Whatever may be the practical outcome, even the most severely censorious of critics will admit that the annual meeting of the Women's Agricultural and Horticultural Union held at the Bedford College for Women on Thursday was not unfruitful of some very sensible suggestions by no means inapplicable to the present unfamiliar situation in our country. Two principal points enforced were the need for more trained women in farm and garden work in view of the depletion of labour due to the war and the desirability that exists for more extensive kitchen gardening so that we should be less dependent upon imports of vegetables and fruit. It was Miss Tuke, the Principal of the College, who has the chief credit of bringing these matters to the forefront by observations that merit consideration. Her leading plea was that on account of many women having been thrown out of work by the war it had become necessary that new careers should be opened to them. One direction in which opportunity lies is certainly horticulture and agriculture which stand in the exceptional position of not being in a state of depression and this is a line therefore which affords a promising prospect of success.

This country can never hope to be able to raise all the food supplies it requires, nor is it necessary when we have the immense and ever growing wheat fields of our Dominions to draw upon; but Miss Tuke was perhaps not greatly exaggerating when she expressed her conviction that not a single vegetable need be imported and that surely we could grow more apples. Last year vegetables were imported to the value of four millions and fruit to the amount of nearly twelve millions sterling, and no one would be unduly sanguine in thinking that a considerable share of the profit arising from this supply might well be secured for our own people and that women might be partakers in the benefit. There is somewhat of a prejudice against women engaging in agriculture, the impression being that it is "unladylike," but as Miss Tuke remarks, that prejudice has been overcome in the case of gardening and it is not unreasonable to suppose that the thin barrier between the two grades of tillage may be also broken down. Especially may this be looked for, let us observe, at such a time as this when in all walks of life people are becoming more alive to their opportunities and duties and when necessity demands that everyone of both sexes must in the future take a more active share in the reconstruction of our industries and building up anew our national prosperity. Attention was called to this in the annual report of the Union, wherein it was urged that for the next few years at least women and girls with practical knowledge of agriculture and forticulture would be very much in demand. For those naturally fitted for the work therefore there is no occasion for fear or hesitation about taking up such occupations. The war has brought about an entirely new position, and it is needful that people should adjust themselves to it. It is not only that we ourselves require that every available acre of land should be turned to the most useful purpose, but our French and Belgian neighbours will look to us for help. When peace comes to their ravaged lands they will want from us not only food but live stock, seeds and plants so that they may start afresh for themselves. It is in this work that the Women's Agricultural and Horticultural Union should play a useful part, and it is satisfactory to learn that a representative of the Board of Agriculture has this week been attending at the Union office for consultations as to joint action.

The ladies promoting this movement should not, however, lose sight of what is being done by another body working for similar objects, namely, the National Political League. The great aim of the promoters of this latter organisation is to encourage and bring about co-operative industries in which girls and women may be employed in productive work, and land has already been offered in various parts of the country where a commencement may be made in this enterprise for intensive cultivation, poultry rearing, fruit farming, dairying etc. No mention was made of this organisation at the meeting of the Union, but it might be well, in order to avoid overlapping and undesirable competition, that both bodies should at least be in touch. The international character of the Union is specially valuable because in these matters we have much to learn from our neighbours, especially Denmark, Belgium and France; but the National League also includes amongst its executive Mademoiselle Rossignon, the well-known Belgian worker, and it must be remembered that it was in Belgium, before the horrors of war afflicted that country, that schemes in connection with the agricultural education of women were to be found such as the most advanced educationists have never dreamed of in the United Kingdom.

Dundee Courier, Dec: 5th. 1914.

DUNDEE WOMEN SHOW ENTERPRISE

IN STARTING A TOY-MAKING INDUSTRY.

GRIPPING DISTRESS IN THE CITY.

The Dundee Ward Committee Rooms for the reception of cases of distress caused by the war are to be opened on Monday evening first. This was decided upon at a meeting of the Prince of Wales' Fund Executive yesterday afternoon, at which Lord Provost Don presided.

Mr W. G. Leggat reported that the contributions to the Prince of Wales' Fund were still increasing. Since last meeting three weeks ago £640 had been collected, making the total £41,440. That sum was, of course, apart from the large amount which they knew had been sent direct to London by local subscribers. As to the future, interest in the fund was being well maintained, and it was a satisfactory and encouraging feature that although they had been collecting now since the beginning of August contributions were still coming in at the rate of over £200 a week. (Applause.)

The Lord Provost—Have you any means of getting at the amount sent direct from Dundee to London?

Mr Leggat—We know of £12,000 and a number of other subscriptions. I should say the total is somewhere between £14,000 and £15,000.

The Town Clerk said he had requested a grant of £200 from the Central Committee. The money had been received and banked.

An Ambition.

The Lord Provost said they had found the central authorities very willing to do anything that the committee thought desirable. The object of the Prince of Wales' Fund in the first place was to deal with necessitous cases caused by the war, and he thought the position occupied by Dundee up to the present time was very noticeable. Trade had been pretty much in normal condition, and they had not required to distribute any of the funds. His own ambition was that in Dundee they might be able to carry on trade in such a manner that they would not have to call upon the fund at all, and go on maintaining their position so far as contributing to it was concerned. In comparison with other cities of its size Dundee had done as well, if not better, by the fund than other places throughout the country, and that was very much to their credit. It would be even more to their credit if they could go on without the assistance of the fund. He did not say that was possible, but he thought they should aim at that, because it would be the most enviable position that could be occupied by any city in the country.

To Earn Grants.

The Town Clerk read a letter from Miss Mary Paterson, secretary of the Scottish Committee on Women's Employment, who stated she was glad to know that Dundee had not suffered to any great extent from the dislocation of industry caused by the war, but as the conditions might not always remain so favourable the Scottish Committee on Women's Employment desired that steps should be taken by local committees, especially in those places where women were largely employed, to form a sub-committee of the local committee to deal with the question of women's employment. She was aware that a large committee of ladies existed in Dundee, of which Miss Henderson was secretary, and that they had been taking a great deal of interest in this matter and doing useful work. That committee, however, did not form part of the Prince of Wales' Fund Executive, and therefore she could not at present recommend the payment of a grant in aid of any scheme of employment which they might put forward. Miss Paterson urged the Executive to form a sub-committee, which no doubt would consist of ladies from Miss Henderson's committee.

Women Very Active.

Miss Mary H. J. Henderson gave an interesting account of what is being done by the Women's War Relief Fund Committee. She said that while the work of that committee had largely been that of collecting and distributing comforts to the soldiers and sailors by voluntary effort, the organising of clubs for the local troops and social evenings for the women, besides assisting the Soldiers' and Sailors' Families Association, they had from the inauguration of the committee included the paid employment of women in their activity—charwomen, knitters (who were paid 6d per cut for their work), and shirtmakers (who were paid 1s 6d per garment). A small toy manufacturing industry had recently been started. They began this work, not as an effort to provide employment for unemployed women—their finances had never justified such a position—but primarily because of the opportunity of forming at least the nucleus of what might possibly develop into a profitable industry in Dundee. No such industry existing before, they were not in competition with established industry, and they had been careful to attach to their manufactory only girls unemployed. They employed a lady superintendent and two assistant superintendents, and eight learners, most of whom were typists and dressmakers out of work. There was little doubt that with enlarged funds this work might be developed greatly, but until the toys were on the market it was difficult to say how it would pay. So far it was financed by the Women's War Relief Fund Committee. Their weekly wages bill for toymakers was £8. (Applause.)

The Executive decided to bring this work within the grant-earning category by appointing the lady members a sub-committee, with power to co-opt members from the Women's War Relief Fund Committee.

Opening the Rooms.

A deputation representing the Scottish Council for Women's Trades appeared to urge that the Ward Committee-Rooms should be opened at once.

Mr James Thomson, solicitor, said distress existed in Dundee at present amongst certain unorganised trades—dressmakers, waitresses, and typists—and the Rev. A. C. Mackenzie cited particular cases that had come under his notice. It was unanimously decided to open on Monday evening first.

In reply to Mr J. H. Martin, Mr Archibald Newlands said there would be no free-and-easy carrying about of checks for orders upon grocers, &c., such as apparently had happened in Dundee before.

Mr Martin asked from what source the preliminary expenses of the Executive would be paid?

The Town Clerk said he was spending money daily, and he would ask Mr Leggat to foot the bill, not out of the contributions to the fund, but out of the interest. (Laughter.)

Mr Newlands—I am afraid it must be my duty to see that the money is sent on to headquarters as soon as possible. (Renewed laughter.)

The following were appointed a committee to deal with cases of distress requiring immediate attention:—Miss Barbour, Staff-Captain Alvey, and Messrs J. H. Martin, Robert Allan, and N. Marra.

It was agreed to make application for the city's proportion of the gift of 50,000 cheeses of 80 lbs. each from the Prince of Wales' Fund and 25,000 cases of canned salmon and 100,000 tons of potatoes from British Columbia and the toys brought by the Jason, the American Santa Claus ship.

Mr Marra said that if they began to feed people on cheese and salmon and found afterwards that they had to restrict them in their choice of goods with the checks it might raise a spirit of discontent. (Laughter.)

A proposal by Mr Marra that the Executive should hold its meetings in the evening was defeated.

Liverpool Daily Post & Mercury Dec: 10th. 1914.

LIVERPOOL TOYMAKERS

PROFITABLE RESULTS OF NEW LOCAL INDUSTRY.

Although not many weeks have elapsed since the inception of the scheme, the toy-making enterprise of the Liverpool Women's War Service Bureau, in Gambier-terrace, founded originally by Mrs. Herbert R. Rathbone as the Lady Mayoress's Bureau, has achieved a sound commercial success. Tangible evidence of this was forthcoming yesterday in an exhibition at 6, Gambier-terrace, of dolls and toys made in the workrooms to the order of a wholesale factor, who is prepared to take most of the output at a price which will make the venture a profitable one. Nothing more than a glance round the room was required to convince the visitor that the handiwork which represents the fruition of the labours of the girls who have been in training compares favourably in point of quality with the toys which hitherto have been placed on the English market by the Germans. The scheme was begun in October with ten girls, and such has been the rate of development that at present there are fifty girls of from 17 to 22 years of age. Trained under the direction of competent forewomen, the young workers have quickly acquired a capacity which has put them in a position to earn a livelihood. The nursery playthings they produce include stuffed ducks, elephants, rabbits, and dolls. Already they have made 9,000 ducks, elephants, and rabbits and 3,000 rag dolls—all to order. The ducks, which are stuffed with cork, possess what to the little folk will be an especial advantage—the property of being able to float. Besides stuffing little dolls, ten of the girls display tasteful aptitude in dressing large dolls. For example, there are mute little Red Cross nurses, Belgian peasant boys, and babies in long clothes. The general verdict of all who visited the exhibition yesterday was that the industry has been established on a thoroughly practical basis. As the girls become proficient they will be drafted into [illegible]

The Liverpool Courier, December 10th. 1914.

LIVERPOOL'S TOY INDUSTRY.

Deplorable as the war is, it is nevertheless giving an impetus to business aptitude in directions hitherto contemplated to only a limited extent in this country. One of the industries so affected is the making of toys. A great many of the toys previously sold in this country have been of German manufacture, but the outbreak of hostilities has put a stop to their importation, and very rightly so in the interests of English people. That the latter are quite as capable of producing them as the Germans was graphically illustrated by a little exhibition, held yesterday, at 6, Gambier-terrace, where the work of the Liverpool Women's War Service Bureau is being carried on. The idea of training girls in the art of making toys was started at the first as a mere experiment, but so successful has it proved that the number so employed has grown from ten at the outset to forty. The toys, mostly representing animals and birds, are being sold to a wholesale dealer in the city, who has arranged when the period of training is completed to take fifty of the girls into his own factory, so that there is every prospect of this important branch of industry taking firm root in Liverpool. The Toy Workroom Sub-committee consists of Mrs. Herbert R. Rathbone (chairman), Mr. F. J. Marquis, Mr. C. Sydney Jones, Miss Mahler, Mrs. Allan Bright, Miss Knowles, Mrs. Billinge, Mr. W. N. Sherlock, Mrs. Hoch, and Miss Jessie Beavan (hon. secretary).

DOLL DRESSING.

Another branch of the Bureau's work consists in the dressing of dolls, most of which are supplied by a wholesale dealer, but the Bureau is also open to receive other orders. Some ten girls are engaged in this occupation, and the skill they have acquired was amply evidenced in the charming collection of dolls displayed yesterday. Representations of Belgian boys and Red Cross nurses largely predominated, but there were other dolls of a more elaborate description and which could not fail to delight the hearts of the most fastidious children. Shirt-making is also affording employment to a number of women, whose work does not enter into competition with shops, as hitherto it has been an occupation little followed in Liverpool. The garments are of a high class quality and are being executed to the order of various dealers, while private orders are also undertaken. Since the Bureau was opened in October last for toy-stuffing and doll-dressing, 9,000 animals and 3,000 dolls have been turned out. Yesterday's exhibition contained about 36 dozen dolls.

Mr Leggat—We know of £12,000 and a number of other subscriptions. I should say the total is somewhere between £14,000 and £15,000.

The Town Clerk said he had requested a grant of £200 from the Central Committee. The money had been received and banked.

An Ambition.

The Lord Provost said they had found the central authorities very willing to do anything that the committee thought desirable. The object of the Prince of Wales' Fund in the first place was to deal with necessitous cases caused by the war, and he thought the position occupied by Dundee up to the present time was very noticeable. THE QUEEN'S FUND.

SIXTY NEW TRADES FOR WOMEN.

At the opening yesterday of the annual Arts, Crafts, and Industries Exhibition at the Portman Rooms, Baker-street, W., by Mrs. Arthur Sassoon, it was stated by LADY ROXBURGH that 60 new trades, which have always been considered the exclusive property of Germany and Austria, are now being taught in England.

This year's exhibition, which will be open until Friday, is larger than usual, and includes many specimens of British made toys from the workrooms of the Women's Emergency Corps. There is a daily exhibition of lace making by Belgian workers.

About 75 per cent. of the entrance money this year is being given to the Queen's Fund.

The Queen's Fund reached last night a total of £89,784 10s. 6d.

All communications should be addressed to Lady Roxburgh, 33, Portland-place, London, W., and all cheques be made payable to Mrs. C. Arthur Pearson at the same address, and crossed "Queen's Work for Women' Fund Account."

LABOUR COLONY FOR WOMEN.

A PRACTICAL OUTLET FOR ARTISTIC TASTES.

A meeting was held yesterday afternoon at 17, Arlington-street, W., by kind permission of Mrs. Gordon Selfridge, at which the question of forming a Labour Colony for Women was discussed.

Miss Lilian C. Barker introduced the scheme, which was elaborated by Dr. Helen Wilson and Miss Wakefield. The object of this movement is to open a really interesting career for those women who have made a failure of their lives, and are anxious to take their places once more in the world. The scheme is preventive as well as remedial. It was pointed out that the effect of an uninteresting and monotonous method of earning a living has a deadening effect on the moral character, and that if a woman is given no outlet for the artistic side of her nature, she is apt to break away from convention in the search for distraction. A proposal was made to organise the colony somewhat on the same principles as the Little Commonwealth in Dorsetshire.

Amongst the trades which were mentioned as successful in this connection are weaving, embroidery, designing, while horticulture and poultry farming would help to make the colony as self-supporting as possible. Funds were asked for the initial venture, and further particulars may be obtained from Miss Lilian Barker, 6, Heath Drive, Hampstead, N.W.

FEMALE LABOUR IN ENGINEERING WORKS.

The text of the agreement between the Engineering Employers' Federation and the trade unions in the engineering industry with regard to the employment of female labour is in the following terms:—(1) It is not the intention to give the work of skilled men to female labour; (2) all machines requiring adjustment of tools by the operator, either before or during the operation, shall be operated by male labour; (3) female labour shall be restricted to purely automatic machines used for the production of repetition work; (4) a purely automatic machine is a machine which, after the job has been fixed, requires no hand adjustment until the operation is finished. All such automatic machines shall be set up by fully skilled mechanics; (5) lathes used for turning, screwing, and for boring of shells shall be operated by male labour; (6) the foregoing shall be observed until the termination of the war, when the whole question shall be discussed, if desired, without the foregoing settlement being argued to the prejudice of either party.

"Advertising as a Profession for Women."

To the Editor.

You ask for correspondence on Mr. E. C. Digby's point of view concerning advertising as a profession for women. Mr. Digby's conclusion is that "the advertising side of newspaper work is not women's metier," and his reasons for this conclusion are: (1) that women cannot compete with men where such matters as face types, line cuts, half-tone blocks, and newspaper make-up are concerned; (2) that women depend too much on obtaining publicity through the medium of personality, and (3) that women lack initiative and are not as a rule capable of grasping an opportunity.

As a newspaper publisher who has had occasion to employ both men and women on the business side of my publications, I am disposed to join issue with Mr. Digby. I have found women quite as earnest as men in getting together the essentials of their duty—such as knowledge of the materials to be handled or talked about; I have not found them (except in a few cases promptly followed by dismissal) obtrusively conscious of their personality; and I have found them particularly quick at grasping an opportunity.

I think Mr. Digby's real point lies in his phrase: "Hundreds of men and women enter this road, but few succeed." It is not, in my view, a question of men versus women; it is rather a question of the better training or selection of both in a field which is admittedly strewn with failures. But other things being equal, and especially where dress or household requisites form the subject of the advertisement, I would expect on the whole better results from a woman canvasser than from a man.

To my mind the only real objection to the woman advertisement canvasser is the sex difficulty, and that is not the woman's fault. If men could only get into the way of regarding women just as good comrades and as ordinary human beings with as much right to a place in the sun as themselves, all other difficulties would speedily vanish.

FORTY YEARS AN EMPLOYER.

To the Editor.

I observe that correspondence is invited on this subject, and I shall be glad if you will allow me a little space in which to state the point of view—not of an expert, but of a business woman who has had some slight experience in this connexion.

With regard to that technical knowledge which, as your contributor points out, is necessary to success, I have met a good many advertising men in whom it was distinctly lacking, while, on the other hand, I certainly know of women—and women of quite average ability—who seem to have succeeded in acquiring it, in spite of Mr. Digby's assurance that "in these matters women cannot compete with men." To master the technicalities of the advertising business is, I submit, quite within the capacity of any intelligent person, whether man or woman; it is not a question of sex, but a question of intelligence and aptitude. I would not be so foolish as to deny that men stand for more in the advertising world than do women, whose entrance into the business dates from so comparatively recent a period and whose opportunities, so far, have been so greatly restricted; but considering the achievements of women in such other professions as are open to them, I most certainly deny that it is beyond the capacity of the average woman to master the technicalities of advertising. A knowledge of type values—and, what is equally important, an appreciation of the value of white space—and the ability to bring out the essential display feature, are things easily acquired by anyone of intelligence and education. Your contributor, like other experts, is inclined to magnify the learnedness of his profession; but I decline to accept the view that it is open to men only to learn the value of face types, cuts, and half-tones; and that it is impossible for the average woman to grasp the fact that a 65-screen half-tone is unsuitable for printing on art paper, or that an attempt to utilize a 200-screen for printing on news paper is foredoomed to failure.

Your contributor clings to the old-fashioned, masculine belief in the illogicality of women, whom he supposes to arrive at conclusions by what is called "feminine intuition," which is held to be something quite different from "masculine reasoning." This, however, is only one of the many fallacies which are current concerning women, and I can assure him that the average woman is quite able to trace her thoughts from premise to conclusion in exactly the same way that men do. It is rather a cheap way of seeking to discredit any class of people to say that they are "notoriously" this, that, or the other. It would be easy for me to say, for instance, that "The Daily Express is notoriously anti-feminist," but I might quite reasonably be expected to state the process by which I had arrived at that conclusion. I should not consider that the fact of my being a woman, and therefore "illogical," relieved me of that obligation. Can your contributor state the process of reasoning by which he has arrived at the conclusion that "the average woman is illogical"? Has he not rather accepted, without reasoning or examination, an idea which for generations has been so industriously circulated by men?

The admission that "there are a few women representatives who are a success" is more significant than it seems. Their number, we are told, is small indeed, but then the total number of women employed in the advertising business is comparatively inconsiderable, and we must, of course, be prepared to find a large proportion of inefficients amongst women just as we find them amongst men.

When he claims that women are capable only of being "good servants to men," your contributor shows that conception of the inherent masculine superiority on which his whole article is based. This is an attitude which has survived from other times and other manners. It is an attitude which women often have occasion to recognize, and sometimes with amusement, but which [illegible]

A meeting was held yesterday afternoon at 17, Arlington-street, W., by kind permission of Mrs. Gordon Selfridge, at which the question of forming a Labour Colony for Women was discussed.

All such automatic machines shall be set up by fully skilled mechanics; (5) lathes used for turning, screwing, and for boring of shells shall be operated by male labour; (6) the foregoing shall be observed until the termination of the war, when the whole question shall be discussed, if desired, without the foregoing settlement being argued to the prejudice of either party.

To the Editor.

I observe that correspondence is invited on this subject, and I shall be glad if you will allow me a little space in which to state the point of view—not of an expert, but of a business woman who has had some slight experience in this connexion.

With regard to that technical knowledge which, as your contributor points out, is necessary to success, I have met a good many advertising men in whom it was distinctly lacking, while, on the other hand, I certainly know of women—and women of quite average ability—who seem to have succeeded in acquiring it, in spite of Mr. Digby's assurance that "in these matters women cannot compete with men." To master the technicalities of the advertising business is, I submit, quite within the capacity of any intelligent person, whether man or woman; it is not a question of sex, but a question of intelligence and aptitude. I would not be so foolish as to deny that men stand for more in the advertising world than do women, whose entrance into the business dates from so comparatively recent a period and whose opportunities, so far, have been so greatly restricted; but considering the achievements of women in such other professions as are open to them, I most certainly deny that it is beyond the capacity of the average woman to master the technicalities of advertising. A knowledge of type values—and, what is equally important, an appreciation of the value of white space—and the ability to bring out the essential display feature, are things easily acquired by anyone of intelligence and education. Your contributor, like other experts, is inclined to magnify the learnedness of his profession; but I decline to accept the view that it is open to men only to learn the value of face types, cuts, and half-tones; and that it is impossible for the average woman to grasp the fact that a 65-screen half-tone is unsuitable for printing on art paper, or that an attempt to utilize a 200-screen for printing on news paper is foredoomed to failure.

Your contributor clings to the old-fashioned, masculine belief in the illogicality of women, whom he supposes to arrive at conclusions by what is called "feminine intuition," which is held to be something quite different from "masculine reasoning." This, however, is only one of the many fallacies which are current concerning women, and I can assure him that the average woman is quite able to trace her thoughts from premise to conclusion in exactly the same way that men do. It is rather a cheap way of seeking to discredit any class of people to say that they are "notoriously" this, that, or the other. It would be easy for me to say, for instance, that "The Daily Express is notoriously anti-feminist," but I might quite reasonably be expected to state the process by which I had arrived at that conclusion. I should not consider that the fact of my being a woman, and therefore "illogical," relieved me of that obligation. Can your contributor state the process of reasoning by which he has arrived at the conclusion that "the average woman is illogical"? Has he not rather accepted, without reasoning or examination, an idea which for generations has been so industriously circulated by men?

The admission that "there are a few women representatives who are a success" is more significant than it seems. Their number, we are told, is small indeed, but then the total number of women employed in the advertising business is comparatively inconsiderable, and we must, of course, be prepared to find a large proportion of inefficients amongst women just as we find them amongst men.

When he claims that women are capable only of being "good servants to men," your contributor shows that conviction of the inherent masculine superiority on which his whole article is based. This is an attitude which has survived from other times and other manners; it is an attitude which women often have occasion to recognize, and sometimes with amusement, since it is held not only by men of Mr. Digby's calibre, but by others of more mediocre attainments.

I do not wish for an instant to belittle the splendid professional and industrial achievements of men, nor to convey the impression that I am entirely satisfied with woman as she is; but do let us, in these times at least, be fair to women and try to eliminate those elements which tend to discourage their efficiency in those occupations into which, for economic and other reasons, they have come to stay.

A NEW TRADE FOR WOMEN.

The Making of Dolls' Tea-sets.

One of the new trades suggested by the Central Committee on Women's Employment, in connection with the Queen's Fund, is the making of dolls' tea-sets. This work is now progressing favourably in the Potteries, particularly at Stoke-on-Trent. One firm reports that they are able to employ more women than they have been able to do for a very long time by reason of the new industry. The work is very suitable to the girls, who have clever hands, and whose usual employment is in the pottery ware. In Stoke-on-Trent alone, 23,000 women and girls are normally employed in pottery work. Since the war began the unemployment has been considerable and there is practically no other trade in Stoke to which the women can turn.

Before the war the dolls' tea-sets were all made in Germany, and the demand for them, particularly at Christmas time, is large. The shopkeepers at Stoke have themselves urged the manufacturers to take up this class of work. Since it has been commenced there has been a quick sale for the British-made article. Toy dinner, tea, dessert and toilet sets are being made by a process which is easy for the girls to learn, and at which they can speedily earn good wages. The making of boxes for the tea-sets will give further work to women, while the packing is another definite employment.

TOY-MAKING AT CHICHESTER.

THE CHRISTMAS RUSH.

Cathedral cities are not renowned as the homes of new industries usually. Chichester, however, is an exception. Its fresh enterprise of toy manufacture promises to become permanent and to develop. As is well known, it was introduced by the Mayoress, Mrs. Garland, to provide employment for local women in connection with the Queen's Work for Women Fund, and was a direct outcome of the penny a week house to house collection in the city. During the war it will, of course, continue under philanthropic auspices, but when the sword is sheathed once again the toy-making will have to be placed on a commercial basis. In the meantime there is an excellent opportunity to establish it on proper remunerative lines if such a course is at all possible The question resolves into finding a sufficient market for the articles made after Christmas. So far the business has been worked at high pressure in order to cope with the Yuletide rush, but such a flourishing state of trade is not to be expected afterwards. In any event a vigorous effort will be made to retain the new industry for the benefit of the borough, and even if this proves unsuccessful it will have served a most useful purpose in a time of emergency. The scheme for the future is very much in embryo. At present it is enabling quite a number of young women to gain a livelihood. At Ivy Bank, the residence of the Mayor and Mayoress, excellent accommodation has kindly been provided for those engaged in making stuffed toys, and here wonderfully realistic birds and beasts are wrought out of medley of material, natural powers being substituted by ingenious mechanical contrivances. Mrs. Garland acts as the instructress in this department. The woodwork is carried on in premises kindly lent by Dr. Paxton, under the supervision of Mrs. Arthur Buckell and Mrs. Closa. Fretsaws fashion all kinds of playthings dear to young folks, and where tools are useless paint artistically applied makes up for the deficiency. It is a fascinating occupation, this catering for the pleasure of little people, and affords an interesting insight into their minds. A special word of congratulation has been received from Lady Roxburghe upon the efficient manner in which the work has been organized at Chichester. And certainly it is well deserved. The movement at Chichester is self-supporting. More than that, a contribution of £10 has already been forwarded to the Central Fund in addition to meeting local needs, and a further donation will be forwarded as a New Year's gift. It may be pointed out to those who support the Mayoress's Work for Women Fund that it is in no way associated with the Girls' Club, which is being carried on for quite a different purpose. The two movements are entirely separate and distinct in object, working, and finance.

IPSWICH TOY INDUSTRY.

PROMISING COMMENCEMENT.

Recently, in describing in some detail the scope of the activities of the Northgate Street Depot, established for the administration of the Mayoress's Fund, we mentioned that a toy industry had been initiated in Ipswich, concerning which we intended to furnish particulars when it had sufficiently developed. The time has now arrived to describe this promising work, which is carried on in a large and cheerful building in the grounds at the back of the Depot. The leading spirit is Miss Ada P. Ridley, who has been much assisted by Mr. Waters, from the Ipswich Handicraft Centre, who has acted as instructor, and continues to supervise the work; while Miss Ridley has assisting her as a designer Miss Monica Turner, who has devoted much time and not a little artistic ability to her voluntary occupation. Miss Ridley also does some of the designing in addition to managing the work-room, and Mrs. Arthur Turner acts as hon. secretary and treasurer. The toy factory, as it may fairly be called, is financed by means of a fund separate from that of the Depot; in fact, the necessary capital has been subscribed privately in the form of £5 shares.

Up to a dozen young girls have so far been engaged on the work, in which obviously they take the greatest interest and pleasure. They are taught the use of the fretsaw, which many of them work with facility and accuracy, largely in cutting out the popular jig-saw puzzles and some ingenious toys which have been designed and coloured by Miss Monica Turner, who evidently has a special aptitude for this sort of work. Among her designs is a mechanical toy representing the Kaiser and Lord Kitchener engaged in a wrestling match, in which the fortune of war fluctuates almost as much as it does on the Western frontier. This has already found a ready sale to the leading retail toy-sellers of Ipswich, such as Cowells and Smiths, and as the toy has been registered, the inventor and factory are protected, with the result that a considerable and profitable sale throughout the country may be hoped for. Another original toy which is being turned out in considerable quantities, and is proving very popular with young people is that called "Soldiers' Winter Quarters." It is an ark-like hutment, with windows and doors which open, and it contains articles of camp furniture, including trestle tables which collapse or fold up, chairs, etc. There are Army and Navy money-boxes, capital wooden trains, dolls and dolls' furniture, and week by week the number and variety of the articles are being increased. In the matter of colouring and workmanship they bear comparison with any foreign or other toys of the same class, and they are neatly packed in cardboard cases, which are also made upon the premises.

This obviously is an industry capable of great development, and it affords most suitable work for young girls who have left school and desire to occupy their time pleasantly and profitably. It should also give scope to ingenious inventors as well as clever draughtsmen and colourists A large proportion of the toys sold in this country have hitherto come from Germany and Austria; and there is no reason, but rather the reverse, why the whole of this trade should not be transferred to workers in Great Britain and Ireland. By and by also the toy industry may admit of a certain amount of home occupation, though it would appear to be preferable that young workers should be employed together in bright and pleasant surroundings and conditions such as those which prevail at Northgate Street.

BRITISH-MADE TOYS.

INTERESTING EXHIBITION IN NEWCASTLE.

An exhibition and sale of toys—the outcome of the effort to teach local girls, otherwise out of employment, to earn a livelihood in this way—attracted a large number of people to 51, Blackett Street, Newcastle, on Saturday, when the opening ceremony was performed by the Lady Mayoress (Miss Fitzgerald).

The exhibits included dressed dolls and wooden toys. The dolls had been dressed by girls, mostly dressmakers and tailoresses, who had been thrown out of work because of the war. The girls were gathered together under the superintendence of the Women Workers' Committee and Miss Dorothea Richardson, and provided with a workroom in Newcastle, where they earn wages.

The wooden toys had been made by 16 net-makers, dressmakers, waitresses, and shop girls, in North Shields, who had had the benefit of the instruction of Miss Constance Holmes. The scheme was inaugurated by the Northumberland County Women's Employment Committee, of which Viscountess Allendale is president, and Viscountess Ho ick, vice-president and chairman. The girls have been paid at the rate of 3d per hour.

Councillor Annie Maud Burnett, North Shields, presided at the opening ceremony, and remarked that the large attendance at a busy time so near Christmas was an evidence of the interest in toy-making. Although its development was only in its infancy, there were very great possibilities. Similar operations had been started in North Shields, and they were all very proud of the fact. Lady Allendale had shown an interest for which they were grateful, and had seen the movement in its best aspect—that was an inspection of the work and the workers at their tasks. The success was due to Miss Constance Holmes, who had aroused everyone's enthusiasm.

The Lady Mayoress (Miss Fitzgerald) said the war had furnished opportunities for thousands of women to help in the work of the nation by nursing our wounded soldiers and by joining various other branches of social service. And our women in availing themselves of the opportunities that afforded had given ample proof that they were worthy daughters of the Empire. But, in spite of this, it so happened that, as regarded disturbance of employment by the war, women were still the greatest sufferers. That fact had caused enterprising ladies to embark upon a new toy-making scheme, with a view to providing work for their unemployed sisters; and this exhibition was a practical illustration of what could be accomplished in that direction.

Miss Pease, on behalf of the Women's Movement Committee, proposed a vote of thanks to the Lady Mayoress.

Mrs Gurney seconded the vote of thanks, which was heartily accorded.

GLASGOW GIRL TOYMAKERS.

With praiseworthy and characteristic enterprise the Scottish Council for Women's Trades have set the girls employed in the emergency work-room, 341 St Vincent Street, to the making of toys. The result of the experiment was witnessed yesterday when a modest toy bazaar was held. Considering that the girls, whose ages range from 16 to 24, had no previous training in the art of toy-making, their productions are wonderful. An interesting variety was on view yesterday, including toys that are really topical—kilted soldiers, cannons, and miniature trenches, exact models of the guns now doing patriotic havoc among the ranks of Germany, and of the trenches which our gallant soldiers so stoutly hold. The purpose of the enterprise is not, however, merely to supply toys for the Christmas season; the training the girls are receiving will, it is hoped, prove of more permanent value. There is a prospect of revival of the toy industry in this country, and the girls taught in the emergency workroom of the Scottish Council of Women Trades will find themselves equipped for such employment. At present 25 girls are engaged in the workroom, and they receive wages and food. In another workroom in Cathedral Street 40 girls are employed at needlework. The effects of the war are being especially felt by women workers, and the admirable enterprise of the Scottish Council for Women Trades is relieving in some measure the prevailing distress.

The Daily Graphic, December 22nd. 1914.

655/16 655.

Mr. Coutts, a manufacturer whose former business was ruined by war, has taken up the making of British toys wholly by British workers and of British material. He and his wife (shown in the left-hand corner), though without previous experience of toy making or machinery, have devised ingenious and astonishingly successful machine tools, and organised and taught a labour-force consisting of Stockwell girls and men. ("Daily Graphic" photographs.)

OUSTING THE GERMANS.

A BRITISH TOYMAKER AND THE STORY OF HIS SUCCESS.

Up to August 1st there was in the City of London a brush merchant. He had a growing business, a delightful home, and a happy English wife and children. Came the Kaiser's bomb-shell, and the business side collapsed. No more exporting could be done, no more material could be got—it came from enemy countries.

A common story, you may say. Did not many businesses collapse? Were not many business men flung overboard from the good ship Prosperity? Unfortunately, yes, and many, perhaps most, turned to with British energy and made the best of things. Every club is full of the stories of such men, to whom all honour. This is but the tale of one of them; it has some special points, that's all.

BRITISH TOYS FOR THE BRITISH.

What could he do? He was not fit for the Army. He was resolved to win through for wife and children. But how—how? One day he read a reference to the vast sums of money spent by British people on German toys. A lead at last! He would see if he could beat the Teuton at one of his own trades. He had not handled a toy since childhood. He knew nothing of machinery. But he had will and pluck and a wife full of faith and helpful expedients, and with these large assets and smaller assets in the department of £ s. d. he and his wife set to work. They took a large grim house in a London suburb which has hundreds of such houses. (There is to this part of the enterprise a romantic side connecting it with a nation which is enemy to us.) Man and wife began making the toys themselves. They confined their first efforts to the simplest things—dolls' houses, the bright-coloured balls which youngsters love to play with, toy forts, and such like. The process of filling the balls by hand took so much time that they could not be sold at the penny at which they must be sold, if at all. The wife thought out a machine for squeezing the composition to the right size and shape. The husband took the chain from a cycle and drove the machine by this means. Result: success. Next, what of the labour with which to turn out the dolls' houses and forts? Girls who had been learning dressmaking and similar light trades, but were workless now, were sought and found, and though the new craft was quite different, and painful to hands unskilled in it, they stuck at it, fired by the examples at the head. Some of the girls worked after hours, such was their zeal. One law was made organic—nobody should be employed at below a living wage. The little fourteen-year-old learner was given her 5s. 6d. a week, the others more in proportion.

THE MOTHER OF INVENTION.

Mechanical difficulties abounded. In cutting out the cloth for the balls it became imperative to cut many pieces at a time. The husband contrived a species of wholesale cutter unknown before. A skilled friend, up to his eyes in Government work, took time from his sleeping hours to make this. Result: success again. The wood for the toys must be sawn true and regular. A first-rate mechanic, whose employer had had to turn him away owing to the war, was met by good fortune, and is now hard at work. And so it went on. Every inch of the house has been used in the most ingenious way. Even the dust-heap has been made serviceable by these ingenious people.

So far the enterprise is a success. It looks like becoming a huge success. The British trade is giving the British product a welcome. Orders are pouring in from all parts at a remarkable rate. The trade finds the goods every whit as attractive as any others, and a thousand times more welcome in British homes than anything German ever will be again.

Coutts is the name of this pair of indomitable English folk, and the grim house is No. 28, Stockwell Road, S.W. The atmosphere within is anything but grim. It is Cheeryble-ish. It explains much of the success.

BRIGHTON TOY MAKERS.

CRITICS OF LOCAL RELIEF COMMITTEE'S SCHEME.

"PLAYING AT SHOPS."

A meeting of the Local Relief Committee was held at the Town Hall, Brighton, yesterday evening. The Mayor (Alderman J. L. Otter, J.P.), presided, and there were also present Miss F. de G. Merrifield, Mrs. Poole, Miss Collins, the Bishop of Lewes, Mr. W. J. Archer, Mr. George Bird, Councillor H. C. Fairfax-Cholomeley, Mr. M. W. Huggett, Councillor Deighton, Mr. W. Dallaway, Mr. G. Ingham, Mr. H. Hone, Mr. R. Halley-Stewart, Mr. T. Hussey, Mr. J. Jeffs, Mr. J. Mansfield, Mr. R. S. Newman, Mr. E. Marsh, Councillor Poole, Mr. W. G. Peskett, Mr. Arnold Stephens, Mr. B. J. Saunders, J.P., Alderman Thomas-Stanford, M.P., J.P., Mr. E. Turrell, Mr. W. R. Waterhouse and Dr. Whittington.

New Members.

A letter was received from the Town Clerk stating that the Town Council had appointed Councillors Fairfax-Cholomeley and Poole to be members of the Committee in place of Councillors Galpin and Skinner, resigned. A letter was also received from Mrs. Edith M. Jennings, Hon. Secretary Women's Co-operative Guild (Brighton branch), stating that Mrs Allen had been appointed to represent them on the Committee.

A Resignation.

A letter was received from Mr. William Gillett, J.P., tendering his resignation.—It was decided to refer the same to the Free Church Council to appoint a representative in his place.

Additional Representation Wanted.

The Prudential Staff Federation (Brighton branch) wrote applying for representation.—Mr. George Cooper moved that an additional representative be appointed, but the motion was lost.

The New Loder-road School.

A letter was received from the Secretary to the Education Committee with reference to the erection of the Loder-road School. The letter stated that the Committee were endeavouring for the Loder-road School to be done at the earliest date, and for the re-painting of certain schools at a cost of £275.

State of Employment.

Mr. B. J. Saunders, in moving the proceedings of the Employment and Labour (Branch) Sub-Committee, stated that unemployment was no worse than it was a month ago. On the whole it was very gratifying to know that unemployment was less than at this time last year.

The proceedings were carried.

The Toy-Making Industry.

A somewhat lengthy discussion took place in the consideration of the proceedings of the Women's Employment Sub-Committee of 4th November relating to the payment of grants with respect to unemployed girls recommended by the Relief Sub-Committee for instruction in toy-making.

Mr. Toyne, the Secretary of the Education Committee, said that by the suggestion of the Committee the grant should be paid for four weeks at the rate of 4s. 6d. a week as wages to learners. At the end, those shewing ability would be paid regular wages. The people who had organized the scheme were neither philantaropists nor capitalists. Under the Articles of Association it was impossible for anybody to hold more than £200 capital in the undertaking, and the dividend was limited to 5 per cent. The minimum wage suggested for adults was 10s. a week. The scheme was in its experimental stage. The wages they proposed for others was 5s. 6d. a week for girls of 15; 7s. 6d. for girls of 17; and 9s. for girls of 19. He thought Brighton must form a centre of other groups throughout the country with respect to the toy-making industry, and that each particular group should specialize in a certain toy. They could not have extreme cheapness in respect to toys and pay good wages, but on the other hand they were not going in for very expensive toys.

Mr. Toyne, replying to several members, said that at present they could take up to 20 girls. They were affiliated to the Women's Emergency Corps in London, but there was no grant from them. In London the toy-making scheme was doing very well. They had about 150 employed, and they had sold a large number of toys to well-known retailers. The present offices of the Brighton and District Toy-making Association were at 34, West-street.

The Bishop of Lewes moved that they give every encouragement possible to the scheme.

Mrs. Poole seconded.

Critics of the Scheme.

Mr. Ingham opposed the scheme. They had, he said, been told that they were neither philanthropists nor capitalists. They must be one or the other. They must either be business people or people playing at shops. He objected to the scheme because they were not even business men and women or even philanthropists, but a crowd of busybodies.

Mr. Coutts, a manufacturer whose former business was ruined by war, has taken up the making of British toys wholly by British workers and of British material. He and his wife (shown in the left-hand corner), though without previous experience of toy making or machinery, have devised ingenious and astonishingly successful machine tools, and organised and taught a labour-force consisting of Stockwell girls and men. ("Daily Graphic" photographs.)

OUSTING THE GERMANS.

A BRITISH TOYMAKER AND THE STORY OF HIS SUCCESS.

Up to August 1st there was in the City of London a brush merchant. He had a growing business, a delightful home, and a happy English wife and children. Came the Kaiser's bomb-shell, and the business side collapsed. No more exporting could be done, no more material could be got—it came from enemy countries.

A common story, you may say. Did not many businesses collapse? Were not many business men flung overboard from the good ship Prosperity? So far the enterprise is a success. It looks like becoming a huge success. The British trade is giving the British product a welcome. Orders are pouring in from all parts at a remarkable rate. The trade finds the goods every whit as attractive as any others, and a thousand times more welcome in British homes than anything German ever will be again.

Coutts is the name of this pair of indomitable English folk, and the grim house is No. 28, Stockwell Road, S.W. The atmosphere within is anything but grim. It is Cheeryble-ish. It explains much of the success.

Galpin and Skinner, resigned. A letter was also received from Mrs. Edith M. Jennings, Hon. Secretary Women's Co-operative Guild (Brighton branch), stating that Mrs Allen had been appointed to represent them on the Committee.

A RESIGNATION.

A letter was received from Mr. William Gillett, J.P., tendering his resignation.—It was decided to refer the same to the Free Church Council to appoint a representative in his place.

ADDITIONAL REPRESENTATION WANTED.

The Prudential Staff Federation (Brighton branch) wrote applying for representation.—Mr. George Cooper moved that an additional representative be appointed, but the motion was lost.

THE NEW LODER-ROAD SCHOOL.

A letter was received from the Secretary to the Education Committee with reference to the erection of the Loder-road School. The letter stated that the Committee were endeavouring for the Loder-road School to be done at the earliest date, and for the re-painting of certain schools at a cost of £275.

STATE OF EMPLOYMENT.

Mr. B. J. Saunders, in moving the proceedings of the Employment and Labour (Branch) Sub-Committee, stated that unemployment was no worse than it was a month ago. On the whole it was very gratifying to know that unemployment was less than at this time last year.

The proceedings were carried.

THE TOY-MAKING INDUSTRY.

A somewhat lengthy discussion took place in the consideration of the proceedings of the Women's Employment Sub-Committee of 4th November relating to the payment of grants with respect to unemployed girls recommended by the Relief Sub-Committee for instruction in toy-making.

Mr. Toyne, the Secretary of the Education Committee, said that by the suggestion of the Committee the grant should be paid for four weeks at the rate of 4s. 6d. a week as wages to learners. At the end, those shewing ability would be paid regular wages. The people who had organized the scheme were neither philanthropists nor capitalists. Under the Articles of Association it was impossible for anybody to hold more than £200 capital in the undertaking, and the dividend was limited to 5 per cent. The minimum wage suggested for adults was 10s. a week. The scheme was in its experimental stage. The wages they proposed for others was 5s. 6d. a week for girls of 15; 7s. 6d. for girls of 17; and 9s. for girls of 19. He thought Brighton must form a centre of other groups throughout the country with respect to the toy-making industry, and that each particular group should specialize in a certain toy. They could not have extreme cheapness in respect to toys and pay good wages, but on the other hand they were not going in for very expensive toys.

Mr. Toyne, replying to several members, said that at present they could take up to 20 girls. They were affiliated to the Women's Emergency Corps in London, but there was no grant from them. In London the toy-making scheme was doing very well. They had about 150 employed, and they had sold a large number of toys to well-known retailers. The present offices of the Brighton and District Toy-making Association were at 34, West-street.

The Bishop of Lewes moved that they give every encouragement possible to the scheme.

Mrs. Poole seconded.

CRITICS OF THE SCHEME.

Mr. Ingham opposed the scheme. They had, he said, been told that they were neither philanthropists nor capitalists. They must be one or the other. They must either be business people or people playing at shops. He objected to the scheme because they were not even business men and women or even philanthropists, but a crowd of busybodies.

Councillor Deighton also opposed the scheme. He mentioned that there was a scheme on foot to teach English boys to become waiters, but it was impossible for an English boy to become an efficient waiter unless he knew more than one language. Were they going to pay out doles while these lads were learning languages? It was never intended that the Prince of Wales's Fund should be used for that purpose.

Mr. Ingham said the children would be engaged in making toys which would be unsaleable after the war. Britain had never been a toy-making country and never would be. He did not want to see English waiters. They did not want ours to be a nation of flunkeys.

Councillor Poole said there were many thousands of foreigners doing work that Englishmen could do. He was convinced that if this would only bring back trade it was worth support.

Mr. Geo. Cooper said it was better for them to have employment than to give doles. Until he could see a better way he felt they were justified in spending 4s. 6d. in helping the girls to help themselves.

Dr. Whittington said he did not quite like the scheme. He, however, supported it, although there were some points about it that were not very businesslike. Still they had got to administer funds in the way which would do most good.

The resolution supporting the scheme was carried.

Glasgow News, Jan: 1st. 1915.

WOMEN AND GERMAN TRADE.

It is probable that Glasgow women may take a prominent part in capturing a certain proportion at least of trade formerly monopolised by Germany. The city branch of the Scottish Committee on Women's Employment have in hand a scheme for educating women and girls in the making of articles formerly obtained from enemy countries. The directors of the Glasgow Chamber of Commerce now intimate that they are desirous of assisting the Ladies' Committee in their efforts, and the Board have circularised members asking for information regarding trades which would give employment to female labour in this country.

Northern Daily Telegraph, Jan: 9th. 1915.

WOMEN AS TIN-WORKERS.

The tin shops attached to the great wholesale provision factories fulfilling Government contracts have never been so busy as they are now, every man and boy who can handle a soldering iron being assured of employment. The extraordinary pressure has, indeed, led one well-known firm to train women and girls for the more mechanical side of the work. Each tin requires to be soldered at the top, bottom, and the side seam, and to be provided with a self-opening tongue, the cutting of the latter being entrusted to the girls. So great is the demand for tins that, so far as the home trade is concerned, firms are preferring to pack in glass, even at a reduced profit.

Glasgow Herald, Jan: 18th. 1915.

CAPTURING GERMAN TRADE.

GLASGOW PROPOSALS.

INTERESTING POSSIBILITIES.

At the monthly meeting of the directors of Glasgow Chamber of Commerce held yesterday a number of suggestions for the capture of the trade of our enemies were submitted. Mr Montagu M. W. Baird presided.

"THE FREE TRADE DOGMA."

The Chairman said that a deputation from the Glasgow Central Office for Women Workers had been heard. The deputation wished to know if the Chamber could suggest trades suitable for women which had formerly been carried on in Germany, and the Chamber had been so far successful in suggesting a good many articles which, instead of being imported, might be manufactured by women in this country. The Corporation had given their aid in getting suitable premises. He hoped members would give special attention to the question.

Mr Thomas Cameron, the secretary, read a letter from Mr Alexander Walker, of Messrs John Walker and Sons (Limited), distillers, in which he said that he considered any proposal to found a company in this country to compete with a firmly established business in Germany having large capital and perfect equipment in organisation, technical ability, and machinery would be quite futile without definite protection for a term of years. Such business could not be founded and in a position to compete with old-established concerns for at least 10 years, and nothing less than tariff protection would be effective in supporting an infant industry. The writer's firm was dependent for one product on Germany, which was only made there, and they would be glad to finance the manufacture of it in this country had they security for Government support. Unfortunately the Free Trade dogma entirely obsessed reasonable consideration of the question by those now in power.

WORK FOR WOMEN.

Mr D. H. L. Young (of Messrs James Templeton and Co., carpet manufacturers), from whom a letter was also received, wrote that he had been in communication with some of the members of the Women's Committee, and he had been asked to inquire whether the manufacture of plush felt for making ladies' hats would not be an opening for women's work in this country. The industry had hitherto been mainly carried on in Austria. He understood there was likely to be a continued and growing outlet for the product. The raw material consisted of the loose fur of hares or rabbits, which was blown on to revolving cylinders by compressed air. That, he believed, was afterwards felted and the hats moulded by hand. Such information might, as far as it went, be of interest to some manufacturers and merchants. Another scheme which had occupied his attention was the possibility of employing a certain class of women's labour next summer in trying to exterminate the bracken which was so largely encroaching on sheep pasture in Scotland. Such labour would be organised in the same way as that of the women who annually work in the fishing industry or in the fruit-picking industry. Committees, largely consisting of ladies, would have to be formed to arrange for the housing and feeding of the workers. Housing might be under tents, and the weaving of cotton canvas for this purpose would give immediate employment to women. Other committees would arrange with landed proprietors and tenant-farmers as to the contribution they would make towards the expenses. The Glasgow Employment Committee, of which Mr Francis Henderson is chairman, had already got powers to supplement the wages paid to workers under such a scheme. Professor Bower, of Glasgow University, had made a study of bracken and could advise as to the most scientific way to attack its encroachment. Men like Dr Beilby, of the Technical College, and the Chairman of the Agricultural College could be asked to give information as to the possibility of extracting potash from the bracken. Potash would be in great demand for manure as the German supplies were cut off, and it was quite conceivable that the burning of bracken for potash would recoup some of the expense. He had spoken to Mr Whitton, the superintendent of Glasgow Corporation parks, who had had experience of the matter in connection with Ardgoil estate and could give valuable advice. In conclusion, Mr Young expressed his willingness to act on any committee of preliminary inquiry which might be appointed.

The Chairman explained that they had received from the Board of Trade an exhaustive statement showing the number of persons occupied in German industrial centres in certain industries and a number of trades which the Board suggested the Chamber might deal with. On making inquiry it was discovered that boxes for ointment and straw covers for bottles were principally supplied by Germany and provided work which women might take up.

Evening News, Jan: 11th. 1915.

"CAREERS."

Fingerposts To Callings For Girls and Women.

At this season of the year many girls who have left school are wondering how they are to employ their time in useful work. This state of wondering is always amongst us, but now it is more than ever, and quite rightly, a matter for serious thought. The solution of the difficulty must, of course, depend upon many conditions, such as mental and physical capacity, the possession of money to lay out upon the project in view, and the time that will be entailed in preparation before any return can be expected.

THE WOMAN DOCTOR.

It has been pointed out by those who know that women doctors are offered by the circumstances of war the finest chance of making themselves useful, and of earning a good living, that they have ever known in the annals of their profession.

The war has carried away to the field of battle numbers of students and young medical men, and to keep pace with the demands women should take their place in the schools.

According to "Careers," a thoroughly useful book, published by the Women's Employment Publishing Co., 5, Prince's-street, Cavendish-square, London, W., at 1s. 6d., or by post 1s. 9d., "a student of medicine ought to be able to rely on an income of not less than £150 a year throughout her five or six years' course." Though the outlay is a sound investment, it is not easy to come by in every case.

TRAINING FOR THE PROFESSION.

Given the right woman, how can she set about training for the career she has chosen? Thanks to the women pioneers in medicine, it is perfectly easy.

"First of all she chooses whether she wishes to study in a mixed school or a school for women only. If she chooses the first of these courses she goes to Glasgow, or Manchester, or Liverpool, or Birmingham, or one of the other provincial universities. If she chooses the latter course she goes to the London (Royal Free Hospital) School of Medicine for Women (University of London), or the Edinburgh School of Medicine for Women.

Her next choice is the qualification to be sought, though this should also have influenced her choice of place of study, since it is desirable to take the degree of the university in which she is working. No student can obtain a university degree without having matriculated in that university, or having passed an examination which gives exemption from the matriculation, so this preliminary arts examination must precede the medical course."

ARMY NURSING.

Army nursing is and will continue to be the goal of many a woman's aspirations. That right honourable career started by the wonderful Miss Florence Nightingale demands the following qualifications:—

"A candidate must be between 25 and 35 years of age, single or a widow, and must have had three years' training in a civil hospital of 100 beds or over. She must, in addition, be of British parentage or a naturalised British subject. If she has these qualifications and wishes to join the regular service, she should apply to the Matron-in-Chief, Queen Alexandra's Imperial Military Nursing Service, at the War Office, for the necessary papers.

A MISTAKE CORRECTED.

It is pointed out in the book that it is a mistake to suppose that good work in the Army cannot be got by nurses in times of peace, for in the larger hospitals, where the majority of nurses serve, there is medical and surgical work every bit as good as in the civil hospitals, under the best surgeons and physicians in the kingdom.

The Times, Jan: 12th. 1915.

WAR PROFESSION FOR WOMEN.

PUBLIC HEALTH WORK.

That a considerably greater number of women of the upper middle classes will have to support themselves is bound to be one of the results of the war, but the difficulty of finding the necessary means for an expensive training, such as that demanded by medicine and many other professions, will be, in many cases, insurmountable. A suggestion is made in the current issue of the *British Medical Journal* that such women might turn to public health work, and the secretary of the National Health Society, 53, Berners-street, Miss F. Lankester, a sister of Sir Ray Lankester, informed a representative of *The Times* that public health is one of the few openings for women in which lucrative appointments were often going begging, and that the demand for trained women is greater than the supply.

Well-educated, cultured women, she states, are the best suited to this form of employment, and gain advancement to the more important posts in due course, their education fitting them to realize the real significance of their work. Among the appointments gained by students of the National Health Society have been five inspectorships of factories and workshops under the Home Office; sanitary inspectorships under a number of London boroughs; inspectorships under the Infant Life Protection and Shop Hours Acts; and lecturerships for the county councils and posts as relieving officers under various boards of guardians.

The work itself is interesting, well paid, and of great public service, and the cost of training is not heavy. A three-months' course in preparation for the certificate of the Sanitary Inspectors Examination Board, for instance, costs 12 guineas, and includes lectures in chemistry and physics, municipal hygiene, sanitary law and administration, building construction in its sanitary relations, and visits to waterworks, sewage works, common lodging houses, disinfecting stations, &c. The salaries that it is possible to obtain after securing the necessary qualifications vary from about £80 to £130, and may reach the pleasant figure of £500 if the woman who takes up public health has gifts and aptitude for her task.

This profession is one that should particularly appeal to women at a time when attention is being directed so strongly to work in connexion with the sanitation of the camps and the dangers of infection. The society's lecturers are distinguished health authorities holding public appointments, and a course of lectures starts at the end of this month. Certificates and medals are awarded to the successful students.

Daily Telegraph, 2.2.15.

WOMEN FOR FARM WORK.

A resolution adopted by societies co-operating on the Joint Food Supply Committee has been sent to the secretaries of the Board of Agriculture, Board of Education, and Board of Trade, as follows:

That we condemn the proposed employment of children on farm work, and recommend that facilities be given for the employment of women on the land and that allowances be made for travelling and lodging.

It is approved by the National Women's Council, East-end Federation of Suffragettes, London Kitchen Gardens, National Aid Corps, Fabian Women's Group, National Food Reform Association, National Food Fund, Printers' Warehousemen and Cutters Federation (Women's Branch), Tailoresses' Trade Union, Railway Women's Guild, some Women's Co-operative Guilds, Girls' Club Dinners, and Women's Industrial Council.

THE ENEMY'S TRADE.

GLASGOW'S EFFORT TO CAPTURE IT.

FELT HATS, POTASH AND PILL-BOXES.

The question of capturing German trade was discussed at the Glasgow Chamber of Commerce yesterday, when suggestions were made as to the industries capable of being transferred to this country.

It was stated by the Chairman (Mr. Montagu M. Baird) that they had had a communication from the Glasgow Central Office for Women Workers asking for suggestions as to trades suitable for women, and which had formerly been carried on in Germany. In reply they had had suggestions of a good many articles which, though formerly imported, could be made in this country.

The Chamber's Committee had acted in co-operation with the women's representatives in securing suitable premises, and he expressed the hope that members and directors would support them in finding an outlet for the work of the women and the possible capture of some line of German trade.

Mr. Alex. Walker, of Messrs. John Walker & Co., distillers, Kilmarnock, wrote to the effect that to consider any proposal to found a company in this country to compete with a firmly-established business in Germany having large capital and perfect equipment in organisation, techincal ability and machinery would be quite futile without definite protection for a term of years. His firm was dependent for one product upon Germany, which was only made there, and they would be glad to finance the manufacture of it in this country had they the security of Government support. Unfortunately the Free Trade dogma entirely obsessed the reasonable consideration of this question by those now in power.

CHANCE FOR WOMEN.

In a letter regarding industries for women, Mr. D. H. L. Young wrote that he had been in communication with some members of the Ladies' Committee, and had been asked to inquire whether the manufacture of plush felt for ladies' hats would not be an opening for women's work in this country. The industry had hitherto been mainly carried on in Austria. He understood there was likely to be a continued and growing outlet for the product. The raw material consisted of the loose fur of hares and rabbits, which was blown on to revolving cylinders by compressed air. This, he believed, was afterwards felted and the hats moulded by hand.

Another scheme which had occupied his attention was the possibility of employing a certain class of women's labour next summer in trying to exterminate the bracken which was so largely encroaching on sheep pastures in Scotland. Such labour would be organised in the same way as that of the women who annually work in the fishing or fruit industries.

Committees largely consisting of ladies would have to be formed to arrange for the housing and feeding of the workeds. The housing might be in tents, and the weaving of cotton canvas for that purpose would give immediate employment to women.

Other committees would arrange with landed proprietors and tenant farmers as to the contribution they would make towards the expense. The Glasgow Employment Committee, of which Mr. Francis Henderson is chairman, has already got powers to supplement the wages paid to workers under such a scheme.

The letter went on to suggest that Professor Bower, of Glasgow University, who had made a study of bracken, could give his advice as to the most scientific way to check its encroachments, and men like Dr. Beilby, of the Technical College, and the Chairman of the Agricultural College, could be asked to give information as to the possibility of extracting the potash from the bracken.

Potash would be in great demand for manure, as the German supplies were now cut off, and it was quite conceivable that the burning of bracken for potash would recoup some of the expense. Mr. Young also suggested that Mr. Whitton, the Corporation Parks Superintendant, who had had experience of the matter in connection with Ardgoil estate, and who knew the difficulties involved, could give valuable advice.

The Chairman said that in connection with the matter the Chamber had written on September 1st to the Board of Trade asking them for an indication of the trades that might employ women. A reply had been received giving a rather exhaustive statement showing the number of persons

Women Tillers of Earth: HOW THEY MAY HELP TO KEEP THINGS GOING.

"BACK to the land." This is not a new cry, but it is being sounded now with a vigour it has never known before, and echoes are coming from quarters that before the war were completely deaf to it.

The wisdom of making much of land that can produce food, the work of cultivating daily necessities that have hitherto come from afar, has lately become such a general matter of table talk that those who have never discussed matters of this kind before find it one of vital interest, and are wondering what part woman will be called upon to play in this crisis.

TO FILL THE GAPS.

Apart from the probable increase of cultivation this coming year, thousands of men who have been drawn from this very work in order to go to the war will doubtless leave big gaps, that cannot be filled by other men, in the fields and market gardens at home. This certainly suggests that the prospects of work for the lady gardener are very hopeful.

She may have to adapt her knowledge. And she probably will, for her training has not been for the peculiar demands of this and of the coming years. Even the girl who has specialised on horticulture may find herself, by necessity, absorbed solely in market-gardening work, which hitherto has been but a side study in her training and professional career. And those who have been too ambitious, and perhaps failed through prematurely starting out with land of their own or in partnership, may make a great hit by specialising in one department of a far larger undertaking.

THE SPRING CALL.

In a few weeks now the call for workers will be made everywhere, and then the indications for the future will be manifest.

Up to the present it has been difficult for the most experienced advocates of gardening for women to say exactly what may be anticipated. The move of men from the land to the Army has been gradual, and the winter months are passing quietly. With the spring the stir will be fresh and vigorous, and then, it is not a great stretch of imagination to assume, all those with good gardening knowledge will be called upon to utilise it.

It is a curious fact that although there have been women gardeners for many years—highly specialised head-gardeners on large estates, under-gardeners, assistants, jobbing gardeners, and so on—many of those who have habitually employed gardeners are astonished to hear that there are trained and experienced women gardeners who could do the work they need done. Another remarkable fact is that few who have ever had capable and experienced women gardeners, trained for years in theory as well as practice, ever wish to revert to the old class of gardener. The secretary to the Women's Agricultural and Horticultural International Union declares that it is the rarest thing for a capable experienced woman head-gardener to be out of an engagement for a month or more. This alone tells of a growing demand for women gardeners even in normal times.

GIRL GARDENERS AT GLYNDE.

A HEALTHY AND INTERESTING LIFE.

"Naturally the best places are not for the beginners," said Miss Gill to a "Star" representative, "but for those who are enthusiastic about their work it is an excellent life. It is splendidly healthy and extremely interesting, and the remuneration for a capable head gardener is very good. Only last week I placed a lady gardener in a post where she receives a cottage to live in, coal, lighting, all the vegetables she requires, and milk from the farm, as well as a salary of £100 a year. A less experienced lady gardener shares the cottage with her. This is not an isolated case. There are many similar ones, and remuneration and conditions always vary. When a student goes to a training college she spends her two years at half theoretical and half practical work; and if she can manage it, she is wise to take the third year doing nearly all practical work, learning so much more of the results of weather conditions, and so on. If she had only one year, she might strike a year following a terribly wet summer, or one of great drought, when the results would be entirely different. Then after the three years she usually goes out as an under-gardener without salary until she has gained a little outside practical experience; and then started in this way she quickly works her way up."

STEADY INCREASE OF STUDENTS.

Until the war broke out there was a steady increase each year of women gardening students, including those who studied to be poultry and bee-keepers, dairy producers, etc. Then the tide through various reasons was stemmed somewhat, although the present necessity for producing more food for home consumption suggests that the war should have been a quick fillip to the numbers of students.

Lady Wolseley, writing from Glynde, says: "We want in England more well trained, educated, foreseeing people as gardeners. I often wish we could enlist for this profession the services of active ladies accustomed to out-of-door country lives, preferably the daughters of Army and Navy officers. The life is a happy one, and the profession is remunerative. Why do they hold back?"

GIRL GARDENERS AT GLYNDE.

Daily Graphic,
Jan: 15th. 1915.

THE WOMAN ENGINEER.

NEW AVENUE OF LABOUR FOR FEMININE WORKERS.

"The Englishwoman's Year Book, 1915" (A. and C. Black), compiled by feminine experts on their own particular subjects, increases its value with the years, and the volume issued for the present year is the best yet published. Among its most interesting features is a table of "Records for Women," which shows at a glance how the sex has broken new ground in the professions and honours hitherto associated with men.

There is also a fine section devoted to the welfare of children, and architecture and engineering as professions for women are more fully dealt with than in previous editions. According to Miss Griff, engineering as a profession has not many attractions to most women, but owing to the ever-increasing use of machinery in this the twentieth century there is an equally growing need and place in the professions for the woman engineer. Automatically also women's interest in engineering matters is increasing from their now almost daily contact, in some way or another, with mechanical matters.

Russia's Lead.

"Russia has led the way for some years in opening the profession to women. In that country they have been admitted as designers and draughtswomen in large engineering works, and recently a lady obtained a post as road engineer after open competition with men," says the writer.

"After Russia follows Switzerland, the U.S.A. and Canada, in which countries women are engaged in various ways as engineers. In England there is not (to the writer's knowledge) any woman but herself practising as a consulting engineer, and exceedingly few training as qualified engineers in any branch beyond automobilism. Liverpool University opened its doors to women for an engineering training, and one woman took her final degree of B.Sc. (Eng.) there, but has left England for Canada.

"The directions in which a woman who is thoroughly trained should find useful and congenial work are these:—Consulting engineer, research work in laboratories, laboratory assistant, lecturer, factory inspector, insurance inspector, draughtsmanship for drawing offices, tracer, assistant to patent agents, mechanical manager to lady farmers, mechanical manager to lady manageress of printing works, steam and electric laundries, etc.

The Times,

WOMEN FOR FARM WORK.

TO THE EDITOR OF THE TIMES.

Sir,—In your valuable columns of to-day I read an article on the "Dearth of Farm Workers." In order to meet the demand for agricultural labour the writer suggested that possibly the best means would be "to relax the school age, so that boys from 12 to 14 years old could be brought into service, &c." There is certainly a great deal to be said in favour of this suggestion, but there is another proposition, which up till now has not been brought forward. Has not the fact been overlooked that there is a large reserve of women who are able and willing to take the place of the absent men? Anyone familiar with the Lowlands of Scotland knows how much work on the land is performed by women in many districts.

I am the last person to advocate sending inexperienced town-bred women to work in the country without having had any previous agricultural training. The labour exchanges would be able to help a great deal towards furnishing the supply of women who would be suitable for the unskilled labour, and for the better class women there are already several colleges and associations, from whom information could be obtained. If committees were formed in the country towns to deal with the matter they might do good work in organising the supply of female labour for the land, and encourage local farmers to employ women. Another point, which is all to the advantage of the farmer, is that women labourers would be comparatively easy to house; they would be single women, or at any rate women without families, and could easily be accommodated with lodgings by the wives of those labourers who have already enlisted.

Agricultural work should present no very great difficulties for the right sort of women, and to many open air country life would be most congenial.

Only last month I read with interest an article appearing in *The Times* describing the rural conditions of France during the war: the article laid particular stress on the good work the French women had rendered in connexion with the harvest. At a time like the present the employment of women as farm workers is an experiment that should certainly be tried in England; the women would be proud to help "in work that is of national importance and well within their capacity."

I am, Sir, yours faithfully,
EDITH CASTLEREAGH.

WOMEN GARDENERS.

Girls Invade Sphere of Agriculture.

FACTORY TO FARM.

Pros and Cons of New Back-to-the-Land Movment.

One of the interesting side developments brought about by the war is the invasion of the sphere of agriculture by female workers.

In all parts of the country women have realised the possibilities of this new back-to-the-land movement, and in several places farm schemes, more or less ambitious in character, are well under weigh.

In Hertfordshire a company of factory girls, thrown out of employment, have gone on the land with some initial success. These girl farmers, although painfully new to the business, are sticking to their ploughing, trenching, and planting, undaunted by bad weather and the physical demands their work entails.

Viscountess Wolseley's Views.

The gardening profession too, is one that holds out distinct prospects to women. Viscountess Wolseley, who is the founder of a well-known college of gardening, points out the opportunities that await far-seeing people of her own sex in this branch of employment. "The life is a happy one," she declares, "and the profession is remunerative. The training is no harder than that of other workers, and there are ever-widening prospects developing for the experienced, fully-trained gardener.

"We often have the offer of a comfortable bothy (or cottage)," continues the viscountess, "large enough for three or four ladies, who would receive coals, milk, vegetables, and salaries from 18s. to 30s. per week, according to their experience. In many cases they would be given the entire control of a large kitchen garden and glass houses, and provided they supplied the owner with his household wants, they would have a free hand as regards the disposal of the remainder of the fruit and vegetables."

Other Aspects.

Interviewed on the subject by a *Daily Dispatch* representative, one who has had a great experience on gentlemen's estates, and possesses a thoroughly extensive knowledge of what is required from the gardening staff in such places, and who is also at the present moment an occupant of one of the "bothies" referred to by Viscountess Wolseley, said the crux of the whole thing was whether ladies would "be prepared to carry out the whole thing in its entirety—not only fussing about in greenhouses, sometimes doing a little fumigating and picking off a faded leaf here and there? Would they attempt the heavy and exacting work that is included in the general routine of the average gardener?"

"One thing is certain," proceeded the person interviewed, "they would need a special dress to be able to accomplish their duties quickly and well. There is no doubt women would be able to do the lighter work of the garden, as, for instance, attending to the flowers in the greenhouses and outside, cutting the daily supply of roses or other flowers, whichever might be in bloom at the time, and getting together the various vegetables for the use of the house.

"I am afraid, however, that the employment of ladies as gardeners," concluded our informant, "would not be a wholly satisfactory experiment, if they were expected to carry out the whole programme of work. Perhaps women of the working classes, who were brought up to work on the farm and in the fields, would make fairly competent gardeners, but in the actual test I do not think any class of woman could properly and adequately fill the place of the male garden hand. They are not physically fit for the heavy parts of the job."

Yorkshire Observer,

"Women for Farm Work."

Under this heading in yesterday's "Times" Lady Castlereagh urges, apropos of the complaints in many parts of this country as to the present scarcity of agricultural labour, that there are many kinds of farm work in which women "of the right kind" might with great advantage to themselves and to this country take the place of their masculine relations and acquaintances who are now too busy drilling for the war to fulfil the industrial functions which are theirs in time of peace. Incidentally, Lady Castlereagh refers (as did we in a paragraph in this column during the French vintage season) to the invaluable aid given by the womenkind of the French agricultural regions from the beginning of the war until now; and what is true of Frenchwomen in this regard is almost equally true of women in the other war countries, and will be true of the countries which are expected to join in the dread arbitrament before the end comes. An obvious reason, however, why the women over a great part of these islands cannot so largely as their Continental sisters supplement our agricultural labour needs is that our town industries already call on them so urgently. Not only in the textile and clothing factories and behind multitudinous shop counters, but in many and varied departments of dark work, from banks and mercantile offices downwards and onwards, the percentage of women workers must now be larger than ever before. In no other way could the unprecedented drafts on the patriotic young manhood of the country have been met without severer degrees of labour scarcity than we have yet had to face. Nor can we ignore the probability that one after-the-war consequence will be the strengthening of the status of women even in the political sphere.

ENGLISH TOYS.

(To the Editor.)

Sir,—There is much talk nowadays of "stealing the German trade," of developing our home industries, and of the refusal ever more to accept goods marked with the legend "Made in Germany." But it would be greatly to the advantage of our own people to make more of the things we use.

Miss Edith Downing, an English sculptor, has modelled a charming set of doll's head and limbs, which is being made of china and wax, with stuffed body, by the workers in the toy factory started by the East London Federation of the Suffragettes. This doll is entirely English in manufacture and its appearance is essentially so. It is more childish than the foreign dolls to which we have been accustomed. It costs 5s. with china head and limbs, 4s. with wax head and limbs and glass eyes, and 3s. 6d with wax head and limbs and painted eyes. Wholesale prices may be obtained on application to the E.L.F.S., at 400, Old Ford-road, Bow, E.

This is but one of the interesting toys now being produced by East London workers under the auspices of the E.L.F.S. The effort which is being made to establish the industry in East London is an important one, for the district has been hitherto too largely given up as a hopeless region of the sweated and unskilled.

Generous financial help is urgently needed in order that the industry may not be unduly fettered, and proper attention may be given to the careful preparation of samples for use in the spring trade.

DOLL-MAKING IN EAST LONDON.

To the Editor of the Manchester Guardian.

Sir,—There is much talk nowadays of "stealing the German trade," of developing our home industries, and of the refusal ever more to accept goods marked with the legend "Made in Germany." It would be greatly to the advantage of our own people to make more of the things we use. The practice of a skilled craft or trade plays an important part in the development of character, and the higher wages paid to those who do skilled work help to raise our national standard of living. In considering the introduction of any industry which is new to this country, such as doll and toy making, or any other, it must be remembered that it is impossible for the new-comers, at least for a time, to turn goods out as cheaply as those are able who for generations have been experienced in the work. Even more vital to success it is that we should not expect our own people to produce precisely the same kind of wares as those to which we have been accustomed from Germany.

Miss Edith Downing, an English sculptor, has modelled a charming set of doll's head and limbs, which is being made of china and wax, with stuffed body, by the workers in the toy factory started by the East London Federation of the Suffragettes. This doll is entirely English in manufacture, and its appearance is essentially so. It is more childish than the foreign dolls to which we have been accustomed. It costs 5s. with china head and limbs, 4s. with wax head and limbs and glass eyes, and 3s. 6d. with wax head and limbs and painted eyes. Wholesale prices may be obtained on application to the E.L.F.S., at 400, Old Ford Road, Bow, E. This is but one of the interesting dolls and toys now being produced by East London workers under the auspices of the E.L.F.S.

The effort which is being made to establish the industry in East London is an important one, for the district has been hitherto too largely given up as a hopeless region of the sweated and unskilled. For some time to come the industry cannot be self-supporting; new ideas are being developed, new processes introduced. The workers have to be taught the rudiments of their trade. But the Federation is determined to pay fair wages, in order to give the workers a chance to give of their best in developing the industry, which, as soon as it pays its way, will run on co-operative lines.

Generous financial help is urgently needed in order that the industry may not be unduly fettered and proper attention may be given to the careful preparation of samples for use in the spring trade.—Yours, &c.,

E. SYLVIA PANKHURST.

Toymaking in South Wales.

LADY MACKWORTH INTERVIEWED.

The scope of the Women's Emergency Corps is a very wide one, but none the less the Cardiff branch seems to be carrying on its full share of work most successfully. Originally the idea of the corps, which has branches in various parts of the country, was to provide an outlet for voluntary work, and in a very liberal sense in Cardiff that is being done. Voluntary workers have registered themselves at the local office in the Principality Buildings, and work has been readily allotted to them. Lady Mackworth is the honorary secretary of the Cardiff branch, whilst Miss Pridden is organising secretary and Mrs W. E. Jones hon. treasurer.

Lady Mackworth, in an interview with one of our representatives yesterday, said they had started a toy industry at No. 11, Westgate-street, and they were now employing about 1 girls and had a similar number on a waiting list. The idea was to develop the toymaking industry in this country. The toys were all hand-made, and it did not need much capital to start with. They were hoping to enlarge, however, and the profits and any additional money they got would be devoted to extending the work. When the work was first commenced in the city they had a teacher down from London, but the principles were quickly learnt, and now the girls were under the care of a forewoman. So far they had done fairly well in the sale of goods. The toys were largely wooden ones, but they were just going in for stuffed articles, and for a week there would be an exhibition of work.

Another branch of work the corps has undertaken is that of a creche in Salisbury-road, where women who are found employment in connection with the Queen Mary Work for Women Fund may leave their children when at work. Then, in co-operation with the Soldiers' and Sailors' Families Association, the corps is associated with the Women's War Clubs. The success of some of these is remarkable.

The Liverpool Courier,
Feb: 2nd. 1915.

WOMEN AND FARM WORK.

Our farmers are placed in a very unfortunate position. There is every prospect that they will find themselves hopelessly short-handed in what should be a season of great agricultural expansion. Farm labour has never been particularly abundant of recent years, but with so many men away at the camps the situation now threatens to be serious. In France and Germany the withdrawal of agricultural labour has been much more severe, but the work is being very efficiently done by the women, who have nobly responded to the appeal made to them by their respective Governments. Lady Castlereagh and others are urging that a similar course might be adopted in the United Kingdom.

Women have long done admirable service as farm hands in Scotland and the border counties, but seldom in the English agricultural districts. Whether there are enough women competent to do such work is an open question. Farmers frequently complain that even country girls brought up on farms cannot milk or do dairy work. It is not that English women are less resourceful or courageous than others, but the farming system in this country has offered them less encouragement. Such an experiment would, however, be well worth trying now.

Eastern Daily Press,
Feb: 2nd. 1915.

NORWICH TOY-MAKERS.

A NEW LOCAL INDUSTRY

An interesting display of locally produced toys will, by courtesy of Mr. Frank Dimmock, be on view in his shop window in London Street on Wednesday, Thursday, and Friday of this week. This is the outcome of one of the many schemes to cope with unemployment among women and girls that have been set on foot since the war began. It was obvious then that an opportunity had presented itself of capturing for English workers the toy-making industry which had hitherto been mainly a German preserve. In many centres women are hard at work, and in Norwich a number of girls have, since the autumn, been training under Miss Dorothy Jewson. Toys have been designed for the factory by several local artists; and in many cases those exhibited have been executed by the artists who designed them. It is the intention that these designs shall be entirely carried out by the girls in the toy factory as soon as they are sufficiently skilled. Several of the simpler toys have, however, been completely turned out by the girls.

Like all similar undertakings, the scheme has needed, and will need for some time to come, financial support; but the increasing number of orders which the factory is receiving, both from local firms and others further afield, encourages the conviction of the organisers that the toy-making industry can, within a reasonable period, be put upon a satisfactory business footing, paying its way, and in due course making a fair profit. The toy factory is situated at 5, Margaret Street, premises which have kindly been placed at the disposal of the Norwich toy makers by Mr. Wm. Moore, the Chairman of the Board

Nottingham Guardian,
Feb. 2nd. 1915.

SUGGESTED FEMALE HELP FOR THE FARMER.

In many parts of the country the farmers are short-handed to an extent that is seriously embarrassing them. This shortage of farm labour comes at a time when the farmer needs even additional service, owing to the greater demand for home-raised agricultural produce and stock. Of course, the situation in England and Scotland is nothing like so serious as it is in France, and possibly in Germany, where a large proportion of the rural population has been called up to the colours, and made to change its plough-shares into swords. But in France, certainly, and in Germany probably, the women have stepped into the breach. The French Government issued an appeal to them at the beginning of the war, stating that while the men were fighting for their country, the women must feed the army. Lady Castlereagh and other influential ladies are urging that women should be given a chance of becoming farm workers in this country too, as they already are in some parts of Scotland and in the English border counties. There is much to commend the suggestion, but unfortunately it is very difficult to carry it out. Farm work requires at least some experience, and only those women would be likely to succeed at it who have had a farm life. Our farmers make complaint that even English country girls are mostly innocent of such arts as milking and dairy work.

CAREERS FOR WOMEN.

TAKING THE PLACE OF MEN.

DENTISTRY AND PHARMACY.

(FROM A WOMAN CORRESPONDENT.)

The number of men replaced by women in employment since the beginning of the war is officially stated to be slight, though there are as yet no statistics available. But unofficially one learns of women doing many unaccustomed things, and of the scope of their work being widened both in the professions and in various forms of industry. Even if many of the posts formerly held by men which women are now filling are for the period of the war only, and will have to be yielded up should their original holder return safe and sound, they will have tested women's capacity in a way that may have a lasting effect on women's work in the future.

Among professional women, doctors and teachers of university standing found the most immediate demand for their services in place of men gone to the front. Medical posts were thrown open to women which before the war would have been plums reserved for male consumption only, and some of these very posts are actually going begging at the present moment, because the demand for women doctors is greater than the supply. The London County Council have even recently waived their ban on married women doctors in the case of a lady doctor whose husband had gone to the front. Women teachers have been replacing men and proving themselves able to keep their classes in control, even if they are not always able to join in the more athletic games. One university woman has been taking an out of doors class in surveying in a boys' school with great success. But in the teaching profession there is always a tendency to pay a woman less than a man, and in at least one instance a woman teacher took the duties of two men—or rather one and three-quarters, a small portion of the work being taken on by another teacher—but she was only paid the salary of one.

The Board of Trade in its report on employment in the United Kingdom in December declares that "statistics relating to commercial employment in London show that there has been an increase of 25 per cent. in the employment of women in London banks since the war, while similar though not quite such striking figures are given for some other City employments." Inquiries go to show that in some of the most conservative banks in London women have been employed for some months in the securities department and in the ordinary work done by a bank clerk, beginning with the making up of pass-books. But in one bank at least very long hours have been worked, and the remuneration given was not that paid to men for similar work. Hitherto in the banks when women have been admitted they have not been employed on work usually done by men, and consequently their salaries were not open to comparison. In the future, however, they will be. In the Stockholm State Bank there is a woman chief cashier paid at the same rate as a man, and the precedent might be borne in mind.

A NEW FORM OF EMPLOYMENT.

One curious employment being carried on by women of the professional classes is in the letter censor's office. Owing to their knowledge of languages women are particularly fitted for such posts. Incidentally, as a comment on women's alertness on the business side of the war, it may be remarked that the suggestion to prevent German women, allowed to return, from taking back gold to Germany came from a woman who learned that some patriotic feminine aliens were taking back as much as £50 in gold pieces to the "Vaterland." A woman is employed at one of the stations checking passports, and several women were selected through a well-known women's employment agency as booking clerks, to take the places of men who had enlisted, by one of the great railways

It is said also that the war is leading to an increase in the demand for fully-trained women pharmacists and dentists. Both professions demand, however, a lengthy preparation. There are already several highly-qualified women teaching dispensing and running their own pharmacies in London and in the country, and there are a fair number of women dentists already in practice and doing well. Several women trained in accountancy and book-keeping have recently taken excellent posts which were formerly held by men.

In the returns of women's employment under trade groups the Board of Trade gives under the heading of engineering a 10 per cent. increase since October, and notes that 28·1 per cent. of the 20,000 women employed are on overtime. To supplement this it is interesting to note that women are being asked for as trained plan-tracers in engineering works at the present moment to fill vacancies left by men who have enlisted. The Central Bureau for the employment of women at 5, Princes-street, Cavendish-square has some of these posts waiting for suitable applicants.

The legal profession does not seem to have yielded any fruits to women in spite of the very large percentage of lawyers' clerks who have enlisted, perhaps because legal business has fallen off pretty heavily. Before the war there were several solicitors' offices where women were employed in important positions as clerks, but so far there is no news of further appointments being made, though it is quite possible that such may be the case. But women have found their way into many Government offices where before the war their employment would hardly have been countenanced.

INDUSTRIAL WORKERS.

Among women industrial workers one comes up against a certain lack of mobility, which may impede the employment of women in many directions, and also the deliberate restriction of their possible entry as competitors into certain trades. There is, however, said to be a movement in the upholstery trade towards the greater employment of women. In this trade it is curious to note that a woman is by laws made by her male colleague, allowed to use scissors, but not a hammer or chisel. In the fancy leather and metal trades women are now being employed on additional work, and the tailoresses, in spite of the "slump" in their employment, are stated to be doing better since the alien disappeared from some workrooms.

Concerning two trades for which women are peculiarly fitted, but from the highest prizes and certificates of which they are debarred by the male unions—hair-dressing and cooking—one hears of no great change in favour of women since the war. Women make postiches, dress hair, and shampoo it in many houses quite as well as men, but there is always the question as to their standing and pay. In the chef's domain it is being boldly said that there are many women who can get no more than £100 or £150 and must not call themselves chefs, but who are the equal of men getting 10 or 12 times their salaries. Music-engraving is a trade which is expected to offer opportunities to women as a result of the war.

In some of the big provision dealers women have been taken on to replace men, and with fair success, though one big store had many complaints from its grocery department at Christmas time owing to the enthusiastic assistants booking orders for things sold in other departments. The manager of the department declared that grocery took longer to learn than any other trade. In at least one big drapery house women are to be seen for the first time in the linen department handling heavy goods, and in two big stores lift-girls are acting for lift-men "wanted for the trenches." Women chauffeurs are not taking the place of men to any great extent.

But the numbers of openings enumerated above are sufficiently interesting to make one wonder what will be the further development in six months' time. A two-years' inquiry recently completed by the Fabian Women's Society covering every trade and profession open to women showed that 51 per cent. of the 4,000 typical cases taken were supporting others as well as themselves, and 80 per cent. were entirely self-supporting, leaving a small percentage depending on others for partial support. This would seem to prove that in peace-time at least women do not work unless they have to, and that the pocket-money worker, in whose interests so many employers pay less to their women employees for the same work than they would to a man, is largely a myth.

The Times 19-2-15.

CAREERS FOR GIRLS.

PROSPECTS OF EMPLOYMENT IN MANY FIELDS.

The first of a series of lectures arranged by the League of Honour on openings for educated women was given by Miss Craig (Central Bureau for the Employment of Women) yesterday at 106, Harley-street. Mrs. JAMES GOW presided. The course is designed to survey the fields of work at present available to educated women and to familiarise mothers of girls with the necessity for finding them careers in view of the possible diminution in the numbers of those likely to marry in the future.

Miss CRAIG, who spoke on "General Employment Prospects for Educated Women and Girls," said the war brought home the necessity of training. Parents who imagined a training wasted on those who were sure to marry forgot that numbers of women after marriage had to support themselves, their children, or their husbands. In choosing a career the two things to be considered were the public demand and the girl's bent. The higher professions—medicine, surgery, and architecture—were all open to women of exceptional power. Dentistry, pharmacy, teaching, and domestic economy training offered openings. School attendance officers now included a number of women, and superintendents and matrons of training colleges or resident schools under county councils were from time to time required. The development of children's care committees had called for a number of specially qualified women as organisers and assistants; the Labour Exchanges had opened the way to a good many well-paid and responsible posts, and there were also women health insurance officers. The constantly broadening sphere of social work was not overcrowded, and there was room for many well-equipped workers.

In gardening and horticulture the chief demand was for girls with capital enough to start on their own account after training. Jobbing gardening and town gardening were branches of the work in which there was still plenty of room for girls with some power of organisation and initiative. Forestry, too, seemed in many ways to be suitable for women. Cookery offered an immense opening to educated girls, though, curiously enough, at present, men were the greatest experts in cookery. Tea-rooms, dressmaking, hospital nursing, nursery-nursing, and laundry-work had each their own opportunities, while in artistic work the most recent successes were the lady house-decorators. There were also at present successful women bookbinders, metal workers, jewellers, chemists, florists, and photographers.

The next lecture in the series will be given on February 26, by Dr. Florence Willey, on "Women in the Medical Profession."

The Times 19-2-15.

OPPORTUNITIES FOR WOMEN.

The Hon. Mrs. Norman Grosvenor, Chairman of the Colonial Intelligence League, which helps educated women to find posts overseas, desires to call attention to two training centres for the teaching of poultry-farming, dairying, and domestic economy, "both offering during the war training, board, and lodging on terms which certainly cannot entirely cover the cost." These are Hoebridge Farm, near Woking, and Stoke Prior Colonial Training College, Bromsgrove. The Colonial Intelligence League can offer five trainings at Hoebridge Farm at the specially reduced fee of 10s. a week for a six months' course. Particulars can be obtained from the secretary, Colonial Intelligence League, 36, Tavistock-place, W.C.

Mrs. Talbot, President of St. Margaret's House Committee, and Miss Elisabeth Anson, Oxford Secretary and Treasurer, inform us that St. Margaret's, the "Ladies' Branch of the Oxford House," is in need of ladies to carry on its work. The terms are from £1 to 25s. a week. Further particulars may be had from Miss Harington, Head of the Settlement, St. Margaret's House, Bethnal Green, E.

Bradford Argus 16-2-15.

NEW EMPLOYMENT FOR WOMEN

Doctors, Dentists, Bank Assistants, and Workers in Various Trades

Taking the Places of the Men.

Since the beginning of the war the scope of women's work has been widened both in the professions and in various forms of industry.

Among professional women, doctors and teachers of university standing found the most immediate demand for their services in place of men gone to the front. Medical posts were thrown open to women which before the war would have been plums reserved for male consumption only, and some of these very posts are actually going begging at the present moment, because the demand for women doctors is greater than the supply.

The London County Council have even recently waived their ban on married women doctors in the case of a lady doctor whose husband had gone to the front. Women teachers have been replacing men and proving themselves able to keep their classes in control, even if they are not always able to join in the more athletic games.

One university woman has been taking an out of doors class in surveying in a boys' school with great success. But in the teaching profession there is always a tendency to pay a woman less than a man, and in at least one instance a woman teacher took the duties of two men—or rather one and three-quarters, a small portion of the work being taken on by another teacher—but she was only paid the salary of one.

At London Banks.

The Board of Trade in its report on employment in the United Kingdom in December declares that "statistics relating to commercial employment in London show that there has been an increase of twenty-five per cent. in the employment of women in London banks since the war, while similar though not quite such striking figures are given for some other city employments.

Inquiries go to show that in some of the most conservative banks in London women have been employed for some months in the securities department and in the ordinary work done by a bank clerk, beginning with the making up of pass-books. But in one bank at least very long hours have been worked, and the remuneration given was not that paid to men for similar work.

Hitherto in the banks when women have been admitted they have not been employed on work usually done by men, and consequently their salaries were not open to comparison. In the future, however, they will be. In the Stockholm State Bank there is a woman cashier paid at the same rate as a man.

In the Letter Censor's Office.

One curious employment being carried on by women of the professional classes is in the letter censor's office. Owing to their knowledge of languages women are particularly fitted for such posts.

Incidentally, as a comment on women's alertness on the business side of war, it may be remarked that the suggestion to prevent German women, allowed to return, from taking back gold to Germany came from a woman who learned that some patriotic aliens were taking back as much as £50 in gold pieces to the "Vaterland."

A woman is employed at one of the stations checking passports, and several women were selected through a well-known women's employment agency as booking clerks, to take the places of men who had enlisted, by one of the great railways.

It is said also that the war is leading to an increase in the demand for fully-trained women pharmacists and dentists. Both professions demand, however, a lengthy preparation. There are already several highly-qualified women teaching dispensing and running their own pharmacies in London and in the country, and there are a fair number of women dentists already in practice and doing well.

At Engineering Works.

Several women trained in accountancy and book-keeping have recently taken excellent posts which were formerly held by men.

In the returns of women's employment under trade groups the Board of Trade gives under the heading of engineering a ten per cent. increase since October, and notes that 28.1 per cent. of the 20,000 women employed are on overtime. To supplement this it is interesting to note that women are being asked for as trained plan-tracers in engineering works at the present moment to fill vacancies left by men who have enlisted. A bureau for the employment of women has some of these posts waiting for suitable applicants.

The legal profession does not seem to have yielded any fruits to women in spite of the very large percentage of lawyers' clerks who have enlisted, perhaps because legal business has fallen off pretty heavily. Before the war there were several solicitors' offices where women were employed in important positions as clerks, but so far there is no news of further appointments being made, though it is quite possible that such may be the case. But women have found their way into many Government offices where before the war their employment would hardly have been countenanced.

Industrial Workers.

Among women industrial workers there is said to be a movement in the upholstery trade towards the greater employment of women. In this trade it is curious to note that a woman is by laws made by her male colleague, allowed to use scissors, but not a hammer or chisel. In the fancy leather and metal trades women are now being employed on additional work, and the tailoresses are stated to be doing better since the alien disappeared from some workrooms.

Concerning two trades—hair-dressing and cooking—one hears of no great change in favour of women since the war. Women claim that they can make postiches, dress hair, and shampoo it in many houses quite as well as men, but they say there is always the question as to their standing and pay.

In the chef's domain it is being boldly said that there are many women who can get no more than £100 or £130 and must not call themselves chefs, but who are the equal of men getting ten or twelve times their salaries.

WOMEN "ODD JOBBERS."

CLASSES IN DOMESTIC REPAIRS.

In the Cosway-street School, Marylebone-road, one of the Women's Institutes of the London County Council, last night a score of women were busy with drawing-books, compasses, and T-squares. Some were the mistresses of households, some were teachers, some were women interested in the social work of the East End. One was preparing to go out to Canada.

At the end of the lesson the teacher asked what they would like to be taught next. Their answers were: how to fix washers; how to make door-handles tight; how to stop escapes of gas; proper place to hang a picture; how to drive a plug in; how to make furniture out of a packing-case; how to mend children's boots.

The instructor nodded and said that they would be taught them in turn at succeeding lessons. As there are very few men available for odd jobs and no boys to carry their tools, these women wish to learn to do these odd jobs about the house themselves.

THE NEW INDUSTRY.

TOY MAKING ON A PRACTICAL SCALE IN THE EAST-END.

An enterprise which will eventually bring credit to British skill and originality is the toy industry, established in Bow by the East London Federation of the Suffragettes. The toys made by the workers include dolls, jointed wooden toys, and stuffed animals, all of which are pre-eminently "British" both in design and execution.

Very considerable time and care is being expended in making both dolls and animals as life-like as possible, so that the shapeless flaxen-haired object which was "made in Germany" may be replaced by something not "just as good," but better.

In connection with the industry which now flourishes at 400, Old Ford Road, Bow, perhaps the most important feature of all is the wages paid at the factory. This is not a sweated industry. The workers are paid a minimum wage of 5d. an hour, or on piece rates calculated on that basis (and for some of the more skilled work at a higher rate). The women engaged can thus earn upwards of £1 a week, and that without working the disgracefully long hours which obtain in so many industries.

The factory has been started without capital, and is at present partially supported by voluntary subscriptions, and in appealing for support the organisers state that if a toy industry can be established on a non-sweated basis, not only individuals but the race itself will benefit through the physical improvement of the workers.

655.

A PUBLIC meeting in connection with the promotion of artificial flower-making as a new industry in Edinburgh for women, was held yesterday in the Oak Hall, Edinburgh. Lady Dunedin, who presided, said such a large meeting was in itself an indication of the interest that the people of Edinburgh were taking in the scheme, and she hoped it was also an indication that the movement was going to prove successful.

Miss Rosaline Masson said that owing to the war new problems had presented themselves to be solved. Among these was this, that a great number of women had been thrown out of employment, while many others, not hitherto wage-earners, now found it necessary to work for a living, and the number of those women in both classes would increase as the war went on, and even more so when it was ended. Now was the time to open up for women a new industry instead of giving them nothing but sewing to do, and they were met that day to consider in a broad-minded spirit an effort in the right direction—namely, to provide women with training that would fit them for the labour market and lay the foundation stone for a new structure. Their object was to train women to make artificial flowers of a fine class and without any suspicion of sweating. Nor would their new industry interfere in any way with the work now in the hands of cripple children. There was no industry of the kind in Scotland at the present time. Three matters had to be kept in mind. The scheme would have to be considered by men able to organise and start an industry; it would not necessarily be local, and might even become national; and it was a German industry at the present time.

MR BENSON AND THE WAR WITH UGLINESS.

Mr F. R. Benson, in speaking in support of the scheme, said theatrical people had often difficulty in getting artificial flowers for their requirements, so that perhaps from his side of the footlights they might be able to help forward the scheme and find for the products something in the way of a market. And the regiments of the flower-makers would range themselves with those who were waging the present life and death struggle with ugliness. It was the apathy of this country that had lost us so much of our trade, and that apathy was due to the opinion that so many people held that we must always remain the first workshop of the world. If we had had sufficient enterprise and sufficient versatility we would not have allowed so many of our markets to be captured, and included in those captured was that of the making of artificial flowers. This war was surely an example in the concrete of a life-and-death struggle with ugliness, the ugliness of an unholy alliance that had dynastic ambition linked hand in hand with commercial greed and a soulless love of material philosophy. This country and our Allies prided themselves that they were engaged in a sort of crusade for freedom now, and for a reign of humanity, of love, and of beauty in the future. This was also a war of peoples against Chancellors, a war of self-sacrifice and of freedom against a war of selfishness. He ventured to think that the Germans had made some of their greatest mistakes because of their neglect of artistry, and though they might take Paris or Warsaw, though the Russians might retreat, and though the Germans might sink many merchant ships, yet as sure as man's faith was fated to work its way upwards, so surely would victory rest ultimately on the side of the Allies. (Applause.) German culture as they had come to know it was the negation of all those things that flowers stood for. They must take their places in this war with ugliness, and he thought they were doing so in carrying out the scheme that was now proposed. (Applause.)

Lieutenant-Colonel Wyllie spoke of the chances that presented themselves for developing such a trade as flower-making with other countries. There was now, he said, a splendid opportunity for depriving Germany of her trade in that connection.

Mrs Chalmers Watson gave an outline of the scheme proposed. Three things, she said, were essential—first, that suitable workrooms should be provided for a training centre, with highly trained teachers—the nature of the work would probably demand skilled French teachers; second, that funds would be necessary for equipment, for the payment of teachers, and for the payment of pupils during their apprenticeship; and, third, that keeping in view the aim of establishing an industry on a practical basis, a careful record of facts and figures would require to be kept which would enable the scheme later to be placed on a sound commercial basis. They believed that a course of training of six months would enable their pupils to turn out flowers of the kind desired. It was estimated that the initial expenses for the six months would amount to about £400, and they confidently hoped, when the merits of the scheme were made known, that all the money required would be forthcoming.

The Lady Assistant.

If you had told station engineers in July, 1914, that in two years' time young women would be controlling some of their switchboards, what would they have replied? Yet the lady in our photograph is busy in a sub-station of the Shropshire, Worcestershire and Staffordshire Electric Power Co. Her apparel does not seem to us altogether suitable, it is too loose and flowing and might easily throw off a switch inadvertently, which leads up to reform in feminine attire and throws a grave responsibility on His Majesty's electrical inspector of factories.

We see, by the way, that in Scotland an engineering probationary course is now offered to well-educated women, between twenty and thirty-five years of age, who are prepared to take up manufacturing engineering as a profession. So impressed is the directorate by the feminine capability displayed in this war that £40,000 is being spent on a factory to be run entirely by women. Special conditions will prevail. There will be two shifts, each consisting of eight hours divided by a long interval into four-hour half shifts. The wages earned will range from £65 to £250 per annum.

"He is a fool who thinks by force or skill
To turn the current of a woman's will."
(Far wiser he who lets 'em rule the board,
And turn the current where they will. Oh Lord!)

RELIEF OF DISTRESS.

QUEEN'S "WORK FOR WOMEN" FUND.

SHIRT-MAKING IN GLASGOW.

One of the most practical of the schemes carried on under the Queen's "Work for Women" Fund is the workroom for the training of shirt machinists which was opened last month at 11 Spoutmouth, Glasgow. Skilled shirt machinists are always in demand, and never more so than at the present time, when employers are too busy with large contracts to afford the necessary time or machines for the training of workers. As this line of work, therefore, seemed to offer an exceptionally favourable opportunity for unemployed women and girls, with the prospect of quickly rendering them self-supporting again, a training workroom was organised through the efforts of the Glasgow Sub-Committee on Women's Employment, the scheme being approved by the Scottish Committee on Women's Employment, and financed by a grant from the Queen's "Work for Women" Fund. Rooms were granted through the generosity of the Glasgow Corporation, with use of power and light, and a competent forewoman was engaged to give instruction. Twenty-eight girls are now occupied in shirt machining (practising stitching on collar bands, cuffs, sleeves, &c.), and also in making shirts, the material used consisting for the most part of bale ends of shirting presented by local manufacturers. The girls who are being trained have come from all kinds of previous occupations, including bleachfield workers, golf ball makers, bookbinders, bookfolders, paper bag makers, cable workers, laundry packers, shop girls, tea-room girls, clerkesses, treadle machinists, cigarette makers, and confectionery workers. In addition to the machine workroom, where the girls are given training in power machining and shirt-making, there are also an ordinary workroom where sewing is done and instructions given in making, mending, and making over all kinds of garments, and a kitchen where meals are prepared and furnished to the workers at moderate charges, and where a few girls are receiving training in cooking, marketing, and domestic economy. The fact that after only a month's training a number of girls have found good situations with shirt-making firms proves the practical utility of the machinists' training scheme in meeting an existing demand.

Electrical Times 13-7-16.

The Somersets have done little but disservice to the Tory Party, to which they belong. As a "Die-hard" during the Parliament Bill controversy, the Duke was thrown over by Lord Lansdowne and the majority of the Peers. The Duchess was one of the founders of the Insurance Tax-Resisters' Defence Association—an egregious fiasco which successfully defended none of its dupes, and did nothing positive except deprive large numbers of poor servant girls of sickness benefits under the Insurance Act—a cruel thing for which the Duchess has done nothing to atone.

One of our pleasantest memories, by the way, is of Miss Mary Macarthur rising in righteous wrath from the balcony at the Albert Hall meeting that inaugurated the League, and denouncing the Duchess for her part in that mean business.

The Lady Assistant.

If you had told station engineers in July, 1914, that in two years' time young women would be controlling some of their switchboards, what would they have replied? Yet the lady in our photograph is busy in a substation of the Shropshire, Worcestershire and Staffordshire Electric Power Co. Her apparel does not seem to us altogether suitable, it is too loose and flowing and might easily throw off a switch inadvertently, which leads up to reform in feminine attire and throws a grave responsibility on His Majesty's electrical inspector of factories.

We see, by the way, that in Scotland an engineering probationary course is now offered to well-educated women, between twenty and thirty-five years of age, who are prepared to take up manufacturing engineering as a profession. So impressed is the directorate by the feminine capability displayed in this war that £40,000 is being spent on a factory to be run entirely by women. Special conditions will prevail. There will be two shifts, each consisting of eight hours divided by a long interval into four-hour half shifts. The wages earned will range from £65 to £250 per annum.

IPSWICH WOMEN WORKERS.

TOY EXHIBITION.

The public of Ipswich now have an opportunity of seeing the developments which are being effected in the new toy industry established by Mrs. Arthur Turner and Miss Ridley in association with the Northgate Street Depot. Mr. Smith, of Smiths-Suitall, has very kindly devoted one of the windows in his establishment in the Butter Market to a display of the toys made by the young workers at Northgate Street, and they are well worthy of inspection, and, be it added, purchase. Among the toys are engines and trucks labelled "G.E.R.," stoutly made and well cut and painted; soldiers' Winter hutments, sentry boxes, the clever mechanical toy designed by Miss Monica Peirson Turner, "The Kaiser and Lord Kitchener"; and several others. The workmanship of all is unusually good—almost too good, some might think. At any rate, they are many degrees better in all essential respects than the German toys which were imported almost to the exclusion of all others. There is now a chance of placing on a firm and permanent basis a highly-promising industry—one which will afford occupation to young people and others not merely in a factory or place of business, but also in their own homes. Last Christmas the surplus of foreign toys on hand helped to provide the needs of the season; but next Christmas it seems most probable that we shall have to depend solely on home-made toys. There is every reason, therefore, for giving the utmost encouragement to this new industry, which seems destined to undergo great developments in Ipswich in the near future.

Evening Standard 31-8-

THE QUEEN'S FUND.

WOMEN WEAVERS, GOLD-BEATERS AND HAIR-NETTERS.

The Central Committee of the Queen's "Work for Women" Fund are much occupied in reviewing possible new trades for women.

It is not, however, as easy to replace alien trade as it at first sight appears. There are dangers in attempting to start new enterprises on unsound lines, while relief funds could not obviously be used in competition with existing industrial concerns.

Various branches of toy-making have been under review for some time, and these include stuffed and wooden toys, the making of china dolls' heads, and dolls' trunks. The doll-making trade, however, is only one of many.

There is the making of artificial flowers, of baskets and of bags for bonbons, which also offer possibilities. Experiments have been made with crochet buttons—hitherto in the hands of the enemy's trade—but this is by no means all. The committee have investigated such out-of-the-way trades as the making of memorial wreaths, the extraction of potash from seaweed, the manufacture of hair-nets, of Japanese cot quilts, fireless cookers, and surgical bandages.

It is only when reading a list of these trades that it is possible to realise how many every-day domestic articles are made in an enemy's country. Amongst the new trades to be considered is that of manufacturing the tinsel scourers which we use for cleaning saucepans, stockinette knickerbockers, the weaving of willow for mats and rugs, chairs and baskets, gold-beating, gloves, and a certain kind of rug previously made in Austria.

AMONG the many trades and professions that are opening up for women at the present day printing is very seldom mentioned. Numerous reasons are given for this omission, one of the chief being that the work is too heavy; another, the long apprenticeship necessary before efficiency can be attained.

Both these arguments may hold good for certain branches of printing, and in large establishments, where the work is necessarily specialised, the part taken by women is usually limited to the composing and proof-correcting departments; the heavy work—lifting huge formes, the actual printing, being entirely—and rightly so—in the hands of the men. In this "specialised" work undoubtedly proficiency in setting up type, to which the whole time is given, can only be attained through long and steady practice. A few women are now employed as monotype operators, an instrument in appearance very like a huge typewriter, used for the mechanical setting up of type, in contra-distinction to "hand" setting, but there is still considerable prejudice against the practice.

But a small printing-press business, in which the workers have to learn all branches of their trade, is a very different matter. And it is this form of printing that has so far been overlooked by women of education as a means of livelihood both practical and congenial.

There are several qualifications necessary for women who wish to learn the printing business in a small way. One is a liking for a certain amount of manual labour, and another—and this is very important—good physical health. Besides these, if the business is expected to pay, as it certainly should, one at least of the women should be a good canvasser—capable, that is, of obtaining orders for printing, either personally or through judicious advertising. The direct personal element is preferable, as adequate advertising is too expensive for a small firm. Given these qualifications, together with a determination to get on, there is no reason why a small printing concern should not be run successfully, and eventually extend its borders, still employing only women. An aptitude for business is, of course, very necessary. The heavy part of the work is the machining and, at times, the imposing and proof-correcting. For this reason physical health and strength are very necessary, as it means a good deal of standing. Both these difficulties could, by arrangement of both the work and the imposing table, be overcome.

For the preliminary training, if time and money permit, a six months' training with any small firm ought to be ample. During this time the student, using brains and intelligence, and *liking the work*, could get enough variety of experience to fit her to start independently. It is possible to get a working knowledge of all the chief branches in a few months, and then work alone; but the longer training is recommended to avoid anxiety and—necessarily—a certain amount of wasted time and material. Long apprenticeship may be necessary in the case of young girls, or for women who have no power of concentration, and whose object is to become compositors only; but for those who desire a more general training, it is simply waste of time. In a small shop a Jack-of-all-branches is necessary, and this to a certain extent—at any rate, in the beginning—makes great speed a secondary consideration, and one to be left to time to remedy.

Having got the necessary preliminary training—preliminary because in printing one is always learning—the next thing to be considered is: How to start in business? And here it should be clearly understood that the work is intended to pay its way, and is not to be run "anyhow."

It is suggested, to avoid anxiety, that there should be a capital of, say, £250–£300. Of this £150 would be spent for "plant"—machine, type, &c. the remainder being reserved for working expenses and slack times. The amount to be taken out by the partners (who will be the workmen also to begin with) to be decided by the work obtained. It would be possible for a new firm, with very little training, to pay its way, including wages, almost from the beginning hand to mouth probably, but that would not matter. On the other hand, the chances that it would not pay at once or for many months must be considered and calculated for, or failure will be inevitable. Roughly, the first year should be a time to gain custom—

Having got the necessary preliminary training—preliminary because in printing one is always learning—the next thing to be considered is: How to start in business? And here it should be clearly understood that the work is intended to pay its way, and is not to be run "anyhow."

It is suggested, to avoid anxiety, that there should be a capital of, say, £250–£300. Of this £150 would be spent for "plant"—machine, type, &c.—the remainder being reserved for working expenses and slack times. The amount to be taken out by the partners (who will be the workmen also to begin with) to be decided by the work obtained. It would be possible for a new firm, with very little training, to pay its way, including wages, almost from the beginning—hand to mouth probably, but that would not matter. On the other hand, the chances that it would not pay at once or for many months must be considered and calculated for, or failure will be inevitable. Roughly, the first year should be a time to gain custom—regular if possible—and accumulate capital, keeping down working expenses as far as possible. At the end of that time a fair idea of the resources of the firm can be arrived at.

The type of work to be done profitably and well by a small firm is necessarily limited. Quick jobs—that is, work that can be set up, printed, and got out of the way at once—are to be aimed for. The small printer cannot compete with his larger *confrère* in the matter of pamphlets, two- or three-colour work, any big job that requires large quantities of type and a corresponding heavy printing. Where a big firm can set up and print, say, thirty-two or many more pages of type at the same time, a small treadle-press which prints two, or at the outside four, pages at once, stands no chance. Work of that kind, when accepted—as it should be whenever possible—would be sent to a large firm who would allow a commission.

Leaflets of all kinds, programmes, tickets, cards, note-headings, invitations, and small or smallest work, can be accepted and worked at a profit by the (from the professional point of view) short-trained small printer.

With regard to estimating, this is largely a matter of practice where small work is concerned, and varies according to the type of work undertaken. There is no hard and fast rule, and, although time is supposed to be the chief guide, it cannot always be considered from this basis by the small printer, as many things may interfere with his steady work at one job. It may be said, however, that after a little time the fair price to charge for any given piece of work becomes fairly easy.

There is considerable prejudice against women in the printing trade, chiefly, it is believed, because of the lower wages that they are willing to accept in comparison with the men. This is not the place to deal with the economic position of women, but much might be done to improve women's position in the matter of wages, &c., by a firm managed and owned by business women, preferably educated women who have gone through the mill themselves, and therefore realise that good work and happy employees cannot be obtained for undesirable wages.

655/25

THE EDINBURGH PROJECT.

Only last Friday was the public announcement made of the project of starting in Edinburgh a new industry for women in the making of artificial flowers, and already the interest evinced in the scheme has been very gratifying. The project is being undertaken by a sub-committee of the Women's Emergency Corps, with Lady Dunedin as convener, and it is within the commodious premises which the Corps occupies at 29 Drumsheugh Gardens, that the work will be carried on, at the beginning, at all events. The new industry which the Committee propose to set on foot, it should be clearly understood, is not to be in competition with the artificial flower-making, such as is done largely by cripple children, but is to be confined to the making of high-class artificial blossoms, such as are used in the best millinery.

A Good Opening.

That there is an opening now for this industry there can be no doubt. The Board of Trade recommends it. The Committee have had the advice of experts on the subject, and their information is that there is a good market in this country for high-class flowers. The fashion of wearing flowers fluctuates, but never entirely dies down, and last summer there was a large increase in the demand, especially for hats. The class of flower which these experts recommend the Committee to produce is the rose, sold wholesale at from 3s to 5s 9d, and their opinion is that such an industry started at this time should do very well.

Only Two British Makers.

There are only two places in this country where the best artificial flowers are produced, and both are in London. The chief source of supply is France, but it is not commonly known that a considerable quantity of supposed French millinery flowers is actually made in German factories. The really expensive flowers, however, are French, and these cost from 3s to 5s a flower. The Edinburgh Committee's project has in view the making of flowers ranging in value from 5s 6d to 15s.

One of the London organisations, the Mayfair Flowermakers, gives employment to 20 girls. The work was begun in connection with a club for poorer girls, and it has been remarkably successful. In 1913 they sold flowers to the value of £1400. The other London flower industry is carried on by the West Central organisation, which employs 24 girls, and although it has been in existence for little more than a year it has found a ready market for its work.

Artistic Work.

The difficulty in beginning a new industry of this kind is to get a good teacher. In both the London cases the girls were taught by ladies who had learnt the business in France, but it is possible that a lady of exceptional talent may be found who will import the experience she has gained in London to the Edinburgh venture. It is work that requires considerable artistic taste; and the workers must have cleverness and deftness of hands and a good sense of colouring. In that respect the occupation should appeal to better class young women who are in need of employment. There must, however, be careful training before the workers become efficient. It is stated that a clever girl will be thoroughly efficient after six months' training.

A Modest Beginning.

It is this preliminary training work which the Edinburgh Committee have in view meantime, and they are asking for £400 to tide them over that period. The Committee estimate that that sum will be necessary for the equipment, the payment of the teachers, and the payment of the pupils during their apprenticeship. They have a very confident belief that, given a capable instructress, the venture will eventually prove a success. The beginning will, however, be modest. Only a few girls will be engaged at first for instruction, and already, it is said, there have been numerous inquirers.

In flower-making the dyeing is a most delicate process. In a French factory the proprietor himself is usually the dyer. The getting of the right shade of colour is essential if the flowers are to be of real value, and so it has been proved by experience that it is more profitable to produce one flower in a large quantity than many flowers each in a smaller quantity. Only the making of the blossom itself is contemplated by the Edinburgh Committee; the making of the foliage is a separate industry that requires special machinery.

Success of Toy-making Venture.

In this new branch of the Women's Emergency Corps work, Mrs Chalmers Watson is taking a special interest, and she is greatly encouraged in her efforts by the success which has been achieved by the Corps in their development of the toy-making industry. In that department they now give employment to about 50 girls, and the toys they are making are finding a ready market in some of the best shops. Up to the present they have confined their operations in woodwork to such articles as could be done by the hand or by the fret saw, but shortly more elaborate machinery, including a turning lathe, will be at their service in the Dean Studios at Belford Bridge. The toys made are in great variety, but in each case the endeavour is made to make the articles as artistic as possible. Special attention is meantime being given to the casting of dolls' heads in an unbreakable com-

[illegible]

AN APPEAL TO WOMEN PHARMACISTS.

In this issue of the Journal, Miss Margaret E. Buchanan, whose interest in the welfare of women pharmacists is so well known, appeals to such of them as are at present unemployed to take up positions in pharmacies at the dispensing counter. There is an immediate and pressing need for the services of properly qualified persons as dispensers in pharmacies, owing to the large number of young men who have enlisted; and, as Miss Buchanan points out, an opportunity is thus provided for women pharmacists to take up their share of the national burden in this time of stress. Not only so, but many of them may thus find a legitimate outlet for their energies, such as they have hitherto failed to find since qualifying as pharmacists. It seems to be beyond question that suitable positions open to women who have passed the Minor Examination have been much less numerous than could be filled, especially in view of the fact that so small a proportion of the qualified women have been willing to go into pharmacies. But, as our correspondent "Pharmaceutria" has recently urged, this disinclination to enter upon the practice of pharmacy in the fullest sense of the term is not one to be encouraged, especially at the present time. Of the many women who are legally entitled to practise pharmacy as a business there is undoubtedly a fair proportion who also possess the ability, and they would be well advised to contemplate seriously the desirability of making this business their life work. There is no reason to suppose that women pharmacists need be less successful at the sale counter than at the dispensing counter, and the remarks of "Pharmaceutria" on this subject, published during the past few weeks, will be found deserving of the most serious consideration.

Sussex Daily News. 20. II. 1915.

EXHIBITION AT BRIGHTON.

The scheme mooted two months ago with the idea of gradually introducing the toy making industry into Brighton and other parts of the county, and thus acquiring the trade controlled principally by the Germans, is meeting with appreciable progress and the Organizing Committee of the Brighton and District Toy Making Association have every reason to be satisfied. They admit they are faced with a formidable task in commencing a new industry and they fully appreciate that some time must elapse and considerable outlay be incurred before their efforts can meet with the success desired. But the Committee have the greatest confidence in ultimately succeeding. With the idea of shewing their progress, the Association opened a two days' exhibition of toys yesterday at the Centre, 34, West-street, Brighton, and the display of goods made by the 20 Brighton girls, who are paid Trade Union rates of pay, certainly gives great hope. Of course up to the present only wooden toys can be made—goods made of metal will follow as room for development presents itself—and they were really of an ingenious and attractive description. Miss Hudson and Mrs. Toyne designed the toys and the girls cut them out—a difficult matter in some cases—hand painted and finished them. An interesting exhibit consists of figures representing farm life from farmer to labourer and from pigs, sheep, &c., to the shepherd and dogs. Then Indian babies (the Brighton mascot) have been neatly made and included in other interesting exhibits is a fully furnished model house, correct in every detail, and made by Private Borham, of the Royal Irish Rifles, and Sergeant Christian, of the 5th Dragoon Guards, while recovering their health at the British Red Cross Hospital at Hove. They had appropriately called it "Happy Hours" by reason of the fact that the hours spent at the work were decidedly happy ones. The Committee now desire to get the shopkeepers of Brighton and all over England to take their goods instead of the German articles, and while admitting there were great difficulties to surmount, the Committee are sure that the industry will be an established fact by the time the Germans again try to induce the people of this country to accept their goods. They have already received orders from Brighton, Hove and Stafford and although many influential people have taken shares in the scheme the Committee desire to secure further shareholders because money is wanted to carry the work on and to cope with every possible development. The ladies and gentlemen who have the scheme in hand are:—Chairman, The Countess of Chichester; Treasurer, Miss Horatia Seymour; Secretary, Mr. Toyne; Organizing Committee, Mrs. Sandeman, Mrs. Toyne, Miss Hudson and Miss Campion; Committee, Mrs. Otter, Mrs. Thomas-Stanford, Dr. Burnie, Dr. Helen Martindale, Miss Ionides, Miss Mavrogordato, and Miss Lawrence.

Daily Graphic 4. III. 1915.

A New Industry.

According to the "Drapers' Record," experiments with an Austrian and German cottage industry are being made in the work-rooms of the Central Committee on Women's Employment. It is that of making crochet buttons, for which there is a large and steady demand in this country. The committee are hoping to prove by these experiments that the work could be sufficiently remunerative to be worth considering as a new trade for women.

In various parts of the country successful attempts have been made to supply such things as enamelled buckles, buttons, and the like, now used so extensively for tailor-mades; and the revival, or rather greater demand, for these things from our own manufacturers means grist to the mills of our own workers.

DUBLIN DOLLS.

NEW LOCAL INDUSTRY.

STRONG CLAIMS FOR SUPPORT.

(BY OUR SPECIAL COMMISSIONER.)

In one of the private houses in Great Brunswick street, adjacent to Westland row Railway Station, is being conducted a modest industry, which has great future possibilities. When war was declared a year ago a great many dressmakers and seamstresses in Dublin were thrown out of employment, and much distress existed amongst this industrious section of the community. To assist these women workrooms were started in several centres of the city, towards the expense of which grants were made through the Mansion House Committee, from the Prince of Wales' Relief Fund. A good deal of war work was secured, such as the making of shirts and other garments for the soldiers and sailors. When this work was nearing completion several of the girls were re-engaged in the workrooms of the city, but many of them could not find work owing to the slackness of the dressmaking trade, due to the economy practised by the women of Dublin.

To meet this difficulty an effort was made to establish a toy industry in Dublin, more especially the manufacture of dolls. Under the auspices of the Women's Suffrage Movement a workroom was started in Nassau street, which was very successful, and the nucleus of a satisfactory trade was established. During the past few months that industry has been working in Great Brunswick street, where, under the title of the Dublin Toy Company, managed by Miss MacTear, assisted by Mr. J. B. Tivy, it is progressing satisfactorily on purely business lines, and is finding constant and remunerative employment for about thirty girls. The grant from the Mansion House Committee ceased in May last, and the industry is now almost self-supporting.

MAKING DOLLS' HEADS.

The principal difficulty in regard to the Doll industry in the United Kingdom has been the supply of heads, arms, and legs. These were previously supplied from Germany, and it is only recently that the English potteries agreed to experiment in the making of china heads. These cannot even yet be supplied in sufficient quantities to meet ordinary demands, and it is believed there will be a decided scarcity of dolls for the Christmas trade.

Mr. Tivy has introduced a new system of making dolls' heads, arms and legs into the Great Brunswick street factory, so that not only is he making these for his own factory, but is also able to supply large quantities to English doll makers. At the present moment he is engaged in the fulfilment of an order for one hundred gross of these for an English house, many of which will eventually find their way back to Ireland for the Christmas trade. The heads and limbs are cast in moulds, a special composition being used for the purpose. The heads are covered with two coats of a washable leadless paint, double-waxed, and when covered with wigs and dressed the dolls are, in appearance, equal to any of the cheaper quality of wax doll hitherto supplied from Germany.

At the recent Toy and Fair market in Islington, London, this Dublin doll was regarded as being equal to the American exhibits and better than the majority of the English ones. It was owing to this commercial competitive excellence that Miss MacTear was able to secure so many orders. In fact more orders were received than could be dealt with in a reasonable time with the present means available at the factory. Since then Mr. Tivy has invented some machines which will very appreciably increase the output, at the same time producing a superior article at a reduced cost. These machines are expected shortly, and when installed almost unlimited quantities of heads, arms, and legs can be supplied from Dublin.

BEAUTIFUL IRISH COLLEENS.

At the Dublin factory bodies are also turned out, and the finished dolls look remarkably well, considering that they will be retailed at from 1s. 6d. to 2s. each. The favourite doll at present seems to be a sweet little "Irish colleen," and the presentable "Irish Paddy," whilst "Highlanders" and "Red Cross nurses" are in keen demand. It is interesting to note that almost all the orders received have come from the largest English wholesale houses, whilst but little practical support has been received from the Irish wholesale factors, whose buyers are, as a rule, inclined to look askance at the new venture until satisfied that the dolls will be really saleable, and not "stock-keepers."

Under the auspices of the Mansion House Committee, which is giving financial assistance, workrooms have been established by the Sisters of Charity at Upper Gardiner

Daily Graphic
10.3.15

At first sight it seems very strange to exclude children from a place where the most exquisitely varied assortment of toys is brought together. That is what happens at the Royal Agricultural Hall to-day, when the first Toy Fair and Market ever held in this country will open its doors. Of course there is a reason. It is not for nothing that Johnnie and Alec and Freddy and Bill—and their sisters and mothers and fathers—are shut out. The Fair is for staid men who take no particular joy in toys except as goods to buy and sell. This is a trade exhibition solely. And when the buyer is bargaining for a thousand gross of, say, the latest thing in mechanical toys, it does not help matters if the British boy or the British girl bounces up, shouts "How nice!" and insists upon hearing all about the works. So far from helping, that sort of thing dislocates business.

BOOM IN BRITISH PRODUCTS.

Ever since the war the way to a boom in British toys has been steadily broadening out. If our toy-shops are full of toys to-day, depend upon it, practically everything in them is British. "Toy making was a very small industry here," remarked a member of the International Trade Exhibitions, Ltd. (who are conducting the Fair), to a DAILY GRAPHIC representative, "but since the war British manufacturers have laid down increased plant, and a lot of people have started in the toy trade who were not in it before. The result is we have got together a very excellent exhibition. Something like 150 firms are showing, of whom 90 per cent. are British. We have about twenty or thirty French firms, but they make a class of goods typically French, which is not in competition with others; and there will also be two or three American firms. The buyers will be present from all parts; for instance, I have just heard of three arrivals from Rio de Janeiro.

It is bound to be so, because, owing to the war, there is a universal scarcity in toys. Germany made some 80 per cent. of the world's toys. Of course, while we can certainly increase our trade enormously, no one supposes for a moment that Great Britain will be able to supply the world with toys. Labour conditions in Germany facilitate the low-grade goods; but when it comes to anything a little bit better we can beat Germany at her own game. Dolls we have only just started to make in this country, and the British doll is going far; while the 'lead soldiers' and the 'games' branches of the trade are expanding wonderfully. Buyers for the toy trade are at the moment starving for toys owing to the impossibility of getting them from Germany, and the object of the exhibition is to concentrate every conceivable thing they want to see in one building, so enabling them to do in a few days what otherwise would occupy many weeks."

A GREATER ONE NEXT YEAR.

Mr. W. Joynson-Hicks, M.P., will open the Fair at eleven o'clock to-day. It goes on till March 26th. Next year a much bigger enterprise has been planned, which will be called the London Fair and Market, and will occupy Olympia as well as the Agricultural Hall and other buildings from March 14th to 24th. It is to be on the lines of the Leipzig Fair—that is to say, open to the world; except that, even if the war is over, no German or Austrian goods will be admitted on any account. The organisers are deliberately making it world-representative because buyers want to see the whole world's goods, and that is why Leipzig Fair has contributed to a large extent to Germany's export trade.

The principal sections will be those devoted to fancy goods in all branches, including:—

China,
Glass and pottery,
Toys,
Games and sports goods,
Jewellery and silver ware,
Fancy stationery,
Fine art productions, colour printing,
Hardware in all its branches,
Musical instruments,
Furniture, etc.

It is claimed that never in the history of this country has an undertaking of such magnitude been projected.

That is for 1916. But meantime there is being organised for this year by the Board of Trade a sort of Leipzig Fair, only that it will be national, as its name—British Industries Fair—denotes. This is fixed to be held at the Agricultural Hall from May 10th to 21st. It is not to be disguised that there exists among some at least of the trades which have been accustomed to hold their own exhibitions, as well as among experienced organisers of exhibitions on behalf of particular trades, a feeling of resentment at the Board of Trade entering upon such work. Whether the Board of Trade will attempt to establish their British Industries Fair as an annual event is undecided. One might hazard the suggestion that they will probably not do so. But these are exceptional times, and the arrangements for the coming May Fair are sufficiently advanced to warrant the promise of considerable success. The space at the Agricultural Hall is, in fact, over-applied for.

and remunerative employment for about thirty girls. The grant from the Mansion House Committee ceased in May last, and the industry is now almost self-supporting.

MAKING DOLLS' HEADS.

The principal difficulty in regard to the Doll industry in the United Kingdom has been the supply of heads, arms, and legs. These were previously supplied from Germany, and it is only recently that the English potteries agreed to experiment in the making of china heads. These cannot even yet be supplied in sufficient quantities to meet ordinary demands, and it is believed there will be a decided scarcity of dolls for the Christmas trade.

Mr. Tivy has introduced a new system of making dolls' heads, arms and legs into the Great Brunswick street factory, so that not only is he making these for his own factory, but is also able to supply large quantities to English doll makers. At the present moment he is engaged in the fulfilment of an order for one hundred gross of these for an English house, many of which will eventually find their way back to Ireland for the Christmas trade. The heads and limbs are cast in moulds, a special composition being used for the purpose. The heads are covered with two coats of a washable leadless paint, double-waxed, and when covered with wigs and dressed the dolls are, in appearance, equal to any of the cheaper quality of wax doll hitherto supplied from Germany.

At the recent Toy and Fair market in Islington, London, this Dublin doll was regarded as being equal to the American exhibits and better than the majority of the English ones. It was owing to this commercial competitive excellence that Miss MacTear was able to secure so many orders. In fact more orders were received than could be dealt with in a reasonable time with the present means available at the factory. Since then Mr. Tivy has invented some machines which will very appreciably increase the output, at the same time producing a superior article at a reduced cost. These machines are expected shortly, and when installed almost unlimited quantities of heads, arms, and legs can be supplied from Dublin.

BEAUTIFUL IRISH COLLEENS.

At the Dublin factory bodies are also turned out, and the finished dolls look remarkably well, considering that they will be retailed at from 1s. 6d. to 2s. each. The favourite doll at present seems to be a sweet little "Irish colleen," and the presentable "Irish Paddy," whilst "Highlanders" and "Red Cross nurses" are in keen demand. It is interesting to note that almost all the orders received have come from the largest English wholesale houses, whilst but little practical support has been received from the Irish wholesale factors, whose buyers are, as a rule, inclined to look askance at the new venture until satisfied that the dolls will be really saleable, and not "stock-keepers."

Under the auspices of the Mansion House Committee, which is giving financial assistance, workrooms have been established by the Sisters of Charity at Upper Gardiner street, and also at Seville place, where a large number of girls are engaged in dressing dolls to sell at from 6d. to 1s. 6d. each. In these cases orders have been received from Irish wholesale houses, but not in sufficient quantities to guarantee any large extension of the industry. But orders are being received in bulk from across the water, and during the past week the Sisters of Charity in Gardiner street have received an order for one hundred dozen dressed dolls.

The efforts of these two convents deserve every possible support and encouragement, inasmuch as they are finding employment for a great many seamstresses who are now entering upon a dull season when employment will be scarce, and food, fire, and light are daily becoming more expensive. These are industrious, hard-working girls, who do not want charity, but employment. The time is now coming when the children will be purchasing their toys for Christmas presents, and no small girl would be so unpatriotic as ever to think of purchasing a German doll. Indeed, to make a present of a German doll would be an insult to any properly trained Irish child, and would mean that the doll would immediately be consigned to the lumber heap. Irish girls should be reminded of these Irish dolls—Irish colleens, Irish Paddys, and sweet Irish nurses—and when their attention is drawn to them they will not, it is certain, buy any other more especially if they are informed that they are designed and made throughout by Irish girls who otherwise would be without employment during the bare and trying autumn and winter months. By persisting in asking for Irish dolls the shopkeepers will be compelled to stock them, and thus a much-needed fillip will be given to a growing Irish industry. The Sisters of Charity at Upper Gardiner street or at Seville place will be pleased to send samples and quotations to any wholesale house who are interested in the Irish doll trade.

world with toys. Labour conditions in Germany facilitate the low-grade goods; but when it comes to anything a little bit better we can beat Germany at her own game. Dolls we have only just started to make in this country, and the British doll is going far; while the 'lead soldiers' and the 'games' branches of the trade are expanding wonderfully. WOMAN AND HER WORLD.

A Pleasant Occupation.

Curiously enough, since writing an answer to a correspondent last week I have met a lady decorator in the flesh. I was visiting a friend who told me how, as she was bemoaning her fate at having to leave her flat in the hands of workmen and charwomen, "the very person" to help her out of her difficulties arrived.

"Of course," said Mrs. ——, "'Lady Decorator' is rather an ambitious title, but I don't know what to call myself. Yes, I hold certificates from the Board of Education in practical building construction, and I've had five years' training under several firms of artistic house decorators." Mrs. —— has great natural taste in colour and form, and I cannot help thinking there must be numbers of women who would like expert advice in the decoration of their homes, but who are afraid to approach one of the big houses who do this kind of thing, in case the bill should be beyond their means. My friend, who had introduced me to the Lady Decorator, explained that she wished to have her flat "spring-cleaned" while she visited a friend in Scotland. One room required papering, and there was a cabinet of priceless china to be washed which could not be trusted to a charwoman.

"When I returned," she said, "it seemed as though some fairy had been at work. The flat was as clean as a new pin, every piece of the precious china had been washed, none of it broken, and the workmen had actually gone at the hour they said they would! But this was not all; the sitting-room curtains, whose faded edges had been a trial, had been turned and now look like new." Of course, Mrs. —— has been strongly recommended by my enthusiastic friend. Her latest piece of work was in a country cottage which really had to be almost rebuilt. It was "a love of a place," as they always are from the outside. Though there were only five rooms there were two staircases (two cottages having been merged into one by the simple expedient of knocking a door through upstairs), and the best and largest bedroom could only be reached by passing through another one. The window of the living-room was next the fireplace, and the door exactly opposite! The only ventilation for the larder was into the kitchen, and the only way to the coal cupboard was through the living-room. "I must say I did feel rather hopeless," laughed Mrs. —— in telling me the story, "but I took measurements and gave estimates for making the place habitable at the least possible cost. Then I remained and saw the work done, living in a cottage close by, and I was proud when it was all finished." For anyone with artistic tastes and a practical turn of mind this work is very suitable, and at present the market is not overcrowded.

While on the subject of decorations I may mention a charming and restful room I saw the other day. It was rather long, with a window at both ends. The carpet was black! This sounds depressing, but it wasn't, for there was a broad band of polished boards round the room. The paper was striped white, alternate bands of satin and plain. The curtains were quite cheap black and white striped —cotton material—and the simple furniture was covered with a soft chiné cretonne in which pale pink roses on a grey ground prevailed. One big bowl of pale pink tulips stood on a low table, and the whole room gave one an indescribable feeling of rest. There was only one picture—a beautiful etching of Rheims Cathedral as it was, and, alas! is no longer. My hostess told me that she had been amazed at the smallness of her bills, for she had had to study economy in every way.

I hear that the International Congress of Women is to be held in Holland on April 28, 29, and 30. There is something a little pathetic in the announcement that the "Palace of Peace" is not large enough to accommodate the assembly, so the place of its meeting will be announced later. The object of the congress is to advocate that women "should make some constructive contribution towards the solution of the problems arising out of the present war and the peace settlement that is to follow." This, of course, is a laudable object, but, though I yield to no one in my desire for peace, I think it is much too early to talk of it; if we must talk and write of it, let us prefix the word "honourable." I was rather shocked to hear an English woman of my acquaintance observe, "Surely Germany might keep some of Belgium as she has fought so hard." I hope there are not many of my countrywomen who share this idea. The British Committee of the International Women's Congress has offices at Queen Anne's Chambers, Tothill-street, Westminster, London, S.W., and Miss Chrystal Macmillan is hon. secretary.

L. Swaine (Wandsworth).—You do not give any address, so I am taking the postmark. Thank you for your kind letter. Pray do not imagine that I am "above taking an interest" in your affairs. Why should I be? If I were you I should get some white Japanese silk at about 1s. 11d. a yard, double width, and make a blouse with a long full basque. This will hide the deficiencies of the skirt about the waist and with a neat belt of some bright colour will look quite smart. I gather that the white cloth is quite clean and it is only the "cut" that does not please you. No, I should not attempt to "let anything in." I do not fancy it is possible to make much by the sale of Persian kittens unless they are prize bred, but I should think 10s. is very moderate for a good one, and I will mention them to my friends. I think the author you mention writes rather rubbish. Have you read all George Eliot? If not, begin with "Middlemarch" or "The Mill on the Floss." Both are entrancing and have the merit of being good literature, which the stuff you are reading now is not.

S. Flatman (Stalybridge).—Write to Stagg and Mantle, Leicester-square, London, W.C., and ask for their catalogue. They have some charming and very cheap overalls for little girls. Mention the age of the child and the colour you prefer and they will send you what you want if selected from their lists. Overalls are quite easy to make at home if you have a pattern and a machine. If you want a pattern, ask *Our Home*, 9, Essex-street, Strand, London, W.C. I believe they had a pretty and useful one a few weeks ago.

ARMY OF WOMEN NET MAKERS.

Mr. Charles Frederick Carter, the general manager of the Great Grimsby Coal, Salt, and Tanning Company, Limited, writes to the "Daily Express" on the subject of a recent paragraph headed "Net makers wanted," describing a scheme to organise women to learn net-braiding in order to undertake a contract for a supply of 20,000 hay nets for Army purposes.

"It must be brought to the notice of your readers," he writes, "that there is an army of girls and women at the various fishing ports of the United Kingdom skilled in the braiding of nets of every description, who are hard pressed at the present time to make a living. The nets of steam trawlers are made ashore by female labour; some of the women employed are widows of fishermen lost at sea, and others are old folk living in almshouses, to whom this work is given to eke out an existence.

"To give an idea of the extent of this organised labour: There are quite 500 women and girls in the port of Grimsby alone skilled in the braiding of nets, and the 20,000 hay nets mentioned would be one day's work for the principal firm, with its branches, engaged in the supply of gear and necessities to the deep sea fishing fleets."

Daily News 9.3.15

THE field of women's employment daily grows wider. One of the latest comers is the lady optician, and the wonder is that a vocation so eminently suited to women has remained so long exclusively in masculine hands. The lady oculist has been with us for some years, but the lady optician is more or less of a novelty.

Miss Isabel Bremner, B.Sc., who has just started in private practice at Parliament Hill, Hampstead, was the first woman to win the prize awarded by the Spectacle Makers' Company, and passed first on the list the Fellowship Examination of the British Optical Association in 1914. Her training under Dr. Max Coque, the eminent French ophthalmic surgeon, was followed up in the up-to-date workshops of two of the most important wholesale firms of spectacle makers.

THE REVIVAL OF BASKET MAKING

BASKET-MAKING, which is one of the home-industries now being revived in several English villages, has two great points in its favour: it requires very few tools and practically no capital. The material used is the common osier or willow, grown chiefly in the valleys of the Thames and the Trent, and a large number of cottagers and dwellers in caravans are engaged in making the coarser kinds of baskets, which are hawked about by their wives and children.

The chief centres of manufacture—London excepted—are Thurmaston, near Leicester, Basford, near Nottingham and Grantham in Lincolnshire. At Thurmaston is the largest willow plantation known. It was planted by Mr. W. P. Ellmore—a great authority on willow-culture, and stretches over 100 acres.

In London a good deal of the basket-making trade is in the hands of the blind, or partly blind, workers who are employed by the London Association for the Welfare of the Blind. Their depôts are full of charming specimens of basket work, so fine and beautifully made that it is hard to realise that the workers are without sight.

Many baskets are, of course, made of cane, which is imported from abroad, but those made in English villages are woven from the British osier, made without machinery, simply by hand.

Although as an industry basket-making is by no means dead, in some of our English villages it has languished exceedingly. The Hon. Mrs. Steward Bouverie is responsible for the revival of it in the village of Bushbridge, Surrey. Last November, a gipsy was engaged to teach a few of the villagers the art, and so successful have these classes become that a very promising industry is now in full swing. The first order of one gross of flower-baskets was delivered to Lady Scott Gatty. In the photograph on this page basket-making by the roadside is shown. London workers' wages vary from 25s. to 50s. a week.

Daily News. 9.3.15

WOMEN AND MEDICINE.

(To the Editor.)

Sir,—The Manchester branch of the Federation of University Women considers that it might be useful to draw attention to the many opportunities open to those wishing to study medicine outside London. The public, and in particular the parents of intending students, do not generally realise how widespread these opportunities are. All the English Universities admit women to their medical faculties, and in all, except London (where there is a separate School of Medicine for Women), men and women share on equal terms in the instruction provided. Information as to the Medical Schools open to women is given in the "Girls' School Year Book" (Year Book Press), and in the pamphlet on "Openings for University Women," published by the Central Bureau for the Employment of Women.

Though the Federation consists of women from all British Universities, we are in this district naturally more familiar with the special provision in the Victoria University of Manchester. The men students in the Faculty of Medicine, nearly three hundred, of course very greatly outnumber the women, of whom there are at present thirty-two; but no differentiation is made in the training, either in class-room, laboratory, or hospital. There is a close connection between the University and the largest city hospital, the Royal Infirmary (592 beds), all the wards of which are open to all students for clinical instruction, and which further sets aside a large "students' block" for their convenience.

In other great centres of population there are similar opportunities of study in the hospitals, though in some of these women students are only admitted in part. The Scottish medical centres are, of course, open to English women, and there are increasing opportunities in Ireland also. The demand for women doctors, both in England and in India, is already very great, and no one should be deterred from training by ignorance of the many existing schools offering facilities. Owing chiefly to smaller cost of living the expense of training in the provinces is somewhat less than in London.

WOMEN AS "CARMEN."

GROWING USE OF FEMALE LABOUR.

In St. Paul's Churchyard yesterday passers-by were treated to the unusual spectacle of a woman acting as vanguard while the driver unloaded a consignment of goods. The experiment is being tried by carrying and other firms in the London area owing to shortage of youths due to enlistment. Women are now to be seen in greater numbers in the London suburbs acting as "milkmen." Since the war began women have invaded the following callings usually followed by men:—

Stationmasters.
Tramcar conductors.
Lift attendants.
Ticket collectors.
Grocers' assistants.
Steel smelters.
Shop walkers.
Goods checkers.
Railway porters.
Messengers.
Railway clerks.
Ticket inspectors.
Night telephone operators.
Shell and fuse makers.
Pithead labourers.
Bookstall clerks.

In addition, women are now more generally employed in occupations like clerks and shorthand typists in place of men.

Various shopkeepers' organisations have lately been in consultation with the Home Office in view of a proposed recruiting campaign at the London shops, and it is now stated that to facilitate the release of men various clauses in the Shops Act will be suspended during the war in order that shopkeepers may be able to employ women.

WOMEN'S WORK IN THE ENGINEERING INDUSTRIES

MISS C. GRIFF, of 52 New Bond Street, W., writes us as "a woman engineer," who has herself been through the orthodox training of workshop apprenticeship, drawing office, and technical college, on the subject of mobilising the women willing to work on war service, as suggested by the Board of Trade. She asks the help of our readers in letting her know in what special work in their factories they are prepared to engage women workers, and whether there is any particular method of training they would desire to fit girls for working for them? Lady tracers and draughtswomen have, of course, been employed to a certain extent for years past, but she wishes to know also what works who have hitherto not employed them will now be willing to do so. She does not wish to add to the numerous existing organisations for women's work, but to assist in the management—under the auspices of one of them—a special branch for training and helping women to work during the war in the factories directly connected with munitions of war, and other necessary engineering undertakings.

We have made inquiries, and find that there is no organisation which does exactly that which Miss Griff proposes; the Queen's Work for Women Relief Fund, the National Political League, and the Professional Women's Sub-Committee of the Prince of Wales' Fund, all working more or less in conjunction to avoid overlapping, act mainly in the direction of making or finding work for women in distress. On the other hand, we hardly think that there will be much scope for the organisation proposed by Miss Griff, for those firms who can use female workers to take the place of male ones, would doubtless prefer the simpler expedient of first filling the vacancies with those already trained, and if more were required would then advertise for others, select likely applicants, and train them themselves. Moreover, the existing technical classes and schools are for the most part open to women as well as to men, and the fees are not large.

OFFICIAL WORK FINDER.

Miss Kelly, of Liverpool, a graduate of the London University, is the first official work finder for women in this country. She has been engaged by the Central (Unemployed) Body for London, and was one of a large number of applicants for this interesting and unusual post.

Her work consists mainly in watching new professions, helping women to qualify for careers by advice and guidance, and also by keeping in touch with private and public employers in various parts of the country.

The Manchester Courier

1/12/15

MACHINE SEWING FOR WOMEN.

WORK FOR WILLING FINGERS.

A LAUDABLE ENTERPRISE.

The task of training a middle-aged widow from a washerwoman to a valuable servant of the nation in its present crisis has the appearance of being a somewhat tall order, but the step between washing shirts and sewing shirts for soldiers has been very successfully undertaken as a result of the activities of the Manchester Society of Women Suffrage. A patriotic—as well as a sisterly—intention, a little assistance from the relief funds, and the establishment of a machine training section at the women's workroom in Heyrod-street has enabled the society to turn out up to the present about fifty women, well trained and qualified, who have gone forward into factories and workshops engaged on Government contract work. In the main they have taken up shirt stitching on piece rates, and have been able to earn wages varying between 10s. and 25s. per week.

The potential value of these workrooms during the present war, as proved in this instance, makes it a matter for regret that only one such establishment now exists out of the three which were originally organised. There is some satisfaction, however, in the possibility that the two which have been closed may reopen in the autumn.

At one time upwards of three hundred women were found work for portions of each week at 2s. per day, but during the summer months active and healthy women find little difficulty in obtaining considerable casual employment. Hence, the primary object of the workroom ceases to exist to a large extent during this season of the year. Notwithstanding this, however, between 150 and 200 women are still kept engaged in three-day shifts, thereby augmenting their earnings by 6s. per week.

The major portion of these are working on garments which are distributed free by the relief committees. Much of the material upon which they are employed is given, and the rest is bought from the relief funds. Discarded garment are always thankfully received at Heyrod-street, and are converted into articles of clothing for needy people suffering through the war. So skilled do some of the women become in the art of sewing that it is not unlikely that eventually these workrooms may be self-supporting if they are turned into commercial ventures.

When the idea of starting a machine training section was mooted, employers were not too enthusiastic in accepting women over 25 years of age, but when asked if they would engage fully trained and qualified women of between 30 and 40 they answered in the affirmative, and as a consequence useful work is being found for those who, but for the training, would have had no manner of skilled ability in their fingers. As it is those who had to exist by a little casual cleaning and washing are on the way to a tolerable living in a much more congenial atmosphere.

There are at present twenty machines being utilised at Heyrod-street, and during the period of training the women get a maintenance grant. But for this assistance they are all too old to start in factories.

Women, Work, and War.

New Industry for Women.

TOY MAKING.

(By WOMAN EXPERT.)

(SPECIAL.)

It is well for us to remember that we have got to capture other things besides German trenches. We have got to capture, or recapture in many cases, trades and industries which to our detriment we have too long left at the mercy of German exploitation. With peace, the material peace of a nation, we bracket prosperity, and the peace and prosperity of this nation after the war will be measured by its productiveness. The return of the soldiers will cause almost as great an upheaval as their going. The great army of wage-earning women which the war has called into existence will be set aside when the men return to their civil occupations. Munition works, as far as women are concerned, will cease, and it will be a considerable time before the trades from which these workers were drawn will resume their normal course. It is necessary, therefore, to look ahead, beyond the present artificial demand for woman's labour, to something that will provide a livelihood in the future

One of the trades which have passed out of this country into German hands is toymaking. It is not a very big industry—not to be compared with the chemical, textile, or mechanical industries which she has drawn into the huge net of her industrial organisation. Still, it helps to fill the German national coffers to the extent of many thousands of pounds annually, and it provides employment for a large number of women and girls.

A CARNIVAL OF WORK.

I wish I could show my readers the picture of Sonneberg, the headquarters of the doll-making industry. To come into the town at the end of a winter's day a traveller might well suppose that high carnival was being held. But it is a carnival of work. The factories are at their busiest in anticipation of the feast of Noel. One factory alone presents a face of four hundred windows, all brilliantly lighted, and all hands are working overtime. I would like to see a doll factory of the dimensions of this one erected in our own district, and I see no reason why it should not be.

Last Christmas this generation of youngsters played for the first time with English toys. The larger wooden toys were turned out by the cabinetmaking firms, whose workers in many cases would otherwise have been unemployed. These toys presented many characteristic features. They were stronger, solider, and altogether better made than the German toys, but not so attractively finished. There were also an immense number of grotesque plush toys, and these, too, were English made, and provided employment for numbers of women whose regular occupations were adversely affected by the war. These plush figures took the place in the shop windows and subsequently in the children's Christmas stockings of the blue-eyed dolls of Sonneberg; but in the children's hearts I do not think the most desirable of Fifis will ever replace the real doll, in whose contour and colouring a little girl sees the ideal counterfeit of babyhood.

These jointed, composition dolls, known in the trade as articulate dolls, have hitherto been entirely a Continental product. They were made in France orjginally; but in the Franco-Prussian war the Germans destroyed the French factory after first securing the moulds, which they took back with them to Germany. Afterwards Germany entered into brisk competition with France in making these dolls. Their productions were inferior to the French, but they were cheaper, and gradually the German doll captured the European market.

WHAT LIVERPOOL IS DOING.

When supplies were cut off from Germany it might be supposed that it was an easy matter for us to manufacture the dolls in this country; but the matter was, in fact, not quite so simple as it appeared. The process was practically unknown. There were no moulds in the country, and the chances of being able to import them were remote. However, these difficulties were gradually overcome, and there is now in Liverpool a factory in full working for the production of articulate dolls. The work is almost entirely done by girls, and is easily learnt by an intelligent worker. I am told that in the simpler processes a fair amount of proficiency can be gained in three weeks, though naturally there are some parts of the work in which highly-trained skill and dexterity are essential. I have seen the work of the factory, and have marvelled at the many processes involved in making one doll, and also at the facility with which the girls mastered their work. In one room they are engaged at lathes turning neatly-fashioned wooden limbs from blocks of wood; and this, as far as my experience goes, is a new form of labour for women in this country. Another process, which needs skill and judgment, is the making of the plaster casts in aluminium moulds. The body is first cut and moulded in cardboard, the two halves being stitched together with wire. The limbs, on the other hand, are plaster on a foundation of wood, and these have to be fitted together in a manner to ensure the flexibility of the joints, which is characteristic of the articulate doll.

The making of the heads is even more intricate, and for the painting of the faces some artistic skill is essential. This making is a separate section, and with the gumming on of dolly's hair, after finishing touches have been given to her eyelashes and her pearly teeth, the dollmaker's task approaches completion. There are still, however, several processes to go through before the doll is ready to accompany the commercial traveller on his rounds in search of orders. A good many of the dolls are provided with a single garment as a step towards a fully-clothed career. This provides work for the machinist. And there is boxing, labelling, and packing to be done.

It is intended eventually to extend this enterprise.

ANSWERS TO CORRESPONDENTS.

S. S. (Preston).—I am afraid you would have a difficulty in obtaining a post as cookery school teacher to the County Council unless you first qualified by taking the diploma of the National School of Cookery, or trained in the Council's own schools. Naturally, they require highly-qualified instructors, and private experience would not be considered sufficient.

G. E. (Bolton).—Certainly the remuneration offered did not err on the side of generosity. As distance is no object, you might get munition work at Barrow, at Messrs. Vickers' works. I should write asking if they have vacancies. The pay is good.

C. H. (Liverpool).—It is difficult to get any sort of home work that really pays for the labour involved. A great deal of knitting is now done on machines. You might apply to the Women's Work Committee. They have a depot in Bold-street, Liverpool. But I am afraid I cannot hold out much hope for work of this kind. Could not some of your former patients be persuaded to give you orders?

Athletic Girl.—As I stated in my article, it is proposed later on to open the munition classes to women, but not at present. I do not know of any works in your neighbourhood employing women. They might give you some information at the factory in North Haymarket, but they are not employing women there.

S. M. (Hargrave).—Apply to any of the leading steamship offices in Liverpool for the position of stewardess. But, of course, you understand that this work would take you much away from your home. You could become a waitress and go home every night.

E. M. (Liverpool).—The Technical Education Committee do, I think, issue a higher certificate for advanced domestic economy, but it is vacation time now, and I cannot get any precise information on the subject. It seems to me that your training and experience entitle you to one of the higher secretarial posts, either to an institution or a professional man. You would have to add shorthand and typewriting to your qualifications, but you would very easily master these two subjects. You did not enclose the cutting mentioned, so I am unable to say anything about that matter. Write again if I can help you further.

A. M. (Myrtle-street).—It appears to me that the position you could most suitably fill would be that of housekeeper in the country, where your general domestic knowledge would be useful. Advertise in the "Echo" and watch the advertisements in that paper

WOMEN'S WORK IN WAR TIME.

THE TRANSFERENCE TO NEW TRADES.

By MARION PHILLIPS, D.Sc. (Econ.)

The importance of women's work in industry has never before been recognised as it is to-day. On all hands the demand for their labour is marked, and on all hands one hears of the unemployed woman as a misery of the past. The figures recently given in the House of Commons, however, show very plainly that the unemployed woman does still exist, and those with practical experience know that with the rising cost of living her unhappy lot has seldom been so hard. A few days ago there were over 43,000 women and girls on the live register of the unemployed at the Labour Exchanges. At the same time there were more than 85,000 on the special war register, and these two registers would not be an exhaustive list. The continuance of the demand for work and the coincident demand for workers, therefore, call for some explanation.

The chief explanation for this lack of equilibrium appears to be the desire of every employer to get the pick of the industrial market. Whenever a trade which employs women becomes especially busy, as so many are now with large war contracts, the need for new workers grows, and they must be obtained from those who have previously followed other employment. The new hands have to be taught the work and the employer demands that they shall be as young as possible and shall begin at a learner's wage. His desire is for the quick, easily adapted worker and the cheap worker, and the result is that a girl under 25 can easily enough get a job if she is willing to start at small wages. But the proportion of women and girls living at home is higher the younger they are, so that the ones able to take a learner's wage, which is not a living wage, is greater amongst the younger workers. The older women more often have dependents themselves, or, at best, are solely dependent on their own exertions. Thus, even when they might be easily adapted to a new trade, they are unable to take a low starting wage.

Too Old at 36 !

But, apart from actual skill and pay, there is a very great prejudice against the older worker by reason of her age. A young and capable woman, e.g., has been told on sight that she was too old to learn a new process, though her age was no more than 36. And she did not look that! "Go along home, mother, and send your daughter," is a frequent reply to the unemployed woman.

There is another danger in this policy of taking the best worker and the cheapest worker. Every trade has its own peculiar needs and acquired skill and its status and wage standard. From the national point of view, the transference of workers should be so far as possible of advantage to the worker herself, and cause neither loss of the acquired skill nor deterioration in status and wages. But the unchecked competition for the young worker and the throwing aside of the older woman pays no attention to these national aspects of the matter. Much might be done. We know what trades are slack, and, roughly, the number of women who can be spared from these. We have information as to the processes and skill, and to some extent of the wages and conditions in both slack and busy trades. The trade unions, the Labour Exchanges, the Trade Boards Department, the Home Office and the Census of Production Department all have information on these points. What is wanted is the co-ordination of their knowledge and upon that the consideration of the best means of transference. The lines upon which employers should recruit their workers might be laid down, and through authoritative suggestion, without compulsion on the part of Trade Unions and Labour Exchanges, a very great influence could be exercised and something of the present waste of the strength and skill of women workers could be prevented.

The Need for Forethought.

The need for forethought is very urgent. In many war industries, girls and women are working at exceedingly high pressure. The prohibition of night work is abrogated,

SELF-HELP IN THE ISLE OF MAN.

SOCK FACTORY ESTABLISHED IN DOUGLAS.

A correspondent writes:—

Efforts have been and are being made in the island itself to assist Manx people hard hit by the failure of the visiting season. There is a large preponderance of females in the population of 50,000—Manxland has virtually no industries, and of the men of service age 2,000 have joined the King's forces—and a large section of the girls and women are idle and largely penniless. Many of these are bound to remain on the island by family and other ties.

Fortunately, there happened to be stationed in Douglas a minister of the Wesleyan Methodist Church, the Rev. C. Copeland Smith, who had already had experience of relief work in connection with the Birmingham and West London Missions. Mr. Smith gathered round him some of the influential laymen of his church and opened a factory for sock-making at the Nobles Hall, Douglas. A Leicester man himself, he secured the assistance of experts in the trade, with the result that as the fruit of nine weeks' work he has now a fully fledged factory, employing about 75 girls, and he has secured contracts from the Government for the supply of socks to the army, navy, and the alien detention camps, in the execution of which he expects to find employment for fully 200 girls and women during the coming winter months.

The Manx girls are taking to the work with zest, and those who have had a few weeks' practice are turning out as many as two dozen pairs of socks a day. The work is being done on knitting machines, under the supervision of an expert supplied by a very well-known firm. The success achieved by Mr. Smith has exceeded the highest expectations, and not a few of the girls are taking home with them more than 15s. a week already for 5½ days' work of eight hours a day. To carry out the undertaking a private company has been formed, called the Manx Industries Association, Limited, but it is expressly provided that no dividends are to be paid on the shares of the company. An interesting branch of the work is the manufacture of socks from Manx wool, and many friends on the mainland are supporting the effort by buying Manx socks for their soldier relatives as well as for private use.

Mr. Smith's main difficulty has been to find capital to carry on this useful piece of work. Each machine costs about six guineas, and many local people who would gladly assist are so seriously affected by the war that they are unable to do so. It will not be difficult for readers to appreciate what it will mean to the people of Douglas to have from £4,000 to £5,000 in wages paid to them during the coming winter.

be prevented.

The Need for Forethought.

The need for forethought is very urgent. In many war industries, girls and women are working at exceedingly high pressure. The prohibition of night work is abrogated, and in spite of its bad effects, especially on young workers, we have to risk the results because of the national needs. But in addition to the night shift, there are a very great number of female workers who are employed under special permits from the Home Office for extraordinarily long hours. Even where permits have not been obtained, the Home Office recently failed on one occasion to get an employer fined by the magistrates for working women as long as twenty-four hours. At the present time it has proved almost impossible to prevent the lengthening of hours. The pressure of work and the shortage of new workers bring about this result. But the consequence will be the breakdown of the present inadequate staffs and then still further pressure in the future. The careful recruitment on sound principles of new workers from the trades most nearly akin to those requiring them is the only safe way of staving off this time.

Scientific transference, however, means the migration of workers from districts where industry is slack to those places where they are required. To carry this out with the greatest economy of working power means that the housing of the new workers must be as good as possible and compensation for removal as well as lodging money must be considered. For women, these matters are of additional importance for their low wages make them less desired as lodgers, and the special care necessary in housing young and inexperienced girls is too obvious to need pressing. Again there is needed here the authoritative suggestions and supervision of a Government department acting in consultation with the trade unions in order that the welfare of the industrial women may be safeguarded as well as the immediate needs of the employer.

The future depends more and more upon the women of the nation. The nation's hopes industrially and racially must come to rest very largely upon them, and it is of the first importance that the community should realise without delay the need to conserve both their health and industrial efficiency.

The Common Cause

FIRST-HAND EXPERIENCES.

VI.—Engineering as a Profession for Women.

Owing to so many women of all classes having been brought into contact with machinery since the outbreak of war, their interest in engineering has greatly increased. It can now be more safely considered as a coming profession for our sex, particularly in special branches; also in the less-skilled grades of an engineer's work, there is a large opening as a trade for women who are clever with their hands and have a certain amount of initiative. Personally, I consider these opportunities will continue and probably increase after the war.

An article in a contemporary somewhat confused the professions of architecture and engineering; it should therefore be clearly understood that the following remarks apply solely to the latter, except in so far as civil engineering and mechanical draughtsmanship apply to anything similar in an architect's career.

No one should think of taking up engineering as a profession in any one of the branches—civil, mechanical, or electrical—unless she is prepared to go through the very hardest theoretical and practical training, and, for the latter, nothing can ever take the place of going through the "shops"—that is, serving a regular apprenticeship in proper engineering works. Up to the present this has been the great stumbling-block in our way of progression in this fine profession, but conditions have changed so drastically that this may not be so difficult of attainment in the future.

From a good deal of experience in advising women upon adopting engineering as a career, and from teaching them, I am sorry to have found a bad flaw in our sex. The flaw is this, that women are not content to spend either the same time, money, or patient concentration upon their training as boys and men are for their professions. They are offended when taught in the same way as a boy would be for his "shop" experience, and yet, *until* they start, this is what they ask for! Girls want to run before they can walk. The theoretical side being usually learnt at a college, they cannot escape the prescribed period of training. It is the practical teacher who has the difficulty in making a woman-apprentice realise that to become anything approaching an efficient engineer of any sort she must spend weeks and sometimes months learning what appears the most insignificant work. Women do not like, for instance, to be put, day after day, to do filing. They think that a few hours should suffice, and soon want to "turn handles and levers." This was the reason given me by an engineer as his objection to teaching women. We should take this as a warning, and, unless possessed of patience and great perseverance, select one branch of engineering and specialise on some particular work in connection with that branch. In this way the interesting part of one's work can be reached a little more quickly. However, for even the simplest course of training to learn things which barely come under the category of "engineering," such as "running repairs" to motor-cars, there should be no escape from spending at least double the time the pupils consider necessary to learn the simplest work.

Although the foregoing remarks cannot be impressed too strongly upon girls who are considering any branch of engineering as a profession, there is no need for those who want to work in one special branch of the engineering trades (either for war work or permanent employment), to think that a long and arduous training is imperative for them. The special short courses of training now being arranged for these workers should be ample for their requirements. The principal objective in these cases is that the intending worker should have an opportunity of testing her aptitude for the work she wishes to undertake; also, that she should be able to enter the works as a trained operative, avoiding giving managers and foremen a bad opinion of women's work.

As in many other professions, England is one of the last countries to acknowledge that women can enter some of the departments of engineering quite successfully. Russia has led the way for some years past. In that country women have been admitted to many engineering works as designers and draughtswomen. A Russian lady in England has recently been working at the study of mining engineering; and yet another of her countrywomen carried off the prize position in a competitive examination with men for a post as road-engineer.

In Switzerland, the U.S.A., and Canada women are working as engineers. Fortunately, even in our conservative British Isles, there is no definite bar to our entering the profession, but we suffer from the great drawback of not being allowed the same letters after our names, by not being permitted membership (on the same lines as men) of the principal engineering institutes, with the exception of the Institute of Electrical Engineers.

The higher, or more theoretical, degrees of B.Sc. and D.Sc. for engineering are granted to women by most of our Universities, with the exception of Oxford and Cambridge. At the latter ladies are allowed to work in the engineering laboratories, but they are not granted degrees. The London City Guilds, and Board of Education examinations are available, and were the first boards I personally tested. They set up no objections, and I obtained my certificates on the same terms as ma students.

I will not enter into the subjects necessary to study f degrees and certificates, as they are all fully detailed in t various syllabuses. After a good course of training has be completed there are numerous openings suitable to the pa ticular capacities of the individual. Those who have go mathematical qualifications should direct their attention to ci engineering or draughtsmanship and designing in all branche On the scientific side there are, or should be, opportunities f work in engineering and metallurgical laboratories, and lecturers and laboratory assistants. For the more practica openings are daily occurring now as mechanical managers lady farmers, manageresses of printing works, steam and elect cal laundries. There is also work, eminently suitable to femini hands, in the repairing of electrical instruments. Space forbi at present more detailed description, but full particulars ca I believe, be obtained through the Women's Service Depa ment. 58, Victoria Street, S.W.

C. GRIFF.

Daily Express

NEW TRADE FOR WOMEN.

Women have invaded many industries, but perhaps one of their most remarkable feats has been achieved in the shoe trade, where they have successfully taken up "clicking."

"Clicking" is the cutting out of boot and shoe uppers, either by hand or by means of a press. The work calls for more skill than any other process in connection with the making of boots and shoes. Skins vary greatly in texture, substance, colour, and quality, and great discernment is necessary in cutting them up, or much valuable material may be wasted

Formerly a youth would not be permitted to cut "outsides" until he had been apprenticed for three or four years. Now in some midland factories girls have been doing the work after a few weeks' training, and doing it well.

Scarborough Mercury
29/1/16

NEW SCARBOROUGH INDUSTRY.

NET BEATING ONE OBJECT OF LATEST COMPANY.

WORK FOR WOMEN AND GIRLS.

There is no diminution of enterprise in connection with the Scarborough fishing industry and the list of companies recently formed has been added to by the Imperial Steam Fishing Company, for the acquisition of trawlers and drifters.

A particularly interesting and important feature of the new company, the offices of which are 3, Sandside, is the intention of the promoters to establish a new industry here in the shape of net beating, which would employ a number of females. In Lowestoft and Yarmouth many women and girls are thus employed, and with more Scarborough craft now participating in the herring fishing, it is thought the time is opportune for establishing a net-making industry.

Many will hope that the new project will be a success, for industries at Scarborough are all too rare.

As those interested in the new company (one of the principals of which is Mr. Richard Crawford, well-known in connection with several local fishing companies) are, for the most part, residents of Scarborough, operations will be carried on here, so far as the making and storing of gear are concerned, although the boats may follow herringe.

Beating and braiding nets formerly occupied some workers here, but of late years it has not been carried on to any considerable extent, although in the course of a herring season many are worked here, and, of course, many trawl nets are used all the year round.

IN UNIFORM.

EVOLVING AN INDUSTRY.

When a great firm of clothing contractors employing some 3,000 hands, and estimating its Army requisitions in millions, thinks it worth while to open a new department to deal solely with the demands for uniforms for women, it is obvious that a new branch of industry is coming into existence. The growing demands in this direction are convincing testimony of the extent to which women are taking the places of men, not only in tram and railway work, but in many other fields of labour. Before long, for example, we may look for women to come to attend to our gas-mantles and burners under the maintenance system that is so convenient. The Gas Light and Coke Company is organising a feminine staff under excellent conditions of care for the girls, over whom there will be a lady superintendent responsible for their health and well-being.

One after another of the railway companies is extending its employment of women. On the entire system of the Underground tubes they are to be found in all sorts of capacities. In the provinces the movement is even more advanced, and the chief municipalities are putting women into every capacity they can possibly fulfil. Large firms require suitable attire for their feminine messengers, lift attendants, commissionaires, and light porters. So far the Post Office only supplies its post-women with "bad weather wear"—that is to say a mackintosh and tarpaulin hat—but as the number increases of women employed in the delivery and collection of letters, it is likely that they will be called upon to assume some uniform.

QUESTION OF DESIGN.

In a large concern like a tramway company there is always one officer specially charged with the duties of maintaining the supply of uniforms, issuing them as required, and seeing that any modifications that may be desirable are carried out in future orders. As may well be imagined, some of these officials viewed the task of designing or even ordering a new equipment for the women they were about to employ with something like consternation. They felt that in a matter of this kind even the wife or sister would not understand the practical and technical details that would have to be fully considered.

Hence most of them have come to this particular firm as doing the largest civilian uniform work in London, or to one or other of the well-reputed houses, and laid the problem before them. They could indicate the distinctive features that marked the uniform of the men, and, of course, the women would have the same buttons and badges. What was wanted was something womanly, equal to hard wear in all sorts of weather, and constituting no hindrance in the exercise of duties.

Then it was that the lady's tailor, accustomed to meeting the needs of various kinds of sport, could be called in. He understood matters as to the length and fulness of a skirt which the non-expert would never have realised. He knew those little touches that make a coat look smart and trim where without them it would be commonplace, and even dowdy. The introduction of colour in pipings and revers, the sparing use of braid, gold, silver, or black, the slope of a collar, the position of a pocket, all had their due consideration as a part in a whole, and as a result the uniforms that are now coming into wear are far in advance of anything of the kind yet attempted. The great-coats designed for the women conductors of the trams owned by the greatest municipality of the Midlands are smart enough to cause pangs of envy among many of the lady passengers. These really handsome coats are of the best heavy dark blue cloth. The shapely collar and cuffs have effective touches of scarlet, and the large gold buttons, with their cipher, are handsome and good. A half-belt at the back holds in place the pleated fulness. For fine weather wear the blue serge uniform has a well-cut Norfolk jacket.

ACCESSORY WORK.

The largest order yet placed at one time for women's uniforms was for 300, and several of more than 200 have been fulfilled. It follows that such work has been of value in readjusting labour displacements due to the greater economy that ladies are exercising in the number of tailored dresses that they order. The workers who specialised on good-class coat and skirt suits have been able to turn to this, and a walk through the work-rooms was enough to demonstrate the excellence of the attributes that is put into these uniforms. In one section there was an interesting glimpse of the dexterity with which some half-dozen girls were working in gold thread the device that will appear on the collars of the women who are to be employed by an important water company in one of the Eastern counties.

Nor does the work end with the making of the skirt, with its coat or tunic. The cap or hat is a very important accessory, and the latter is [illegible]

Nor does the work end with the making of the skirt, with its coat or tunic. The cap or hat is a most important accessory, and the latter is being more and more widely adopted. A neat felt, with a round crown and a brim that can be adapted to requirements, is generally liked better in conjunction with the average coiffure than the peaked cap, which is not always either becoming or easily put on. For some employments the uniform outfit extends to underwear, as it is obvious that frilled underskirts might constitute an actual danger running up and down the steps of a motor-omnibus.

There is no difficulty whatever in inducing girls or women to wear such uniforms. They are quick to realise their comfort and their appropriateness to the task for which they have been devised. In them, too, the wearer realises a kind of reliant authority that she has never fully felt before. What their future effect on practical working dress may be it is too soon yet to speak. But in other circles of women workers, as the members of the Voluntary Aid Detachments, the Women's Ambulance Reserve, and those who don cotton overalls and long linen veils over their hair in the various centres from which surgical requisites for the military hospitals are turned out, the pretty and easily assumed rest-gown is coming into importance.

WOMEN IN BUSINESS.

It transpired at an informal conference held at Brighton this week, under the presidency of the Mayor (Alderman J. L. Otter), that a circular had been issued by the Home Secretary suggesting that, in view of the extended employment of women in business establishments during the war, and possibly after, a system of training in commercial methods and practice should be instituted at municipal technical colleges or similar institutions. In explaining the object of the gathering, which was representative of the leading establishments in the borough, the Mayor mentioned that, as at present developed, the idea was to form two classes, the first for instruction in clerical work, the students being expected to qualify in about six weeks; and the second in phonography and typewriting, with a course of two months' study of six hours per day. A committee was appointed to take the direction of the movement.

During the discussion it was suggested that the first step was to ascertain from the returns of Lord Derby's scheme of recruiting what class of clerical assistance was most needed to replace the men who had joined the colours. This, it was thought, would enable competent judges to form an opinion as to the best kind of training to pursue. A lady present took the view that facilities for business education should not be restricted to young girls. "Women with good education," she added, 'should have an opportunity to qualify." The representative of the local Labour Exchange gave some interesting information tending to dispel a popular illusion. The demand for female assistants, he assured the meeting, so far as his experience went, was never equal to the supply. At his office 290 girls had registered, and of this number only ninety had been placed. Finally, a bank manager mentioned his experience of female clerks in such institutions. At present they could only discharge the duties of junior clerks, and he had far more applicants than vacancies. Personally, he thought the time when female cashiers could be usefully employed in banks was remote.

The Queen
18.3.16.

Women are being mobilised more and more for factory work, and recent pronouncements by members of the Government show that the substitution of women for men will have to increase rapidly. But one serious difficulty in this connection is the lack of mobility of such labour. For a long time past there has been talk about the lack of mobility in the supply of male labour, and the Labour Exchanges have tried to remedy it. The case must surely be worse with regard to female labour. In the last resort men are more accustomed to moving about; and at need can leave their home and family in one place and take lodgings in another. But women, especially married women who are now being drawn back into factories and works, cannot so easily transport themselves. Those who have families cannot leave them entirely; while for those who have not, and the unmarried women, the question of lodgings is not so simple as it is for men. There is undoubtedly a large quantity of potential female labour in a hundred small towns all over the country; there would be a surplus in such places even if women's work on the land were thoroughly organised and efficiently used. But how is such labour to be moved to the great manufacturing places? It looks as if some Government system of housing and providing for women workers will have to be evolved.

The woman house agent has long been an accepted fact in Canada, where she buys and sells land; whilst women lawyers do the conveyancing. In this country the idea is somewhat novel, although the work is peculiarly adapted to a woman's capacity and experience. The prejudice against feminine competition in the house agents' business has been very hard to break down, but that this has been satisfactorily overcome is proved by the interesting fact that an agency has lately been started in the West End of London by some enterprising ladies who undertake considerably more for their clients than do the agents of the opposite sex. The ladies personally inspect all houses and apartments on their lists, thus saving house-hunters many unnecessary journeys to unsuitable places. There can certainly be no doubt that the woman's point of view will be most useful in this profession. When one thinks that it is women who have the management and government of houses, it is really rather extraordinary that the letting of houses should have been for so long an exclusively masculine occupation.

And why not the woman architect, in these days when so many women are finding work for themselves? We seem indeed to have heard of one woman not in business by herself, but as assistant and partner in a firm of architects. In this profession, even more than in house-letting, women should surely find scope. There are endless details about the planning of a house of which only a woman can really appreciate the importance. One is inclined to wonder whether any woman has ever lived in a house without seeing a score of ways in which it might have been improved from the housekeeping standpoint in such matters, for instance, as cupboards, passages, stairs, the height at which shelves are put, and so on. Very few men would have practical notions on such matters, and every woman would have. There is no obvious reason why women should not undertake the whole business of architecture. But even without all the technical training necessary for that, it would be possible for women to be associated with firms of architects, the men doing the parts that require technical knowledge, and the women being partners in the planning and arrangement of the house.

NEEDLEWORK FOR THE WAR.

HOW TO KEEP UP THE HOME IN TIME OF STRESS.

By MRS. LIONEL BARLOW.

"Night work only, 7 p.m. to 7 a.m."

The voice is not exactly harsh, but it is businesslike and final. The tired-looking woman to whom it is addressed falls back to the little queue outside the big West End warehouse. "How can I take it?" she asks, speaking her thoughts aloud, "and my four children at home! And the labour exchange people made me so sure of this." There is a momentary murmur of sympathy among the women.

"Have you tried Westminster, missis?" a sympathetic voice suggests timidly.

"I have tried everything, and this was the last. Westminster! What's that?" Her neighbour told her, and that is how she came to us. This is her story. It is a sample of scores.

Before the war her husband was a solicitor's clerk in the City earning his regular £4 a week, and keeping up his modest home in a southern suburb. There came the call of King and country, and he accepted. At first his firm generously supplemented the Army allowance to his wife and family with thirty shillings a week. With this they were able to carry on while he went off to fight in Flanders. But time went on, legal business languished, and the firm had to reduce their allowance to six shillings. This meant that the little home had to be sustained on thirty-two shillings a week, a thing manifestly impossible.

HOPELESS QUEST.

The wife bravely looked around for means of earning more. Were not women in demand? She applied in this direction and that. Everywhere it was the same. The sort of work afforded would take her away from home all day or all night, and the pay was too small to enable her to leave a substitute; even if any substitute can take the mother's place.

It was when she had reached the verge of despair that the unknown sympathiser recommended her to come to us—the Needleworkers' War Aid Association. She has just brought me a pile of shirts, beautifully stitched. They are the regulation Army shirts. She has been doing this for us for several weeks, and taken away on an average sixteen shillings a week.

We have a steadily increasing number of women on our books, turning out splendid work, enabled to retain their own homes, conscious that what they are doing is not only keeping their end up while the bread-winner is away, but they themselves are performing an actual service to the State as essential in its way as munition-making.

Our association not only keeps homes together; it prides itself on the high standard of work turned out. The certificates on our office wall tell their own tale. Out of one order for 11,000 shirts only twenty-eight failed to pass as perfect, and they had slight defects that were easily remedied.

HONEST PAY.

The best class of Army shirt making forms our principal supply. The pay is fair and right. According to her ability and the time she can give when home and children have had her necessary attention, a woman will sit at her machine and make that addition to her weekly income which will enable her to retain her position in the world.

Each of these women is a tiny capitalist. She has saved and has bought her machine. It is due to her that her capital should bring its return. It is due to her country that her labour and her machine should produce the munitions of war. She is, in her way, as much a maker of munitions as the woman

her machine. It is due to her that her capital should bring its return. It is due to her country that her labour and her machine should produce the muniments of war. She is, in her way, as much a maker of munitions as the woman who works at a lathe in the workshop. The clothing of the soldier is as necessary as the weapons he carries. So, too, alas! is the equipment of the hospital to which he will be taken when his poor body is bruised and broken.

The equipment of the hospitals provides another class of work for us, and several show the value of it. We have done much for King George's Hospital, and at the Star and Garter there is practically nothing in use made by the sewing machine which has not been stitched by our home workers.

There is not one woman employed by us who is suitable for factory life, not one who could spend the long hours of an ordinary day away from her home. Collected and organised by us, these women now form a body of labourers whose productive power must not be despised, but if we are to keep them together as a productive body we must have funds.

SPLENDID WORK.

The question may be asked why, if our work is done for the Government and Red Cross institutions at fair rates, we should need outside funds at all. It is true we do not want very much, but some we must have if this splendid work which has gone on increasingly from the beginning of the war is to continue.

Our work has to be, and is, first class; but we do not—as the ordinary business manufacturer must—select our workers or turn off those who are slow or need supervision. We make the best of all who need our work, improve their standard if not up to ours, and speed them up as much as possible.

The ordinary small dressmaker, with one sewing machine (often a hand machine) cannot possibly compete in pace with the factory hand working at a power machine. The latter often do one minute part of a garment, the former do the whole. Nearly all our women have children or delicate relations to look after, and their usual work is paid on a different scale from that of the ordinary factory hand. But it is much higher class work, and in peace time is much better paid. Their homes are in proportion to their peace-time earnings, and our aim has always been to enable them to maintain these homes.

Subscriptions in aid of the Needleworkers' Aid Association should be addressed to Mrs. Lionel Barlow, hon. secretary, 14, Great Smith-street, Westminster, S.W.

NEW SPHERE FOR WOMEN.

RE-ESTABLISHING A LOST TRADE.

By C. HYATT-WOOLF, F.R.P.S.
Editor of the "Optician and Photographic Trade Journal."

War is even a mightier leveller than poverty. It promises to obliterate sex distinction. It has compelled women to enter on masculine occupations, hitherto closed to them, and where in some cases they may remain, side by side with men, long after the cessation of the conditions that dragged them from the inaction of their domestic obscurity.

One of these occupations where permanency of tenure can be expected is the making of optical munitions. After the war they will be otherwise known, but woman's handiwork can find a permanent place in the industry. Hence, while the choice of war work is wide, the optical craft should especially commend itself to women. Some forced industries will cease to crave their assistance because they must wither or, peradventure, die. Quite other conditions attach to the work of the optical and scientific instrument-maker. The reasons can be simply stated.

The world has hitherto looked largely for its optical supplies to Germany. Our country, while initiating the very work out of which the Teuton has realised fame and fortune, has itself been one of her biggest patrons. Germany's exports to other countries with which we trade have been out of all proportion to ours. At the outbreak of war the Government, as one of the consequences of our reliance on Germany, was nearly stranded for optical military supplies.

A GREAT REVIVAL.

The British optical industry rose nobly to the occasion. Our optical manufactories are to-day more productive than they have ever previously been. They are still expanding, and, with proper fostering—educational, financial, and economic—they promise to equal in output the best German efforts. The future may turn, however, entirely on the labour question. There is a serious shortage now, with the result that the Government, in order to protect our military necessities, has been compelled seriously to circumscribe the exports of optical and scientific manufactures.

Apart from our home consumption, there exists a great foreign market keen on buying from us, but which can only be partially supplied. Russia herself would be one of our best customers could we deal with her needs. Before the war she was almost entirely catered for by Germany. The same applies to the South American States and other important countries.

It is clear, then, that the war has created a vast opening for our optical trade in the world's markets, and that it will be a permanent one is likewise plain. At present, therefore, this fascinating craft affords profitable and patriotic work for women, with the added advantage that when the purely war factories are closing their doors to them, those of the optical industry will remain wide open. Were all the optical craftsmen who have gone to the front to return to the industry, they would not, in all probability, even now nearly suffice to fill existing gaps.

NATIONAL NECESSITY.

In fine, women who engage in the making of optical munitions, and receive the technical training which this implies, will not only help the conduct of the war, but will furthermore be in a position to aid the industrial campaign that

SCIENTIFIC WORK FOR WOMEN.

SIGHT-TESTING AND ITS OFFER OF A CAREER.

By C. HYATT-WOOLF, F.R.S.L., F.R.P.S.
(Editor of the "Optician.")

A recent article in the "Daily Express" on "A New Sphere for Women" has evoked correspondence which shows that, with the existence of an intense desire among women to help their country and themselves, a considerable number of such women are not, for one reason or another, well adapted for the suggested work of optical munition making. In the following article Mr. Hyatt-Woolf shows that the scientific instrument industry covers so wide a field that there is room for all who desire seriously to take it up.

The woman who imagines the labour of the factory would be too arduous, or the demand on mechanical dexterity too exacting, will find in the prescribing and fitting of glasses to correct errors of vision a pleasant and profitable mode of applying her activities. Not only so, but male Army ineligibles might do worse than direct their attention to this semi-professional calling. The need of workers in this department of the industry is great, and the service to the land would be proportionately valuable.

Rightly or wrongly, the tribunals have levied a much heavier toll than was anticipated on the sight-testing rooms of ophthalmic opticians, and the scarcity of qualified men and women has, therefore, become most marked and serious. The country cannot do without them. Wearers of glasses are to be found in every station of life nowadays—the shop, the office, the workroom, the factory, and largely even in the Army itself. Indeed, reading, writing, and fine mechanical employments would be practically closed to one-fourth of the population of these islands were it not for the assistance that glasses provide.

DELICATE CRAFT.

Now the craft of the sight-tester is one that particularly appeals to well-educated persons who are particular about appearances. It exercises ingenuity and the reasoning faculty. It is quite as scientific a handicraft as are pharmacy and medicine, but it encroaches on neither the one nor the other, and merely implies the application to the eyes of lenses capable of correcting certain insufficiencies in the organs of vision. Nature has provided us with eyeballs, at the front of each of which is a lens, and at the back a screen on which the subjects to be visualised are focussed.

The shape of the eyeball may be deranged, shortened, or lengthened, the lenticular medium may acquire faults, the refractive or light-bending power of the eye may prove unequal in different meridians, or other mechanical errors of a more or less important nature may develop. The effect is, broadly speaking, similar in all cases. The light transmitted from the objects gazed at ceases to be sharply focussed by the lens of the eye on the screen (the retina) at the back of the eyeball, with the result that the world as seen by the abnormal-eyed is grey, distorted, and elusive, instead of being sharply defined and full of import. The remedy is, then, simply to apply lenses of a suitable description to rectify the deficiency, which can be measured by the skilled refractionist.

AN ANCIENT TRADE.

These optical defects bear no relation to disease, and the remedies bear no relation to medical or surgical treatment. They are purely the mechanical correction of the eye mechanism; the diseases of the eye, which are quite another subject are the affair of the oculist.

Ophthalmic opticians, formerly called spectacle-makers, have been carrying on their work for hundreds of years. In the reign of Charles I. a charter was granted to the Spectaclemakers' Company and power given it to control the conduct of the industry. The company has existed to this day and is actively showing interest in the present course of events to which I have alluded. Nearly twenty years ago it founded a system of training and examinations for opticians, and the welfare of these examinations is presided over nowadays by Sir William Hart-Dyke, ex-president of the Board of Education, and Professor Silvanus Thompson, F.R.S.

These references are pertinent here because of an emergency measure introduced by Sir John Rolleston, Master of the company, which is intended to remedy the existing shortage of opticians. The scheme provides for short courses of tuition in optics to be given free to nominees of certificated members of the company, and to others on payment of a small fee. I may add that all communications respecting this excellent movement should be addressed to the Clerk of the Spectaclemakers' Company, Temple House, Temple-avenue, London, E.C.

MANY OPENINGS.

Plainly this industry, affording as it does a semi-professional status, presents a unique area for the activities of those "at a loose end" who desire patriotic work, or are threatened now or after the war with attenuation of income. There are many ways of entering it, one of which I have outlined. It might be possible to find an opening with some qualified optician and receive training from him, or to obtain his recommendation to the Spectaclemakers' Company; but I feel certain that no real difficulty would be experienced in discovering an entry by those who are willing and able to undertake the probationary training, for the shortage is real, and capable instructors, eager to help, exist in many of our cities throughout the country.

The business itself is a profitable one, and reserved in a sense for the "select," since the training entailed removes it from the reach of those who, in the limited sense, specialise in shopkeeping. The future of a present entrant to the industry would be well assured. Before the war the demand for glasses was extending prodigiously, as is natural wherever people become more educated, and hence capable of recognising their own needs; and after the war the expansion of trade, both home and colonial, will broaden the field of demand, increase its profitable possibilities, and even add to the importance of its outlook.

future for Great Britain to be, as nearly as possible, a self-contained country. This lesson, at least, we have learned from the terrible results of the unpreparedness to produce even military essentials which shocked and surprised the nation when war was declared. Almost everything was lacking, and where the ability to produce optical instruments existed there was often a shortage of materials that paralysed progress. It must not happen again.

The scientific instrument industry is broadly based. It ranges from spectacles, eye-glasses, field-glasses, telescopes, microscopes, cameras, and kinematographs to gunsights, rangefinders, heliographs, sextants, periscopes, compasses, polariscopes, barometers, hydrometers, thermometers, pyrometers, and a host of other mathematical, philosophical, and scientific appliances. Women have already taken the step I am advocating by entering for the making of some of these commodities into a kind of apprenticeship to extend beyond the period of the war. Delight in the occupation and its prospects has been expressed even by a cultured woman who never previously performed a day's mechanical work.

PERMANENT WORK.

It is, indeed, a craft that is so varied in its field that employment can be found in it for every grade of ability and intelligence. The entry of women into this arena need not depress the wage market. Their energies can be directed into such channels as to compete as little as may be with the available supply of male labour. In fact, they could be drafted into what would be to a large extent a new industry so far as this country is concerned, since the optical industry, which, as I have pointed out, has been drifting more and more from England to Germany during the past fifty years, will now have to be reclaimed.

War work has necessitated the extension of large existing British optical plants and the laying down of new ones. Women's labour may enable these to carry on when the blessing of peace is restored to us. The work is for the most part light, and, except in the rough grinding of lenses, by no means dirty; and, with a sufficient sub-division of labour in the factory, it can be brought easily within the capacity of any bright woman or girl after but a short apprenticeship to the use of machine tools.

Those disposed to make a study of the simple laws of optics governing the use of lenses might also at the present find a field outside the workshops, but the experience gained therein would prove an additional advantage in the semi-professional business of sight testing and spectacle fitting which this implies. It will always be a pleasure to me to advise those who care to communicate with me what steps should be taken in order to enter the optical and scientific instrument industry.

MESS WAITRESSES.

The latest recruit in the ranks of the women war workers is the mess waitress. Her advent has been so very recent that it is too early as yet to say whether the mess waitress had "made good," but women have shown such remarkable adaptability during the war that there seems little fear of their failing in the new duties they have undertaken. The work of the mess waitress is much on the same lines as that of a parlour-maid, but the hours are longer, and girls who do not intend to take their duties seriously will not succeed in this new sphere of employment.

After receiving some training in the work, mess waitresses have to "sign on" for a year, or the duration of the war if the struggle should end before the twelve months have expired. Dressed in a khaki overall with a white apron and cap, the mess waitress has invaded places where the presence of females at meal times has hitherto been strictly confined to occasional "Ladies' Nights" and "At Homes."

LABOUR EXCHANGES' GREAT WAR WORK.

The Many Jobs They Have Found for Women.

WHEN the Labour Exchanges were started a few years ago, who would have guessed what a tremendous part they were destined to play in the assembling of Britain's vast war machine?

Without them the business of converting the country into one huge war factory and of finding the right men to work in it without the loss of any precious time could not have been accomplished so expeditiously and so adequately. In the recruiting campaigns, in finding work for the Belgian refugees, in advising employers how to take up munition work, in the dilution of labour, and the substitution of women for men, the Labour Exchanges have done and are doing a remarkable work of which the country is but little aware.

A *Weekly Dispatch* representative was supplied with some interesting facts which reveal something of the magnitude of the work.

In peace time the Exchanges put employers into touch with the workpeople and find work for the unemployed.

The Labour Exchange officers are men who have had industrial careers themselves before passing into the employ of the Government—men who have the knowledge born of practical experience.

STRANGE OCCUPATIONS.

As remarkable has been the entry of women into the trades and professions. The 'bus woman, the tram woman, the van woman, and the lift woman are now familiar as everyday sights. Here are some occupations that women have just taken up:

Filling sacks with cement, and weighing and checking and putting on to trollies.

Unloading ore from barges, stacking fires and smelting the ore.

Pressing strips of tin prior to loading into crucibles.

Furnace attendants in bottle manufacture.

Trucking in a gun factory.

Draughtswomen.

Working in breweries.

A great part of this work of substitution has been done by the Labour Exchanges registering the women and sending them into the trades for which they were physically most fitted. A vigorous campaign is now being conducted throughout the country by the Labour Exchanges to extend the employment of women, particularly in vital industries for which men are now not to be had; the Exchanges have the assistance of special local committees in all important centres.

Some businesses which had failed in peace time are now prosperously engaged on war work. A cabinet maker and a billiards table maker are now retrieving their fortunes making munitions.

LAND WORKERS WANTED.

Strong efforts are being made to get more women on to the land. In January 1914 it was known that there were 80,000 women working on the land, not including those of farmers' families. Since then and up to January of this year there has been an increase of 5,000. This is a very poor figure for a country engaged in a life and death struggle, when every man that can be spared is needed in the fighting forces. Farmers are difficult to convince. The men who have tried woman labour are satisfied—it is the farmer who has not tried it who is convinced that women are no good on the land. The Labour Exchanges and the village registrars working in conjunction with them have 30,000 village women registered and simply waiting for the farmers to come forward and make use of their labour. The farmers are hoping that boys will be released from school, and are also still waiting to see how many of the starred men will be taken into the Army. But they must make up their minds to the fact that probably many more tens of thousands of women will go on to the land before this war is won.

The Daily Mail

B. E. I.

THE FITTER'S "MATE."

ANOTHER NEW WAR TYPE.

In many workshops the fitter's "mate", or assistant is being replaced by feminine labour.

In a long, low workshop a man and his mate were "stripping" an engine.

The room was filled with deep shadows cast by the warm sunshine that streamed through the open windows in the roof, and heavy with the purple smoke that rose from a brazier of burning charcoal.

Under a narrow circle of light thrown by a swinging electric bulb, the two were busily engrossed in their work. The fitter was a typical engineer, whistling gaily over his task. But what a strange figure had replaced the old familiar fitter's "mate," a position held by an ever-changing succession of youths, all with perpetually unshaven chins and the end of a cigarette stuck between their lips.

The newcomer was humming a song in a low soft voice. Her hair reflected the spun gold of the sunlight as she bent over the engine, eager and happy, working side by side with the fitter, a real mate, a man's mate, providing yet another proof of woman's adaptability to work which has hitherto been regarded as wholly outside her province.

She was cleaning out the gearbox, a trim figure wearing a sensible dark blue overall, which, while providing her clothes with ample protection against the grease and dirt which her work created, allowed her to retain her feminine charm.

* * * * *

As I crossed the room she looked up with a smile.

"Are you the new fitter?" she asked eagerly, and when I answered her in the negative she added regretfully, "Oh, I'm sorry. I'm looking forward to the arrival of another 'engineeress' in the shop; I get a wee bit lonesome at times."

Then she continued her work, thrusting her hand again into the grease and dirt of the gearbox with a wonderful business-like air that told of an experienced hand and complete understanding.

"Do you like the work?" I asked her.

"The twenty-five shillings a week helps to keep things going while the men are away," she answered evasively.

"And you don't find the strain too severe?"

"Oh, not at all," she replied, "but it gives one a wonderful appetite. Thank goodness it's nearly dinner time."

"Do you go out to eat?" I asked.

"No," she replied; "I've got a little room fitted up here, where I heat my own food. Would you care to join me?"

"Rather," I said, and as she frankly admitted her own lunch would be insufficient to satisfy the appetites of both, I went out to buy food while she continued the work she was engaged on.

* * * * *

When I returned she was still busy, using a spanner with the familiarity of an experienced man. She was giving valuable assistance to her fitter in a number of ways—handling saws, files, and hammers with the air of a trained mechanic, and sparing no pains to ensure accuracy and satisfaction.

The fitter showed no hesitation in relying completely on her judgment and ability. He certainly recognised her value, and gave her ample proof of his high esteem by the very obvious confidence he showed in her.

At the stroke of one o'clock both the fitter and his mate dropped their tools after the manner of all true workers, and nothing could have been a more truly convincing proof of the full extent to which women have replaced their fighting predecessors.

* * * * *

With the instinct of true femininity my little friend proceeded immediately to wash and "tidy up" when we reached the little room that had been thoughtfully set aside for her—for whether a woman be working in an omnibus, in a munition factory, at the docks, or on the land she will always remain a woman. While she brushed her hair and powdered her nose I fried sausages over a charcoal fire. The appetising odour must have curtailed the toilet somewhat, for the sausages were scarcely cooked when an anxious voice inquired:

"Isn't it ready yet? I'm *so* hungry!"

An overturned box served for a table, but we had the unexpected luxury of a tablecloth, of clean knives and forks, and dainty crockery.

While we ate our informal meal she told me of her anxiety to learn her business thoroughly.

"I've been here six months," she said, "and have never felt the least bit weary of it. Perhaps," she continued, "that is because, before undertaking it, I realised fully what the work was going to be and so took it easily, avoiding any attempt to overdo it. I start at nine and leave off at five. The short hours, I believe, have enabled me to 'carry on' so satisfactorily, and have prevented me from feeling any ill effects."

Then she continued, with pride, to tell me that her husband, a motor engineer, was an attested man, and that when he left home to answer the call of the country she was going to "run" his garage "on her own."

"It's only a little country garage," she said, "but it's a good business that my husband has built up and worked hard for. It was our first home," she added simply, "and we love it!"

She pictured to me the little house attached where she reigned as mistress; speaking lovingly of the garden they had tended together with the tiny trout stream running through, where they had fished in their leisure hours. Listening, I understood why he was going out to fight for home and country, and the wonderful incentive she had to keep things going until his return. For love and pride of country and Empire is the dominant spirit that reigns in the heart of every man, and in the heart of every woman the love of home.

G. IVY SANDERS.

Daily

WOMEN AND THEIR WORK.

EMPLOYMENT AS JEWELLERS AND SILVERSMITHS.

So far there does not appear to be much prospect of employing women as jewellers and silversmiths on any large scale. There is certainly a shortage of workmen in the trade, but, as far as one can judge, there is no concerted movement by the old-established silversmiths' firms towards training and employing women in place of the men who have left.

The woman jeweller and silversmith is not, however, unknown, and there are many instances in which beautiful jewellery is made by women in their private studios.

In one particular instance a woman has recently opened a jeweller's and silversmith's establishment in London, where she undertakes all branches of jewellery, silver work, repairs, etc., and herself trains the girls who assist her in the workrooms. A visit to these workrooms is most interesting, and the girls show a most wholehearted enthusiasm for their new employment.

A girl who wishes to enter this trade can first be taken on as a learner on payment of a small premium, and during this time she receives from 5s. to 7s. a week pocket money. At first she learns pearl and bead threading, the simplest work of all, then soldering, riveting, mounting jewels, and the use of the various tools. If she proves clever at her work and likely to become skilled she will be engaged as a regular workroom hand, and can then earn anything up to £2 a week.

At the present time there is scope for women to do well at re-mounting and repairing plate and trinkets. In some cases a woman who has been thoroughly trained should be able to start a small business of her own and work up a good connection.

At this woman jeweller's establishment special tuition is given to private workers at a charge of three guineas for twelve lessons of two to three hours each. During this course the pupils learn soldering, mounting jewels, etc., and the handling of the tools and furnace. A tool outfit for a beginner will cost about £1.

Further information on this subject can be obtained from Mrs. Sandheim, jeweller and silversmith, 130, High-street, Notting Hill Gate. Mrs. Sandheim has a few

of a cigarette stuck between their lips.

The newcomer was humming a song in a low soft voice. Her hair reflected the spun gold of the sunlight as she bent over the engine, eager and happy, working side by side with the fitter, a real mate, a man's mate, providing yet another proof of woman's adaptability to work which has hitherto been regarded as wholly outside her province.

She was cleaning out the gearbox, a trim figure wearing a sensible dark blue overall, which, while providing her clothes with ample protection against the grease and dirt which her work created, allowed her to retain her feminine charm.

* * * * *

As I crossed the room she looked up with a smile.

"Are you the new fitter?" she asked eagerly, and when I answered her in the negative she added regretfully, "Oh, I'm sorry. I'm looking forward to the arrival of another 'engineeress' in the shop; I get a wee bit lonesome at times."

Then she continued her work, thrusting her hand again into the grease and dirt of the gearbox with a wonderful business-like air that told of an experienced hand and complete understanding.

"Do you like the work?" I asked her.

"The twenty-five shillings a week helps to keep things going while the men are away," she answered evasively.

"And you don't find the strain too severe?"

"Oh, not at all," she replied, "but it gives one a wonderful appetite. Thank goodness it's nearly dinner time."

"Do you go out to eat?" I asked.

"No," she replied; "I've got a little room fitted up here, where I heat my own food. Would you care to join me?"

"Rather," I said, and as she frankly admitted her own lunch would be insufficient to satisfy the appetites of both, I went out to buy food while she continued the work she was engaged on.

* * * * *

When I returned she was still busy, using a spanner with the familiarity of an experienced man. She was giving valuable assistance to her fitter in a number of ways—handling saws, files, and hammers with the air of a trained mechanic, and sparing no pains to ensure accuracy and satisfaction.

The fitter showed no hesitation in relying completely on her judgment and ability. He certainly recognised her value, and gave her ample proof of his high esteem by the very obvious confidence he showed in her.

At the stroke of one o'clock both the fitter and his mate dropped their tools after the manner of all true workers, and nothing could have been a more truly convincing proof of the full extent to which women have replaced their fighting predecessors.

* * * * *

sorry, and have prevented me from feeling any ill effects."

Then she continued, with pride, to tell me that her husband, a motor engineer, was an attested man, and that when he left home to answer the call of the country she was going to "run" his garage "on her own."

"It's only a little country garage," she said, "but it's a good business that my husband has built up and worked hard for. It was our first home," she added simply, "and we love it!"

She pictured to me the little house attached where she reigned as mistress; speaking lovingly of the garden they had tended together with the tiny trout stream running through, where they had fished in their leisure hours. Listening, I understood why he was going out to fight for home and country, and the wonderful incentive she had to keep things going until his return. For love and pride of country and Empire is the dominant spirit that reigns in the heart of every man, and in the heart of every woman the love of home.

WOMEN AND THEIR WORK.

EMPLOYMENT AS JEWELLERS AND SILVERSMITHS.

So far there does not appear to be much prospect of employing women as jewellers and silversmiths on any large scale. There is certainly a shortage of workmen in the trade, but, as far as one can judge, there is no concerted movement by the old-established silversmiths' firms towards training and employing women in place of the men who have left.

The woman jeweller and silversmith is not, however, unknown, and there are many instances in which beautiful jewellery is made by women in their private studios.

In one particular instance a woman has recently opened a jeweller's and silversmith's establishment in London, where she undertakes all branches of jewellery, silver work, repairs, etc., and herself trains the girls who assist her in the workrooms. A visit to these workrooms is most interesting, and the girls show a most wholehearted enthusiasm for their new employment.

A girl who wishes to enter this trade can first be taken on as a learner on payment of a small premium, and during this time she receives from 5s. to 7s. a week pocket money. At first she learns pearl and bead threading, the simplest work of all, then soldering, riveting, mounting jewels, and the use of the various tools. If she proves clever at her work and likely to become skilled she will be engaged as a regular workroom hand, and can then earn anything up to £2 a week.

At the present time there is scope for women to do well at re-mounting and repairing plate and trinkets. In some cases a woman who has been thoroughly trained should be able to start a small business of her own and work up a good connection.

At this woman jeweller's establishment special tuition is given to private workers at a charge of three guineas for twelve lessons of two to three hours each. During this course the pupils learn soldering, mounting jewels, etc., and the handling of the tools and furnace. A tool outfit for a beginner will cost about £1.

Further information on this subject can be obtained from Mrs. Sandheim, jeweller and silversmith, 150, High-street, Notting Hill-gate, W. Mrs. Sandheim has a few vacancies at the present time for learners and workroom assistants.

The secretary of this column will be glad to give expert advice and information on all matters concerning women's employment, training, etc. Letters, accompanied by a stamped, addressed envelope, should be forwarded to the secretary, Women's Employment, "Daily Express," 23, St. Bride-street, E.C.

The Lady Engineer.

This is really getting serious. We report elsewhere an application in the Patents Court concerning Miss E. J. Smith. She means to use the Austrian Billiter cells for electrolytic work, and the Court has had to announce that it will recommend the licence shall be granted. Personally we were not present in court; our knowledge as to Miss Smith's persuasiveness or the Court's meekness is therefore quite negative. But we would ask readers to note the very business-like manner of the applicant, her deadliness of purpose, and her admirable fortitude under examination.

We say the tendency is becoming serious, because not only is the feminine invasion of man's freehold property in the field of engineering rather disturbing in itself, but the ladies' genius for housekeeping and bargaining is a menace to some of our most cherished traditions. "I ought not to pay him a large royalty. I suggest 1 per cent. is sufficient. . . . It costs 8s. a pound to-day, but it may well come down to sixpence-ha'penny." And there you have it, in that last magic word, the "ha'-penny." For the intelligent engineer or manufacturer it suggests a whole train of anxious thought. Stand we where we did?

THE WOMEN OF SHELL CITY.

Last autumn I gathered sun-kissed apples in a glorious orchard; a week later the hay was being cut down from under the trees; then, one by one, tiny grey iron buildings sprang up, like mushrooms, at uniform distance.

Passing frequently in the train, I watched the little buildings multiply; as far as the eye could reach their light-painted roofs gleamed through the branches of the fruit trees and gave the appearance of a sanatorium in the making. Rapidly, however, the strange little settlement became peopled by many girls and women, all wearing dull grey cap and overall, who toiled there ceaselessly, by day and by night, preparing for the great and glorious "push." And within six weeks of the day when the long grass fell to the scythe shells were being turned out ready for the front.

A few days ago, by the courtesy of the Ministry of Munitions, I was permitted to pass through the jealously guarded gates of this national factory and to watch the wonderful process of manufacturing the ultimate liberation of Europe. Familiar as I already was with the view of the factory, I had but a very vague conception of its immensity until, after being provided with over-shoes and satisfactorily answering the challenge "All clear?" (of matches, tobacco, steel hairpins, and the like), I passed through a tiny door and stood on the wooden platform which has been erected to connect the hundreds of separate workshops and which serves to carry the eighteen miles of miniature railway that have been built.

From a high bridge which connects two of the different sections I looked over the 200 acres of land, where nearly 5,000 women are working day and night on the production of shells, and there came to me perhaps a truer realisation of what war means. On every side were whole families uniting in the tremendous effort to win the war; women, many of them, who have hardly known the meaning of "work," facing long monotonous hours of labour with that same courage and fortitude with which our men in the trenches are facing death.

"And they are simply splendid!" the manager said of them, as he escorted me with pride over this wonderful "Shell City." "Of course," he added, "the work is essentially a woman's!"

FASCINATING WORK.

And later, as I watched the busy workers engaged on their various duties, I quite agreed, for the work is certainly a woman's, and it is work that every woman in the land should be proud to undertake.

Of all war work shell making is indeed the most fascinating; the very sight of the [illegible] shells which are being [illegible]

WOMAN'S SHARE IN THE GREAT OFFENSIVE.

Toil and Danger in the Shell Factories.

(By M. T. HOGG.)

They (women) are now part and parcel of our great army. Without them it would not be possible to make progress. With them I believe victory can be assured.
—Lord DERBY, at a meeting in Queen's Hall.

Lord Derby's words contain no exaggeration. The present great British offensive is the direct outcome of women's labours in the munition field.

For months past many hundreds of thousands of women and girls of all classes and all ages have been engaged in all the various operations necessary to the production of modern war material, and thousands more will soon be at the same job. The existence of the woman who works in the munition factory is well enough known; of the nature and scope of her duties nine people out of ten are profoundly ignorant. The average person, if he thinks about it at all, probably comes to the conclusion that "the women are employed on light jobs, carrying about small things, and making themselves generally useful." The truth is very far from that.

The various processes involved in the making, finishing, and filling of heavy shells are being done by women. They, too, are responsible for the evolution of the fuse from its early crude form to its final stage of deadly perfection. Women are making cartridges and charging them. Some spend their time waxing bullets; it is the business of others to neck and indent the cartridges once those same bullets have been slipped into their proper place by other workers. In short, there are very few operations connected with munition work, the inspecting of finished articles not excepted, in which women do not lend a very capable hand.

The Ideal Worker.

Both to the work and the conditions under which it is carried out the women are, in great part, wholly unaccustomed, but every manager or foreman will tell you that they are good time-keepers, especially the single ones, and conscientious at their work, to which they bring an enthusiasm and a determination to do well that make for a high standard of production. There is one factory where women are almost exclusively employed filling fuses. So far, and the work has been going on for many months, not one single batch of those submitted for inspection have been rejected by the Government authorities. It is a record of which the firm, and the girls, too, are, very justly, exceedingly proud.

To gain a really adequate idea of the nature of the work being done by women in the production of war material it is necessary to go to factories where they are employed. In company with one or two others similarly privileged, I visited, by permission of the authorities, two or three such factories in a Midland town the other day. There, surrounded by noisy machinery, with hundreds of moving pulleys overhead, and gears and fly-wheels on every side, or in the comparative quiet of the "danger" rooms, were hundreds of women from eighteen years of age upwards, working at lathe and capstan, punch and drill, or occupied in the more exciting business of filling fuses with high explosives. University women and women of leisure, professional women and cooks, ladies' maids and ordinary factory "hands," were all there, working side by side in perfect good fellowship, linked together by the common interest of preparing the necessary means for securing the downfall of the enemy.

Highly-skilled Processes.

There was one factory in which women were making fuse bodies, and a fuse body is not the easiest thing in the world to turn out correctly. In this particular instance it was about the most complicated pattern made, and the gulf between the time it started life, a roughly-stamped semblance of its final polished and glittering self, until the moment it was pronounced ready for dispatch to the filling factory was bridged by rather more than a hundred processes. Not all simple processes

And later, as I watched the busy workers engaged on their various duties, I quite agreed, for the work is certainly a woman's, and it is work that every woman in the land should be proud to undertake.

Of all war work shell-making is indeed the most fascinating; the very sight of the thousands of shells which are being despatched to our gallant men is inspiring; and perhaps the slight tinge of danger which lurks in the handling of high explosives adds a certain amount of zest, though this danger has been eliminated to an enormous degree and is ever decreasing. Even the temporary sickness which assailed the workers during their first week or so on the new tasks has now practically disappeared; and the effects of certain chemicals which momentarily dyed the hands and faces of the workers a rich golden colour, and earned for them the titles of the "Canaries" and the "Girls of the Golden West," are gradually vanishing.

Every effort is made to ensure the well-being of the workers. Beautifully equipped hospitals have been built, and lady doctors and trained nurses are always in attendance. Canteens, where substantial food can be obtained at nominal prices, have been erected in various parts of the factory grounds, and lady superintendents have been engaged, whose sole business it is to attend to the comfort of the employees. I heard one of the girls appeal to a lady superintendent for a transfer to some other building.

"Aren't you happy? Is there anything wrong?" was the anxious inquiry.

"Oh, no," the girl replied; "but I want to be near grandmother."

From workshop to workshop we passed, and everywhere the women looked happy and healthy. A very apparent keenness was shown to increase the output, and there was no sign of slacking there, no grumbling. It made me proud indeed of England's womanhood, even grateful, for the opportunity that war has given of proving her value.

MESSAGE IN SHELL-BOX.

The absurd rumours which have been circulated of the dangers which lie in the shell factories have by no means affected the determination of the women of England. They are patriotic and quick enough to understand the origin of such rumours, and realise that there is practically no risk when the precautions laid down by the factory are rigorously observed. Even if such dangers exist, I warrant the women would be prepared to meet them. While our men are laying their lives down by the thousand, the women would not fail to do likewise were that necessary. I had ample evidence of the endurance and resolution of the shell workers, for just as I was about to leave the grounds a heavy thunderstorm threatened and ominous rumblings could be heard in the distance. Immediately on the shrill note of the warning whistle the girls streamed out of their respective workshops, in perfect order, and made for their dressing-rooms; the forewoman of each shop remained behind to draw the dark green curtains with which each shed is provided. There was no panic or rushing, and when the storm had passed by they resumed their duties quietly.

The watchword of the factory is "Work, unceasing work." The week-ends are free to enable the workers to husband and gather strength and energy for the coming week. Fifty-two hours a week is the shift for the day workers, and for the night workers fifty.

Contentment reigns there on that battlefield of the workers, for they feel, very rightly, that they are fighting the country's battles side by side with the soldiers, and are helping them to win the war. Nor is duty the only element in that stern world of work, for romance, too, has crept in. One of the girls confessed to having slipped a message of good will and cheer into one of the boxes of shells. Out on the battlefield of France a lonely soldier has seen the white message flutter in the moonlight, over the blood-stained earth, and soon there will be another war wedding!

G. I. S.

---

correctly. In this particular instance it was about the most complicated pattern made, and the gulf between the time it started life, a roughly-stamped semblance of its final polished and glittering self, until the moment it was pronounced ready for dispatch to the filling factory was bridged by rather more than a hundred processes. Not all simple processes by any means, for many of them require extreme delicacy of handling and a degree of accuracy comprised within the limits of a thousandth part of an inch either way. Some were turning the stem to size, others were doing fine threading operations, in other words, cutting screw tracks, or making the base plugs, or engaged in some other operation necessary to the interior well-being of the perfect fuse. Elsewhere there were women assembling the parts of a device that goes through twenty-seven stages before it is pronounced complete.

Women, however, do not devote all their energies to munitions. The motor-bicycle, which has played a conspicuously useful part in this war, demands, and receives, their attention, and not a few of the parts belonging to machines supplied to the allied armies in the various theatres of war are the work of their hands.

Dangerous Occupations.

"Nerves," it seems, is a complaint of which the woman who works in a munitions factory knows nothing. You will find her in the danger buildings in as great, or greater, numbers than in the other departments. It is in the danger buildings that the high explosives are handled, and in the "danger" branch of a third factory we watched women filling the fuses destined for use with big shells. You would never have guessed, by the perfect confidence and *sangfroid* with which they did their work, that they were dealing with some of the most deadly substances known to modern science.

Wages are higher in the "danger" area than elsewhere (which may account for the fact that there is never any lack of volunteers, though some of the girls confessed to feeling a distinct satisfaction at the idea that they were dealing with the actual substances that would ultimately kill many Germans), and especially in the rooms devoted to the preparation of certain substances used for filling purposes which are apt to induce a yellow complexion or a red rash. Neither is becoming, but, then, neither lasts long. Both yield easily to treatment, and recently a solution has been discovered which frequently acts as a preventive against both complaints, and should they occur reduces to a minimum their attendant discomforts.

The Life de Luxe.

Business is business always, and in the business of munition making the welfare of the worker is never neglected. Here, again, the factory in question sets an example that others might profitably follow. For the benefit of the workers who come from a distance—the majority in this case come from Ireland, Scotland, and Wales—hostels have been built where you can get a comfortable bed, a cupboard, a locker, and an enamel jug and basin for your own exclusive use, as well as the run of a laundry, for the sum of 13s. a week. How meals—a good, substantial breakfast, a dinner of soup, meat, vegetables, and pudding, tea, and supper—can be included in that 13s. is a secret known only to the presiding genius of the catering department. There is a woman doctor to look after the health of the workers, a general superintendent who looks after the housing arrangements, and a matron, who is in many cases a trained nurse, and a sanitary expert into the bargain, in every hostel.

Munition work is, as has often been pointed out, national work of the highest importance. It is worth doing, and, indeed, must be done well, and the Ministry of Munitions, who require the services of many thousand more women, has established centres of preliminary training all over the country for those willing subsequently to enter factories. The Training Section, Ministry of Munitions, will gladly supply particulars of the nearest training centre.

WOMEN ENGINEERS.

WORKS FOR TRAINING TO BE BUILT IN THE NORTH.

As a result of the fine work done by educated women, works where women can be trained as mechanical engineers are to be built on the west coast of Scotland.

Only well-educated women between 20 and 35, with a definite mechanical bent, will be qualified to apply, and preference is to be given to widows and daughters of officers in the Army and Navy. A probation of six weeks, during which £1 a week will be paid to cover living expenses, will decide whether the candidate is fitted for the occupation and is willing to undergo a longer training, probably three years.

"Our great difficulty at present," said the secretary of the General Department of Women's Service to a *Daily Mail* representative yesterday, "is that we cannot get trained women, though we could place almost any number. We want trained women as gardeners for agricultural and dairy work, and we badly want trained clerical workers. If girls can only be persuaded to train, train, train they have the world of employment waiting for them."

Applications for the engineering works can be made in the first instance to Miss O. W. Robinson, Women's Service, 58, Victoria-street, S.W.

Peoples Journal
15-7-16. Dundee

TO TRAIN WOMEN AS ENGINEERS.

Proposal to Erect £40,000 Factory in Scotland.

TRADE UNION VIEWS.

(Special to "People's Journal.")

"Did you hear, Mr Bunton, of the proposed women's engineering factory to be erected somewhere in the West of Scotland?"

"No," said the Glasgow Secretary of the Amalgamated Society of Engineers. "What are they up to now?"

Seeing he had not heard of the proposals, I briefly sketched for him their outline. A factory is to be erected, principally for the purpose of finding employment for women in the making of aeroplane and motor engines. The ladies are to be taught part of the business during a period of six weeks, and those who are found unsuitable are to be weeded out. Those who display aptitude are to undergo a course of further training, and after passing certain examinations will find employment at wages varying from 25s a week to £250 a year. During their probation they will receive £1 a week.

"That is a good deal more than the apprentice engineers get, Mr Bunton," said I.

"Yes, it is a good deal more."

"Six weeks' training instead of six years, is it? Times are moving; changes are coming to pass."

Women Can't be Engineers.

"All the training in the world will not make women capable engineers," said Mr Bunton. "They are neither mentally nor physically endowed for such work. We don't fear their competition at all, and wherever they are capable of doing the work we would not object to their doing it, provided they were paid the standard rate."

"I am not quite so certain of that, Mr Bunton," said I. "Such delicate work as the making of aeroplane and motor engines—at least certain parts of them—could surely be done by women. Very largely in America and on the Continent women are engaged in doing these things. That may come to pass here after the war."

"We do not expect to find conditions the same after the war," said the Secretary; "but you may rely upon it the bitterest fight of all will be the industrial struggle that will follow if we are up against conditions that are entirely against Trade-Union principles. As far as women are concerned, despite the statements of certain employers, we know that they are absolutely incapable of completing any class of engineering work alone and without supervision. When they come to handle tools on their own and apply certain principles and aptitude to engineering work, they are no good at all. The people who are concerned with this scheme do not know what they are talking about."

"It is stated that two of the Directors of a well-known controlled establishment are prepared to sink £40,000 in a concern which will be worked entirely by women."

The Men will Decide.

"Very patriotic gentlemen, I am sure," replied Mr Bunton. "I think I could name them. Perhaps the 25s a week is the real inducement, and you may be sure the women won't get much more. But you may rely upon it we'll have a big say in these matters. It is the men who are fighting and dying for the country, it is the men who will have to decide.

"You will agree," I continued, "the men [illegible]

WOMEN AND WAR WORK.

TO THE EDITOR.

Allow me to inform your correspondents who seem to think that I am too much in favour of female labour, that when the question was first spoken about, I was strongly against women being brought into engineering shops, &c. Not that I thought that they would never learn, but I held that woman's place was in the home, and I knew that once women were admitted to engineering works, they would come to stay, and this will be seen when the war is over. Britain will never be the same again.

Even I was astonished to read the following (which appears in the "Electrical Times" for this week, on page 21, which refers to a new engineering factory to be erected in Scotland)—"So impressed is the directorate by the feminine capability displayed in this war that £40,000 is being spent on a factory to be run entirely by women. Special conditions will prevail. There will be two shifts, each consisting of eight hours, divided by a long interval into four four-hour half shifts. The wages earned will range from £85 to £250 per annum."

In conclusion, I strongly think that Glasgow ratepayers should protest against the Corporation taking young educated well-to-do business women into the electricity substations at 27s per week. If ever there was a job suitable for disabled soldiers and sailors this is one, as the duties are only operating switches and watching. If ladies can learn this work in 3 months, surely disabled soldiers and sailors could learn in 6 months, and be entitled to pre-war pay for this class of work, viz.:—40s to 45s per week, instead of the cheap female labour at 21s to 27s per week.

FOREMAN.

July 15, 1916.

TO TRAIN WOMEN AS ENGINEERS.

Proposal to Erect £40,000 Factory in Scotland.

TRADE UNION VIEWS.

(Special to "People's Journal.")

"Did you hear, Mr Bunton, of the proposed women's engineering factory to be edected somewhere in the West of Scotland?"

"No," said the Glasgow Secretary of the Amalgamated Society of Engineers. "What are they up to now?"

Seeing he had not heard of the proposals, I briefly sketched for him their outline. A factory is to be erected, principally for the purpose of finding employment for women in the making of aeroplane and motor engines. The ladies are to be taught part of the business during a period of six weeks, and those who are found unsuitable are to be weeded out. Those who display aptitude are to undergo a course of further training, and after passing certain examinations will find employment at wages varying from 25s a week to £250 a year. During their probation they will receive £1 a week.

"That is a good deal more than the apprentice engineers get, Mr Bunton," said I.

"Yes, it is a good deal more."

"Six weeks' training instead of six years, is it? Times are moving; changes are coming to pass."

Women Can't be Engineers.

"All the training in the world will not make women capable engineers," said Mr Bunton. "They are neither mentally nor physically endowed for such work. We don't fear their competition at all, and wherever they are capable of doing the work we would not object to their doing it, provided they were paid the standard rate."

"I am not quite so certain of that, Mr Bunton," said I. "Such delicate work as the making of aeroplane and motor engines—at least certain parts of them—could surely be done by women. Very largely in America and on the Continent women are engaged in doing these things. That may come to pass here after the war."

"We do not expect to find conditions the same after the war," said the Secretary; "but you may rely upon it the bitterest fight of all will be the industrial struggle that will follow if we are up against conditions that are entirely against Trade-Union principles. As far as women are concerned, despite the statements of certain employers, we know that they are absoluely incapable of completing any class of engineering work alone and without supervision. When they come to handle tools on their own and apply certain principles and aptitude to engineering work, they are no good at all. The people who are concerned with this scheme do not know what they are talking about."

"It is stated that two of the Directors of a well-known controlled establishment are prepared to sink £40,000 in a concern which will be worked entirely by women."

The Men will Decide.

"Very patriotic gentlemen, I am sure," replied Mr Bunton. "I think I could name them. Perhaps the 25s a week is the real inducement, and you may be sure the women won't get much more. But you may rely upon it we'll have a big say in these matters. It is the men who are fighting and dying for the country, it is the men who will have to decide."

"You will notice," I continued, "the idea is to give preference to the widows and daughters of officers in the navy and army."

"Yes, I see that. Well, the widows and daughters of the men will require sustenance as well as they, and it will have to be found. But I don't think it will be found by underselling the men's labour. It is too soon yet, however, to state what our action will be. The war is not yet over, and many things may happen when it is."

Mr J. Thomson, General Secretary of the Associated Blacksmiths, said:—"I have no objections to women undertaking any branch of trade, provided they are paid the standard rate. In my opinion, however, this suggestion is simply a move to introduce cheap labour. I quite realise that in some classes of work, in the manufacture of automatic machines, for instance, women may be equally as good as men, but where there is initiative and where there is skill required they are unequal to the work."

WAR WORK AT HOME.

GROWING FIELD FOR WOMEN ENGINEERS.

EXPERT'S EXPERIENCE.

By Miss CLAYTON GRIFF,
Consulting Engineer.
XVIII.

Why should not British women fitted for such duties be trained to take the places of male chauffeurs, electricians to attend the lighting and heating plants of factories and large private residences, and similar posts which can nearly as well be filled by women as by men? Thus more men can be released to fight, or to fulfil other duties less suitable for women. Some of us are trying to arrange for preliminary training of well-educated women in engineering works, so that directly they start work in a factory they will be useful and productive operatives, whether they are helping to make shells or screws.

I am consulting engineer to the National Political League, whose "Land Council" is giving demonstrations of women's work on the land at 16, Carlton House-terrace, by kind permission of Lady Cowdray, on June 27, 28, and 29. The council is seeking funds in aid of national service and the mobilisation of women's work to replace men, so there will be exhibits relating to dress, the dairy, fruit, poultry, afforestation, packing, bottling, intensive culture, and engineering implements. I shall be dealing with the last-named branch of the work.

I myself was trained in an engineering works which specialised in heavy traction. I was the only woman there, and was taken on as an apprentice by the manager in the ordinary way. I learned all about the mechanism of the motor omnibus and similar vehicles there, and, of course, had to work in overalls; the oil would drip on my hair when I went under the chassis, and I had to have a shampoo every evening. But after a year of this I was able to start learning the theoretical side at a technical college with far more success than I could possibly have had otherwise. Thus I obtained certificates for motor engineering, steam and heat, and engineering generally, and learned to do practically anything for myself in the way of repairs and construction. I have driven a motor traction engine through Aldershot, and have, of course, driven all kinds of private cars for hours together, and amid the busiest traffic.

Therefore I speak with knowledge of women's capabilities in this direction. The Board of Trade has encouraged me with favourable opinions regarding the openings that may arise for women to take charge of oil engines on farms to run threshing machines. There are steam ploughs and petrol ploughs which women could control as well as men. There are plenty of ways in which women could help the work of the nation by undertaking the duties of mechanical engineers. But they must have training first. There has been talk of bringing over Frenchwomen to fill posts of this kind, but I see no necessity for this if British women will set to work to qualify. I am filing at 48, Dover-street, W., the names of all those who apply to me, expressing their willingness to undergo training. Some of those who apply have only the vaguest idea of what thorough training in mechanical engineering means. At present there are many more women in France who have taken a course of practical instruction than there are on this side of the Channel. A woman trained to take charge of an oil engine and stationary plant for agricultural or domestic work might expect at least 30s. a week to keep herself out of it, or a pound a week with board and lodging. If she became a skilled mechanic able to repair and maintain the plant she would be worth 50s. a week or more.

QUESTION OF PHYSIQUE.

We hope that some large firm will offer to train a number of women for engineering work. A few weeks, or even a few days, will show a woman if she has the physical strength necessary for standing at her work for hours together. Only exceptional women, perhaps, can work as long and as hard as a man. I am not one of those who think most women can do everything in the way of hard work that men can do. In some occupations it might take at least two women to do as much

A WOMEN'S ENGINEERING FACTORY.

NEW WORK FOR EDUCATED CLASSES.

A new profession for women is about to be started in Scotland. Unlike most of the opportunities which have lately been afforded to women, this will have an after-war permanence.

It is only open to well-educated women between 20 and 35, and to those among them who can take an interest in mechanics and are prepared to take up manufacturing engineering as their regular occupation. There is about to be built at a place on the west coast of Scotland a factory where work in the nature of the building of aeroplane engine parts will be undertaken, and when a sufficient nucleus of skilled women is formed the whole engine will be built in the works. It may be that after the war engines for motors will be part of the work, but, however it may change, it is not an undertaking only for war purposes, but a business venture on more or less peace lines, which owes its origin to the fact that two of the directors of a well-known controlled establishment have been so impressed by the work done by educated women that they are prepared to sink £40,000 in a concern which will be worked entirely by such women.

Ordinary factory conditions will not prevail. The works will be run in two shifts, night and day, each shift comprising two periods of four hours, with breaks for meals, rest, and technical instruction. For example, the interval in the day shift will be two hours, and during that time there will be a half-hour technical class, which after the probationary period is past the women may attend or not, as they choose. The probationary period is six weeks, and the only expense for those selected will be the fare to the place. During this period there will be practical instruction by qualified technical men and women; afterwards it is probable that there may be a woman with exceptional engineering qualifications in charge of the works. A payment of £1 a week will be made to cover living expenses. At the end of the time unsuitable people will be weeded out and an agreement made with those showing a definite mechanical bent, probably for a period of three years.

After the first six months an examination will be held, followed by further examinations, on a progressive scale, at the end of each succeeding six months. On these examinations will depend the money earned. It is probable that the lowest rate will be 25s. a week and the highest £250 a year, but these prices are not as yet fully determined. There will be no temptation to limit production. The buildings will comprise a one-storey building as the main workshop and a four-storey building for office, mess-rooms, recreation-rooms, music-room, library, and class-rooms for technical instruction.

In choosing the women for this scheme preference will be given to the widows and daughters of officers in the Navy and Army, but only those with mechanical bent will be considered. Applications can be made in the first instance to Miss O. W. Robinson, Women's Service, 58, Victoria-street, and it is recommended that they should be made promptly, as it is expected that a certain number of women may be chosen to undergo a training in special processes before the opening of the factory, which will not take place until the early autumn.

Daily Mail

WOMEN FOR ENGINEERING.

Over 200 applications have been received at the office of Women's Service, 58, Victoria-street, S.W., from women anxious to receive engineering training at works which have been established in the West of Scotland.

The scheme offers scientific training, leading to a permanent profession, to well-educated women between 20 and 35 who possess a serious inclination towards mechanics and are willing to devote themselves to consistent preparation. Preference will be given to widows and daughters of military and naval officers, who are given an opportunity of securing their future without initial financial outlay.

mechanism of the motor omnibus and similar vehicles there, and, of course, had to work in overalls; the oil would drip on my hair when I went under the chassis, and I had to have a shampoo every evening. But after a year of this I was able to start learning the theoretical side at a technical college with far more success than I could possibly have had otherwise. Thus I obtained certificates for motor engineering, steam and heat, and engineering generally, and learned to do practically anything for myself in the way of repairs and construction. I have driven a motor traction engine through Aldershot, and have, of course, driven all kinds of private cars for hours together, and amid the busiest traffic.

Therefore I speak with knowledge of women's capabilities in this direction. The Board of Trade has encouraged me with favourable opinions regarding the openings that may arise for women to take charge of oil engines on farms to run threshing machines. There are steam ploughs and petrol ploughs which women could control as well as men. There are plenty of ways in which women could help the work of the nation by undertaking the duties of mechanical engineers. But they must have training first. There has been talk of bringing over Frenchwomen to fill posts of this kind, but I see no necessity for this if British women will set to work to qualify. I am filing at 48, Dover-street, W., the names of all those who apply to me, expressing their willingness to undergo training. Some of those who apply have only the vaguest idea of what thorough training in mechanical engineering means. At present there are many more women in France who have taken a course of practical instruction than there are on this side of the Channel. A woman trained to take charge of an oil engine and stationary plant for agricultural or domestic work might expect at least 30s. a week to keep herself out of it, or a pound a week with board and lodging. If she became a skilled mechanic able to repair and maintain the plant she would be worth 50s. a week or more.

QUESTION OF PHYSIQUE.

We hope that some large firm will offer to train a number of women for engineering work. A few weeks, or even a few days, will show a woman if she has the physical strength necessary for standing at her work for hours together. Only exceptional women, perhaps, can work as long and as hard as a man. I am not one of those who think most women can do everything in the way of hard work that men can do. In some occupations it might take at least two women to do as much work in a day as a man accustomed to the work could accomplish. But a woman can drive a private motor car as well as a man under normal conditions of service, and the pay is good; it is the same with many other occupations.

Engineering firms at present rather take the view that they only want unskilled women's labour, if any, and say that women have no initiative in regard to machines; but there are indications of a change of feeling. The gist of the matter at present is to obtain preliminary training in machine minding for voluntary women workers. It is no use sending women to a factory to work if they cannot stand for hours together. They must get accustomed to the work first. Firms are engaging unskilled women used to factory work in preference to any others, but we might train voluntary workers who could go to factories in batches of thirty or thereabouts, already equipped with some practical knowledge, and they could work together, which would be much better than sending women of good education to work singly in factories in company with women of a lower class. They could work side by side with the ordinary woman factory worker, if required, but I think the wheels would run more smoothly, so to speak, if women of the better educated classes worked together in groups. Of course, all women workers must be paid according to the work they are able to perform; my object is to train women of the superior classes, socially, in the use of tools, and to accustom them to regular hours and hard work, before they attempt to enter a factory to work.

Having built my own steam engine from start to finish I know exactly what demands practical mechanical engineering makes upon a woman's energy and intelligence. The more work I did at the bench the better I felt; it suits me better than any other work. I have been less tired at the end of a long morning's manual work than at the beginning. But if I missed doing active manual work for a few weeks I found that on resuming it I tired much more quickly.

Women can help during the war in quite a variety of ways as mechanical and electrical assistants. There will be many cases of women, after the war, having to earn a living in new fields of activity—those whose husbands [illegible] disabled, for instance

these prices are not as yet fully determined. There will be no temptation to limit production. The buildings will comprise a one-storey building as the main workshop and a four-storey building for office, messrooms, recreation-rooms, music-room, library, and class-rooms for technical instruction.

In choosing the women for this scheme preference will be given to the widows and daughters of officers in the Navy and Army, but only those with mechanical bent will be considered. Applications can be made in the first instance to Miss O. W. Robinson, Women's Service, 58, Victoria-street, and it is recommended that they should be made promptly, as it is expected that a certain number of women may be chosen to undergo a training in special processes before the opening of the factory, which will not take place until the early autumn.

A Novel Employment.

A reader asked me a short time ago whether there was an opening for women as gamekeepers. Frankly, I do not think that there is, but perhaps my experiences during a two days' stay with one may be interesting. Miss —— is located "somewhere in England." She has a tiny furnished cottage on the edge of a wood, free coal, lights, milk and vegetables, and is paid 25s. a week. The schoolmistress of a neighbouring village shares the cottage, and during her absence I had her room. We rose at four and made the round of the covers, and very lovely it was at that early hour. What I did not like was finding the rabbits and rats in gins and having to kill them; but I was told that this could be done painlessly, and my friend seemed to have got over her first qualms. Early in the year she had to hunt the hedgerows and collect the pheasants' eggs, then it was necessary to find a nice old broody hen as foster-mother. When the chicks were hatched they had to be guarded against all kinds of dangers—rats attacked them at night, and in the daytime there was often a hawk hovering about ready to pounce on the best and fattest of the brood. When they were old enough they had to be taken into the woods and turned loose to look after themselves. "And then the first 'shoot'!" sighed Miss ——. "What an anxious time I had, placing the different people at the right points; if a man missed a bird he seemed to think it was the fault of the gamekeeper. I have to wage an unceasing war against rats, stoats, weasels, hawks, jays, and crows, who all have one end and aim in life, it seems—to kill and destroy young pheasants and partridges. Of course, I am a fairly good shot, and am expected to act as loader to my employer."

Gamekeeping will never be a successful or suitable employment for women, because, among other things, the gamekeeper must be friends with all kinds of curious and sometimes shady characters, otherwise everyone's hand will be against him, and birds will disappear in a mysterious way. I thoroughly enjoyed my visit, however, and my insight into another corner of life which, till now, I had missed. Still, I do not suggest that any of my readers should take up gamekeeping as an occupation.

CHEMICAL WORKS RUN BY WOMEN.

Using German Process for Government Supplies.

An interesting application was made in the Patents Court to-day in connection with what was said to be the only factory in England run by women—the Chemical Works, Disraeli-road, Willesden.

Its principal, Miss E. J. Smith, with her chief chemist, Miss Markham, applied for licence to use a German electrolytic process in the production of potassium permanganate, which is used in the trenches and all the military hospitals as a disinfectant.

Miss Smith explained that the Government orders 20 tons of potassium permanganate at a time. It is also used to refine the oil for aeroplanes.

Miss Smith passed all the engineering classes at Edinburgh University for the B.Sc. of engineering, and gained "distinction" in the senior engineering class.

Miss Markham, her principal chemist, is a distinguished honours student from the chemical department of Oxford University.

The Controller indicated that it was likely the licence asked for would be granted.

WOMEN FILM CENSORS.

Our Birmingham Correspondent writes: The city justices yesterday appointed two women inspectors to report upon films shown from time to time in the cinema houses. Mr. Gerald Beesly, chairman of the licensing bench, said the present trade censorship was ineffective. Stringent regulations were contemplated in Birmingham regarding the character of films shown to juveniles, and the times at which they should be shown. Some of the cinema and vaudeville posters were a disgrace, and he advised those responsible to be careful between now and the annual licensing day.

Women Window Dressers.

So many of the artistic "window dressers" have been "called up" that I am told there is a new chance for women who can combine artistry with practicality and business instinct. Women, of course, really ought to understand best the style of window dressing which will attract women if not men customers.

The School of Women Signallers.

WAR-TIME HELPERS IN A NOVEL WAY.

Even though the field of war work for women is claiming a larger percentage of workers each day, there still exists a number of girls with leisure time on their hands who are anxious to use these spare hours in useful service to their country. To these I would recommend a course of instruction at the School of Women Signallers, whose president, Miss C Everett-Green, was kind enough to give me a resumé of the aims and objects of the work done by the members.

"'The School of Women Signallers' was founded in 1915 as a learning and a teaching body, with the object of making itself useful at a time when a shortage of male instructors was to be expected. Our members go through a course of training in Army signalling at St. Andrew's Hall, Carlisle-place, S.W., and a dozen have already passed the Army signalling test and hold first or second class certificates.

"They are still continuing their studies under a staff sergeant from the Royal Military College, Camberley, and at the demonstration we gave in the Inner Temple Gardens a few days ago we had the honour of receiving the congratulations of Admiral Sir Henry Jackson upon our efficiency in lamp signalling.

Teaching Convalescent Soldiers.

"For the last six months we have been teaching and coaching a number of soldiers at a convalescent hospital, who have shown the greatest appreciation of our members' work, and many of whom have declared that without our services they would not have been able to gain instructions in army signalling. This testimony to the usefulness of our work is naturally very gratifying, as we feel that 'our bit' is valued by and of real service to the very men whom all women wish to help. In this way every girl who goes through a course of training at the School of Women Signallers and in time gains the coveted badge of the crossed flags, worn upon our sleeve as the sign that the member has passed the Army Signalling test, can feel that she is doing a patriotic form of work, less showy perhaps than some other kinds of war work but none the less useful to the soldiers who desire our services."

In addition to the convalescent soldiers the Women Signallers are also teaching men at canteens and soldiers' clubs, as well as members of the Overseas forces and cadets from the O.T.C. of a public school. Another branch of their work in teaching lies among the scouts and girl guides, including classes of officers, and in connection with this form of service I may mention that Sir R. Baden Powell has expressed his appreciation of their work.

"Apart from the value of the work itself," said the president, "we have found that the training in signalling is immensely helpful in many ways. It increases the powers of observation, as we are naturally compelled to study the details of the contours of the country and the form of natural objects that come in our way when engaged in signalling, and there is no doubt that the memory is greatly strengthened through our course of training. Our members soon begin to recognise the fascination that springs from the many interests that arise out of the very study of signalling in all its branches, and though to the outsider who understands nothing of the work it may seem dull, yet I have always found that once a girl begins her training she is almost astonished herself at the new fields of knowledge with which it brings her into touch.

"Some girls, indeed, show an extraordinary facility for the various branches of signalling, and their progress is astonishingly quick. The intricacies of the buzzer, the telegraph sounder, disc and lamp signalling become familiar to them after a course of training, as well as the use of semaphore and Morse flags, and I have been told that girls are often quicker than boys in picking up the required knowledge. Our work, too, is eminently suited to the active woman of more mature age and is beneficial to her even from the standpoint of health.

Last year we went into "camp," and shall do the same this summer as the members thoroughly enjoy camp life. And as every week more men express their desire to receive instructions, and say all kinds of nice things to us for our services, we are hoping that more and more members will join our School of Signallers in order that we can cope with any demand made upon us. For not only do we have soldiers for pupils, but seamen also come to us for instruction, and in this way we work for both services.

As showing their interest in the movement, I may say that the Countess Wilton, Lady Jackson and Lady Cudrington are patrons of the School of Women Signallers, and it is evident from the way in which the services of the members are being utilised that the work done is to be reckoned as among the really valuable forms of women's war work.

WOMEN AS MUNITION WORKERS.

THEIR AMAZING ADAPTABILITY.

HEALTH PRECAUTIONS.

By MARY MACLEOD MOORE.

To visit enormous munition factories, as has been done lately by women writers, through the kindness of the Ministry of Munitions, is to be struck by two main facts. First, the amazing adaptability of human nature, for women of all classes, occupations, tastes, and temperaments are making a success of munition making. Second, how curious and, on the surface, incongruous a thing it is that Woman, the mother of the race, the guardian of life, should be employed in her tens of thousands in making the instruments of death.

It has been said easily and carelessly by the superficial person whom we have always with us that the rush of women and girls into munition factories is a matter partly of excitement and partly of high wages.

As to the first it is hard to believe that excitement and a desire for novelty could keep women working steadily for twelve hours or thereabouts week in and week out. The girl who took up munition work for a lark would soon find it necessary to look elsewhere to satisfy her craving for fun. There must be a sounder motive.

THEIR BIT FOR THE COUNTRY.

That motive may be love of England and the desire to help her in her hour of stress, or love of a man who is fighting for the country. It may be an inarticulate thing or it may be expressed, as in the case of a charming girl who had been "in the drapery" and is now working in one of the danger rooms of a great factory.

"Dad's in the Navy," she said, "and I applied for work in a danger room, where I tie the cordite, for I feel that with every day I work I am helping him. Lots of the girls whose men are out there want to do work that will help to kill Germans and end the war. We feel that we're doing as well as we can to back up the men, as we can't be in the Army or Navy."

And another said when questioned: "Pay? Oh yes, the pay is good, but the girls like the work for itself. Look at me. My man went off the week we were married to fight. My brother and my brother-in-law are out there too. I'm here and my sister is working at Government work somewhere else."

Still thinking of wages I recall a girl wearing a red badge on her overall sleeve.

"It means," she said in reply to a question, "that I am senior overlooker for five shops. Pay? I work at the 42s. rate and last week I made £3 6s. for day work, and when I was on night work I made £3 12s. I was in service before this."

One looked critically for signs of strain and ill-health among the rows of girls—for most of them are young—who glanced up from their machines or paused to answer some question. Few of the girls seemed delicate. Most of them were fresh and in good spirits, and it was explained that the woman supervisor, who needs must be—and is—kind as well as firm and just, sees all the girls who apply for work, judges whether they are likely to stand the strain well, and finds out at what distance they live from the works that they may not arrive in the morning jaded and overdone from rising too early and struggling for a seat in the tram or train.

CARE FOR WORKERS' HEALTH.

Much is being done in the munition factories to ensure that the health of the girls does not suffer. In a large number there are welfare workers who supervise the women, give advice, listen to complaints and probe them, investigate cases of sickness and broken time, and see that the conditions under which women work are satisfactory.

In one factory no woman who lives more than an hour's journey from her work is employed. In a great many districts the sudden influx of workers has heavily overtaxed the housing accommodation, with unsatisfactory results, and this whole question

655
655/44

the greatest appreciation of our members' work, and many of whom have declared that without our services they would not have been able to gain instructions in army signalling. Still thinking of wages I recall a girl wearing a red badge on her overall sleeve.

"It means," she said in reply to a question, "that I am senior overlooker for five shops. Pay? I work at the 42s. rate and last week I made £8 6s. for day work, and when I was on night work I made £8 12s. I was in service before this."

One looked critically for signs of strain and ill-health among the rows of girls—for most of them are young—who glanced up from their machines or paused to answer some question. Few of the girls seemed delicate. Most of them were fresh and in good spirits, and it was explained that the woman supervisor, who needs must be—and is—kind as well as firm and just, sees all the girls who apply for work, judges whether they are likely to stand the strain well, and finds out at what distance they live from the works that they may not arrive in the morning jaded and overdone from rising too early and struggling for a seat in the tram or train.

CARE FOR WORKERS' HEALTH.

Much is being done in the munition factories to ensure that the health of the girls does not suffer. In a large number there are welfare workers who supervise the women, give advice, listen to complaints and probe them, investigate cases of sickness and broken time, and see that the conditions under which women work are satisfactory.

In one factory no woman who lives more than an hour's journey from her work is employed. In a great many districts the sudden influx of workers has heavily overtaxed the housing accommodation, with unsatisfactory results, and this whole question of improvement has to be carefully considered by experienced people.

In munition works there are three systems as regards time. One shift of thirteen-fourteen hours (the overtime system), two shifts of twelve hours, and three shifts of eight hours, and in every case there are suitable breaks for rest and refreshment.

In one huge factory a girl in a danger room said that she began at eight, stopped at 11.30 for dinner, for which she was allowed till 12.45. Then worked till 4.15, when there was half an hour for tea; and from that time till 7.15 the work went on.

The women can get good meals in the canteens run in connection with these works.

For dinner the menu chalked on the blackboard told of meat—a choice of two or three dishes—and two vegetables for eightpence; stewed fruit and custard for twopence, and tea, coffee, or milk for a penny or twopence. For tea a large cup of hot tea cost a penny, a round of buttered toast the same sum, and cakes or buns a penny. Eggs cooked in various ways are obtainable also and some girls were making a substantial tea, which included two eggs. No time is wasted in attendance. The girls buy tickets for varying amounts at a wicket and pass on to a counter, where they give their orders and carry their cups and plates to long deal tables. One might suggest, however, that benches with backs would be more restful during meal hours than those without.

With the co-operation of the L.C.C. and other educational authorities sixty-four centres for free training have been established in the United Kingdom. Thousands more women are wanted for the work and the short course provided gives the inexperienced student some "machine sense" and renders her less diffident when she starts work in a factory.

Yorkshire Observer.

The Lady Commercial Traveller.

Is there a branch of human activity except actual soldiering that woman is not threatening to enter? The information now comes to hand that the lady commercial traveller is steadily making her way into the profession. Who could resist the sex armed with smiles and samples? It is said that before the war there was some feeling of resentment among the men who travelled in drapery goods at the ease with which the women succeeded in reaching the buyers It would be ungallant to keep the lady commercial traveller waiting her turn in the hall. The United Kingdom Commercial Travellers' Association is apparently disposed to think that the innovation is temporary and due merely to war exigencies, and it is said that some of the women are travelling for husbands and male relatives who have been called up for military service. Others, however, are prepared to believe that lady commercial travellers, having once got a foothold, will not easily be dispossessed after the war. The merchanting houses may be expected to look favourably on those who bring in a satisfactory amount of business.

Rush of Women Medical Students.

The official recognition given to women doctors and the success achieved by the lady practitioners have prompted an unusually large number of females to take up the study of medicine. The enrolments already received at the different schools of medicine in the country indicate that the coming autumn term will be a record one so far as lady students are concerned, and, curiously enough, Glasgow leads the way with the highest number to date. This enthusiasm for medical study by women is, in the opinion of many people, likely to lead to a new post-war problem. They assert that few of these young ladies are likely to obtain their degrees before hostilities have ceased, and that then, when the present shortage of male doctors will be ended, it would be unfair to expect the women who have spent their time and money in gaining their qualifications to refrain from practising.

Daily Express.
19.9.16.

WOMEN AND THEIR WORK.

FUTURE PROSPECTS OF MOTORING AS A PROFESSION.

Anxiety is felt as to the position after the war of the many women who have taken up occupations ordinarily pursued by men. Will there be any chance when the men come back for the women to continue the trades they have learnt during the war, or will they be thrown out of employment after having spent what money they could spare on training for a profession they cannot any longer pursue?

Such questions as these are constantly being asked by women who have taken up motor driving and mechanism, or are still anxious to train for this particular branch of employment.

With regard to women as motor drivers, it seems that now the woman driver has become an accepted fact she will be able to obtain many positions not suitable to the ordinary man chauffeur. To begin with, women have found out the immense convenience of the small light car and the cycle car, they have learnt that they can drive them easily, and many who earlier would not have thought of owning a car are now tempted to buy one, either new or secondhand.

This creates an opportunity for the woman driver who can combine driving with other work, secretarial or gardening, or even nursing and housework. The secretary-chauffeuse has become a most necessary adjunct in the lives of many women engaged in important professional or charitable work.

Again, there should be a good opening for women who will study to become competent mechanics and will take up ordinary garage work. If women would do ordinary repairs —tyres, tubes, vulcanising, patching, cleaning—and if two or three of them could club together and buy a secondhand car for hire work and hire it out, driving it and living over a small garage they should be able to make a living in many places in the country.

EXPERT REPAIRS.

If they could also do expert repairs—take down an engine and overhaul it—they should find work coming in from all parts of the neighbourhood near their garage. Of course, they must first prove that they can do such work; but what is to prevent them? The average mechanic in country towns is not a very great expert, and there is nothing to prevent women of ordinary intelligence learning to do first simple repairs, and gradually, as experience is gained, going on to jobs requiring greater knowledge

Then there is an opening for women mechanics to teach other women. The woman running a garage could take women apprentices. As a rule women teach their own sex better than men do; or, rather, it is easier for both to learn in this way, because the average man mechanic finds himself in rather a difficult position with women students. If he is doing a difficult job it distracts him to be asked endless questions; in the case of a boy apprentice he would probably tell him to hold his tongue, or something more forcible, but in the case of women, especially women of a different class, he finds himself constrained by politeness to put up with the distraction, with the result that the work suffers.

Yet the women are eager to learn, and if they are to earn a living they must be taught thoroughly, and go into the repair shop and learn to handle tools, etc.

Once thoroughly trained they will be in a position to start their own garages, do repairs, sell supplies, teach other women driving and mechanism in many country towns. Some ought to specialise in electrical work, magnetos, dynamos, etc., the average good mechanic is often far from expert in this subject, and besides this there is the study

Women Typewriter Mechanics.

A NEW OUTLET FOR THE BUSINESS GIRL'S ACTIVITIES.

"I'm simply weary of tapping at a typewriter all day long," a girl I know exclaimed in my hearing the other day. "I want to be up and about doing something new—something women haven't done before."

"Why not?" queried her companion. "I can tell you of a new field for women's labour where you will be given ample chance to win a position that has been, and is still, sacred to men."

"You're joking," suggested the other suspiciously. Truly, one might well imagine that women have already conquered all there is to conquer in the commercial world.

"Well," replied her friend, smiling, "considering I'm training for such a job myself, I'm not likely to be joking."

"But you're working for a typewriter company," remonstrated our typist friend.

"Exactly so. Only instead of doing typewriting I'm learning to do the mechanical work of cleaning and repairing the machines. Until some twelve months or so ago no woman was engaged in this work. It is novel, fascinating, and interesting work, and anything but monotonous."

"Then it's the very thing for me! I'm going to be a typewriter mechanic," exclaimed the young typist, eagerly.

And to the surprise of all her friends, a typewriter mechanic she has become!

I met her a few days ago and asked her if she still felt bored and restless.

"No," she replied. "I've found my niche—I'm doing something new at last."

AN ENCOURAGING POINT.

The encouraging point, from the woman's point of view, about this new field for woman's labour, is that those who have tried the plan longest are most hopeful of its success. On one point they all seem agreed. The women are to be given a fair chance to learn the work, and they are to be given that chance now.

Not only so, but there seems more or less general agreement that when fully trained they shall draw a man's pay, which is anything from £2 to £5 a week, and sometimes even more. It remains with the women to respond to this offer.

Briefly, it may be said that any intelligent girl above the age of seventeen, with a natural liking for mechanical work and plenty of "grit," is appealed to.

During the first few months of her training she will probably be put to the unskilled work of cleaning the machines, for which she will receive about 15s. a week. This is, for the most part, not dirty work, as might be imagined, most of it being done by machinery. The work, too, is comparatively light, as the girls are not expected to lift the machines.

LEARNING TO USE TOOLS.

Afterwards the girls will be taught the use of the various tools employed in this kind of work and to make all manner of repairs. It is estimated that it takes about three years to train skilled mechanics, after which period they are ready either to take a responsible position in the workshop or to be sent out as inspectors. No woman has as yet completed her training, so that it remains to be seen whether women are likely to be employed as inspectors in the future or not.

One exceptionally clever woman mechanic, however, though she has not completed her training, has already been sent out as acting inspector in several "emergency" cases and seems to be giving

MOTORING AS A PROFESSION.

Anxiety is felt as to the position after the war of the many women who have taken up occupations ordinarily pursued by men. Will there be any chance when the men come back for the women to continue the trades they have learnt during the war, or will they be thrown out of employment after having spent what money they could spare on training for a profession they cannot any longer pursue?

Such questions as these are constantly being asked by women who have taken up motor driving and mechanism, or are still anxious to train for this particular branch of employment.

With regard to women as motor drivers, it seems that now the woman driver has become an accepted fact she will be able to obtain many positions not suitable to the ordinary man chauffeur. To begin with, women have found out the immense convenience of the small light car and the cycle car, they have learnt that they can drive them easily, and many who earlier would not have thought of owning a car are now tempted to buy one, either new or secondhand.

This creates an opportunity for the woman driver who can combine driving with other work, secretarial or gardening, or even nursing and housework. The secretary-chauffeuse has become a most necessary adjunct in the lives of many women engaged in important professional or charitable work.

Again, there should be a good opening for women who will study to become competent mechanics and will take up ordinary garage work. If women would do ordinary repairs —tyres, tubes, vulcanising, patching, cleaning—and if two or three of them could club together and buy a secondhand car for hire work and hire it out, driving it and living over a small garage they should be able to make a living in many places in the country.

EXPERT REPAIRS.

If they could also do expert repairs—take down an engine and overhaul it—they should find work coming in from all parts of the neighbourhood near their garage. Of course, they must first prove that they can do such work: but what is to prevent them? The average mechanic in country towns is not a very great expert, and there is nothing to prevent women of ordinary intelligence learning to do first simple repairs, and gradually, as experience is gained, going on to jobs requiring greater knowledge

Then there is an opening for women mechanics to teach other women. The woman running a garage could take women apprentices. As a rule women teach their own sex better than men do; or, rather, it is easier for both to learn in this way, because the average man mechanic finds himself in rather a difficult position with women students. If he is doing a difficult job it distracts him to be asked endless questions: in the case of a boy apprentice he would probably tell him to hold his tongue, or something more forcible, but in the case of women, especially women of a different class, he finds himself constrained by politeness to put up with the distraction, with the result that the work suffers.

Yet the women are eager to learn, and if they are to earn a living they must be taught thoroughly, and go into the repair shop and learn to handle tools, etc.

Once thoroughly trained they will be in a position to start their own garages, do repairs, sell supplies, teach other women driving and mechanism in many country towns. Some ought to specialise in electrical work, magnetos, dynamos, etc.—the average good mechanic is often far from expert in this subject—and besides this there is the study of electric light plant and gas and oil engines for farm machinery.

Women who will train along these lines will surely be able to earn a steady income both now and after the war. Particulars of some motoring training schools where special classes are held for motor mechanism are given in the adjoining column.

The seventh article of this series on "Women's Employments after the War" will be given on Tuesday, and will deal with the prospects for the woman journalist.

Mechanics.

A NEW OUTLET FOR THE BUSINESS GIRL'S ACTIVITIES.

"I'm simply weary of tapping at a typewriter all day long," a girl I know exclaimed in my hearing the other day. "I want to be up and about doing something new—something women haven't done before."

"Why not?" queried her companion. "I can tell you of a new field for women's labour where you will be given ample chance to win a position that has been, and is still, sacred to men."

"You're joking," suggested the other suspiciously. Truly, one might well imagine that women have already conquered all there is to conquer in the commercial world.

"Well," replied her friend, smiling, "considering I'm training for such a job myself, I'm not likely to be joking."

"But you're working for a typewriter company," remonstrated our typist friend.

"Exactly so. Only instead of doing typewriting I'm learning to do the mechanical work of cleaning and repairing the machines. Until some twelve months or so ago no woman was engaged in this work. It is novel, fascinating, and interesting work, and anything but monotonous."

"Then it's the very thing for me! I'm going to be a typewriter mechanic," exclaimed the young typist, eagerly.

And to the surprise of all her friends, a typewriter mechanic she has become!

I met her a few days ago and asked her if she still felt bored and restless.

"No," she replied. "I've found my niche—I'm doing something new at last."

AN ENCOURAGING POINT.

The encouraging point, from the woman's point of view, about this new field for woman's labour, is that those who have tried the plan longest are most hopeful of its success. On one point they all seem agreed. The women are to be given a fair chance to learn the work, and they are to be given that chance now.

Not only so, but there seems more or less general agreement that when fully trained they shall draw a man's pay, which is anything from £2 to £5 a week, and sometimes even more. It remains with the women to respond to this offer.

Briefly, it may be said that any intelligent girl above the age of seventeen, with a natural liking for mechanical work and plenty of "grit," is appealed to.

During the first few months of her training she will probably be put to the unskilled work of cleaning the machines, for which she will receive about 15s. a week. This is, for the most part, not dirty work, as might be imagined, most of it being done by machinery. The work, too, is comparatively light, as the girls are not expected to lift the machines.

LEARNING TO USE TOOLS.

Afterwards the girls will be taught the use of the various tools employed in this kind of work and to make all manner of repairs. It is estimated that it takes about three years to train skilled mechanics, after which period they are ready either to take a responsible position in the workshop or to be sent out as inspectors. No woman has as yet completed her training, so that it remains to be seen whether women are likely to be employed as inspectors in the future or not.

One exceptionally clever woman mechanic, however, though she has not completed her training, has already been sent out as acting inspector in several "emergency" cases and seems to be giving every satisfaction.

WHERE WOMEN COUNT.

"I can tell you where we are already finding women *do* count in work of this kind," the manager of one of the big typewriting concerns who have just begun to employ women, said to me the other day, "and that is in the stores department. All the two thousand parts of a typewriter have to be classified and kept in separate compartments so that a missing screw or other part in a typewriter under repair may be easily replaced. Send a man to fetch one of these parts and he may take two or three hours; send a woman and she'll take as many minutes That's my experience.

"How do I account for it? Oh, a woman's much more methodical than a man. Give a man some parts to sort out and he'll toss them in anyhow; not so a woman. A woman is thoroughly conscientious over every detail."

Keenness, according to an instructor in typewriter mechanics, is another attribute that women are introducing into the workshop. "There's not that playing about in work hours amongst girls that there is with boys learning the trade," he declared. "They're too keen to get on to waste their time."

As might be anticipated, however, there are numbers of employers who are somewhat critical as to women's mechanical capabilities and are "afraid to venture."

"A woman can't use a screwdriver," one of these remarked, "and I doubt if she'll ever learn," he added pessimistically.

AN HOTEL-SCHOOL IN TRAINING.

By CLAIRE DE PRATZ

PARIS.

The war has taught us many things, both spiritual and material, we did not know about ourselves. One of the most useful lessons we have learnt among the practical things is that there were some businesses, even upon our own soil, which we had almost allowed to pass from our own hands into those of the Germans. The managing and directing of hotels is a case in point. As soon as the war broke out and all German residents were sent out of this country, we perceived that more than three-fourths of the staffs of our larger hotels had dwindled away. Even though the enterprises themselves were financed by French money, the actual management of them was German. But we French people, being an assimilative and adaptable race, understood our lesson at once. For the future French hotels in all their separate departments are to be managed and run by French employees only. The Teutonic waiter and chambermaid, office clerk or overseer, is to be a-thing of the past, belonging to the days of l'Avant Guerre!

And, as has been so often the case since the beginning of this war, it has been a woman who has come forward with a practical and immediate solution of this problem by founding, organising, and managing with admirable competence, even to its smallest details, a Technical Training College for Female Hotel Employees, in every branch of the business. Mdlle. Valentine Thomson (nothing English about her but her name!), the accomplished and gifted daughter of Gaston Thomson, who held office in various Cabinets as Minister of Commerce and of the Navy, had, until recent years, merely been a brilliant society girl. But, after having published two books which met with some literary success, and founded a Feminist and Feminine Review called "La Vie Feminine," specially devoted to the cause of the working woman, suddenly, with the outbreak of the war, realising the necessity of a special training for women in all branches of hotel management, Mdlle. Thomson set to work to secure a building, and, having renovated it, to transform it into a model school-hotel. Although workmen are so scarce—for all building, carpentering, painting, etc., they are so difficult to obtain—Mdlle. Thomson had in a few weeks equipped the entire establishment from garret to cellar.

★ ★ ★

I visited it with her yesterday, and found it in full working order. The house—formerly the private abode of M. Alphand, the architect, of Paris—is situated at Passy, close to the railway station. The entrance hall forms a spacious lounge, which, by means of an archway, is connected with the dining-hall. This is separated from the kitchen by a wall of clear plate glass, so that all the secrets of the kitchen stand revealed, while the smell of cooking is avoided. There are two or three openings, with small glass doors, between the dining room and kitchen, through which the steaming hot dishes are passed from the hands of the cooks to the attendants in the dining room. The walls of the dining hall, which is provided with small marble-topped, green-stained tables, are exquisitely decorated by no less a personage than the great Poiret, who is also responsible for the bedroom decoration upstairs. The celebrated decorator has made the panels of the walls gay with brilliant flowers on a pure white ground. One panel in the dining hall has a large almond tree in full bloom, and the pink petals seem to fall everywhere around the diners.

The rooms are lighted by electric light, carefully shaded; and the furniture, though simple, is quaintly and charmingly designed with a view to comfort and elegance. Mdlle. Thomson tells me that she has met with help and generous kindness from all tradesmen, purveyors, etc. She showed me many baize-lined drawers filled with delightful table silver and cutlery, and cupboards full of china and linen, the gifts of various collaborators and friends.

★ ★ ★

Suddenly she opened a door on the first floor, and I found that we had interrupted an English class. Some twenty young women, ranging in ages from 18 to 23, stood up to greet us, by the guidance of a [illegible]

WOMEN AND THEIR WORK.

X-RAY OPERATING AS A CAREER.

The work of a radiographer is very suitable for the woman of good education with a scientific bent, especially if she has had training as a nurse, and an increasing number of hospitals are being fitted up with X-ray installations.

Where X-ray treatment is given the radiographer at the head of the department must, of course, be qualified. Where, however, radiography only (as in accident and military hospitals) is required, a thoroughly trained radiographer without medical qualifications is quite competent. She must possess a good knowledge of anatomy (osteology especially), the control and management of X-ray tubes, and all apparatus connected therewith, and should be able accurately to interpret the X-ray plates—not always an easy matter—for the surgeons if required.

The radiographer must also have a good knowledge of photographic work, of developers and their action, and should be able to make up her own developing, fixing, reducing, intensifying, and toning solutions.

The radiographer has to be thoroughly familiar with every portion of her apparatus and its use. She should also completely understand the risks attached to the work and guard against them.

There is much to learn. A competent radiographer cannot be made in a week or two. Three or six months can be turned to good account if further time cannot be spared, but a year's work under the supervision of a really skilled radiographer is necessary to turn out a thoroughly useful X-ray worker.

Even when this training is finished there are constant improvements, and care should be taken to make oneself acquainted with new apparatus and new methods as they are introduced. The pay of a radiographer without medical qualifications varies. It is (for whole time work) from about 30s. to £2 per week, living out of hospital, though dinner and tea are generally given. If the operator lives in, the salary is from £50 to £70 per annum. Part time, 10s. per half-day, is a very usual rate of payment, a half-day being from about 9.30 a.m. to 1 p.m., or 2 p.m. to 5.30 or 6 p.m.

Electrician. 8-9-16

Women Wireless Operators.—At the beginning of the year Marconi's Wireless Telegraph Co. determined to test the suitability or otherwise of women as wireless operators, and established a school at one of their stations, where instruction of a practical and theoretical nature has since been given to women.

The school has (it is reported) been well attended, but applications for admission were latterly refused, as a decision had been arrived at to close the establishment for the present at the end of this month. So far as it has gone the experiment is regarded as encouraging, and some of the pupils have been already drafted to stations, where they are taking night duty in turn with men. Sending by female operators has, however, a tendency to be too light. This defect varies in individual cases, and with some of the women learners it is thought that they will become efficient wireless operators with practice.

was met with help and generous kindness from all tradesmen, purveyors, etc. She showed me many baize-lined drawers filled with delightful table silver and cutlery, and cupboards full of china and linen, the gifts of various collaborators and friends.

★ ★ ★

Suddenly she opened a door on the first floor, and I found that we had interrupted an English class. Some twenty young women, ranging in ages from 18 to 25, stood up to greet under the guidance of a kindly Professeur d'Anglais. They all appeared interested in their work. In another sacred precinct the directress of the establishment showed me the books kept by the pupils in turn; while the charming foundress explained the system of the school. The course is of three months' training in all branches. Each pupil in turn goes through the special training for bureau work, and is taught bookkeeping single and double entry, besides typewriting and shorthand and English. Each pupil is also trained in all the practical details of housekeeping and house-cleaning. There is not a single servant kept in the establishment, all the housework and cooking, as well as the table and room service being done by the pupils themselves, who are thus not only the pupils of the school but also the managereses, bookkeepers, clerks, interpreters, chambermaids, waitresses, cooks, themselves as well as clients. Thus each girl prepares her own bath and prepares another for a client as well. The dormitories and bedrooms and linen-rooms are kept spotlessly clean. No personal belonging is allowed to be in evidence. Each pupil has her own private locker in which to keep her treasures, the key of which is in her own possession. All clothes are kept in the hanging cupboards. I saw every room in the establishment, and every nook was spotlessly clean and exquisitely tidy. I was even allowed to visit the bedroom of a well-known, delightful American lady novelist who is the first guest-client of the new hotel. I begged to be allowed to become a customer in due time, when the establishment will have increased the number of its private rooms. I need hardly say that the house is heated throughout by chauffage central in wintertime.

★ ★ ★

Mdlle. Thomson tells me that she has already turned out several batches of accomplished hotel employees, for which there is a great demand among the Paris hotels, who now apply regularly to her for employees in both the bureau and service departments.

After I had left the hotel-school, delighted and amazed at all I had been shown, I went with the foundress to visit the "Vie Feminine," where I was privileged to see many other interesting things for the welfare of women . . . "But that," as your great Kipling would say, "is another story," which must be told another day.

This war will have revealed to the people of all countries the fact which only a few careful observers had realised before—namely, that the women of France, especially those of the newer generations, are possessed of truly remarkable capacities. How many are there who a few years ago would have believed it possible that a carefully nurtured society girl like Mdlle. Thomson, without any previous training, herself hedged in by the narrow conventions which have hitherto characterised the education of all young French girls, could suddenly prove herself capable of producing, organising and managing such an institution as the one I have just described; and this in the space of a few months while war is still waging upon the soil of her country!

Schoolmistress.
14-4-16

Women's Work.

"Mothers of the Army."

Thus the poet, Mr. Alfred Noyes, speaks of the women munition workers whom he was privileged to visit on the Clyde and of whom his epic appreciation is such that we venture to quote a passage for the benefit of those who may not have seen it in the daily papers. After speaking of the sacrifice the Clyde workers had made in giving up their holiday he describes how in the munition works "hundreds of women were heaving great shells into the shaping machines, or drawing red-hot copper bands from furnaces; and there was a steady fervour about their work, hour after hour, that seemed as if it would exhaust any human energy. They seemed to lavish all the passion of motherhood upon their work: for this gleaming brood of shells, rank after rank, had indeed been brought forth to shield a dearer brood of flesh and blood. 'Mothers of the Army' was the thought that came to one's mind, though they were of all ages. An army of little mothers, in the Peter Pan sense—but the shells were their terrible brood also."

Forestry.

In an interesting account of her work, published in "Women's Employment," Miss Mary Sutherland appeals to girls to enter the ranks of forestry students in order to obtain the scientific training which will enable them to serve their country in a very necessary department which has hitherto been considered "a man's job," but which is now open to women.

The work of afforestation in this country has been greatly neglected, there is a shortage in the supply of imported timber, and the State is seeking to make good by looking to the national supply. Experts are in great demand and it is good to know that women are capable of taking up the work professionally. In the theoretical part of the training, Miss Sutherland tells us, women have equal chances of success with men, and there is no part of the practical training usually taken by men students that women cannot also perform. Miss Sutherland is now in charge of two acres of forest tree seed beds on the University College of North Wales Farm.

Women Barbers.

Women barbers have almost entirely supplanted the foreign assistants who used to be found in such large numbers in the London shaving and hair-dressing establishments. The women learn their work quickly and customers are pleased to have their needs attended to by the deft, willing fingers of quiet girls who do not annoy them by stupid attempts to make conversation. This latter trait finds special favour with the proprietor, who is also satisfied that the girls are neater and cleaner in manipulation than the men and do not waste time over their jobs.

Behind the Front.

Miss Lena Ashwell, with a party of friends, has again crossed the Channel to provide the soldiers located "somewhere in France" with entertainment. Having been informed that the men would appreciate a more serious programme than just song and dance and that they have been asking for Shakespeare, Miss Ashwell is including the sleep-walking scene from "Macbeth" and the quarrel and screen scenes from Sheridan's "School for Scandal" among her items.

Musicians.

This summer there has been a great demand for women musicians to fill up the gaps in the orchestras made by men having left for the war. They are taking their places as pianists, violinists, and flautists very successfully and a lady is known to manage the drum very effectively. The trombone is, however, a difficulty and it is to be hoped that men [illegible] service age will still be found to deal [illegible] instrument.

Women and Dentistry.

The demand of the Army for men has brought in its train, among other things, a call for women recruits to train as dental mechanics; and for those who have the skill and patience to learn a by no means easy trade the prospects, financially speaking, are declared to be excellent. The industry has not proved a very attractive one for women, who, it seems, feel some repugnance against making artificial palates and teeth and all the other things connected with mechanical dentistry, but the prospects of receiving high wages may bring about a change. One of the London technical schools is starting a course of instruction in mechanical dentistry for women. After a term's training, students are able to do remunerative work.

WOMEN DIRECTORS.

Peer's Daughter a Member of Nine Boards.

It is women's hour. Women as tramcar and omnibus conductors; women replacing clerks in City offices; women acting as commercial travellers for their husbands now in the fighting line. And now women are taking the places of directors of public companies.

"Why should not women of education and proved brains become directors of companies?" was the question which a woman organiser put to a representative of "The Daily News" yesterday. "Young directors have to do their share of the fighting," she said, "and clever women are stepping into their places. We shall have many women directors of companies before this war is over. Already women are looking after the business interests of their relatives who have gone to the front. Lady Rhondda has become chairman of an old-established aerated water company, and her daughter, Lady Mackworth, has joined the board of directors. They have taken the places of men now in the Army. Both ladies are taking an active interest in the management of the concern, and may be seen at the offices of the company almost every day."

The work of a director is not new to Lady Mackworth, who assists her father, Lord Rhondda, every day in his business. She is a director of no fewer than nine companies, including a colliery company, an insurance agency, a coal distributing agency which operates in France and other countries, and a Spanish coal company. She is not the only peer's daughter to interest herself in business affairs. Early this year the Hon. Elaine Jenkins, the younger daughter of the late Lord Glantawe, was elected "chairman" of the Swansea and Mumbles Railways, Ltd., after serving the company as director for some time.

OPENINGS FOR WOMEN.

OPTICAL WORK.

BY K. BAVERSTOCK.

THERE have never been so many openings in the labour market for capable and well-trained women as there are at the present day. The throwing open of the world of labour to women was an accomplished fact before the war, but with the war the last barriers are yielding. There is now hardly a profession entirely closed to a woman who can prove herself fitted for it. Among the less well-known occupations which offer good prospects to suitable women may be included optical work.

The British Optical Association was founded in 1895, and a woman who wants to become an optician should obtain the membership certificate, and afterwards the fellowship of the Association.

A girl who has received a thoroughly good secondary-school education, and has reached a standard represented by the passing of some examination such as the Senior Cambridge or London Matriculation, should certainly be able, after two years' study, to pass the Dioptric or Intermediate examination, which qualifies for membership. Members who have passed this examination are entitled to use the initials D.B.O.A. after their names. Further study for about one year would probably be required for the Fellowship Examination.

Cost of Tuition.

The cost of tuition varies from about £5 to £15 a year, and can be obtained at various centres, such as the Northampton Polytechnic Institute, Clerkenwell. The course comprises sight-testing, and the understanding of optical instruments and optical prescriptions, etc., and in the higher branches of optics a good knowledge of mathematics is essential. A nurse who had spent a certain amount of time in an eye-hospital would, of course, have an advantage over others. The work is interesting, and in many ways suitable for women, and it is advantageous in so much as an older woman who really knows her work does not find her age a barrier.

It is, perhaps, as well to mention that the Dioptric Examination is open to those of 18 years and older, but that membership of the Association, and consequently the certificate, is not granted until the candidate is 21 years old. After qualification there are two courses for the worker to follow. One is to become an assistant to an optician at a salary ranging from £1 to £3 a week, and this experience would be good. The alternative is for a worker to start business on her own account. This necessitates, not merely thorough training, but good all-round capacity, and a knowledge of business methods, book-keeping, etc. A worker who means to start a business should certainly have sufficient capital for maintenance for at least one year. It is probably wise for a worker to begin as an assistant before setting up for herself; but a capable, fully-trained woman optician, with business ability and experience, may quite reasonably hope to make from £200 to £300 a year under pleasant and congenial conditions.

Machine Review.
Sept. 1916.

FEMALE LABOUR IN THE ENGINEERING TRADES.

THERE are authorities who assert that one of the chief points for decision in the future of the engineering trades will be that of female labour. Such people tell us that many employers who now find women workers serving them so conveniently will refuse to dismiss them when their services are less urgently required than now. We should be well advised, they hold, to prepare for an increase rather than a decrease of female operatives in the engineering trades. Not only, these industrial prophets argue, can we take it for granted that many, if not most, of the women who have taken up employment in engineering and munition factories will wish to remain employed, "but it is probable that many more women and girls will desire to enter the ranks of industry." We are free to admit that there is not a little common sense in these conclusions. Certainly, there is no economic or other reason why women should not continue to be employed in many skilled occupations in the engineering trades. Employers everywhere speak well of them; and the praises of female labour are being freely sung by master engineers in many parts of the kingdom. We therefore think it would be well if engineering firms generally regarded it as fairly established that after the war their works will continue to give employment to a large number of women and girls, generally producing side by side with the men, though in some cases without male assistance. The West of Scotland is very shortly to give us the first engineering works run entirely by female labour. This announcement has only been made quite recently, and we believe its importance will prove to be more far reaching than at present appears. The new experiment is, it is understood, to be financed by two of the directors of a well-known and Government "controlled" firm, and the workers are to be from twenty to thirty-five years of age. The wages of capable hands will start at a minimum of 25s. per week, and examinations to be held twice a year are to decide the rate of wages which the more promising operatives shall receive, particularly those chosen for the responsible posts of forewomen, manageresses, &c. It is intimated that in some of the best berths women "evidencing a decided bent for mechanics" may secure as much as £5 per week! These new engineering works will, it is hoped, become a permanent and not merely an ephemeral addition to the Scotch engineering trades, and the organisers are, it is said, convinced that the effort will be a complete success. There are to be night and day shifts, each shift being divided into two periods of four hour's each.

Sheffield Telegraph
Oct 3rd 1916

FEMALE ANAI S.

WOMEN TO BE TRAINED FOR STEEL WORKS.

In view of the urgent necessity of augmenting at once the man power of the British Army the competent military authorities have decided that any man of fighting age must join His Majesty's forces. This edict has been recently extended to the junior chemists of Sheffield steel works, who carry out important work in analysing the material for guns, shells, and other munitions of war manufactured in our great arsenal. In these urgent circumstances it is necessary once more to fall back upon British women "to see the business through" and to take the place of men called to the front.

To meet the emergency the Metallurgical Department of Sheffield University is immediately organising special practical classes rapidly to train women assistant analysts for Sheffield steel works. The course designed is of four weeks' duration. The hours of instruction are from 10 a.m. to 5 p.m. on Mondays, Tuesdays, Wednesdays, and Fridays, and from 10 a.m. to 1 p.m. on Thursdays.

In this restricted period it is hoped that it will be possible to train intelligent young women to serve their country to the extent of turning out mechanically accurate estimations of the root elements of steel, namely, carbon, silicon, manganese, sulphur, and phosphorus, and so relieve the heavy stress constantly thrown upon the senior steel works chemists by the unexpected departure of their juniors for military training.

WOMEN AND THEIR WORK.

PROSPECTS IN THE FILM INDUSTRY.

The war has made it possible for women to enter more largely into the working of the film trade in Great Britain, and, strange to relate, the average person knows comparatively little of the work and conditions respecting women's work in filmland.

To convey a slight conception of the range at their disposal, I would mention the following positions open in the various departments:—

PRODUCING.—This branch of modern kinematography probably offers the widest scope to persons possessing real talent in the shape of expression, gesture, and so forth.

The financial success of the photo-play depends on the natural ability and grace of the film actors and actresses, but producers are ready to discern the power and general usefulness of the players engaged, and to secure engagements, as in most other businesses, it is advisable to seek out a friend intimately acquainted with the producers or others in authority at the studios. The profession holds out good prospects if regular work can be obtained, and once a footing is secured everything depends on the aptitude displayed by the aspirant to leading parts.

Another branch, closely allied to producing, is film-printing, the photographic side and general repairing, all of which demand careful handling. Here a young woman or girl will find permanent employment at fair wages when proficient, application for such openings being generally made to the renting and producing companies.

RENTING.—Typists, secretaries, bookkeepers, booking clerks, as in other commercial offices, are engaged at the average rates for this class of labour, and vacancies occur from time to time, and are frequently advertised in the trade and "lay" Press. Women travellers, though very few are employed, should command good salaries, which they should be able to augment by commission on orders. The qualifications are enterprise, initiative, and a ready grasp of facts and figures.

Women viewers have for some time found a means of livelihood in reviewing, inspecting, and reporting on the latest releases (new films) for circuit theatres, private exhibitors (or showmen), and renting concerns. Their opinions go a long way in forming the judgment of those intimately connected with the buying and selling of productions, emanating as they do, from the four corners of the earth.

The occupation is far from being monotonous, as the subjects and scenes are ever-changing. Neither are the eyes unduly tried. Writing the synopsis (the story of the films for sending out to managers and clients), scenario, or plot are branches on the literary side, and a source of lucrative revenue to women who specialise, but, as in the case of acting, aspirants should keep in touch with the especial needs of the many producers and the names of the most likely firms, otherwise much time and effort might be turned to no account. Certain conditions, rules, etc., are set up by individual firms, and there is no royal road.

KINEMAS.—Now that the better type of kinema has come to be regarded as a national institution in the highest circles, the question of labour takes a wider aspect.

Women musicians, for example, are now in great demand, and are proving themselves quite equal to the male instrumentalists. Providing one is a clever performer on the violin, 'cello, or, say, piano, the scope is very great, particularly under existing circumstances, and the money excellent.

OPERATING.—Women and girl operators are frequently engaged, but such berths obviously call for some mechanical and electrical experience, and they are not confined solely to the public picture houses. Operators are required in the private theatres to project pictures for clients' inspection. Usually certain hours are set aside each day or week, as the case may be, for these exhibitions. Then, of course, the attendants, cashiers, and minor positions at kinemas are generally filled by girls or young women. Courtesy and devotion to duty carry one a long way on the road to better paid berths—politeness costs nothing.

To conclude, I should say with emphasis that the day of the novice is past. The future holds great things for the specialist in every walk of life, and this should be borne well in mind.

YET ANOTHER CAREER FOR WOMEN.

HOW THEY REPLACE MEN AS COMMERCIAL TRAVELLERS.

By IRENE ST. JOHN.

THE woman commercial traveller is one of the latest and most successful recruits to the great army of women workers.

It was a little difficult for her to invade a world occupied almost exclusively by men, but with the war came her great chance. Thousands of travellers joined the colours, and women began gradually to fill their places. At first the idea of an entirely new venture is appealing. Nowadays any occupation which will take women out of a narrow groove is hailed with enthusiasm.

Some aspects of commercial travelling are indeed delightful. There is the pleasure of visiting fresh places, of seeing buildings of interest, and there is the pleasure of meeting new people—above all, there is the living interest in "making good."

Life "on the road," however, is at present rather lonely for a woman: there are so few travellers of her own sex that she seldom comes into contact with them. The hotel life is often dull for the same reason; she does not stay at the ordinary commercial hotels, but those of the commercial and family type, or at some quiet place which will receive her on commercial terms.

In the majority of cases women travel on salary and commission. Well-known firms pay all travelling expenses.

The woman "traveller" sometimes arranges for bed, breakfast and tea, costing about 6s. 6d. or 7s. 6d., at an hotel in one of the large towns, which she often makes her centre. She is generally too far afield to return for lunch, but she makes a hearty meal at a knife-and-fork tea in the evening. If she prefers to keep to the old régime of four meals a day she decides to sleep and have breakfast at the hotel, and then takes all her other meals at some recherché and not too expensive little restaurant in the town

Like many of her sex, she becomes quite an epicure.

SHE KEEPS TO HERSELF.

She never invades the commercial-room at the hotel, where most of the travellers gather to have their meals and write their orders, which have to be sent off to the firm each night. She has found that individually men travellers are the most charming and polite people, often giving kind advice and helpful suggestions, but when several are gathered together she finds them very exclusive, so she seeks refuge in the coffee-room.

The type of woman needed is one with tact, push and principle. She must have a pleasant manner, an unconquerable spirit, and a natural aptitude for business. She must be reliable and not too young or frivolous; obviously the life might offer many temptations to the flighty, unstable nature; though really, even when one is constantly travelling, the life is often surprisingly uneventful.

Customers are almost invariably kind and courteous, and people in general take an interest in the woman traveller. I even heard of an instance a little while ago in which a kind chemist, observing that one of them looked tired, insisted upon sending her case back to the hotel (it was at the end of the day), so that she should have no weight to carry. Little considerations such as these she appreciates enormously, and they help her wonderfully along a somewhat difficult path. Indeed, those sample cases grow very heavy, and the physical inability to carry as many samples as she would wish is a great drawback.

Railway journeys are very troublesome, especially in war time. Not only does it become irritating to keep "allus a-movin' on," like Poor Joe, but there is the bother of luggage. Few personal effects are needed as a rule, but women travel in a variety of things, and some of them, such as pipes, manicure instruments, drapery, dairy produce, household brooms (minus handles, of course) and walking-sticks, entail the carrying of rather heavy sample cases. When arriving at a town late at night great difficulty is often experienced in procuring porters and taxicabs, and she finds there are often wearisome waits.

She has faced the trials of a traveller's life with splendid courage. At the end of a hard day, if business has been unusually slack, she has perhaps crept into bed and wept from sheer loneliness and disappointment: "women must weep" sometimes, even though they do men's work.

Christian Commonwealth.

Women's Kingdom.

Women Preachers.

A death-blow is dealt to the argument that the custom and tradition of the Church excludes woman from exercising the eucharistic functions of the priesthood in a scholarly article by Miss M. A. R. Tuker in the December "Nineteenth Century." She quotes the early records of the Church to show that from the earliest days of Christianity women occupied both the chief offices of the Church—they served as presbyters and deacons. The *ordos*, or ordination service of deacons proves that diaconal ordination for women differed in no single particular from diaconal ordination for men; women catechised, baptised, administered the communion to women, carried the host to the absent, chanted the Gospel, and read the homily. The first Gentile reference to the Christian ministry occurs in a letter of Pliny's to Trajan, and the two ministers mentioned are women. The most ancient reference to a bishop of Rome couples his name with that of a woman-elder; and the first time a deacon is named in the apostolic age the deacon was a woman (Phœbe). The fact that the translators and advisers of the English version prefer to transcribe the same word "servant" in Romans viii., and "deacon" in Phil. i. and 1 Tim. iii., does not alter the status of Phœbe. Did women preach? "Of course they preached," says Miss Tuker. "Nothing in the often uncertain testimony of the early Church is more certain than that the conversion of Europe to Christianity would not have taken place without them." As the Church became more and more synonymous with the world, women were ousted from their positions, and great efforts were made to wipe out the memory of woman's ministry. By the end of the 12th Century the process was almost complete. But tradition is on the side of woman. The golden tradition of Christianity nearest to its source. And I agree with Miss Tuker: "It is now time that the bishops should give regards to the ordination of women clergy that will appeal to the good man and the intelligent woman."

FEMALE LABOUR.

Girls to be Introduced into Cutlery Trade.

During the week-end an important meeting of spring knife cutlers and grinders was held under the auspices of the National Amalgamated Union of Labour. The meeting, which was representative and largely attended, had been called to consider an important innovation in this particular branch of the cutlery trade. Councillor A. J. Bailey presided.

The subject under consideration was an agreement which had been arrived at by the Joint Board of workmen and employers in regard to the introduction and use of female labour. It had been arranged that women should be engaged to prepare material, such as spruigs, scales, and outside coverings, and also to pin on the outside covers. The employers have undertaken to introduce modern machinery and up-to-date methods of production to secure that all material handed to cutlers shall be true, accurate, and ready for completing the knife.

A scale of wages for girls just starting has been arranged—for those under 16 years 8s. per week, increasing up to 20s. per week for trained girls of 20 years of age with twelve months' experience. The agreement is to come into operation at once. After discussion the arrangements made by the Joint Board were endorsed.

Several shop committees asked for further percentage advances, particularly on commercial work, which is being done to a much greater extent now than at any period during the war, and these applications are to be discussed by the committee.

Daily Express. 2/12/16

WOMEN AN

Women Carpenters.

I heard a day or two ago that a firm of Government contractors are training women as carpenters, and decided to pay a visit of inspection. Among the beautiful woods near Byfleet, in Surrey, a space has been cleared and huts are being erected. People have an idea that if a woman uses a hammer she is bound to hit her fingers! The foreman, however, who was an enthusiast and very proud of his pupils, told me that was only "an old woman's story." Certainly, the women and girls seemed to be doing their work exceedingly well and to be enjoying it. I must say I did not see nearly so much dawdling and wasting time as is usual in a party of British workmen. And then, too, there were no pipes or pots of beer. I did catch sight of a tea-cup in a corner of the shed; but after all, one must expect that at four o'clock in the afternoon. The huts being put up looked most substantial, and it was a real joy to see the girls in their neat overalls and short skirts running up the ladders like the proverbial lamplighters. I heard that when proficient a party will be sent to France to erect the next huts required for housing our Tommies. Special housing arrangements are made; the pay is not munificent, being about 4d. an hour for girls up to twenty and 5d. for those older. Still, it seemed to me healthy and interesting and much to be preferred to typing in an office, for instance. Anyone interested and willing to take up the work should write to Messrs. Tarrant, Government Contractors, Byfleet, Surrey.

Well-paid Work.

I have been much interested in the work taken up by the daughter of a friend. The girl is just twenty, and, owing to the war and for other reasons, she finds herself obliged to earn her living, or part of it, for the present. An uncle offered to pay a moderate amount for her training, and after careful consideration she decided to take a course of dental mechanics. She is very clever and deft with her fingers, and is not much of a bookworm, so this seems just the thing. There is a great demand for workers to make all the delicate and wonderful contrivances for which dentistry is now famous. She will, of course, have nothing to do with the actual patients—that is quite another part of the work. Classes are given at the Polytechnic near her, and she is taking a six months' course. The work is hard, as the classes are continuous during the day; but the work, she tells me, is most interesting. The fee for the six months' course is five guineas, and a dentist is waiting to employ her as an "improver" at £1 a week as soon as she has completed this preliminary training. Of course, she will continue to study while working, and it rests with her to earn a salary of three pounds a week, and in time, if she proves herself really capable and clever at the work, she might earn as much as five pounds. Of course, a salary like the last would only come after much practice and experience. Great delicacy of touch is needed, and of course neatness and exactitude. I shall watch her progress with considerable interest, because I believe this is a really good opening for women now that silly prejudice is being broken down.

CAREERS IN PHARMACY AND DISPENSING.

By MRS. WOOD-SMITH, M.P.S.

Pharmacy as a career for women is not the new calling that people imagine it to be, for the history of its beginning and development, it is interesting to note, is contemporary with that of medicine for women, dating back to about forty years ago. Recent events have, however, of necessity brought both these professions into more prominence than before, and women have shown with what aptitude they have answered the call.

To become a pharmacist it is necessary to pass an educational examination, including subjects required by the Pharmaceutical Society. After having been trained and engaged in dispensing for three years, studying the theory meanwhile, a candidate can present herself, if she has attained the age of twenty-one, for the "minor" examination, and, thereby, if successful, be qualified as a chemist and druggist. The "major" can be taken later if higher distinctions are aimed at.

The Apothecaries' Hall examination is a good stepping stone to the "minor," as the syllabus of that society will show. If a girl's whole time be given up to it, this examination can be passed in about six to nine months. The qualification of this society will enable the possessor to take a post while studying for the "minor," by doing which the cost of study is considerably lessened. Well educated and intelligent women are greatly in demand for this work.

Dispensing is both interesting and pleasant, which means so much to the woman who has to earn her living. Moreover, it is devoid of monotony, especially in institutions wh[illegible] the patien[illegible] tain amount [illegible] of cheeriness are required to be given to the sufferers who attend the out-patient department. One's sense of humour is also often aroused in the many little incidents that happen during the working hours.

I would like to emphasise the necessity for the exercise of absolute accuracy, method, and neatness. Dispensing is most suited to women with these qualities, for the work is one of responsibility and must be taken up seriously. Unlike many professions, it is not only for the duration of the war; while the salaries are good, varying according to the amount of work.

Women, finding that the economic conditions have changed through the war, have taken up and will continue to take up this calling of usefulness to the community, and will thus help to keep and strengthen the position which they have attained in the world's work.

NEW CAREERS FOR WOMEN.

I.—ANALYTICAL CHEMISTRY.

THE war has opened up many fresh spheres of labour for girls, and caused more vacancies where they were already engaged. Before August, 1914, few women were to be found in the scientific world except teachers and a very limited number who were doing research work.

Analytical chemistry was at that period looked upon almost entirely as a man's work, but now the girl who wishes to become an analyst need have no fear about her future career; once she is qualified she will find plenty of work. Her best course is to enter the science faculty of a university and study for a science degree, or to become an associate of the Institute of Chemistry, or both. She must make up her mind to three or three years and a half of study.

In taking up commercial work it is best to have studied at a university (and college) where there is co-education, as it is well to learn one's profession with those with whom we shall afterwards work. For this as well as for other reasons the London University will be found very suitable.

A student can either study for the B.Sc. degree, which takes three years, or instead of the degree work up for the "Institute." If she decides on the latter, her work at college will be slightly different; she will have less theory and a good deal more practical work, which is what she wants to fit her for her future career.

Undoubtedly in the commercial world more value is placed on the "Institute" qualification than on the degree—head chemists know that they have a more practical man—or woman. At the same time it is in many ways a pity to train at a university and not take its degree, so the ideal thing is to study for both. This means a little longer time, as it is too much of a rush to attempt it in three years. The courses of study run concurrently, but still it means after the degree is taken remaining on for the "Institute" examination for the best part of the following year. A girl who does that will then be aiming at the highest qualifications possible.

The expense entailed in training to become an analyst may be estimated at about £35 a year, which is about the fee charged at King's College. Of course, there are extras, such as books, apparatus (though almost all is provided), private coaching for students who require it, and there are fees for the examinations. The expenses connected with the social side of college life are very small.

When a girl leaves college she should be capable of taking a post as assistant analyst at works or in a private laboratory. It is not advisable then, if the opportunity should occur, to take a post single-handed when fresh from college. It is better to go first as an assistant until experience has been gained in commercial methods. No matter how good the training at college may be, it is essential to gain by experience an insight into the daily routine of work in a commercial laboratory. In daily practice time as well as accuracy is of the greatest value.

There are quite a variety of appointments for analysts. The largest number are at works, while others are as assistants to analysts who have their own laboratories and a private practice. The large dairy firms also employ them, the wholesale druggist, and in almost every branch of industry they are to be found. In some appointments the analysis will be of a special kind, while in others it will be general.

Of course, in chemistry, as in everything else, the wisest thing is to specialise, so that we find while one analyst devotes his time to metals, another will work entirely on food or drugs. Science is such a vast field that by specialising the best results are obtained.

The "Institute of Chemistry" helps its associates to obtain appointments, as it frequently receives applications from firms. The colleges, too, are often able to help students in finding work, and there are the usual advertising mediums. It often happens that during the college course students make friends who are able to give them professional help later on.

The amount of work expected of an analyst will vary according to her appointment. Her hours will be from about 9.30 a.m. to 5 or 5.30 p.m.. There are sure to be some days when she will be very busy, with others less strenuous. There may be times when she will have to work overtime if she is on any special work, but that will be entirely a matter of arrangement with her chief. The girl who wishes to succeed as an analyst must not be afraid of work, for the scientific world is composed of hard workers.

The salary will vary much. No girl should take less than £100 a year. Above this will depend to a large extent on her experience and ability. She may earn any figure above that up to about £200. Beyond that figure will depend on the kind of appointment.

There is no reason why a girl should not be the head analyst, with several others under her, when she will require to be a good methodical manager, for to her will fall the arranging of the day's work, the ordering in of her stocks, keeping of books, and so forth.

There is in the near future a very good prospect for girls in the analytical world, provided they possess brains, training, and sufficient worldly wisdom to make their way in the technical departments of science that are now open to them. It is quite womanly work. It requires no special dress other than an overall or long coat of linen or drill.

PORTIA'S ADVOCATE.

Mr. Holford Knight Still Foresees the Woman Barrister.

"The question of women's admittance to the Bar is in a much more favourable position than the reports to-day would suggest," said Mr. Holford Knight to *The Evening News*.

Mr. Knight's resolution that the Grand Council should report on the advisability of admitting women to the profession was rejected at the annual meeting of the General Council of the Bar yesterday.

"I am told that the majority of members present did not vote at all," he said, "and there can be no question that the powerful leading article in *The Times* on Wednesday had a widespread influence in inducing barristers to reconsider the question in the light of the fresh experience of women's diversified capacity gained during the war.

"I feel it my duty to protest strongly against the attempt to import prejudice into this matter by suggesting that it is being done behind the backs of the men who are in the trenches.

"This is nothing but an excuse advanced by notorious anti-feminists who, in their desperation at the approach of changes which they realise they cannot prevent, are forced to resort to any excuse.

"Such a claim would not be made by the absent men.

"Many of them have told me how they have been thrilled by the splendid work their sisters and women friends have been doing."

"I did my best yesterday to maintain the discussion on the level of public utility, and am a little sorry that franchise matters were imported into the speeches.

"We have got to look to capacity and not to sex as the test of fitness for the Bar.

"The result of yesterday's meeting leaves me unaffected. Women will take their proper place in the courts of justice in this land, and it may come much more quickly than at present appears to be likely."

FROM THE CLIENT'S ASPECT.

To the Editor of "The Evening News."

Sir,—"Barrister's" argument against women being allowed to try to practise are very far from convincing. If the client has no faith in the woman-barrister, he need not employ her.

Shall I suggest that woman has uncertain and possibly embarrassing enthusiasms which are not to be crushed and tamed by any tyrannical trade union pressure, by any man's reasoning, or by any prospect of immediate selfish gain?

Woman fails in logical deduction, as a general rule, admitted. She has also not the same respect for the truth as an intellectual expression, but as regards action, she is, when once her will has been engaged, more honest than men, and she has perseverance and courage in her purpose. Here is her value to the long-suffering public.

This matter of women practising as barristers is not a matter for barristers to decide at all; it is a matter for the public.

H. M. Fraser, Lieut.-Com., M.H.
Junior Naval and Military Club.

Irish Times
19/1/17

Women and Law.

The demand for the admission of women was renewed yesterday at the annual meeting of the Bar of England. As on former occasions, it was rejected by a large majority. Nevertheless, the advocates of a broader scope for women's talents will be well pleased, for, if we may judge by the Attorney-General's speech, the English Bar's attitude to this proposal has suffered a significant change. Hitherto the women's demand has been resisted for reasons which, however varied or disguised by legal oratory, were centred always in one argument—the disability of sex. Sir Frederick Smith, at any rate, has abandoned this argument. He spoke cautiously, but he seemed to admit that woman's work in the war has given him a new appreciation of her physical and intellectual capacity. Women have been responsible for some of the most perfect achievements of organisation in the wide field of mercy during the last two years. Many of our readers know that one of the best and largest schemes for the supply of regimental comforts and the relief of prisoners of war was started, and is almost entirely controlled, by women in the Dublin district. Sir Frederick Smith's argument against the admission of women to the English Bar at the present time

possible.

The expense entailed in training to become an analyst may be estimated at about £35 a year, which is about the fee charged at King's College. Of course, there are extras, such as books, apparatus (though almost all is provided), private coaching for students who require it, and there are fees for the examinations. The expenses connected with the social side of college life are very small.

When a girl leaves college she should be capable of taking a post as assistant analyst at works or in a private laboratory. It is not advisable then, if the opportunity should occur, to take a post single-handed when fresh from college. It is better to go first as an assistant until experience has been gained in commercial methods. No matter how good the training at college may be, it is essential to gain by experience an insight into the daily routine of work in a commercial laboratory. In daily practice time as well as accuracy is of the greatest value.

There are quite a variety of appointments for analysts. The largest number are at works, while others are as assistants to analysts who have their own laboratories and a private practice. The large dairy firms also employ them, the wholesale druggist, and in almost every branch of industry they are to be found. In some appointments the analysis will be of a special kind, while in others it will be general.

Of course, in chemistry, as in everything else, the wisest thing is to specialise, so that we find while one analyst devotes his time to metals, another will work entirely on food or drugs. Science is such a vast field that by specialising the best results are obtained.

The "Institute of Chemistry" helps its associates to obtain appointments, as it frequently receives applications from firms. The colleges, too, are often able to help students in finding work, and there are the usual advertising mediums. It often happens that during the college course students make friends who are able to give them professional help later on.

The amount of work expected of an analyst will vary according to her appointment. Her hours will be from about 9.30 a.m. to 5 or 5.30 p.m. There are sure to be some days when she will be very busy, with others less strenuous. There may be times when she will have to work overtime if she is on any special work, but that will be entirely a matter of arrangement with her chief. The girl who wishes to succeed as an analyst must not be afraid of work, for the scientific world is composed of hard workers.

The salary will vary much. No girl should take less than £100 a year. Above this will depend to a large extent on her experience and ability. She may earn any figure above that up to about £200. Beyond that figure will depend on the kind of appointment.

There is no reason why a girl should not be the head analyst, with several others under her, when she will require to be a good methodical manager, for to her will fall the arranging of the day's work, the ordering in of her stocks, keeping of books, and so forth.

There is in the near future a very good prospect for girls in the analytical world, provided they possess brains, training, and sufficient worldly wisdom to make their way in the technical departments of science that are now open to them. It is quite womanly work. It requires no special dress other than an overall or long coat of linen or drill.

E. B.

leaves me unaffected. Women will take their proper place in the courts of justice in this land, and it may come much more quickly than at present appears to be likely."

FROM THE CLIENT'S ASPECT.

To the Editor of "The Evening News."

Sir,—"Barrister's" argument against women being allowed to try to practise are very far from convincing. If the client has no faith in the woman-barrister, he need not employ her.

Shall I suggest that woman has uncertain and possibly embarrassing enthusiasms which are not to be crushed and tamed by any tyrannical trade union pressure, by any man's reasoning, or by any prospect of immediate selfish gain?

Woman fails in logical deduction, as a general rule, admitted. She has also not the same respect for the truth as an intellectual expression, but as regards action, she is, when once her will has been engaged, more honest than men, and she has perseverance and courage in her purpose. Here is her value to the long-suffering public.

This matter of women practising as barristers is not a matter for barristers to decide at all; it is a matter for the public.

Women and Law.

The demand for the admission of women was renewed yesterday at the annual meeting of the Bar of England. As on former occasions, it was rejected by a large majority. Nevertheless, the advocates of a broader scope for women's talents will be well pleased, for, if we may judge by the Attorney-General's speech, the English Bar's attitude to this proposal has suffered a significant change. Hitherto the women's demand has been resisted for reasons which, however varied or disguised by legal oratory, were centred always in one argument—the disability of sex. Sir Frederick Smith, at any rate, has abandoned this argument. He spoke cautiously, but he seemed to admit that woman's work in the war has given him a new appreciation of her physical and intellectual capacity. Women have been responsible for some of the most perfect achievements of organisation in the wide field of mercy during the last two years. Many of our readers know that one of the best and largest schemes for the supply of regimental comforts and the relief of prisoners of war was started, and is almost entirely controlled, by women in the Dublin district. Sir Frederick Smith's argument against the admission of women to the English Bar at the present time was thoroughly sound and convincing. Thirteen hundred members of the Bar are now "practising" on the various battle-fronts, and it would be neither proper nor decent that a decision which must affect the character and conditions of their profession should be taken in their absence. That is, however, only a temporary argument. The fact remains that the women have exacted a very considerable admission from the leader of the most conservative body in England. The war is proving to be a very wonderful solvent of tradition and prejudice. It will alter our systems of education; it will reform the relations between capital and labour; it will revolutionise British agriculture; and it will make many other drastic changes. None is likely to be more radical and far-reaching than the coming change in our whole conception of the *status* of women in the country's public and industrial life.

PENSIONS ADMINISTRATION.

A MEMORIAL FROM WOMEN OFFICERS.

A memorial in favour of the appointment of women officials in connection with the work of the Old Age and War Pensions has been sent to the Prime Minister.

The memorial urges that the services of women would be peculiarly useful, seeing that inquiries have often to be made into domestic and family circumstances which require delicate handling, that the cost of food and lodging has to be estimated, and that in some cases infirm and bedridden women have to be visited.

There is need for the employment of women officers if only to relieve the pressure on the men officers, a pressure now increased by the additional inquiries rendered necessary by applications for a possible increase of pension under the new rule. Women officers are now employed in investigating claims for separation allowances to the dependents of men serving with His Majesty's Forces, although the number so employed is inadequate. Women officers could, as men now do, combine the work of inquiry in regard to War Pensions with that in regard to Old Age Pensions.

The memorialists, therefore, urge that if only for attaining greater speed in the relief of the suffering poor, women may be appointed as Old Age Pension officers, and that the services of women for investigation for War Pensions may be more largely utilised.

Those signing the memorial are:—Lady Strachey (president, Women's Local Government Society), Miss Leigh Browne, hon. secretary (W.L.G.S.), Mrs. Arnold Forster, Sir Wm. Chance, Bart., P.L.G., the Lady Emmott, the Rev. Canon Scott Holland, D.D., Professor Michael Sadler, C.B., LL.D., Mr. J. G. Shipman, Mrs. Cobden Unwin, Lady Lockyer, Miss M. S. Kilgour, M.A., Mrs. Theodore Williams, Mrs. Creighton (National Union of Women Workers), Miss Goring Thomas (secretary, Women's Unionist and Tariff Reform Association), Mrs. McArthur (secretary, Women's Liberal Federation), and Lady Byles (Women's National Liberal Association).

EXPERIENCES OF A VAN SALESWOMAN.

By HERSELF.

In these days when on all sides women are taking the place of men, among the many new careers open to them I think my work as a van saleswoman is perhaps more novel than most. Naturally I have had many difficulties to contend with since I started, but they have been overcome, and I am nearly through the second winter on my war job.

My husband had been invalided out of the Army. He needed a good many things our means did not allow me to procure for him; in fact, as prices showed an alarming tendency to increase, I knew it was absolutely necessary for me to work and add to our income somehow. Having heard that Messrs —— needed women drivers for their delivery vans, I volunteered, was passed as fit, and given a trial.

I had been used to horses all my life, so did not need to be taught how to manage them, but I knew nothing about selling tea, etc., to a clientèle of about 200 middle-class customers in suburbia. So the first day I had to go as "mate" to an elderly vanman who drove, and initiated me into the various duties connected with my work. He was none too pleased that morning, and I felt he resented that a woman had been entrusted with the job at all; but we got to understand one another before the day was over and have been friends ever since. I heard afterwards that at the time he was the only vanman in the firm who would deign to have a woman "mate" with him at all.

He got his reward. Our staff manager thanked him publicly for teaching me, and when pay day came presented him with a one pound note in recognition of his esprit de corps. Before the end of the next week every man in the yard had offered to take a woman out with him to learn the business.

Our manager is a genius at organisation, and he very soon got me into the way of the work. At first I had to stand a great deal of chaff both from the men in our yard and those outside, but I had made up my mind to "go through" with the work, and I did. The outdoor life is good for one, and if you are an energetic saleswoman, it is quite possible to make £3 a week—I have often made more. I do not think any of my old acquaintances ever recognise me in my oilskin coat and cap and leggings, and I certainly do not care if they do.

My work is not welcome in the least. My husband has the things he needs, and so do I; only I am afraid I shall never be able to say, quite truthfully, that I enjoy getting up at 5.30 a.m. so as to have breakfast and be ready to take my horse and van out of the firm's yard at 7.30 [illegible] the [illegible] conditions of [illegible] winter.

WOMEN AFTER THE WAR.

XIV.
MANAGING PROPERTY AS A PROFESSION.

By M. O. Kennedy.

The profession of rent collector would not seem a very feminine one at first sight, and that of property manager even less so. Yet there is a small group of women property managers who have made quite a good living for some years past in this way, and the openings for such women should be even greater after the war.

Housing conditions for the working classes, save in the great blocks of buildings run by certain trusts, which are in reality partly philanthropic, though the tenants do not realise this, leave much room for improvement. After the war there will be a great deal of building done, and artisans' flats on ideal lines, with greater facilities for family life and not such an embargo on large families, are bound to result.

Municipalities were beginning to look into the housing question just before the war, and ever since the war the report of the chief evidence taken by the National Birth Rate Commission, and published by Chapman and Hall, resolved itself largely into a strong criticism of existing housing conditions and their influence on family life. As housing on a very different scale to that prevailing in the past is likely to have a good deal to say to the national life of the future, the character and training of the property manager will in its turn acquire a very great importance.

The Woman Property Manager.

The woman property manager as a regenerating influence may be said to date back to Octavia Hill and her great success in reclaiming slum property and allowing decent artisans to live under peaceful and decent conditions even in the midst of the direst poverty.

Out of philanthropic beginnings a very definite business or profession for women with leanings towards social work has sprung up. Many large properties in poor neighbourhoods are now managed by women. Their qualifications are a knowledge of the lives of the working classes and a capacity for securing the right class of tenant and of eliminating the wrong with the least possible disturbance. And in addition to this a capacity for securing a punctual payment of rent—even good tenants get behindhand if there is any slackness on the part of the collector—and also of knowing when a repair in time will be a saving to the landlord.

Old and New Estates.

New property is always the most lucrative to look after; the rents are higher, the dilapidations fewer, and the general tone is better. But it is in raising the tone of old and not very valuable property and improving the class of tenant that the woman property manager has proved her value. The influence of the woman manager has been all for good. Where she is employed she generally is regarded as a kind of health visitor as well as the landlord's representative, and is invited to advise on the most intimate questions of family hygiene. She is, to the tenant of long standing, the faithful repository of domestic secrets and difficulties, and expected to find an anodyne for sorrows of every kind as well as to have ceilings whitewashed and plumbing seen to. She is often bored, but she rarely shows it. Under her management the careful tenant is encouraged

tic secrets and difficulties, and expected to find an anodyne for sorrows of every kind as well as to have ceilings whitewashed and plumbing seen to. She is often bored, but she rarely shows it. Under her management the careful tenant is encouraged, and when in temporary monetary difficulties, the genuineness of which she has every means of proving, is not pressed for rent. The percentage of arrears of rent under a good woman property manager's rule is generally very low, and this is a proof that business and sympathy can, often be allied to the landlord's benefit.

Payment on a Commission Basis.

Usually in a large artisan property where the basis of payment is commission and not a fixed salary, the woman manager employs some assistants conversant with her methods. Rent is only collected on one or two days a week, and consequently on a large property this would be too big a task for one person; but the overseeing of the property and early attention to necessary repairs are the manager's special job.

For the work of white-washing, paper-hanging, etc., so far men have been employed, as there are few women with the

necessary training, but after the war there would seem no reason why some of the women who are doing window cleaning, dustmen's jobs and the like should not turn their attention to this kind of work, and act as "handymen" to the women property managers. Training for the latter work is usually obtained by going as an assistant to some of the women already engaged in looking after estates.

It is a curious thing that since the war began there has been little or no increase in the number of women property managers. It probably is due to the fact that most of the men doing this work get exemption because they were indispensable, and that tribunals were ignorant of the fact that a fair number of women are doing it successfully. But after the war, when a great many municipal building schemes will be launched, there would seem no reason why the property managers appointed should not be women.

DRESSMAKERS'. PROBLEM.

Scarcity of Workers Prevents Execution of Orders.

From Our Own Correspondent.

Leeds, Saturday.

Costumiers are crying out that they cannot get enough women workers to produce the new frocks that are in such great demand. They write to Labour Exchanges, advertise day after day, and still girls with proper qualifications do not arrive.

The secret of the business was revealed to me this afternoon. "There are not sufficient girls skilled in dressmaking in the country to meet present demands." This reply came from a lady well qualified to know—Mrs. Arnott, one of the Northern organisers of the National Federation of Women Workers. Some have entered better paid occupations. But the great shortage is due to the fact that trainees have not been coming forward in the war period. In April girl dressmakers had their wages raised under Trade Board order to 30s. a week of 44 hours.

This new American veil is of brown me brown and white

'ROPOSED TOY FACTORY.

A meeting of the Glasgow Burgh Distress Committee was held yesterday in the City Chambers—Bailie Maclure presiding. Some discussion arose out of the minutes of the sub-committee which deals with unemployed women.

Councillor John Stewart pointed out that out of a total of 103 women whose applications for work had been adjudicated upon the number actually provided with work was 35. The others had been referred either to the Prince of Wales's Fund Employment Committee, the Soldiers' and Sailors' Families Association, or the Parish Council, while some applications had been refused. He asked if the committee had any guarantee that the persons referred to the parish authorities would receive relief.

The Clerk (Mr Thomas Spence) said that in every case he had taken to the Parish Council relief had been granted.

Councillor Izett asked if those referred to the Prince of Wales's Fund Committee had received assistance. He would like to see, he added, one central authority to deal with these applications. The applicants should not be knocked about from pillar to post as they were at present.

Councillor Alston said he had gone with the applicants to the Prince of Wales's Fund Committee, and, though they were not always dealt with so generously as he wished, they had all received assistance.

The minutes of the sub-committee stated that a deputation had been appointed to wait upon the Prince of Wales's Fund Employment Committee for the purpose of getting an assurance that every case sent to them by the Distress Committee would be provided for, either with work or money, without delay.

The minutes were adopted.

The meeting also approved of a recommendation of the sub-committee in favour of establishing a workroom to employ women in the manufacture of toys. The sub-committee pointed out that in starting a workroom of this description no competition would be offered to British firms, as the trade hitherto was carried on almost entirely by Germany. They recommended that premises for the proposed work room should be taken at 9 Watson Street at a rent of £40 per annum, and that the Local Government Board should be asked to approve of the scheme.

The Clerk reported that up to date 520 women had applied to the Distress Committee. He added that it should be understood that applicants had to satisfy the committee that they had previously applied to the Labour Exchange.

WOMEN TAR-SPRAYERS.

SATISFACTORY RESULTS AT WESTMINSTER.

Women have for some time past been employed on tar-
praying at Westminster,-and Mr. J. W. Dugdale-Bradley,
e city engineer, reports that, generally speaking, their work
s been quite satisfactory. Hours, wages, &c., are as fol-
w:—

Hours.—Fifty per week.

Wages.—1s. 0¾d. per hour, rising to 1s. 2¼d. per hour on
tisfactory service. The women who manipulate the brushes
spraying the tar receive an additional 2d. per hour.

Uniform.—Overalls, clogs, caps and gloves are supplied.

Portable mess rooms and lavatories are provided.

WOMEN IN BUSINESS.

A new departure has taken place in regard to women's activities in the appointment of Miss C. E. Williams as secretary to the Corporation of Insurance Brokers and Agents. Miss Williams has succeeded a man, who left to fill a high post in the insurance world, and whose principal assistant she was for fourteen months. Asked how she gained the qualifications and experience necessary for such an important office, Miss Williams told a representative of *The Daily Telegraph* that she considered the school of practical experience the best possible training. She commenced her business life as a shorthand writer and typist, but she was well educated, and she had no intention of spending her life in that employment. Convinced that she could improve her status only by developing her own powers and knowledge, she attended lectures and availed herself of every chance of acquiring general information of a kind likely to be useful to a secretary. She learned routine work during twelve years' experience in a newspaper office, and this offered her a wide sphere, for she had both a variety of work and opportunities of meeting different [illegible] of people. Her work as assistant in the insurance office where she is now secretary prepared her for the more responsible work. A definite proof of her success is to be found in the fact that so far as she knows she is the first woman to hold such a position.

Daily News 6.6.18

WOMEN HOUSE SURGEONS.

Presiding at the London Hospital quarterly Court of Governors yesterday Lord Knutsford said it had been decided that women students should be admitted to the medical college on exactly the same terms as men, and in future the various house and staff appointments would be open to them. Good work had already been done by the women physicians and surgeons who had held house appointments—one came specially from Canada—and they had overcome the prejudice which he and others had entertained.

Daily Mail 5.7.18

THE WOMAN ENGINEER

AFTER-WAR CAREERS.

By ALICE M. CLOWES.

"Had it not been for the work done by women, the Germans would have won the war by now." So said Mr. Kellaway, M.P., Parliamentary Secretary to the Ministry of Munitions, nearly a year ago, when speaking of the value of women's work in connection with engineering. Since then hundreds more have taken up work requiring some amount of technical skill, and their efficiency has naturally increased with practice.

* * * *

Until the last decade or two there had not been the least indication of any leanings on the part of women towards mechanics. In 1830 the sewing machine was introduced for the special use of women, but its construction did not raise any interest in the feminine brain. It was not until the advent of the bicycle that women began to inquire into the wonderful smooth running and automatic action of their machines. Then came the motor-cycle, and its sporting riders, in learning to drive and understand the vagaries of their mounts, assimilated not a little knowledge of the internal combustion motor. These very naturally developed into skilful drivers of the motor-car, capable of diagnosing the cause of a trouble and of setting it right on the road. Gradually at first the number of women who acted as their own mechanics increased, and when there came heavy demands for lady drivers nobody was startled at their being put through a technical course.

* * * *

In the laboratory and factory, women, many of them holding University degrees, are doing a great deal of useful work, and it is certain that in the future women will figure largely in the science and engineering courses at our Universities. Already Miss Rowbotham (Girton College, Maths. Tripos) has brought about the establishment of an automobile and munition factory for educated women workers. At the present time the output of the works is centred on supplying the demand for high-powered aeroplane engine parts, and Miss Rowbotham herself is acting as machine shop superintendent. After the war this ideally situated factory, built on up-to-date and scientific lines, and fitted with the most modern hydro-electric power plant, is to be a workshop where gentlewomen may serve a congenial three years' apprenticeship to automobile engineering. Here, surely, is the beginning of the definite entrance by women, as professional apart from industrial workers, into the engineering world! The self-styled consulting engineer, running her own garage, giving advice on the buying and selling of cars and teaching driving, has been among us for some time past, but though these women have invariably spent some time in a factory, they have not served any definite apprenticeship.

* * * *

Will there be room for the woman engineer when the commercial world again assumes its normal aspect? Without a doubt there will be for the cessation during the war of many engineering products necessary to every-day life will have caused the accumulation of huge demands, and the machinery and plant will have so extended in many automobile factories that they will probably be turning out ten cars a week for each one of pre-war days.

It is significant, too, that the Committee appointed by the Minister of Reconstruction to consider the provision of new industries for the engineering trades after the war have included women's work in their scheme, and are allowing them to be specially represented on the advisory panel which is to assist the Committee.

NEEDLEWOMEN'S PAY.

Better All-Round Conditions At 7d. An Hour.

From Our Labour Representative.

West End dressmaking girls are no longer receiving the dangerously low wages which used to form one of the scandals of the trade.

Mr. John Turner, general secretary of the National Union of Shop Assistants, informs me that through an arrangement recently concluded with the Ministry of Labour, his organisation has secured for women and girls of 18 years of age and over a new time rate of 7d. per hour for a 44-hour week.

Six Millions A Year.

This means something like six millions a year gained for the needlewomen who make the clothes of their richer sisters. Some of the best houses in the trade, it is only fair to point out, already paid this, and sometimes even a higher rate; but in many cases the increase brings the weekly wage up to treble the old-time earnings.

Welcome War Fruit.

Another matter which Mr. Turner views with satisfaction is the disappearance of the living-in system from a large number of the drapery firms. The union secretary's explanation is that the war has done it. "Heads of business houses used to say that it was better for the morals of the girls that they should live on the premises," he says, 'but when high prices put up the cost of living it was conveniently discovered that the moral fibre of these young people had become remarkably stronger. They were declared to be able to resist temptation, and were given certain sums with which to provide themselves with board and lodging elsewhere."

This union is now engaged in negotiations on an extensive scale for wages and conditions improvements in the grocery and other provision trades.

Guardian . 25 . 9. '19

THE WOMAN IN AUTHORITY.

HOW SHE LACKS THE ART OF RULING.

BY CICELY HAMILTON.

So long as the war was in progress women's work was in demand; industry after industry, drained of its men, was calling for women in their place. Being badly needed, their labour was valued—perhaps a little too highly. I have always thought we were praised overmuch for working to avert a disaster which would have crushed us as surely as it would have crushed the menfolk of the nation. Be that as it may, peace has brought about a change; the admiration which was formerly lavished on the woman "replacing a man" has turned into hints, and more than hints, that her room is more valued than her company. In the Press, last year's photographs of land or munition girls "doing their bit" have given place to jests at the expense of the War Office flapper or the limpet who muddles over pensions. Clearly, in many departments of industry, the woman-worker has outstayed her welcome; and, in marked contrast to the attitude before the Armistice, the tendency to-day is to undervalue her services. Those who have the interests of women's work at heart would do well not to attach too great an importance to a change of attitude which, however disagreeable, was inevitable; excess of contempt, like the excess of admiration that preceded it, is only a temporary phase. The verdict of history will probably be that the women of this country "came out well" during the war; that, taking into consideration the lack of imagination which is a defect of their race or education, they came out exceedingly well. On the whole the faults of their work were faults that might have been expected—mistakes due to lack of experience; to lack of the training that no one had leisure to give. Hurried and unprepared male labour would show the same deficiencies; therefore in trying to estimate the normal value of women's work we can leave out of account the shortcomings due to the haste and emergency of war.

Getting the Best from Subordinates.

Making due allowance for such haste and emergency, there is, I believe, at least one respect in which the work of the educated woman has compared unfavourably with that of the educated man—only here and there do you find a woman who has mastered the art of getting the most out of her subordinates. It is an essential art for those who aspire to govern, and the failure to master it is probably one of the reasons why no woman, in spite of opportunities which must have arisen, has come prominently to the front in the course of the last few years. Those who strike out new lines and found new undertakings are seldom, if ever, successful unless they possess the faculty of obtaining assistance that is not only disciplined but intelligent, and the woman in authority would do well to remember that there is nothing less likely to stimulate intelligence than liability to constant interference. Men, on the whole, have absorbed that fact; the man who runs an office or a regiment well does not constantly harry his subordinates with exact instructions as to how each particular item of work must be done. He demands results and sees that he gets them; but while they are being obtained he does not sit beside his junior and guide his hand—as a woman would be apt to do. The latter method, however immediately satisfactory, is proof of a short-sighted policy; in the long run it means bad service, since the subordinate used to that method employs only half of his mind. Further—implying as it does a contempt for the subordinate's capacity—it does not make for popularity; few of us are so constituted that we like being treated as creatures void of intelligence.

The Passion for Interference.

I remember a year or two ago discussing the subject with a woman who occupied a responsible position in France. She herself had been unusually successful in her dealings with those set under her, and the reason for her success was made plain when she said that she had trained herself deliberately, and not without difficulty, to interfere as little as possible—only when things went wrong. When a new junior came out from England she resisted the temptation, which she frankly admitted she felt, to stand over her and do the work herself while the junior looked on and learned, realising that it was far better, if more troublesome at the moment, to look on while the junior made a blunder or two—to be silently alert for that blunder or two and see that its effects were not serious. Her system was the result of experience—and consequent dislike—of the opposite system, the system favoured by women. We agreed, rightly or wrongly, that the tendency to constant and petty interference was a serious obstacle to the success of women in positions of real authority, since the chief who checks the development of his assistants will ultimately be at a disadvantage compared with the chief who furthers such development. Take, for instance, the case of a hospital staffed by women doctors. If, as I have more than once heard it alleged, the medical woman, as a class, is more given than the medical man to small and unnecessary interference with the details of nurse's work, it is obvious that the more capable class of nurse, the nurse who knows that her work is skilled, will prefer, other conditions being equal, to work under medical men. The complaint may, or may not, be well founded; my experience of hospitals is too small to venture an opinion. But if it should be, the medical woman, as regards the nursing of her patients, will ultimately be placed at a disadvantage compared with the medical man.

A Phase that Will Pass.

Personally, I believe that the passion for interference which at present characterises so many women in positions of authority is a phase that will pass with experience. The art of ruling must be learned, like other arts—and women, on the whole, are new to it. Being unused to authority, other than domestic, they are, at present, too apt to insist on it, to play with authority and show it off, like a child with its latest toy. The phase, as I have said, will pass; but it is to the interest of woman herself that it should pass quickly.

Common Cause
2. 1. 20

CONDITIONS IN WOMEN'S TRADES.

With Compts
Helen G. Klaassen

DAM,—Many of your readers are alive to the danger that women oe driven out of work in which they compete with men, into special men's industries, and realise that if this happens their remuneration nd conditions of work may be pushed down without affecting men and therefore without the protection of the great trade unions.

It is very desirable to keep a foothold for women in all kinds of activities, as people forget quickly, and it may not be long before they return to the belief that women are as incompetent as many supposed them to be in pre-war days.

The object of this letter is to point out that more attention might be given to the trades and professions which are specially the province of women, I mean domestic work, nursing, midwifery, and the teaching of girls. Women have perhaps hardly grasped how much the conditions in these industries, affect the status of the married women of the country.

If those who are paid for domestic work or for the care of the mind or body, receive a too small share of the proceeds of industry, it lowers the estimate of the work of the wife and mother.

The low remuneration in women's trades reacts upon the woman at home, and results in her time being regarded as having very little money value. There is little doubt that the customs of the country have been built up on this basis, and that this is against the interest of the nation as a whole, hindering both happiness and efficiency.

The remuneration of the woman worker does not depend entirely upon supply and demand, nor upon forcible trade union action, much as trade unions have improved the position of women. Trade unionism can never be quite the same thing for women as for men, because of marriage. Men are combining in co-operating trade unions. Women are in trade unions too, but a large proportion of the women of the country will have no influence in the trade union movement, because they, as married women, are outside the unions.

Trade unions do not cover the ground as far as women are concerned. The co-operative movement has brought many thoughtful women together, and we see from time to time meetings of labour women to consider matters affecting the life in the home.

A problem of the moment is: "What form should women's societies take, now that we have the vote?" In developing our new local societies we may well take into consideration women as workers and women as customers as well as women as voters, and we shall do little good unless our societies are formed from women of all classes.

The remuneration of women depends a great deal on public opinion, and has done so in the past. Women must take part in forming this public opinion and not leave it to the employers or the trade unions. It seems to me an important matter at the present time that married women and other women workers should realise their common interests, and act accordingly.

WOMAN PAPERHANGER.

NEW OCCUPATION DISCLOSED IN AN ADVERTISEMENT.

Spring-cleaning, paperhanging done by experienced lady.—Write Adrian, 102, Long-acre, W.C.2.

This novel advertisement appears in to-day's "Daily Express." It emphasises the readiness of the modern woman to explore any avenue which promises to lead to commercial emancipation.

A "Daily Express" representative was able to obtain from "Adrian" herself the following statement of the motives which prompted her to adopt this scheme.

"I like work," she said briskly. "During the war I did a lot of hard work, first in an aeroplane factory in France and afterwards at a hospital for training mentally deficient patients, and I revelled in it."

"The work of an air mechanic interested me especially, and I soon became expert. This is a model I made before being demobilised." And she exhibited a dainty miniature of a British biplane.

"Paperhanging is not a new undertaking with me, though I have never done it as private enterprise before. Frankly, I do not think it is a man's work, and I hope I shall show that it is one of the things women can do better. Spring-cleaning is much harder work physically, but I really like it—and this time, at any rate, I don't think the men will be envious," she smilingly concluded.

WOMEN AND WAR.

THERE are many among us—all women co-operators—who had hoped and believed that the spirit of the age had made such an advance that our international conflicts would be settled by arbitration and not by "glorious victories" in battles fought either on sea or on land.

But as we write the awful tidings have reached us "that England has declared war on Germany," and during the next few weeks, at any rate, newspapers will be opened in anxiety—not to learn the fate of some great measure affecting the welfare of the people, but to learn the fate of battles, to con over the lists of killed and wounded, and to read of defenceless women and children being plunged into the miseries and privations of a conflict, with the making of which they have had nothing to do, and from which they have no redress.

Already husbands and sons who have helped to maintain their wives, mothers, and sisters, are being marched away, leaving the strain to be borne by the women-folk, who will not only have to bear the brunt of the battle at home, but in many cases will have to meet unprotected the actual horror of warfare. Meanwhile, the trade of our country will become paralysed; food prices are already up, and between the destruction and the wasteful consumption of men, there is the prospect of poverty which will pervade the land.

Never before have the people been brought to realise the meaning of maintaining our civilisation on a basis of armaments and of settling disputes by brute force as they have to-day. But the lesson is being learnt. During the past week there has been a great awakening. The "Manchester Guardian," which has stood out nobly for "Neutrality" in the present crisis, has been flooded with letters of protest; and from Tuesday's edition we note that women were to have made their voices heard for the cause of peace.

For the present all public discussion ceases. But as co-operators whose trade and money have gone to build up an international alliance between our brother and sister co-operators in every land, who have no quarrel with one another, and whose interests lie in the maintenance of peace—shall we not send greetings to our sister co-operators in all nations—especially to Austria and Germany? By concentrating our thoughts on friendship at such a time, and by thinking of peace, we shall do a great deal towards overcoming the war spirit which is abroad, and shall strengthen the bond of International Peace in a way it has never been done before.

WHAT OUR WOMEN ARE DOING.

OUR Women's Guild have taken prompt steps to make their influence felt on the side of peace and prices.

On another page in this week's "News" will be found a report of "A Protest Meeting" held in London on Tuesday last, and a letter bearing the signatures of the Guild president and secretary, petitioning societies and customers to so regulate purchases as not to allow one person to be served to the disadvantage of another, and in this way to keep down prices—a line of action which we know has already been taken by several societies.

At the public meeting, Mrs. Fawcett (president of the National Union of Women's Suffrage Society) pointed out how women do not exist in a political sense, while Mrs. Barton's plea was on behalf of the workers, "who are always drawn out to do the fighting." Warfare must cease when the mother voice is heard in the councils of the nations. May that time come soon.

WOMEN'S INFLUENCE

A MANIFESTO TO WOMEN OF EVERY LAND.

Dear Sisters of Every Land,—Whilst our respective soldiers go bravely to the front, and whilst we at home do what we can for the wounded and the distressed, there is something else still more important to do, of which no one seems to think, and which is very specially suited also to the soothing and loving influence of woman.

It is the preventing our beloved soldiers to become wounded.

It is to work, and this internationally, in the interest of the future peace of Europe.

It is whilst the human mind is proving the evils of war that it will be best disposed to consider the advisability of peace for the present time and for all time.

To this effect, and to women everywhere, we advise to hold in every land, in towns and villages and centres, weekly women's meetings, which will go on until we have secured peace. Though begun by prayer, they will continue in work, in results, this being the only efficacious, legitimate, and logical way were only individuals as well as nations willing to understand it.

Whilst being heart and soul with our devoted soldiers at the front, whilst we tend them everywhere, nurse and comfort them, we will then also, in peace and in love, we women of all nations, consider matters week by week and call out together "Each to our God," and each to our own Government, etc., as the case may be, to shorten the intolerable evil and sin, and to resort to arbitration; now and at all times, it being the only possible means to disentangle the present tangle of Europe, which, far from leading us towards peace, is leading us straightway to further hatred and spirit of revenge—hence to further wars. War begets war. It has done so from the beginning, and will for ever do so.

But love and peace and kindness beget love and peace and kindness. We will meet without distinction of party, creed or nationality. We will do so all over the world.

We will do so without "nagging" at any nation, whether ours or any other. They all need our sympathy and help. We will do so as mothers of humanity, as sisters of the whole human race.

We will do so as mothers, sisters and wives of our beloved ones of all nations who are now being ruthlessly murdered on the battlefields.

We will do so as true women—and that is enough!

We will believe and we will know that we shall succeed, and we shall thank God and man in anticipation.

We women cannot afford to allow this madness of war to go on, neither now nor at any future time; we have had enough of it! And it rests on our honour with posterity that we see to this.

Your "Sister of Every Land,"
LUCY THOUMAIAN, R. de V. (Madame),
Of Switzerland, the Neutral Country.
Foundress and President of the first "Women's Swiss Union of Peace," and Foundress of the "Every Women" International Arbitration Movement.
Oakhurst, Chigwell, Essex.

OUR FIGHTING LINE.

WHAT WOMEN ARE DOING.

For the present the special business of women is to stay at their own fighting base, and to help to carry on the fight by combating the distress that there is in our midst to-day, and that is likely to continue for many days to come. Sometimes it is not altogether easy to decide how this should be done. To-day, for instance, a prominent social worker asked my advice regarding a work party desirous of making gifts for the soldiers, and equally anxious to avoid competing with the out-of-work needlewomen of the city. The best that could be suggested was a compromise; that is to say, ladies unable to afford payment for work might still continue to contribute in kind, while others should give out material to be made.

A very proper sentiment inspires most women at this time with the desire to do individual work, but the feeling, creditable though it is, must be put aside in the interest of the ever-increasing number of girls who are out of work. The difficulty of finding suitable persons to whom work may be given is considerable, and so it may be shirked by those who can only afford to give a few garments, but it is worth while to take the necessary trouble, and to be brought into relationship with the individual workers. Here, indeed, the personal touch matters, and by taking some poor woman stockings to knit one may establish a bond of friendship, and do a real and lasting service, infinitely more valuable than that of making a few garments in one's spare time.

The Scottish Council for Women's Trades has taken the matter up, and other societies are protesting against the promiscuous work party. It is by way of being a delusion to suppose that it is much cheaper to make things at home. They can quite as cheaply be bought at a warehouse—not because they are sweated, but because of economies which large houses can effect in cutting out and in time-saving methods. Be quite sure of this. The woman who can afford to buy materials can almost certainly make up the little sum which represents the price of labour. Stocking knitters alone will find that the cost of making is more than the price of the material.

This afternoon I had the privilege of visiting a spacious and airy workroom in one of our great engineering works. The ladies connected with the firm have planned it and fitted it for the use of women thrown out of work by the war, and at present there are twelve girls employed at half-time. As the simplest method of arranging this, six work for one week and the other six take the second week, and so on in turn. Excellent work is done, and while the girls are going on cutting up and making miles of flannel purchased by the generous donation of the firm, outside work for the Red Cross is also being done.

Any lady wishing to have materials made up, and not knowing where to find workers, may do so at once by applying to the Labour Exchange.

I may add to this that the sending of packets of dried fruit accepted by the War Office is still going on. Six boxes were sent out last week containing over a hundred packets, and the boxes this week will contain 1,000 packets. The Women's Guild of Strathbungo Parish Church have sent a handsome contribution and many gifts in kind and in money have been received. The former should be sent to Mrs Stevenson, 40 Princes Square, Strathbungo, and the money to Mrs J. A. Richmond, 108 Springkell Avenue, Pollokshields.

Union of Women Workers.

Many practical and interesting suggestions were made at a special meeting held under the auspices of the Glasgow Union of Women Workers. The Union having been asked to act as a Reference Committee to assist in the prevention of overlapping and waste of energy in the present crisis, it was thought well to hold a meeting at which not only members but also representative women belonging to various other organisations would have a chance of giving their views on the subject. Miss Marion Blackie, who occupied the chair, explained that the committee to be formed would in no way interfere with any existing agency, but would merely act as a "clearing-house" and endeavour to put the right people in touch with each other. Whenever possible cases would be passed through the Labour Exchange, and it was hoped to work in close co-operation with the Voluntary Workers' Exchange, the Scottish Council for Women's Trades, and all other agencies dealing with women's work. On the motion of Mrs Gemmill, supported by Mrs Beith and the Hon. Mrs Campbell, it was decided to form a committee (to be known as the Glasgow Women's Consultative Committee for Unemployment) composed of the present office-bearers and executive of the G.U.W.W., with powers to add the names of representatives from various other societies of women dealing with women's work. Among those who took part in the proceedings were:—Mrs Thos. Johnston, Mrs Maitland Ramsay, Miss Pickering (secretary), Mrs Cross Lynch (of the Glasgow School Board), Mrs Brigadier Bex (Salvation Army), Miss Younger, Miss Waddell, Miss Stewart Wright, Mrs Greig, Miss Frances Melville (Queen Margaret College), Miss Lucy Johnston (Govan School Board), and others.

Kensington News,
October 17th. 1914.

LONDON SOCIETY FOR WOMEN'S SUFFRAGE.

Divers and sundry sorts of work are organised at 58, Victoria street, for Women's Service, where the London Society for Women's Suffrage has its headquarters.

Before the Government was able to take over the Registration of Belgian refugees much of this work was carried out (under the War Refugees Committee) by London Society workers, who all spoke fluent French and were aided by voluntary Flemish-speaking interpreters. The arduous business of registering and allocating offers of hospitality, receiving clothing and dealing with all the difficulties that arose from day to day occupied many workers for some weeks. Refugees are, however, now taken direct to the Alexandra Palace, and the hospitality allocation is dealt with by the Local Government Board.

As the Information Bureau for Voluntary Workers in all fields of social work connected with the special difficulties of the moment, the London Society is able to render valuable service.

On Saturdays Girl Guides are employed for errands and in other ways at the headquarters of the London Society. They greatly enjoy their opportunities of usefulness, and it may be imagined how proud and pleased two little messengers were last Saturday, who were sent on an errand to Buckingham Palace. From Buckingham Palace they were sent on to St. James's Palace, and from thence to York House, returning to tell of their interesting experiences with great elation.

The Central Office has registered a very large number of workers, but it is felt that local offices, where voluntary workers can enrol themselves, are needed as well, and Paddington is to have its own Bureau, at 6, Hatherley grove, Westbourne grove, W., by kind permission of, and adjoining, Messrs. William Owen, Ltd.

Many well-known people are interested in this scheme for "Voluntary Labour Exchanges," including Winifred, Countess of Arran, Lady Frances Balfour, Mrs. Creighton, Mrs. Henry Fawcett, Miss Mary MacArthur, and others.

In other parts of London, these Bureaus are working splendidly, and it is hoped that all who have spare time to give will call and enrol themselves as soon as possible.

The Bureau opens on Monday, October 19th, and the hours are from 11 a.m. to 4 p.m.

THE WOMEN'S FUND.

RELIEVING THE SICK AND WOUNDED.

(Contributed.)

An interesting meeting was held in the Parochial Hall on Tuesday afternoon, a happy combination of business and social intercourse. Work, gifts, and moneye had been coming in at such a gratifying rate that the ladies of the above fund felt they would like all those helping to come and see for themselves the great result achieved.

The Mayoress, in a few words, made everybody welcome, and explained the object of the meeting—to hear the reports of the separate departments and to see the third consignment of goods now waiting to be sent away; and she invited all present to tea—another evidence of the very practical sympathy given by the Mayoress to the fund.

Mrs. Demetriadi (hon. secretary of the Women's Committee) gave a little history of the society and its work from the very beginning. From a large meeting convened by the Mayoress a central bureau was formed for the purpose of organising and classifying work and directing the general flow of energy. The first separate branch formed was the Needlework Guild, and a packing room became a necessity. A separate department had to be provided for rolling and making different bandages, and last, but far from the least, was the bureau itself, where all offers of service, gifts etc., had to be made in the first place. Invaluable service had been rendered by Mrs. Holmes, Mrs. Donkersley, Mrs. G. P. Norton, Mrs. Stewart, and Mrs. Lumb, who had been indefatigable in their efforts to meet the demands made upon them. Over three hundred names were on the books in a very short time, including a lady doctor and trained ambulance workers, shorthand writers, and typists, and added to all these offers were now coming in to provide shelter for Belgium refugees. It was not easy to give an adequate idea of the work that had gone through this bureau. Miss Booth, of Netherton and Miss Eastwood, of Imperial Road, had given valuable assistance to the clerical department. A unique appeal, and one that touched the heart of every "Merciful Man," came to this bureau from the society for the Prevention of Cruelty to Animals for wither pads for the horses, and large quantities of these had been given out, and were now being made for our dumb friends. So many requests to learn bandaging were received that Miss Barry, the matron of the Infirmary, offered to take classes at the Infirmary every night, and there had been regular classes of from 50 to 80, who had learnt first aid, bandaging etc., under the nurses' invaluable and trained assistance. The bandages had been made in a room at the Parochial Hall under the personal supervision of Miss Hudson.

Mrs. Marshall read the report of the Needlework Guild, and said the growth of the guild had been rapid and far-reaching, and the time and energies of the ladies of the committee had been taxed to the utmost, but great must be their joy to be able to announce that when the garments now in process of making were returned the total number of articles would have reached 10,000.

The record of material and the garments cut from it had been accurately kept by Mr. Douglas Walker, who also greatly assisted Miss Hickson (clerical sec.) in making lists of work for individual workers and district heads. Miss Freda Sykes not only placed her car at the disposal of the guild, but made herself responsible for the delivery of 500 parcels and innumerable journeys, giving up her time entirely to the work. Mrs. J. H. Kaye had had no easy task in procuring wool for 1,347 pairs of socks. Large firms generously undertook the tremendous task of cutting out hundreds of garments, and Mrs. Guy Crosland, Mrs. W. A. Crowther, Miss Beardsell, and several other ladies devoted many hours to cutting out smaller articles from remnants returned, so that nothing should be wasted. In all 4,000 articles had already been dispatched to the French and British Red Cross Societies. In response to an urgent appeal a quantity of socks and bandages had been sent to Miss Evers (formerly residing in Huddersfield) for the camp hospital under her care. The report drew attention to the gift of material for dressing-gowns given by Messrs. W. and E. Crowther, Messrs. Joseph Hoyle and Sons, Messrs. C. and J. Hirst and Sons, and Mr. J. E. Crowther. It was impossible, Mrs. Marshall said, to convey thanks in her report to individual workers—boy scouts, children, working women—but she trusted that all who had helped in any way would realise that the smallest as well as the greatest gift was accepted as a work of love and an endeavour to help the Army and Navy of our country.

At the conclusion of Mrs. Marshall's report reference was made to a special committee formed to deal with work for the Belgian refugees. Mrs. Rolt, Mrs. W. A. Crowther, and Miss Willans were appointed to deal with this matter, and Miss Willans, hon. secretary, read a satisfactory report, to the effect that three days after the appeal had been made by means of the Press and leaflets circulated by the Boy Scouts, 724 garments, boots, shoes, etc., were sent to the depot in London for distribution either in England or Belgium, and another 650 garments were waiting to be packed into bales and dispatched at once. The sorting, classifying, packing, and labelling of the gifts required no little organising ability, and the dispatch with which these were done spoke volumes for this little section of workers. The ladies hoped very shortly to be able to send some new garments, due in a very great measure to acceptable gifts of five pieces of cloth from the firm of Messrs. John Crowther and Sons, Milnsbridge, and a roll from Messrs. B. Vickerman and Sons. Alderman Woodhead, Mr. Thomas Walker, Messrs. J. Binns and Co., of Packhorse Yard, Mrs. Percy Brierly's sewing meeting, Fixby Golf Club, Mr. George Hall, Messrs. Schofield and Oldfield, Messrs. Thomas Kaye and Sons, and Messrs. Freeman, all had shown sympathy in some practical form.

Mrs. Rolt explained that up to now the committee had not asked for money, not wishing to interfere with Alderman Woodhead's Belgian Relief Fund, but a little unsolicited monetary aid had come in for which they were very grateful, and as the making up of material would entail some expense she hoped some kind friends would remember their need.

Hardly had she resumed her seat before she rose to say that Miss Siddon had promised £10. Half the money paid for tea was also handed over to Mrs. Rolt for her fund.

The treasurer (Miss N. Lowenthal) read a gratifying report announcing the handsome sum of £738, as the result of appeals in the daily Press and individual interviews.

This brought the "talking" part of the programme to a close, and a move was made for tea and inspection. In the G.F.S. room the ladies had arranged for every type of garmen to be on view, and the work of cutting out and arranging was still going on. In the room above the most orderly arrangement of parcel exists, neatly done up and labelled ready for dispatch, and each parcel represented the utmost care and attention to detail, for Mrs J. Lumb and Mrs. E. E. Hirst, with their band of helpers, have inspected every article. In the next room the bandage-winders could be seen at work, and few people who visited there had ever seen so many or better made bandages. Finally, the gifts for the Belgian refugees were collected in the room on the ground floor—verily a motley assortment of goods. Through the help of several firms the goods have been skilfully packed by experts, and the bales conveyed to the railway station en route for London in the first place, to be sent from there to their destination.

From the Parochial Hall small parties went from time to time to visit the Rest Station in a waiting-room at Huddersfield station. Mrs Wimpenny has provided everything necessary and not only necessaries, but comforts and attendance.

When is this work to finish? Well, certainly, not while such telegrams as the following are received from any of the Red Cross Societies: "Send with utmost speed to Rouen in addition to articles now on the way, shirts, pyjamas, sheets, pillowslips, mackintosh sheets, slippers, and socks. Send thousands of above. You cannot send too many."

Evening Standard, October 5th. 1914.

WOMEN AND WAR.

CIRCULATING LEAFLETS ON PLANTING WINTER VEGETABLES.

ACTIVITIES OF THE W.L.G.S.

In view of the formation of committees in the counties and larger boroughs and urban districts by the local authority, the Women's Local Government Society, on August 7, sent a letter to its affiliated associations and to the Press. In it the W.L.G.S. pointed out the need for the appointment of women on such committees, and urged all associations and women in general to help in securing this result.

Subsequent to the latter, a letter was sent to the members of the society referring to the Local Government Board's circular on the work and constitution of local committees, and asking them to use their influence to secure the election of suitable women on these committees.

In order to enforce the idea that it is desirable that "any relief given should take the form of wages when it is possible to provide work," a further communication was sent to the affiliated associations and to the Press, conveying a suggestion made by Miss Mary Beeton, Met. Bor. C., as to one method of employment.

Paddington Workroom.

In Paddington the Women's Local Government Association has started a workroom at 31, Westbourne-terrace North, and the workers there are engaged in mending clothes for Belgian refugees.

In many towns members of the Women's Local Government Association have placed themselves at the disposal of the Mayor's Committee, notably at Worcester, where it is hoped immediately to start a workroom for factory girls who are out of work or who are on half-time.

The Women's Local Government Society has, in addition, taken steps to circulate some suggestive leaflets published by the Board of Agriculture with respect to the planting of waste spaces with winter vegetables, fruit-growing and fruit preserving, and the feeding and care of poultry, in addition to that of the Women's Co-operative Guild relating to the need for maternity centres.

PERSONAL SERVICE.

WORK OF THE LONDON SOCIETY FOR WOMEN'S SUFFRAGE.

The Women's Service Department of the London Society for Women's Suffrage sends us the following details:—This society has laid great emphasis on the importance of no voluntary worker undertaking work more fittingly carried out for payment by the many professional women now needing employment.

The society, however, desires to point out that this is in no way intended as a discouragement to volunteers, for their services are only too urgently needed still in a large number of enterprises dealing with the social problems which have arisen since war was declared. Day by day Countess Brassey, the Hon. Mrs. Spencer Graves, and other members of the Committee and Advisory Council, are sitting at the offices at 58, Victoria-street, dealing with every kind of need, and they would cordially welcome every offer of help. Though those possessing experience are naturally of the greatest value, no one need hesitate to offer service.

Already the society has initiated a scheme for training, and had arranged for the admission of its workers at the low fee of 3s. for the series of lectures to begin at the London School of Economics on October 12 on "The Relief of Exceptional Distress," which will be specially adapted for those who are bewildered by the many agencies which have leapt into existence for the purpose during the last few weeks.

Lady Brassey also intends to hold an invitation meeting at 24, Park-lane, on the 13th, at which the Women's Service scheme will be explained, and Mrs. Creighton and other authorities will speak on the special needs for personal service which urgently call for attention. All particulars in regard to these plans may be obtained at 58, Victoria-street. "Women! Your country needs you!"—the watchword of the Women's Service scheme, is perhaps truer now than even at the beginning of the war.

The Pall Mall Gazette, October 19th. 1914.

WOMEN'S WORK IN WAR.

SCOTTISH WOMEN'S HOSPITALS FOR THE FRONT.

The National Union Active Service League will hold an important meeting to-morrow afternoon at five o'clock (instead of half-past eight as originally arranged) to discuss women's work in war time and to raise money which will be equally divided between Queen Mary's Work for Women Fund and the Union's Relief Fund.

Many speakers will address the meeting; among them will be Miss Mary Sheepshanks, who will describe the relief work for Belgian refugees in Holland during the past few days. Dr. Elsie Inglis will explain her scheme for sending out Scottish Women's Hospital Units to France and Servia, to work with the Red Cross Societies.

Each unit is to have four women doctors, ten trained nurses, six dressers (senior women medical students), two cooks, an administrator, and a clerk. Each hospital will be equipped for 100 beds.

The cost to equip and despatch a hospital with all salaries paid for six months is £1,000. The excellent work done by the women's hospital in Antwerp leaves no room to doubt that this Scottish hospital will find good work to do and will do it well. Dr. Inglis will go out in command.

Daily Graphic, October 22nd 1914.

WOMEN'S WORK IN WAR TIME.

ASSISTANCE NEEDED IN ALLIES' RED CROSS WORK.

At a meeting held in connection with the Women's Active Service League at Kingsway Hall, the Hon. Mrs. Alfred Lyttelton announced that the Allies badly needed assistance in their Red Cross work. Sir Frederick Treves had asked for further help for the French Red Cross work, and the appeal of Dr. Inglis for the women's hospitals for foreign service was particularly urgent.

Miss Sheepshanks, who has just returned from Flushing, described the sufferings of the Belgian refugees in Holland. In Flushing, with a population of 20,000 inhabitants, she said, they had 30,000 refugees.

In one place she had seen men and women huddled together in coal-sheds, some of them grey with hunger, though the Dutch Relief Committee were working magnificently to house and feed them. A ship with food had also been sent by the Belgian Minister, but clothes and blankets were still urgently needed.

656/4 656.

The Eastbourne Gazette, October 21st

WOMEN'S WORK IN WAR-TIME.

[From a Correspondent.]

"Men must work and women must weep," wrote Kingsley; but if that was the Victorian view of the right attitude of women in the face of calamity, it is not shared by the women of to-day. Pity finds its natural and necessary expression, and grief its greatest solace, in activity.

An officer serving on Sir John French's staff at the Front wrote to his wife, "I take off my hat to the women of France; in fact, I think the women of both our countries are playing a harder game than the men." Be that as it may, one cannot but admire the way in which British women have adapted themselves to the new conditions.

The care of soldiers' families, maternity and child care, the needs of our soldiers and sailors, and of recruits, the preparations made for the wounded, help for unemployed women, women patrols for the neighbourhood of camps, help for refugees—these are only some of the channels into which the energies of women are flowing.

The women of Eastbourne are doing their share in this manifold national service, notably in the care of wounded soldiers, and in general helpfulness towards refugees. As soon as the war broke out, for example, preparations were made for the reception of wounded soldiers, and last Wednesday Eastbourne received its first consignment of Belgian wounded. Who among the crowd who stood near the Station to give the poor fellows a welcome could fail to be moved, first, perhaps, to tears, and then to indignation at the mad folly of such a game as war. The welcome given was enthusiastic, though subdued, but almost the only response was a feeble waving of a hand or cap.

It has been said that many of the wounded, on arriving at the Red Cross Hospital, broke down completely, and wept in sheer weariness and misery. Well-nigh all the distance from an Inferno to Paradise must have been travelled from the enemy's shot and shell to the peaceful security of the Red Cross Hospitals in Blackwater-road, at Urmston and Wish Rocks, where skilled doctors and carefully trained nurses were ready to do all that was humanly possible to ease the sufferers.

The more seriously wounded could not, of course, be sent to England. Those who are with us now are suffering chiefly from bullet and shrapnel wounds. One gunner who had become stone deaf is only just beginning slowly to recover his hearing. A good wash or a bath were almost a forgotten luxury. The red bed-jackets please the soldiers' fancy immensely, but pyjamas presented considerable difficulty at first to the uninitiated.

One soldier, on hearing a barrel-organ being played in the road, said, "Ah! you have no war in England. In Belgium we hear only ping, ping, shwsh, shwsh!" They are sad because they think their country is lost to them.

The women of the Free Churches in East have made themselves responsible for the fitting out of Wish Rocks, Blackwater-road, one of the Red Cross hospitals. When war was declared the Free Church Council appointed a committee of women, two from each church, to consider what help could best be given in the emergency. All the Free Churches, with one exception, responded to the appeal, and forty beds, fully equipped, were promised, with an additional £50 for other expenses. About twenty-seven of these beds are now occupied, and the rest will be provided as required.

Press. In it the W.L.G.S. pointed out the need for the appointment of women on such committees, and urged all associations and women in general to help in securing this result.

Subsequent to the latter, a letter was sent to the members of the society referring to the Local Government Board's circular on the work and constitution of local committees, and asking them to use their influence to secure the election of suitable women on these committees.

In order to enforce the idea that it is desirable that "any relief given should take the form of wages when it is possible to provide work," a further communication was sent to the affiliated associations and to the Press, conveying a suggestion made by Miss Mary Beeton, Met. Bor. C., as to one method of employment.

Though those possessing experience are naturally of the greatest value, no one need hesitate to offer service.

Already the society has initiated a scheme for training, and had arranged for the admission of its workers at the low fee of 3s. for the series of lectures to begin at the London School of Economics on October 12 on "The Relief of Exceptional Distress," which will be specially adapted for those who are bewildered by the many agencies which have leapt into existence for the purpose during the last few weeks.

Lady Brassey also intends to hold an invitation meeting at 24, Park-lane, on the 13th, at which the Women's Service scheme will be explained, and Mrs. Creighton and other authorities will speak on the special needs for personal service which urgently call for attention. All particulars in regard to these plans may be obtained at 58, Victoria-street. "Women! Your country needs you!"—the watchword of the Women's Service scheme, is perhaps truer now than even at the beginning of the war.

among them will be Miss Mary Sheepshanks, who will describe the relief work for Belgian refugees in Holland during the past few days. Dr. Elsie Inglis will explain her scheme for sending out Scottish Women's Hospital Units to France and Servia, to work with the Red Cross Societies.

Each unit is to have four women doctors, ten trained nurses, six dressers (senior women medical students), two cooks, an administrator, and a clerk. Each hospital will be equipped for 100 beds.

The cost to equip and despatch a hospital with all salaries paid for six months is £1,000. The excellent work done by the women's hospital in Antwerp leaves no room to doubt that this Scottish hospital will find good work to do and will do it well. Dr. Inglis will go out in command.

Daily Graphic,
October 22nd 1914.

WOMEN'S WORK IN WAR TIME.

ASSISTANCE NEEDED IN ALLIES' RED CROSS WORK.

At a meeting held in connection with the Women's Active Service League at Kingsway Hall, the Hon. Mrs. Alfred Lyttelton announced that the Allies badly needed assistance in their Red Cross work. Sir Frederick Treves had asked for further help for the French Red Cross work, and the appeal of Dr. Inglis for the women's hospitals for foreign service was particularly urgent.

Miss Sheepshanks, who has just returned from Flushing, described the sufferings of the Belgian refugees in Holland. In Flushing, with a population of 20,000 inhabitants, she said, they had 30,000 refugees.

In one place she had seen men and women huddled together in coal-sheds, some of them grey with hunger, though the Dutch Relief Committee were working magnificently to house and feed them. A ship with food had also been sent by the Belgian Minister, but clothes and blankets were still urgently needed.

that as it may, one cannot but admire the way in which British women have adapted themselves to the new conditions.

The care of soldiers' families, maternity and child care, the needs of our soldiers and sailors, and of recruits, the preparations made for the wounded, help for unemployed women, women patrols for the neighbourhood of camps, help for refugees—these are only some of the channels into which the energies of women are flowing.

The women of Eastbourne are doing their share in this manifold national service, notably in the care of wounded soldiers, and in general helpfulness towards refugees. As soon as the war broke out, for example, preparations were made for the reception of wounded soldiers, and last Wednesday Eastbourne received its first consignment of Belgian wounded. Who among the crowd who stood near the Station to give the poor fellows a welcome could fail to be moved, first, perhaps, to tears, and then to indignation at the mad folly of such a game as war. The welcome given was enthusiastic, though subdued, but almost the only response was a feeble waving of a hand or cap.

It has been said that many of the wounded, on arriving at the Red Cross Hospital, broke down completely, and wept in sheer weariness and misery. Well-nigh all the distance from an Inferno to Paradise must have been travelled from the enemy's shot and shell to the peaceful security of the Red Cross Hospitals in Blackwater-road, at Urmston and Wish Rocks, where skilled doctors and carefully trained nurses were ready to do all that was humanly possible to ease the sufferers.

The more seriously wounded could not, of course, be sent to England. Those who are with us now are suffering chiefly from bullet and shrapnel wounds. One gunner who had become stone deaf is only just beginning slowly to recover his hearing. A good wash or a bath were almost a forgotten luxury. The red bed-jackets please the soldiers' fancy immensely, but pyjamas presented considerable difficulty at first to the uninitiated.

One soldier, on hearing a barrel-organ being played in the road, said, "Ah! you have no war in England. In Belgium we hear only ping, ping, shwsh, shwsh!" They are sad because they think their country is lost to them.

The women of the Free Churches in Eastbourne have made themselves responsible for the fitting out of Wish Rocks, Blackwater-road, one of the Red Cross hospitals. When war was declared the Free Church Council appointed a committee of women, two from each church, to consider what help could best be given in the emergency. All the Free Churches, with one exception, responded to the appeal, and forty beds, fully equipped, were promised, with an additional £50 for other expenses. About twenty-seven of these beds are now occupied, and the rest will be provided as required.

Women's Kingdom.

Feeding the Children.

On five days of the week about 75,000 children are receiving school meals in the area covered by the London County Council. Only 1,100 children attend for meals over the week-end. It would be pleasant if one could conclude that therefore the 64,000 children who do not get food on the Saturdays and Sundays in London schools are getting proper meals at home. I am assured that the real reason why so few children get the week-end meals is that the London County Council provides very limited facilities for them. All that the school teachers can do is to report to headquarters the children who seem to need meals on the Saturday and Sunday. They can do no more, and some of the teachers do not understand that they can do so much. No special instructions have been issued to them, and no one seems to know where the children are being fed at week-ends. Yet it is quite certain, since the miracle of the manna in the wilderness is not being repeated in London every Saturday and Sunday, that thousands of children go hungry for two days—and those two days when they run loose in the streets with leisure to reflect upon the discomforts of being hungry and the singular folly and cruelty of their elders. Is it quite impossible to make the education authorities in London realise the simple fact that if many thousands of children are fed at school on five days in the week no small proportion of them are certain to go hungry on the remaining days?

Women and the War.

Efforts to mitigate the distress among women workers caused by the war are being planned on large lines by the Central Committee, whose work was described in THE CHRISTIAN COMMONWEALTH some weeks ago. One scheme put forward from this quarter involves the employment of women on a branch of the laundry industry not hitherto developed. After consultation with the National Federation of Laundry Associations the Central Committee has approved a proposal that the laundries should provide facilities for the mending and darning of customers' clothing. In some few laundries workers are employed for the purpose of mending garments sent to be cleaned. It is proposed that the laundries should arrange to extend this work, employing skilled women for the purpose, and collecting garments from the customers when the laundry van makes its rounds, the work being done either at piece rates or contract price, as the customer elects. Other schemes suggested by the Central Committee, such as the making of maternity outfits, have already been described; another proposal actually in operation is the pulping of fruit, the making of preserves, and drying vegetables. The National Union of Women Suffrage Societies has started a number of emergency work-rooms, three at Westminster and one in the East End of London. Out of 300 unemployed women who applied to the National Union recently no fewer than 186 were professional sewers—dressmakers, machinists, and skilled needlewomen in most branches of the trade. The women for whom work can be found receive 3d. an hour for a maximum week of forty hours, this being the scale fixed by the Central Committee, of which Miss Mary Macarthur is the secretary. Hundreds of women are waiting for the chance to be employed in these work-rooms, and the National Union is appealing for funds to develop the work, for rooms to be lent rent free, and for material to be made. We hope shortly to publish an article by Mrs. Fawcett on the recent developments of the National Union's activities.

Colleges for Home-Makers.

One of the principles upon which the work of the Central Committee on Women's Employment is being carried on is applied very successfully in the new scheme for instructing women how to cook, clean, wash, sew, and do other housework which factory life has robbed them of any opportunity of learning. The principle is that work not done for commercial profit ought under the direction of the committee be a means of training the workers for brighter days. So in Bethnal Green, Islington, Finsbury, and Stepney colleges are being opened for the women out of work through the war who cannot yet be employed in the committee's workrooms. Part of the practical training in the "college" is the preparation of a threepenny dinner for the women employed in neighbouring workrooms started either by the Local Representation Committees or by the Central Committee itself. One is now in full working order at Stepney. A professional cook who lost her work through the war is in charge, and ten women are helping her, learning at the same time how to cook. They work in two shifts, morning and afternoon, so that they get lessons alternately in cooking and cleaning; and, besides the experience they get in the training kitchen, the London County Council is arranging afternoon classes on two days in the week. The dinner is served in a light, bright dining-room on clean white-covered tables, and more than half the workers pay threepence for a meal which includes roast mutton, vegetable, and apple tart. Some stay in the workroom with a small paper parcel, others go home; one girl explained why she went home. "Threepence is very, very cheap, and it's better than we get at home," she said; "but there are nine of us at home, and mother can make a dinner for us all for ninepence." These training kitchens and classes mean that when the war ends the women who did not know how to cook and sew and keep their homes clean will have learned, and meanwhile they are being maintained instead of being left to starve or scrape a pitiful livelihood together for themselves and their children.

WOMEN AND THE WAR: WOMEN PATROLS.

One of the most important developments arising out of war conditions in this country, is the appointment and recognition of "women patrols," and happily, I understand, with the permission of the Home Secretary and of the Chief Commissioner of Police for the Metropolis, the National Union of Women Workers is about to make arrangements for securing the help of a certain number of women of common-sense and experience, who will, under authoritative sanction, render quiet service as "patrols" amongst our young recruits and soldiers and safeguard our girls from the results of the very natural excitement produced by the abnormal conditions now prevailing. The need for these women patrols is admitted by all who know, even in times of peace, the temptations of a garrison town. Now when the enormous number of newly recruited young men are collected in camps all over the country, the temptations are greatly increased, and unfortunately "the unsatisfactory behaviour" of some women and girls has caused great mischief and has been the means of much injury and scandal. These women patrols will accomplish a noble work for both men and women if they can instil into their younger sisters a higher reverence for themselves and a finer realisation of the need which has brought the men into camp and the courage and devotion which keep them there. The patrols will also possess the needed authority when required. It is hoped that suitable women will come forward as voluntary helpers for this special work, but since it is difficult and responsible, it will be necessary to appoint paid organisers to assist and supervise the voluntary patrols. Several well-known ladies are connected with the scheme. Miss Agnes Garrett is the hon. treasurer, and subscriptions, which are badly needed, should be sent to her at 2, Gower street, London, W.C.

FRENCHWOMEN'S WORK IN WAR TIME.—II.

WORKROOM OPENED AT "LUNE ROUSSE."

By Our Paris Lady Correspondent.

At the "Lune Rousse"—home of the topical song—a work-room is in full swing.

In the boxes, that resemble church pews rather than theatre boxes in the English sense, are sewing machines and women of all ages, some white-haired and bent, others young and neatly dressed, are making grey shirts, a large order having been placed here by an orphanage.

But other work is also undertaken in the "ouvroir." Here is a needlewoman employed on some exquisitely dainty underwear of shell-pink crepe de chine, with fine openwork seaming and lace. Or here is a little milliner at work on a smart velvet hat. And the "ouvroir" boasts, too, a clever blouse hand, capable of cutting out and executing the smartest of corsages.

Making Hats.

Of course, getting the work done, and well done, is, from the point of view of the organisers, only half the battle. If the workwomen are to live, their wares must be sold. So far, the purchasers have been found privately, invited by this one or that, each purchaser endeavouring to find another. The underwear and the hats are only made to order, but the opportunity is too good to be lost, and Parisiennes will not be slow to find their interest in patronising the "ouvroir."

The milliner makes a hat for two francs, and accepts the material from the customer's hands. Indeed, she cannot do otherwise. She has no account or credit with the wholesale houses, which in their turn are for the most part shut, so no one is hurt by this temporary dislocation of market prices, while the workers, if they can just pay their way and keep themselves decently as long as the crisis lasts, are more than satisfied. To the neediest money aid is given by the work-room; for the rest, they get the proceeds of the sales.

Dolls for Christmas.

But another outlet, it is hoped, will be found for some of the wares made in the Paris "ouvroirs," and that is London. The dolls, for instance, will be offered to the doll-shops in the metropolis, where a branch of this particular "ouvroir" has been opened, and is already in operation in South Kensington. There seems no reason why London and Paris "ouvroirs" should not both profit by the two markets: characteristically Parisian goods finding sale in England and typically English articles, which enjoy very great favour here, finding theirs in Paris. This, at all events, is the hope of the women who are devoting their time, their energy, and their spare cash to helping humble working women through a very difficult and perhaps prolonged period of crisis.

In addition to this export department, there will surely be found a fair number of women who will be glad to do a good turn to their poorer sisters, and, at the same time, replenish their wardrobes at war—that is, low—prices. The value of the franc has shot up in a marvellous manner in Paris since August 3. There are hundreds of women earning a good wage in normal times who are now willing to work four or more hours for a lunch. And these are women who know their work, and are skilful workers. How long the "ouvroirs" can be maintained is an open question. There is no doubt of their usefulness. Each has a free canteen attached to it, so the women get a good and nourishing meal in the middle of the day without going outside their workroom.

Work in Leeds.

LET US CAPTURE THE PEOPLE'S TRADE.

WOMEN'S CORNER.

Suggested Co-operative War Activities.

Co-operators have responded splendidly to the appeal for help and assistance to the various War Relief Funds.

But (writes a correspondent) I should have rejoiced if our movement had launched a co-operative scheme and worked it themselves for the benefit of the sufferers, beginning with the mother. Have we not had revealed to us how hundreds of even our co-operative mothers are neglected at child-birth because they cannot afford help? Why could not our large and wealthy distributive societies employ a midwife for their members? (I believe this is already done by one society.) A woman with the highest qualifications can be got for £100 a year.

• • •

Co-operative Milk.

Then come the children. The researches of science tell us that, while milk is the most valuable food which infants and children can have, it is in more danger of being dirty and of carrying infection than almost any other food. A proper quantity of good milk is vital to the well-being of children. Children were never more precious than to-day; there will be a scarcity of them soon. How can a mother on smaller income secure that the milk she buys is wholesome? By co-operative effort. Co-operators can afford up-to-date dairies, fitted with sterilising (or rather pasteurising) apparatus. They can insert clauses in their milk contracts ensuring cleanliness in the herd from which the milk comes. Then the distribution of milk is most unsatisfactory. Often churns of beautiful milk are sold at cost, or made into butter at a loss, because there is a glut on the market. There is never a glut of milk in poor homes. On the very day when this happens babies are being fed on tinned milk, bearing a label in red, "This milk is not recommended for infants," as it is really a cheap brand of skimmed milk.

Where there are already co-operative dairies, the overplus milk might be bottled, sterilised, and sold at half-price next day by the ordinary milkmen from door to door. Even after being skimmed, milk contains all its nourishing qualities excepting fat, which is all in the cream. (That is why skimmed milk is not suitable for infants, who require plenty of fat.) If milk puddings are made with skimmed milk, and a bit of chopped suet added, they are most nourishing.

Infant foods might be specialised in to a much greater extent by our stores. The prices of reliable infant foods are extortionate to-day, and quite beyond the reach of poorer people.

• • •

Fish.

Then the present is a most suitable time for our movement to begin trading in fish. The Grimsby Society has mentioned the matter in interested quarters. The Scottish Wholesale have a splendid trade in dried and cured fish, with headquarters in Aberdeen. Fish forms a cheap and nourishing food, upon which the hardiest races of mankind thrive wonderfully. The Highlanders used to get their chief food all winter from salted herrings, dried ling, and smoked cod, &c. Every home had a barrel of herrings behind the door, and large flat "sides" of ling (cured skate) hanging from the ceiling, where English peasants have a flitch of bacon. The usual way of eating salt herring is to put them on top of a saucepan of potatoes in their jackets, and boil both together. If the potatoes are good, the meal is eaten with relish. But the taste for salt ling is an acquired one—it is so very salt. For these foods, a healthy appetite acquired out of doors is essential. But a fresh fish trade, conducted by barrow distribution, does not require a large initial outlay, and ought to soon pay its way.

• • •

Laundry Work.

Again, those societies which already possess laundries might now undertake the repairing of the clothes passing through their hands for a small additional charge. This needs no fresh outlay of capital whatever, and would absorb additional hands. Another boon would be if our stores' laundries would consider the "bob" wash, i.e., washing and drying a certain quantity for a shilling. Some go by the weight; some by the dozen; some by the pillowcase full. Then, for an additional copper or two, the washing might be mangled, as rough dried clothes from a laundry are so bone dry they have all to be wetted, mangled, and dried over again on their return. Our stores' laundries must consider cheap ways of washing, in order to capture the working people's trade.

THE WAR AND THE FUTURE OF THE RACE.

The Government and the Care of Maternity. United Women's Deputation to Parliament.

IMPORTANT PROPOSALS: ENCOURAGING AND SYMPATHETIC REPLY.

The desolating waste of life inseparable from the operations of war makes it increasingly incumbent upon the nation to assist mothers and to render the conditions of child-birth as favourable as possible. With a view to pressing the importance of special and systematic care, a deputation representative of the mothers of the nation waited upon the President of the Local Government Board on Monday last.

The Right Hon. Herbert Samuel, as President of the Local Government Board and chairman of the Government Distress Committee, received a deputation on the National Care of Maternity in Time of War at the Local Government Board on Monday last.

The deputation was arranged by our Women's Guild, in conjunction with the Women's Labour League and the Railway Women's Guild, and the representatives spoke on behalf of 40,000 working women. A large body of working women accompanied the deputation, many of whom were mothers whose circumstances have been affected by unemployment or short time caused by the war. These working women were supported by medical men and women and by others representing the municipal and voluntary organisations by which the scheme advocated could be carried out.

The following were among those present at the deputation:—Mrs. Barton (president, Women's Co-operative Guild), Miss Llewelyn Davies (general secretary, Women's Co-operative Guild), Mrs. Jarrett (Women's Labour League), Dr. Marion Phillips (secretary, Women's Labour League), Mrs. Webb (Railway Women's Guild), Dr. Amand Routh (National Association for the Prevention of Infant Mortality), Dr. Fairbairn (Obstetric Physician to St. Thomas' Hospital and the General Lying-in Hospital), Dr. Herbert Jones (president, Society of Medical Officers of Health), Dr. Chalmers (ex-president, Society of Medical Officers of Health), Dr. Thomas Barlow (hon. secretary, Society of Medical Officers of Health), Dr. Joseph Priestley (hon. secretary, Society of Medical Officers of Health), Mrs. Deane Streatfield (president, Society of Women Sanitary Inspectors), Councillor Susan Lawrence (London), Miss Turnbull (member of Woolwich Borough Council), Dr. Florence Willey (League of Service Dining Rooms for Mothers), Lady Muriel Paget (Invalid Kitchens of London), Miss Mary Simons (Rotherhithe Babies' Institute), and Miss Margaret Bondfield (Workers' War Emergency Committee).

Introducing the deputation, Miss LI. Davies (general secretary) said: The object of our deputation is to ask that Government support should be given to a scheme we have prepared for the national care of Maternity in time of war. Those who are making this request are representatives of national self-governing organisations of working women, and they are speaking on behalf of child-bearing and nursing mothers who belong to the great class of six million non-wage-earning women.

In normal times the sufferings of women and the loss of infant life is infinitely greater than it need be, largely owing to the fact that the average family wage cannot possibly adequately supply the needs of women at these times, nor make the conditions of their lives such as are essential to health and well-being. It is obvious how much greater the suffering and death would be if this average wage is lost or halved. Our proposals, shortly, are:—

(1) The provision of regular and systematical medical advice and help for expectant and nursing mothers and children up to school age, and (2) the provision of nourishment, of doctor or midwife at confinements, and of sick-room helps.

The machinery for the medical advice and help already exists to some extent in the municipal work already going on and in the voluntary infant consultations and schools for mothers, which number nearly 400. We desire to see this work extended into maternity centres, under the public

nising Secretary of the Yorkshire Ladies' Council of Education, their respective societies having lent their services.

Work in Leeds.

A few days after war broke out a small meeting of women was called by the Lady Mayoress to organise women's work in the city during the war. A provisional committee was appointed, which started a registry for voluntary workers, a scheme for visiting the wives and families of men on service, and a department for providing garments and other needs for hospitals and troops.

At a very large public meeting of over 3,000 women in the Town Hall on August 11th, the Lady Mayoress's Committee was appointed and began to organise and develop the work already started. An executive was formed, to meet twice a week, and a number of sub-committees were appointed to carry out the schemes of the executive and report to it. The general committee meets at intervals when necessary, and has general control of policy. A large number of societies have thrown in their lot with the Committee, among others, the Leeds University, the Soldiers' and Sailors' Families Association, the National Union of Women Workers, the Leeds Babies' Welcome Association, the Charity Organisation Society, the Adult Schools, the Women's Co-operative Guild, the Women's Guild of Christian Service, the Salvation Army, the Leeds City Mission, the National Union of Women's Suffrage Societies and the Yorkshire Ladies' Council of Education.

It has been found necessary to raise a fund for the part of the work which does not come under the scope of the Prince of Wales's Fund, but the Committee is working in complete co-operation with the Lord Mayor's Committee, on which four of its members sit. At first the Committee had offices in the Town Hall, but these were necessarily inconvenient, and the offer of excellent offices made by a firm, rent and rate free, were accepted.

The work of sub-committees is approaching complete organisation. The Visiting Sub-committee has rooms in the Education Office, where it is thoroughly in touch with the relief work carried out through the Education Department. The town has been divided into twenty-six districts, each of which has a district head, and a body of visitors. These undertake to visit the dependants of soldiers and sailors and send in reports fortnightly. Over 5,000 families' names have been given to the Committee by the relief stations, and some hundreds of others are being visited which have never applied for relief. Incalculably good work is done by the giving of sympathy and friendly advice to those in difficulties. The organisation of this work has been a difficult task, and the regular and constant help of voluntary workers is much appreciated.

The Clothing and Hospital Needs Sub-committee is now working in close co-operation with the St. John's Ambulance Depôt at Leeds. All goods are sent to and distributed through it, but only orders made or endorsed by the Committee are carried out in the case of goods supplied by them. The Second Northern General Hospital has been generously supplied with bedgowns, bedjackets, extra blankets, many and varied kinds of bandages, and other needs, while other supplies have gone to the hospital trains, to the local Territorial regiments, and to the front. The bandage-rolling department, which is carried on under the superintendence of trained nurses in a room lent for the purpose, is a delight to the visitor.

A Maternity Sub-committee has established a nursery for soldiers' children temporarily uncared for by the illness or the incapacity of the mother. A house has been very kindly lent, and there are twelve babies now in residence. The matron and staff give their services. This sub-committee is also organising dinner centres for nursing and expectant mothers and for children under school age. For both these purposes the Lady Mayoress's Committee is receiving grants from the Prince of Wales's Fund.

Accommodation has been given at the Central Office to the Belgian Refugee Committee, for the storing and distribution of clothing. This is being organised by a member of the Lady Mayoress's Committee. Through the efforts of the Lady Mayoress's Committee, a representative sub-committee of the Lord Mayor's Committee has been appointed, to form and administer schemes for women's employment, subject to the approval of the Central Committee for Women's Employment. The Lady Mayoress is, therefore, opening a branch of the Queen's Work for Women Fund.

The Honorary Secretaries of the Committee are Mrs. Renton, Organising Secretary of the West Riding Federation of Women's Suffrage Societies, and Miss S. K. Findlay, Organising Secretary of the Yorkshire Ladies' Council of Education, their respective societies having lent their services.

656.

health authorities, on the lines which the Local Government Board has already recognised as desirable in normal times. We cannot be too grateful for the recent grant and memorandum issued by the Local Government Board, which it is not too much to say forms the beginning of a new era for the mothers of the country. If to the Notification of Births Act, Women Health Visitors, Superintendence of Midwives, and Maternity Centres are added the machinery we need for this part of the scheme is ready to hand.

The other forms of help we feel may rightly be claimed from the Prince of Wales' Fund, and we suggest that per capita payments should be made for dinners and milk, for doctor, midwife, and sick help. Dinners and milk we consider as the most essential part of preventive and curative treatment, and women should be asked to regard them in this light, so as to undermine any unwillingness to accept them by those who would shrink from relief.

The wives of soldiers and sailors will receive free attendance at confinements under the scheme originated by the medical profession. The wives of civilians whose employment is affected by the war would be in a worse position. It is surely reasonable to ask that provision should be made for these mothers out of the Prince of Wales' Fund. We wish also to point out that it is unsuitable that only men should be present in town halls to receive women applicants, and to urge that wherever names are registered and inquiries made, women should be in attendance to whom application could be made.

And, further, we ask that the work of public health committees, representative committees, and voluntary organisations should be co-ordinated—as is already the case in at least seventeen towns—by the formation of maternity sub-committees of representative committees, composed mainly of working women, who are best fitted to seek—and it is a matter of seeking them out—out those who are unwilling to apply for relief.

We venture to think these proposals are practical and economical, that they would be the means of giving efficient help. Also, that they are without the evils and drawbacks so apt to be associated with relief work. The fact that help is conditional on a physical state limits the possibility of abuse, and if administered in the way we suggest, there would be as little humiliation as possible to the recipient. We should be building up the health of our mothers and the coming generation, and we should be kindling new hope and courage and effort from the very fact that the women realised that the nation cared for them. "We seem to be of no value," was what one suffering woman wrote to me.

We ask you to give special encouragement at this time to public health committees to form maternity centres and to representative committees to provide nourishment and other help, on the assurance that grants will be made from the Prince of Wales' Fund.

Recruiting a Health Measure.

Dr. Herbert Jones (president of the Society of Medical Officers of Health) said he thought the enormous army of recruits now being trained was in a sense a huge public health measure. More than a million men were undergoing physical exercise and living under health conditions such as many of them had never experienced before. It seemed to him deplorable that while the men of the country were being greatly improved in health, they should allow their wives and children and the wives and children of others to be neglected.

Mr. Samuel's Sympathetic Reply.

Mr. Samuel, in replying, said the question the deputation had raised yielded in importance to none of the problems facing the nations. During the stress of war some things must necessarily be abandoned or postponed, but this was a subject which could not be put aside. (Hear, hear.) Anyone who was a student of the social condition of a people must realise very soon that the question of childhood lay at the root of all else. It was necessary to realise that they must look not only to the child, but to the infant and to pre-natal conditions. Much had been done by the Insurance Act, and by the provision of a sum which now exceeded one-and-a-half millions sterling a year, distributed in maternity benefit to the mothers of the working classes. With respect to maternity centres, he very easily secured the assent of the Chancellor of the Exchequer to the proposal that half the cost of those centres should be defrayed from the National Exchequer. Under the scheme which had been propounded, there were to be arrangements for the medical supervision of midwives; secondly, arrangements for an ante-natal clinic for expectant mothers and maternity hospital provision; thirdly, arrangements for giving such assistance as might be needed to ensure the mother having skilled and prompt attendance. It was proposed also that there should be systematic attendance and treatment for infants, clinics and dispensaries being available for the children up to school age; and, lastly, that there should be home visitation of the infants and children embraced within the scheme.

Those large proposals could only gradually be matured into their full operation, and they looked forward to work of that kind becoming part of the public health service of the country just as much as the ordinary sanitary and medical work or the work for the suppression of tuberculosis. [illegible] the whole of the country."

With respect to the relief of distress during the war, he agreed that special attention should be given to the particular requirements of nursing mothers. They might need more relief than other families. It would be a great error to adopt a hard and fast scale without paying regard to individual circumstances. Secondly, they might need a different kind of assistance from that given to other persons.

Mr. Samuel pointed out that in most places maternity centres did not yet exist; but, on the other hand, relief committees were set up with great rapidity in the first days of the war. Therefore, there was always an organisation to whom the mother could go in her need. There was a certain division of opinion upon the subject of dining-rooms for mothers, and he suggested that the question was one for determination by the local committees. These had their own views, and were jealous—and, to his mind, properly jealous—of their local independence.

Sickroom Helps.

In regard to sickroom helps, he mentioned that a scheme of the kind began its operations that day at Plaistow, where a number of women were being trained. They would be paid a wage and sent to the homes of women who were ill. They would render assistance without attempting to perform the work which ought properly to be done by a trained nurse. He would rejoice to see that system widely extended. In addition to giving assistance, it would give employment at the cost of the Prince of Wales' Fund for many women who were unemployed through the war.

"Those matters on which you have spoken to-day," said Mr. Samuel, in conclusion, "have been brought before the Government Committee for the Prevention and Relief of Distress. That committee takes a very sympathetic view of the case which has been put forward, and I propose, as an outcome of this deputation, to send a further communication to all the local representative committees throughout the country, drawing their particular attention in the distribution of relief to the claims of the expectant and nursing mothers, and making several suggestions of detail which I hope will be widely adopted, and which I am sure will conduce to the end which we have in view." (Applause.)

The members of the deputation came away highly delighted and well satisfied with the reply of the President of the Local Government Board.

SPARKHILL WOMEN'S GUILD AND THE WAR FUND.

THE members of the Sparkhill branch of the Women's Guild (Birmingham) held a whist drive on September 21st, in aid of the Prince of Wales' Fund, and as a result the sum of 30s. was sent to the Lord Mayor of Birmingham.

In addition to this, seventy-five yards of calico were purchased and made up into garments for nursing and expectant mothers, the cost of labour and material being paid out of the guild funds. The garments were sent to the Lady Mayoress' Committee for distribution.

The vice-president of the guild (Mrs. Turner) has been appointed on the Citizens' Relief Committee for Smethwick district.

ECHOES.

A BEVERLEY "AT HOME."—A guild "At Home" was held in the Primitive Schoolroom at Beverley, on Thursday evening, October 1st. The hostess for the evening was Mrs. Shaw (the late president), who is shortly leaving the district. The new president (Mrs. Elwood), opening the proceedings, said they would try and forget the war for a while, and she was sure no one would begrudge them a little recreation—in fact, the soldiers and sailors would be only too glad to think they were doing their duty and helping them. It was Mrs. Shaw's "At Home," and was being held to inaugurate the opening of the winter session of the guild. An interesting programme followed. The proceeds amounted to £2 1s., which was disbursed as follows:—Local War Fund, 30s.; Mrs. Jones Guild Convalescent Fund, 6s.; Guild Independence Fund, 5s., with 5s. in addition from the local branch of the Women's Co-operative Guild.

STOKE'S ANNUAL OUTING.—The members of the Stoke-on-Trent Women's Guild held what they hope to be an annual affair on August 29th last, when they, fifty in number, met to proceed, by chars-a-banc, by Trentham, through Tittensor and Groundslow to Swinnerton. The Catholic Church and the fine mansion of the Fitzherts were passed, the journey being continued through the lovely pastoral scenery of Slindon and Eccleshall, where a stop for an hour was made to view the old town and its church. Then the Royal Hotel, with its old oak furniture and carving and ancient rooms, was visited. This is said to have been the hostelry of Cromwell and his officers, and it is recorded that the church is where he stabled his men and horses. The journey was afterwards taken by Copmere and Chesswardine, where another old church with historic memories was visited. From Market Drayton, just down the lane, a splendid view of the Welsh mountains round Welshpool and the Flint range, with Beeston Castle on the right and the Urekin to the left, can be seen. During the interval of tea and the time for departure, a vote of thanks was proposed and carried to Miss Harding (the branch secretary) for the manner in which she had arranged and contributed to the enjoyment of the company during the day. Just after eight the party assembled to board the motor-cars for the return journey, which was made through Maer Woods and Whitmore, arriving at Stoke about 9 p.m. Many are the pleasant memories of this first outing, and the wish was expressed that such events should be held, as they brought the members into closer friendship and knowledge of one another.

PULLING DOWN OR BUILDING UP?

What United Women Are Doing in Time of War.

ROUND one of the tents in a village fair there was a crowd of boys and girls, yes, and grown-up people too. Many were laughing, and now and then a hearty cheer went up, which roused more people to push their way towards that tent. What could it be?

I would push my way too, and see for myself. I was there because I wanted to share the fun, and where the best of the fun was, I must be present. So I drew nearer. A bigger cheer than ever went up as a lad came out, smiling all over his red, round face, in his hand some little trumpery prize. It was a contest of some kind.

I peeped into the tent, curious to know—and this is what I saw. At the back of the tent was displayed a lot of common, cheap crockery—jugs, cups, and so on—hung or placed upon a kind of rough, makeshift dresser; and the audience were invited, at a penny a head, to try their skill in breaking the pots by throwing a weighted missile at them. The show called itself, "Breaking Up the Happy Home!" And whenever a lucky hit smashed one of the crocks, the people cheered, and the thrower won a prize.

I turned away from the tent feeling sore at the folly of it all. Had not men and women worked hard to make those things? Was it right that children, boys and girls, should think it *fun* to break-up that which took *home* for its name, and its symbol? It was all pure, silly thoughtlessness, of course, and not seriously meant; but big things and big thoughts can lie deep down underneath the folly that is on the surface, and the thoughts that underlay this pastime of the village fair were very ugly ones indeed—thoughts of destruction, waste, and ruin, such as shock and horrify us when we see them for the hideous things they are, in the serious ways of life. We cannot afford to make fun out of even the small beginnings of such things.

Destruction and waste—what else does war mean but that? And women of all countries, who know so well the meaning of waste, either in human lives, or in food, houses, crops—these women claim their right to protest against such extravagance. I want to tell you some of the ways in which the organisations of women are striving to-day to uphold a standard of civilised life in the face of the barbarities and cruel destroyings of war.

First, we must think of our own Women's Co-operative Guild. Where does that begin? Why, it is looking after the welfare of the tiny, new-born babies and the babies' mothers. It says: "We must see to it that no little new baby shall die for want of a helping hand, or be left orphaned because its mother has died of misery and want." Does it not do one good to think of the men and women of the future, who will one day say, "I am alive and doing my work in the world because the Women's Guild saved me and my mother from death in that desperate time of war"? You will agree with me that *saving* a home is a much better—if less exciting—occupation than breaking it up!

On the very eve of the war, there met in London what must be the largest body of organised women in the world—the International Women's Suffrage Alliance, with its members in twenty-six countries. Women from France, Finland, Germany, Austria, Switzerland, Hungary, England, and South Africa were among the speakers. They met to utter a protest—alas! without avail. But what are they doing now? They are upholding the mutual friendship and respect of women in every land: "We are faced by the disruption, the animosity, the misunderstanding caused by war; but all the same, notwithstanding the cruel strain, we must firmly resolve to hold our International Alliance together. We must believe all through that good is stronger than evil, that justice and mercy are stronger than hatred and destruction, just as life is stronger than death. We women who have worked together for a great cause have hopes and ideals in common; these are indestructible links binding us together. We have to show that what unites us is stronger than what separates us."

In London, at the outbreak of the war, were hundreds of foreign women, who found themselves instantly in great trouble. Some of them were denounced as "foreign enemies," though there was no enmity in their hearts; many, almost all, were in dire straits from want of money; even if they were well off, they could not get remissions. And thousands of Americans came pouring from the Continent into London. Some of these were, of course, pleasure-seeking idlers; but the great majority were simple, hard-working people who had come to Europe to educate themselves and get an insight into foreign life. Such were numbers of teachers and social workers, forced to flee from Austria and Germany. The International Alliance opened its doors and its heart to them all, without distinction of race. It found them lodgings, lent them money, gave clothes, helped them to get home safely—and all in the name of international friendship. One is glad to think that it was Frau Gellrich, a German woman, who said: "No declaration of war would make women of different countries hate each other. Women are not on the earth to hate, but to love."

Now, apart from the International Suffrage Alliance, all the suffrage women in the different countries are throwing themselves into the work of building up, not pulling down. The French women, through the president of their union, are specially devoting themselves to carrying on the work laid down by those men who have gone to the front. They are running mills and shops, driving trams and 'buses, carrying on markets, and, above all, working in the fields and vineyards to keep France fed. Indeed, in France, women of all ages and all ranks are working most heroically, steadily, and persistently, in the great task of building up their country. And every land in Europe, whether at war or not, is so calling to its women to help.

The largest of our English suffrage organisations—the National Union—has put its organisers (all trained and experienced) and its 600 branches at the disposal of relief committees. One of the London organisations is concentrating itself upon a supply of pure milk for babies and sick people. The Young Women's Christian Association is taking steps to help and protect those girls who are in danger from the disorder and excitement which inevitably spring up in the neighbourhood of large military camps. The Housewives' League in America is fighting, with all the strength of its 750,000 members, on behalf of low prices in foodstuffs during war time, and opposes the unscrupulous work of the speculators, who make public need an opportunity for private plunder.

All these women, whether they call themselves co-operators or not, are fighting in the same great cause as ourselves—the cause of order and humanity, of homes and children, friendship and goodwill. They believe that Right is, in the long run, Might; that no one can ever make the world better by destroying life and breaking down international friendship; that good will some day triumph over evil.

WOMEN AND WAR.

WHEN THEY FAIL UNDER THE TREMENDOUS STRAIN.

MRS. CREIGHTON'S ELOQUENT ADDRESS.

The Palace Hall, Lichfield, was the venue of the largest gathering held in recent years in connection with the Lichfield branch of the National Union of Women Workers on Friday, when the members were honoured by a visit from Mrs. Creighton, President of the Union and widow of the late Dr. Creighton, Bishop of London, who was renowned as a brilliant preacher, a capable historian and a man of exemplary piety.

Mrs. Kempthorne presided and was supported by Mrs. Stokes (secretary of the branch), Mrs. Thompson (treasurer), Mrs. Morgan, Mrs. Phillips and Miss Holland, while the representative audience was composed of about one hundred and seventy members and friends, including a number from Walsall.

At the outset Mrs. STOKES read a letter from the Countess of Harrowby, President of the Lichfield branch, in which she apologised for her absence owing to making arrangements for the reception of Belgian refugees.

Mrs. KEMPTHORNE, on behalf of the local branch, extended to Mrs. Creighton a hearty welcome, and said they felt it an immense honour to be favoured by a visit from their president. She had great pleasure in asking Mrs. Creighton to give them an address on "The work of women in war time."

Not Equal to the Strain.

Mrs. CREIGHTON, who had a warm reception, said she supposed all of them were thinking at this time about the war, what it meant for them and our country. That afternoon she wished to narrow the subject somewhat and talk about what it meant for the women of our country. The more she had thought about what the war might mean for the women, the more she felt it was a peculiarly difficult time for women. She did not say it was a particularly difficult time for men, for to most men it was clearer what they had to do than it was for women. In London, on every side one could not get away from the inscriptions on the walls that the country needed the men. It was quite clear they knew that it needed men and perhaps everyone would also say it needed women, but she did not think it was clear to the women how it needed them.

She had candidly to confess that so far the women of this country had not proved themselves quite equal to the tremendous strain which had been put upon them. There was nothing more distressing, with regard to the effect of the war at home, than to read the accounts in the newspapers of the increase in drinking amongst women, owing to the war. It was one of the most tragic things in connection with the war—tragic when one thought of the results and tragic when one thought of the women themselves. For these women it was impossible for them to feel anything else but immense pity.

They were failing their country and they were failing their homes just when they were most needed and that was because the past had not fitted them for the strain. They were bewildered, excited, and agitated. The husband, who was the centre of their homes, their life and their thoughts, had gone to the front, and they had been left by themselves; many of them with more money in their hands than they had ever had before, and many of them did not know how to use that money.

The Refuge of the Public House.

They did not understand what was going on and in their excitement they flew to the one refuge, always open to the ignorant, bewildered and excited, the public house. Then on another side their womanhood seemed to have failed, because they heard on all sides of the way in which young girls and women, ignorant and silly, who were given over to evil and haunted the new camps where the men were being prepared to risk their lives for their country. Most of them haunted them for fun and silliness, but others that they might tempt the men, and, alas, sometimes to their ruin. But even those who were going for fun, silliness and excitement, instead of helping, encouraging and giving confidence to the young men, were failing them just in the hour when they needed it most. Did not that give them enough to think about?

There was no difficulty in realising the horrors of war, the breakdown, almost, of our Christianity. But the more they thought about it, the more they saw the effects, the more they realised what it meant. The thought was pressed upon them that war was the maddest way of settling difficulties that ever the folly of man could have thought of. That side of war was easy enough to think about and break their hearts over, but there were other sides.

War seemed to throw a flood of light upon our whole social system, upon all our best ideals, and all we were trying to do, and all we were caring for. That light was like a great searchlight which pierced our hearts and all the corners of civilisation, and all our social institutions and seemed to ask us what they were good for. It showed that all was not right before. We talked about the ideal of home life, but how could we get ideals in the slums of our great cities? We had been too patient in allowing those slums to go on.

The Desire to Help.

The searchlight now came in and said, "See what you have allowed us women to be." That great searchlight of war showed its own visible results which we all deplored, but how about it when it came into their own hearts? What was it teaching them about themselves? They had been excited and overwrought. What star of strength had they found within themselves to enable them to go on in confidence and possess their souls in peace at this time of anxiety? What gift of service had they been able to offer in the hour of their country's need? She was sure that the searchlight of war came home to each one of them. No feeling had been so strong in their hearts as the desire to help and the first desire was to help in some way our wounded soldiers. There was at first a rush to learn first-aid, to equip the hospitals, but it was found that the military authorities only required fully trained nurses, and not those who had no previous experience, so voluntary aid did not seem to have come to much fruition. Then they desired to make comforts and things for our soldiers and sailors, but again they were told that they were interfering with the course of trade by their working parties, so they became more and more bewildered as to how they could best help. There was not only the difficulty of knowing what to do, but many of them found out how unfit they were to do any real work when brought face to face with it: how untrained and unprepared they were and that really there was nothing they could say they could do really well. There the searchlight came in again for they were brought face to face with themselves, and when all the ordinary associations of their lives were shaking and disappearing their hearts were full of anxiety, for there was undue hope at one moment and undue depression at another.

They ought to realise that the first call upon them was to see that all the ordinary work they had cared for, that had been proved, tried and found to be required in the past, was maintained and continued. It was extraordinary that in the first excitement of the war, everyone wanted to do something different to what they had done before and yet they ought to know and feel that the ordinary life of the home and the country had got to be carried on and that it was their duty to see that it was done.

For instance, there was such work as foreign missions which were needed today even more than ever. Although driven into strife at home, by forces they could not control, they should not forget all those Christians and those who knew not Christ in the foreign fields. Therefore the first thing she would say was "Go on with what you are doing."

Those who were not yet working she would advise to find some way of offering themselves for work. It was a great opportunity now. Their Christian, social, and ameliorative work was needed just as much, or more than ever it was. Funds would be more difficult to get, perhaps, owing to the war, but the missionary funds must be secured.

Work in the Home.

What was especially required of women was to look after the homes and the children. The men had gone away to the front and the question was, "What sort of homes were they coming to when they came back?" It was the duty of the women to look after the homes and see that they were maintained in purity and cleanliness. People generally started with great hopes, but she was afraid that in dealing with the distress those hopes had not been quite realised. The funds were to be administered in democratic ways by local committees, formed in the boroughs and districts. It was quite true in some cases, people who knew something about the matter had been placed on these committees, but in many cities the one way of helping which had occurred to those good people had, in her opinion, been the wrong way and that was by giving out doles in some form or other. Their old friend, the grocer's ticket, seemed to have been raising his head and devastating the land.

In their administration of relief, she contended they ought to set their faces against the bad old system of the grocer's ticket and doles, and see that the homes were maintained in integrity and independence. Proceeding, Mrs. Creighton said it was to-day their duty to see first that all public works were expedited to provide employment for the men, that maternity homes be provided for the mothers, and care committees for the children.

They should also remember never to give way to vindictiveness, but keep passion out of their hearts. They had to remember what Germany stood for, in literature, music, and all it had done for the world. Surely part of the great tragedy of the war was that so great and gifted a nation should be so misled. That thought might help them to feel that they were fighting for what they believed to be a great cause—fighting, not only for all that was best in our civilisation, but all that was best in the German civilisation. If we were to be worthy of bringing about a peace which will free the world from a repetition of the awful scourge of war, we should not do it by cherishing vindictiveness in our hearts.

The Scourge of Drinking.

Then, what were they going to do with the question of drink? Were they doing all they could to get the public houses closed earlier? Personally she wished it were possible to get them closed for a couple of hours in the morning. What an awful thing it seemed that this scourge of drinking amongst women should be almost peculiar to our country. Did we not feel it now as we had never done before when we realised what it meant; when we had those two pictures in our minds—the woman drinking in the public house, and the man facing death in the trenches? One did not feel as if one could bear it. They had to try and make the women feel an infinite pity for them, and she thought they could help them, if by every means in their power, they helped them to understand something of what war meant. They did not, perhaps, realise enough how limited their imagination was. Let them help them to feel the call upon their patriotism; to keep home together while the men were away; to train the children and to spend in the best possible way the money entrusted to them, not in their own indulgence, but for the good of their homes. Could they not do more to provide counter attractions?

One could imagine how empty their homes seemed without the man, around whom their whole lives were centred. They would not meet their requirements by merely talking to them. They had to raise in them a new and high feeling of patriotism and provide for them some counter attractions. In London the County Council were opening evening classes of all sorts. They had to make them feel that it would be interesting to improve themselves; in some way or other to live and do what they could to raise their sense of patriotism, their sense of devotion to their country and their homes. On the other hand they should provide counter attractions and give them the feeling that to-day they had an opportunity when they might use their time for fitting themselves to be better wives and mothers. (Hear, hear.)

A War of Ideals.

Proceeding, Mrs. Creighton said she profoundly believed our cause was a great cause and a right cause, but in proportion as we believed that, it made us very humble, inasmuch as to us should be given an opportunity of playing a part in so great a cause, the result of which must affect the whole future history of the world.

thinking at this time about the war, what it meant for them and our country. That afternoon she wished to narrow the subject somewhat and talk about what it meant for the women of our country. The more she had thought about what the war might mean for the women, the more she felt it was a peculiarly difficult time for women. She did not say it was a particularly difficult time for men, for to most men it was clearer what they had to do than it was for women. In London, on every side one could not get away from the inscriptions on the walls that the country needed the men. It was quite clear they knew that it needed men and perhaps everyone would also say it needed women, but she did not think it was clear to the women how it needed them.

She had candidly to confess that so far the women of this country had not proved themselves quite equal to the tremendous strain which had been put upon them. There was nothing more distressing, with regard to the effect of the war at home, than to read the accounts in the newspapers of the increase in drinking amongst women, owing to the war. It was one of the most tragic things in connection with the war—tragic when one thought of the results and tragic when one thought of the women themselves. For these women it was impossible for them to feel anything else but immense pity.

They were failing their country and they were failing their homes just when they were most needed and that was because the past had not fitted them for the strain. They were bewildered, excited, and agitated. The husband, who was the centre of their homes, their life and their thoughts, had gone to the front, and they had been left by themselves; many of them with more money in their hands than they had ever had before, and many of them did not know how to use that money.

The Refuge of the Public House.

They did not understand what was going on and in their excitement they flew to the one refuge, always open to the ignorant, bewildered and excited, the public house. Then on another side their womanhood seemed to have failed, because they heard on all sides of the way in which young girls and women, ignorant and silly, who were given over to evil and haunted the new camps where the men were being prepared to risk their lives for their country. Most of them haunted them for fun and silliness, but others that gift of service had they been able to offer in the hour of their country's need? She was sure that the searchlight of war came home to each one of them. No feeling had been so strong in their hearts as the desire to help and the first desire was to help in some way our wounded soldiers. There was at first a rush to learn first-aid, to equip the hospitals, but it was found that the military authorities only required fully trained nurses, and not those who had no previous experience, so voluntary aid did not seem to have come to much fruition. Then they desired to make comforts and things for our soldiers and sailors, but again they were told that they were interfering with the course of trade by their working parties, so they became more and more bewildered as to how they could best help. There was not only the difficulty of knowing what to do, but many of them found out how unfit they were to do any real work when brought face to face with it; how untrained and unprepared they were and that really there was nothing they could say they could do really well. There the searchlight came in again for they were brought face to face with themselves, and when all the ordinary associations of their lives were shaking and disappearing their hearts were full of anxiety, for there was undue hope at one moment and undue depression at another.

They ought to realise that the first call upon them was to see that all the ordinary work they had cared for, that had been proved, tried and found to be required in the past, was maintained and continued. It was extraordinary that in the first excitement of the war, everyone wanted to do something different to what they had done before and yet they ought to know and feel that the ordinary life of the home and the country had got to be carried on and that it was their duty to see that it was done.

For instance, there was such work as foreign missions which were needed to-day even more than ever. Although driven into strife at home, by forces they could not control, they should not forget all those Christians and those who knew not Christ in the foreign fields. Therefore the first thing she would say was "Go on with what you are doing."

Those who were not yet working she would advise to find some way of offering themselves for work. It was a great opportunity now. Their Christian, social, and ameliorative work was needed just as much, or more than ever it was. Funds would be more difficult to get, per- and all it had done for the world. Surely part of the great tragedy of the war was that so great and gifted a nation should be so misled. That thought might help them to feel that they were fighting for what they believed to be a great cause—fighting, not only for all that was best in our civilisation, but all that was best in the German civilisation. If we were to be worthy of bringing about a peace which will free the world from a repetition of the awful scourge of war, we should not do it by cherishing vindictiveness in our hearts.

The Scourge of Drinking.

Then, what were they going to do with the question of drink? Were they doing all they could to get the public houses closed earlier? Personally she wished it were possible to get them closed for a couple of hours in the morning. What an awful thing it seemed that this scourge of drinking amongst women should be almost peculiar to our country. Did we not feel it now as we had never done before when we realised what it meant; when we had those two pictures in our minds—the woman drinking in the public house, and the man facing death in the trenches? One did not feel as if one could bear it. They had to try and make the women feel an infinite pity for them, and she thought they could help them, if by every means in their power, they helped them to understand something of what war meant. They did not, perhaps, realise enough how limited their imagination was. Let them help them to feel the call upon their patriotism; to keep home together while the men were away; to train the children and to spend in the best possible way the money entrusted to them, not in their own indulgence, but for the good of their homes. Could they not do more to provide counter attractions?

One could imagine how empty their homes seemed without the man, around whom their whole lives were centred. They would not meet their requirements by merely talking to them. They had to raise in them a new and high feeling of patriotism and provide for them some counter attractions. In London the County Council were opening evening classes of all sorts. They had to make them feel that it would be interesting to improve themselves; in some way or other to try and do what they could to raise their sense of patriotism, their sense of devotion to their country and their homes. On the other hand they should provide counter attractions and give them the feeling that to-day they had an opportunity when they might use their time for fitting themselves to be better wives and mothers. (Hear, hear.)

A War of Ideals.

Proceeding, Mrs. Creighton said she profoundly believed our cause was a great cause and a right cause, but in proportion as we believed that, it made us very humble, inasmuch as to us should be given an opportunity of playing a part in so great a contest, the result of which must affect the whole future history of the world. It was not a war in which we were trying to get anything for ourselves; it was a war of ideals more than anything else, and why we cared for victory was because we believed the ideals on which our national life depended, make for liberty in the highest sense, for the freedom of the small nations to develop on their own lines, and make it possible for every country to govern itself in the way it wished to be governed. Were we going to be strong enough to make that cause win? The men were fighting for it, and the women had got to help to keep the life of the country, in all its best and highest activities, going. (Applause.)

Mrs. MORGAN, in proposing a hearty vote of thanks to Mrs. Creighton, said there was no one more able or fitted to tell them of the work for women or women's work in England, than Mrs. Creighton, and they felt it a great honour to have their president there that day. (Hear, hear.)

Miss HOLLAND suitably seconded, and the proposition was carried with enthusiasm.

A similar compliment was paid to Mrs. Kempthorne for presiding, and to the Bishop for the loan of the Hall, on the proposition of Mrs. STOKES.

A collection at the door on behalf of the Queen's Unemployment Fund for Women realised £9 13s. 6d., to which has been added a donation of £3 by the Lichfield branch of the Union.

Dewsbury Reporter.
Oct. 24th. 1914.

RAVENSTHORPE WOMEN'S WORK FOR SOLDIERS, SAILORS, AND BELGIANS.

The following is a list of parcels and contents sent away last week by the Ravensthorpe ladies who are working for the soldiers, sailors and the Belgian refugees. These are in addition to parcels sent on previous dates:—To the County Association, York, for the wounded in hospital: 21 bed-jackets, 34 vests, 5 nightshirts, large parcel of old linen, and 2 pairs of stockings. To the Mayor of Dewsbury, for the Belgians who have come to this district: 16 blankets, 4 rugs, 17 children's petticoats, 2 pairs of slippers, 2 scarves, and 2 vests. To H.M. Queen Mary's Fund: 8 knitted helmets, 5 mufflers, 5 belts, 2 boxes of bachelors' buttons, and 20 pairs of socks. To Capt. Rigg, for Dewsbury Company, at Woking: 3 rugs, 41 sleeping caps, 50 shirts, and 50 pairs of socks. Up to the present £57 has been given and spent on the purchase of materials. In addition there has been received a handsome gift of cloth from Messrs. Marshall, Kaye and Marshall. This is suitable for costumes, girls' coats, boys' suits and overcoats, and men's suits. The committee ask for volunteers to help in the making-up of these materials for the use of the Belgians, who need them.

Daily Graphic,
October. 24th. 1914.

WAR NOTES AND QUERIES.

COMMENTS AND SUGGESTIONS IN BRIEF FROM OUR READERS.

Women Workers and the War.

A number of ladies have joined together with the object of establishing a kitchen and club during the war, to provide good and inexpensive meals and a comfortable club room for gentlewomen and business girls who have been placed in straightened circumstances by being thrown out of a position or put on half pay. These rooms would very much be preferred in the neighbourhood of Kensington or Earl's Court, and it would be most gratefully appreciated if some kind lady or gentleman would help the furtherance of this scheme by lending these rooms free or upon the payment of a small sum weekly. Donations of food or money for same would be very gratefully received.—Mrs. Broome-Giles, Marions, Elstree, Herts.

Daily News & Leader.

ECONOMY IN THE KITCHEN

Work and Objects of National Food Fund.

A national campaign to educate householders on the value of food and for the prevention of waste is one of the great objects of the National Food Fund, a war society which is distributing food to those in need.

At the present moment eight hundred to a thousand persons are being fed every day, quite three-fourths of these being Belgian refugees in different parts of London. Food is sent regularly also to kitchens and creches, maternity centres and other existing well-organised societies.

The supplies come in daily and weekly from anybody and everybody. Each morning a special member of the society goes off to the markets, and is there most freely given, for the fund, not the mere surplus of the market, but some of the best it can produce. At Covent Garden, at Billingsgate, at the Central Meat Market, etc., large quantities are always given by one dealer or the other and promises of more offered.

More help is asked for, as the society recognises that its work, large as it is already, is only just beginning. It wishes not only to continue this daily and weekly food distribution to other societies, but also to teach every housewife how to utilise food to the very best advantage and make waste impossible. Lectures and demonstrations on food and cookery are to be given, not only at the headquarters, 1a, Dover-street, Piccadilly, but throughout the whole country.

636.

WOMEN IN WAR TIME.

WHAT IS BEING DONE IN HULL.

By "SILVIA."

Three months ago it would not have seemed possible that our social life could alter so completely as has been the case since the great war began. On the Continent this change has been practically forced by circumstances upon people of every grade in society; in England it has to a great extent been purely voluntary, like so much else of effort in this country of ours. And it is all to the good when women of their own choice forsake the bridge table and the hunting field and devote their energies to the primitive feminine talents of caring for the homeless and destitute, nursing the sick and wounded, and making garments for the menfolk who are once more living under primitive and very trying conditions.

The sense of values for many of us has been considerably upset since the war began, and we have come to see that hard work, and plenty of it, for others less fortunate than ourselves is better worth while, and more productive of happiness and self-respect, than the social round which now seems so empty and barren when we look back upon it. Even the giddiest and most pleasure-loving girl has risen to the occasion and is doing what she can in the countless ways that have suddenly opened to her, proving herself the while a true daughter of old England, and certainly not the decadent degenerate that both she and her brother, the "Knut," have sometimes been stigmatised.

In Argyle-street.

In Hull this is true, as everywhere else. Until the last week or two quite an army of girls was employed at the Naval Hospital in Argyle-street, many of them coming in from the country very early in the morning for their duties. The Kingston Nursing Division, St John Voluntary Aid Detachment, supplied most of the workers here, and what it has entailed only those who came in at the beginning really know. By Herculean effort chaos was reduced to perfect order, and the hospital, as it stands to-day, is equipped to the last detail for the reception of wounded sailors. But this is only one of the directions in which women and girls have found the means of satisfying their desire to "do something to help." Working parties have sprung up like mushrooms, and everybody is busy making shirts or knitting literally from morning to night.

For some this is a splendid thing to do, but I venture to think there is too much of it, or rather that it is often put into the wrong hands. If those who are in a position to do so would but place their orders for sewing and knitting with dressmakers or drapers, who have the utmost difficulty now in keeping all their "hands" employed, much distress might be averted.

It is inevitable that far less money than usual should be spent on dress. Is it, then, quite fair to those who have hitherto depended on our dress for their livelihood that we should do any work ourselves that could be passed on to them? The Emergency Workroom organised by Mrs Oswald Sanderson and Miss Muriel Wilson at 74, Prospect-street, is a most commendable effort to tide over a period of difficulty and unemployment among women and girls, and deserving of all support. Let us beware lest we ourselves help to increase this very evil by our own handiwork.

The Relief Centres.

The voluntary work done by women at the relief centres has been beyond all praise. Only the most skilled can, of course, deal satisfactorily with the investigation that is so necessary if we would avoid helping the undeserving at the expense of the deserving, but there is a vast amount of clerical work that can be done by quite young girls, thus setting free the more experienced for work of greater difficulty.

In connection with the Soldiers' and Sailors' Families Association an army of helpers (many have already offered) is needed for visiting the wives of men called up or enlisted. Each volunteer is asked to undertake a few families, visiting them periodically and gaining their friendship. In this way hard cases become known and can be helped. Once a week the visitors meet at the Royal Institution to report progress, but the list increases, and more visitors are needed. Will those who feel that we cannot show too much friendship and care for the wives and families of those who have left their homes to fight for us apply to Mrs Clark, 29, Coltman-street, for information?

At the Girls' Club.

The work at Girls' Clubs becomes more than ever necessary if we are to cope with the additional dangers to girls who are free to rove about the streets at night. And here girls of the better classes can be of the greatest possible use. We hear on all sides of the scarcity of workers among girls in Hull, and yet nothing is more fitting than that their fellows in more comfortable circumstances, girls whose education and training have fitted them to give something of their talents to their less fortunate sisters, should come forward in such numbers at this time that our Girls' Clubs should all be open every night. Any girl who would like to help in this very important work should apply to Miss E. Hurtley, Woodside, Sutton-on-Hull, hon. secretary of the local Union of Girls' Clubs and Classes.

It was fortunate for Mrs Haworth-Booth and her band of indefatigable helpers that Friday was, on the whole, a fine day. They were selling great sheaves of beautiful autumn flowers at all the vantage points in Hull in aid of the Belgian Relief Fund, and, to judge from the brisk business done, a goodly sum must have been realised. It is certainly sorely needed.

A concert this winter, for the pure enjoyment it affords, and not in aid of any special object, is a rarity. Such a one was the first of Mr Janssen's at the Royal Institution last Tuesday. It came as a great relief to the mind from the all-absorbing topic, but there were khaki-clad officers, nurses in uniform, and the perpetual twinkle of knitting needles to prevent our forgetting, even for an hour, that we are going through the greatest war that history has ever known.

The Daily Mail,

656/10

GERMAN WOMEN AND THE WAR.

The writer of the following article has just returned from a month's tour of Germany, during which he had ample opportunities for moving freely among the German people and hearing their comments on the war. The calling up of every available man in Germany to the colours has imposed on the German woman the burden of carrying out many duties which in normal times are performed by the men.

In "A Tale of Two Cities" Dickens heads one chapter "Knitting" and another "Still Knitting." These chapter heads very aptly describe the manner in which German women to-day spend their spare time. The whole of feminine Germany is at present occupied in making socks and mittens and comforters for the men at the front. Not only love and patriotism inspire the industry of Germany's women in this respect: this habit of knitting has now become so prevalent that it is something of a disgrace for a woman to sit idle in tramway-car or train when with her knitting needle she might be helping the heroes of the Fatherland on to victory, for the maxim that health-preserving comforts increase the efficiency of the soldier is well recognised in Germany. In Berlin you see these *tricoteuses*, modern style, on every hand. Even in the stalls at the Opera you will find them knitting, still knitting.

But the German Government, which has such an extremely clear idea of utilising every scrap of human force at its disposal, has mapped out a much more important programme for the weaker sex in Germany than the mere manufacture of "woollies" for the troops. Wherever men can be conveniently spared women are now being employed. It is true that taxicab-drivers, waiters, and shopwalkers are still represented exclusively by men, but women in increasing numbers are being utilised as tramway-car conductors, booking-office clerks, accountants and cashiers, and as level-crossing guards, while I understand that serious efforts have been made to get the women in the towns, many thousands of whom are out of work, to migrate to the country to help with the autumn work in the fields.

WOMEN FOR THE HARVEST.

The powers that be are credited with the intention of getting in next year's harvest with the help of the women. The military now believe that the war will last through the spring, possibly through the summer, and therefore women and the harvest are becoming more and more closely associated in their minds.

In the minds of the Army there is not much sympathy with the unemployed women. In the Army concentrates the well-known German sentiment that woman's place is the home and that she must have no will save that of her lord and master, and further that her excursions into other fields of activity save such strictly limited areas as governessing or nursing are to be sternly discouraged. I ventured to remark to a German officer with whom I became very friendly during my recent stay in Germany that the numbers of women out of work would constitute a serious problem for the authorities during the coming winter. My friend turned on me in a fury. "You have no business to think anything about our Government being embarrassed by any such problem," he said. "We have provided ample work for our unemployed women in the fields. If any woman in the cities complains that she has no work let her go to the country. To remain idle is her own fault." I knew it would be useless to point out to my irate friend that a girl typist does not necessarily take kindly to the plough, nor does the young lady hitherto employed in the millinery line desire to go back to first principles and start tending cattle. As a matter of fact, there is not the least likelihood of the thousands of German girls thrown out of work by the paralysis of Germany's trade and industry being willing to confront the soul-destroying dreariness of the German countryside in winter. From what I know of the modern German *Grossstadtkind* she would much prefer to starve in Berlin or Hamburg or Cologne than go and work on a farm in Pomerania or East Prussia in a most rigorous climate amid a lot of surly boors.

FEATURE OF RAILWAY LIFE.

Outside the great centres, however, the German women are helping in the farm work. A long railway journey affords an excellent opportunity for witnessing feminine activity. In East Prussia I have seen the women digging potatoes a few yards from where the men were digging trenches. After the retreat of the Russians from Germany, when the refugees returned to their homes, I saw the women taking up the heavy farm work which in normal times is done by their men-folk. At nearly every level crossing a woman stands at attention by the gates as the train goes by, her flag in her hand. At the stations she sells the tickets and helps to look after the luggage. In the big cities she is acting as tramway-car conductor, but in the smaller centres the authorities have dispensed with the conductor altogether in the tramway-cars and leave the public to drop their fares into a box installed on the rear platform. In Berlin women are acting as ticket inspectors and guards on the electric underground.

The woman is a great feature of railway station life in Germany at present. At every large station on the lines used for troop traffic there are long tables with refreshments and cigarettes and flowers and picture postcards for the men going to the front or for the wounded and sick returning. The Red Cross women in charge of these open-air buffets do everything in their power for the men. Even at lonely little frontier stations in East Prussia I have seen poor women, thinly clad, rush out in the cold rain with hot coffee, soup, and bread for the soldiers.

It is probably superfluous to say that Germany's women are heart and soul with their men in the field. In the women the newspapers have their easiest dupes with their perpetual tale of victories and their childish inventions about "French's contemptible little army." It is almost pathetic to hear them talk. A charming German woman said to me, at a moment when, as I learnt after leaving Germany, von Kluck's army must have been in full retreat over the Marne: "I know Paris well and like the French! The poor French! Why don't they give up? It would be such a pity if Paris were to be destroyed. I am so fond of Paris and have passed such pleasant days there!" About England they are very different. Their hatred of England and the English is white-hot. They declare that they will not be satisfied with the "humiliation" of England alone: England must be "completely obliterated," vowed to eternal destruction.

The Glasgow News, October 30th. 1914.

OUR FIGHTING LINE.

WHAT WOMEN ARE DOING.

The Queen's Scheme.

As was anticipated, the whole question of women's unemployment and relief, as well as the opening of workrooms for special cases, is now being thoroughly taken up in connection with the Queen Mary Fund, and as a branch of the National Relief Fund. A mistake was made when it was decided that the Queen's scheme should not apply to Scotland, but that has been quickly and satisfactorily remedied. An office has been taken at 104 West George Street, where Miss Pickering and a staff of voluntary workers are already attending to the development of the scheme according to local requirements. Whatever else may be said of Glasgow during the war, its women have given an extraordinary example, not only of devotion, but of quiet, business-like capacity, and the voluntary work at 104 West George Street may be thoroughly relied upon. It is being done in connection with the National Union of Women Workers, represents 923 societies, and knows no distinction of politics or creed.

The Glasgow Union of Women Workers has formed a Consultative Committee with representatives from all the large women's societies, social, philanthropic, political, and industrial, and great care has been taken to include all interests connected with women's employment. The committee will form a centre for collecting and giving information; will work with relief organisations, and make use of all existing agencies, registries, Labour Exchange, Employment Bureaus, &c., will co-operate with the Glasgow Relief Fund Sub-Committee for unemployment, will form sub-committees of experts to deal with special occupations, and will keep a register of all work rooms and clubs dealing with unemployment caused by the war. It should be understood that the Central Office for Women does not give work to any one; it investigates and classifies, and deals generally with the whole question. The chairwoman of the committee is Miss Maria Blackie.

Yorkshire Herald, Nov. 3rd 1914.

WOMEN'S RELIEF CORPS.

(To the EDITOR of the YORKSHIRE HERALD.)

Sir, — As numberless women throughout England are anxious to serve their country, and feel that work can be more carefully undertaken and more wisely carried through by an organised body of helpers than by one here and there, the Women's Relief Corps has been formed. Its aim is to undertake civil and semi-military work, and thus enable more men to go to the front, and it will form small but connected centres throughout Great Britain and Ireland. It will consist of women of all classes, creeds, and opinions—the one opinion all will hold in common being that everybody should be of use to her country in this its hour of need.

The corps will consist of two sections, which, however, can be united at the will of the helpers: 1, the civil; 2, the semi-military.

Helpers joining for civil work will be expected when opportunity offers to undertake duties at present performed by men, and thus release the men for enlistment. It is the duty of the Government to support tht dependents of those at the front, therefore the salaries of the men must be used to support the women who take over their jobs, but an undertaking must be given, preferably on paper, that these jobs shall be surrendered to the men on their return from the war.

Helpers joining for semi-military work will be expected to undergo training in drill, route-marching, signalling, and other scout duties; also in the use of arms, so that when trained they may release men from such work as the guarding of railways and public buildings, do home patrol and picket work, etc., but these duties will only be undertaken as ordered by the Government or by local authorities.

Semi-military helpers will wear a simple inexpensive uniform, but not civil helpers (unless they wish), and the age limit shall be 18—50. The watchword of the corps is "United we stand." Those who wish to join the corps will write enclosing stamped envelope to headquarters, 52a, Russell road, Kensington, London, W.—I am, sir, yours, etc.,

C. A. DAWSON SCOTT

Hull Daily Mail, October 30th. 1914.

WOMEN AND WAR-TIME.

LEAGUE OF HONOUR AT HULL.

BISHOP AT G.F.S. MEETING.

The League of Honour of Women, as far as it concerns this city, was launched at the annual gathering of the Hull Girls' Friendly Society at All Saints' Parish Hall last evening, when the Bishop of Hull presided. The League will work through similar women's organisations, although it will come under the wing chiefly at Hull of the local Purity League. There is evidently need for the League of Honour amongst young women and girls, judging by the outspoken remarks of the Bishop. Mrs Cather, who is the wife of Lieutenant-Commander Cather, of H.M.S. Goliath, attended as a delegate from the headquarters of the League, and explained its objects. It has been founded for the time of the war, with the desire to band together the women and girls of the Empire with the object of upholding the standard of women's duty and honour. It is also hoped to raise a strong force of public opinion and support among women and girls with which to combat some of the social and moral dangers emphasised by the war. Another object is to deepen among women and girls of all classes the sense of their responsibility for the honour of the nation, and to make clear the fact that the manhood of our country is either raised or lowered by the influence of its womanhood. Mrs Cather pointed out that the time of war must necessarily be a time of far-reaching dislocation in the lives of women, owing to the altered conditions of work and home life.

AN EMOTIONAL CRISIS.

For some there was anxiety, uncertainty, and often personal sorrow and loss. For others there was the trial of a sudden and great excitement, coupled, in many cases, with loss of occupation, and with the loosening of many safeguards and restraints. For all alike there was the strain of the most intense emotional crisis through which our Empire had ever passed. These conditions constituted in themselves dangers which were felt through every grade of society. They were shown in their crudest form in the increased tendency to drink amongst women in poor districts, and in the flighty conduct, amounting at times to disorderliness and impropriety, of many girls in neighbourhoods where there were troops. Members of the League agree to take two pledges, and are given a certificate with the motto, "Strength and Honour."

The Bishop explained that there had been a very real need for such a league in Hull. The bringing in of large numbers of men in uniform had produced excitement and romance, and had created a rather unhealthy emotional feeling, and young women and girls, who in the ordinary course of life would never permit themselves to be silly, often at times like this lost their heads and became flighty, and became a trouble and a nuisance, and a source of temptation to those very men whom the nation wanted to be at their very best.

GIRLS AND SOLDIERS.

It was sad, he thought, to have a commanding officer in this district writing asking if they could not do something to help them for the sake of the soldiers in camp. They were beset every night with a large number of girls from Hull, many of them quite young girls, who were perpetually hanging around the camp calling to the soldiers, and trying to get the attention of the men. Do what they would that their men should have self respect and be well disciplined, this sort of thing was the greatest hindrance they could possibly have.

The gathering was primarily that of the Hull Girls' Friendly Society, and during the evening certificates for continuous membership and faithfull service were presented as follows:—

Membership (21 years): J. A. Sutherland, Holy Trinity parish; Ellen Broughton, St. Paul's.

Fourteen years membership: Caroline Jackson, St. Stephen's parish; Annie Barratt, St. Jude's; Charlotte Budd, St. Jude's; Ethel Catlah, St. Jude's; Dora Riley, St. Jude's; Mabel Wright, St. Jude's; Edith Moses, St. Jude's; Lucy Colverson, Holy Trinity; Amy Wildbore, Holy Trinity; Ellen Gerrard, Br. Sec.

Membership cards (seven years and upwards): Edit Broughton, 9 years, St. Paul's parish; Effie B. Davis, 7 years, St. Paul's; Mary Brown, 7 years, St. Paul's; Ethel Elvin, 7 years, St. Paul's.

Faithful Service Cards: Ethel Sanderson, 5 years, St. Mary's Parish; Fanny Dearlove, 7 years, St. Mary's; Rosetta Colley, 5 years, St. Mary's; Dorothy Safford, 4½ years, Newington; Amy Frodin, 3 years, All Saints'; Ossie Bailey, 3 years, All Saints'; Jessie Bristow, 3 years, All Saints'; Dora Downsworth, 3 years, St. Matthew's; Amy Bateson, 3 years, St. Matthew's.

For signature: Emily Clifford, 5 years, St. James's Parish; May Ashburn, 7 years, St. James's.

Miss Lovett, the hon. secretary of the G.F.S., who works so energetically for the society, stated that some of their girls were shut up in Berlin, and others returned home in distress in London. She asked the gathering to extend help to those latter by a collection.

The attendance was a large one, and represented the membership in about a dozen parishes in the city. The Bishop was supported by the Rev. A. E. and Mrs Southwood, Dr. and Mrs Jackson, Mr. and Mrs Lovett, members of the National Union of Women Workers, Miss Allen, Miss

West Herts Advertiser, October 31st. 1914.

BERKHAMSTED.

WOMEN IN WARTIME.—Mrs. Creighton, widow of Dr. Mandel Creighton, Bishop of London, gave a very suggestive address on "Women in Wartime," at a crowded meeting arranged by the Berkhamsted branch of the National Union of Women Workers, in the Sessions Hall, on Monday afternoon. Mrs. Berlein, president of the branch, presided. Mrs. Creighton began by saying that all women would agree that this was a time of special difficulty for them. The early Victorian "Men must work and women must weep," was not true of to-day. Women now wanted to work, and to bear their share of the great national burden. Whether they wanted to or not they were really forced to bear their share, perhaps more than their share, of national anxiety. There was the question, how could they help? There was a great national restlessness, and they were all naturally anxious to be of use. That was just at the time when the world they were accustomed to was tumbling to pieces all round them. The call came clear and loud to their young men; and they knew how they could serve their country. It was not so clear to women. They did not know how, and yet they wanted to serve their country in some way. There was a further question: What could they do? What were they fit for? It was a testing time for all. What were the true values of the things they had cared for before the war? In what a different perspective did they look at them now? One of the first answers to the question, "How can we help?" was the very plain and commonsense one that they should go on doing their usual duties so that everything should not be disturbed and upset as a result of the war. (Applause.) Their first care should be, in her opinion, the home, and good work could also be done in schools for mothers and expectant mothers, so that the children in the homes could really have a fair chance in life. Then there was the work which centred round the Care Committees, in seeing that children were well clothed and looked after. There was now a great opportunity for those already at work to make use of the desire on the part of others to help.

WOMEN DELEGATES TO THE HAGUE CONFERENCE URGED BY MRS. PETHICK LAWRENCE

British Women's Suffrage Advocate on Leaving England Says She Goes in Hope That Great Work Will Be Done in Hastening Revolution on War Question

(Special correspondence of the Monitor)

LONDON—Mrs. Pethick Lawrence, the well-known advocate of woman's suffrage, who arrived recently in New York, accorded an interview just prior to her departure from London, to a representative of The Christian Science Monitor, to whom she explained the object of her visit to the United States.

"The whole thing," Mrs. Lawrence said, "has been arranged rather in a hurry. As you know, I am very busy here in London, organising the work of the Women's Emergency League, but when I received this call from the United States asking me if there was not something which could be said profitably on the position of women in this great European struggle, I felt that this was so strongly the case that I ought to respond.

"My first meeting, as you know, will be in the Carnegie hall, New York, on Oct. 30, and at that meeting I hope to explain what, to the world at large at any rate, is a new viewpoint. I suppose that in regard to no other question has the world at large so entirely refused to change its views as on the question of the position of women in regard to war.

Attitude Is Unchanged

"The attitude today is just the same as it was 1000 years ago. The woman is regarded as taking only a very secondary position. It is for her to sacrifice her loved ones, it is true, and to remain at home and anxiously await their return. The simple fact is so largely lost sight of that not only have women to endure such sacrifices, but they have also to face economic ruin and the tremendously pressing problem of how they are to provide even the necessaries for their children.

"Over and above all this, especially in the present campaign, they have to run the risk of, and in many cases endure, unspeakable hardships. We have the authority of Mr. Lloyd George himself for saying that for every man who falls in the trenches at the front, three noncombatants are sacrificed.

"Well," Mrs. Lawrence continued, "it is in this regard that we women want to put forward a new viewpoint and to insist on its being adequately recognized. There are at present, as all the world knows, two very distinct viewpoints from which war may be regarded.

"We have the Bernhardi theory, which glorifies war for its own sake, and lifts it up to a position where it is regarded as almost a paramount national virtue, and then on the other hand, we have the Norman Angell point of view which condems war on every count as being economically disastrous and as never, whether to victor or vanquished, resulting in any profit.

Women's Standpoint

"It is just here that the women's standpoint emerges and must emerge. Roughly speaking, man's province in life is to organise the material resources of the world. Roughly speaking again the woman's province is the care of the life of the nation and all that affects it. I use the qualification 'roughly' advisedly, because it would be absurd, of course, to say that either men or women had a monopoly of these cares, but in the

the invitation from the United States was because I recognize that the States is the one country in the world where these new views would most readily gain a hearing. Here in England we are bound hand and foot with the traditions of the past, and especially at this moment when everybody is engaged—and rightly engaged—in meeting the great need of the moment, there would seem to be no place for a discussion of new views, or indeed for dealing with anything which could only be effective after the war is over.

Youth Amongst Nations

"Moreover, the United States stands, as it were, for youth amongst nations. Its face is turned in a very special sense towards the future, and last, but by no means least, it is the one great nation of the world which has, at any rate in part, admitted women to the full rights of citizenship. We feel, of course, that this war is going to change many things. We feel that it must hasten the time in all nations when women shall be admitted to the vote and that it will necessarily involve the spread of the democratic principle.

"After all, you may have arbitration courts, and you may have treaties, and you may have many other like inventions for the preservation of peace, but the only power which can ultimately keep the peace is the power of democracy. We women desire to see democracy not only grow in power, but spread itself over the whole mass of the human race by admitting women to a full participation in government.

"I would not have you think, however," Mrs. Lawrence continued, "that I am going out to the United States with only vague ideas or that I expect to find only vague ideas when I get there. We have many concrete proposals which we desire to discuss and as an instance, we would strongly advocate the inclusion of women in the delegates to the Hague conference.

Right to Choose

"The people of the United States have the right to choose their own representatives for this conference, and we recognize that if the people of the United States chose a woman like Miss Jane Addams, for instance, who is respected and honored everywhere, as one of their delegates at The Hague, it would represent a great advance, the effect of which the world as a whole would feel.

"Above all things," Mrs. Lawrence said in conclusion, "we want in every possible way to bring home to men and women everywhere that war can be abolished, not that it can only be mitigated or staved off or rendered difficult, but that it can absolutely be swept away, just as the religious war has been, and the burning of witches and many other outrages on our common intelligence which the civilized world as a whole now recognises to be such.

"I need hardly say," she added, "that I am going out full of hope and full of confidence that it is possible for us at this moment to do a great work and one which may play some part in hastening on a complete revolution in thought on the question of war."

656

Emmeline Pethick Lawrence

(Specially signed for The Christian Science Monitor)

fused to change its views as on the question of the position of women in regard to war.

Attitude Is Unchanged

"The attitude today is just the same as it was 1000 years ago. The woman is regarded as taking only a very secondary position. It is for her to sacrifice her loved ones, it is true, and to remain at home and anxiously await their return. The simple fact is so largely lost sight of that not only have women to endure such sacrifices, but they have also to face economic ruin and the tremendously pressing problem of how they are to provide even the necessaries for their children.

"Over and above all this, especially in the present campaign, they have to run the risk of, and in many cases endure, unspeakable hardships. We have the authority of Mr. Lloyd George himself for saying that for every man who falls in the trenches at the front, three non-combatants are sacrificed.

"Well," Mrs. Lawrence continued, "it is in this regard that we women want to put forward a new viewpoint and to insist on its being adequately recognized. There are at present, as all the world knows, two very distinct viewpoints from which war may be regarded.

"We have the Bernhardi theory, which glorifies war for its own sake, and lifts it up to a position where it is regarded as almost a paramount national virtue, and then on the other hand, we have the Norman Angell point of view which condems war on every count as being economically disastrous and as never, whether to victor or vanquished, resulting in any profit.

Women's Standpoint

"It is just here that the women's standpoint emerges and must emerge. Roughly speaking, man's province in life is to organize the material resources of the world. Roughly speaking again the woman's province is the care of the life of the nation and all that affects it. I use the qualification 'roughly' advisedly, because it would be absurd, of course, to say that either men or women had a monopoly of these cares, but in the main it is true.

"Men are capable of sacrificing everything for commerce and for the purpose of exploiting new fields for trade development. Women, on the other hand, risk everything for their children and their chief concern must always be, in spite of any modifications, the safeguarding, protecting and insuring progressive development for the rising generation.

"Now, in regard to war, and especially in regard to this present war, the viewpoint of the women is this: The flower of the manhood, not only of one country, but of practically the whole of Europe, is now in the field. They are fighting one another and, as we know, the casualty lists are long and growing longer. To put it bluntly, women would recognize it as much less harmful that an equal number of the so-called unfit at home should be deliberately sacrificed, rather than this wholesale slaughter of the flower of the race should be permitted.

Development Importance

"We women attach, therefore, supreme importance to the preservation and development of life. The question next arises, how best can we make these views understood and what prospect have we of success in doing so? Well, in this regard," Mrs. Lawrence continued, "we recognize another great fact, and that is that we have between the women of all nations, one great connecting link which binds them together in a great bond of sympathy and that is, motherhood

"This gives us, as it were, a common ground on which we can all meet, and it is therefore one of the purposes of my visit to New York to confer with the leaders over there with a view to sending out a manifesto to the women of all nations, putting forward as strongly as possible, our views on this question, and doing our utmost to secure it a hearing.

"The reason why I specially welcomed

[illegible] when women shall be admitted to the vote and that it will necessarily involve the spread of the democratic principle.

"After all, you may have arbitration courts, and you may have treaties, and you may have many other like inventions for the preservation of peace, but the only power which can ultimately keep the peace is the power of democracy. We women desire to see democracy not only grow in power, but spread itself over the whole mass of the human race by admitting women to a full participation in government.

"I would not have you think, however," Mrs. Lawrence continued, "that I am going out to the United States with only vague ideas or that I expect to find only vague ideas when I get there. We have many concrete proposals which we desire to discuss and as an instance, we would strongly advocate the inclusion of women in the delegates to the Hague conference.

Right to Choose

"The people of the United States have the right to choose their own representatives for this conference, and we recognize that if the people of the United States chose a woman like Miss Jane Addams, for instance, who is respected and honored everywhere, as one of their delegates at The Hague, it would represent a great advance, the effect of which the world as a whole would feel.

"Above all things," Mrs. Lawrence said in conclusion, "we want in every possible way to bring home to men and women everywhere that war can be abolished, not that it can only be mitigated or staved off or rendered difficult, but that it can absolutely be swept away, just as the religious war has been, and the burning of witches and many other outrages on our common intelligence which the civilized world as a whole now recognizes to be such.

"I need hardly say," she added, "that I am going out full of hope and full of confidence that it is possible for us at this moment to do a great work and one which may play some part in hastening on a complete revolution in thought on the question of war."

Southport Visiter, Nov: 3rd. 1914.

WOMEN'S SHARE IN THE WAR.

HOW THEY CAN HELP.

ADDRESS TO WOMEN WORKERS.

There was a large attendance at a meeting held yesterday afternoon at the Birkdale Liberal Club, under the auspices of the Birkdale Centre of the Ladies' Auxiliary of the Southport National Aid Committee. Mrs. Nichols presided, and Miss Grundy gave an address on "Women's Share in the War."

At the outset Miss Kate Rimmer read a long list of gifts which had been received at the Birkdale Centre. She added that all the goods had been purchased. Already they had sent from that Centre 1142 garments; from Church-street, during the fortnight October 15—29, they sent out 2072 garments, this bringing their total since the war began to 9500 garments, as well as 1500 bandages. She expressed the sympathy of the Centre to Mrs. Webster in the bereavement she recently sustained.

Mrs. Nichols, in introducing the speaker, said that in Portland-street during the month they had been open they had made 633 rabbits and dogs, they had dressed 225 dolls, and made 94 hussifs for the soldiers.

Miss Grundy said that they could spend a little less on themselves and a little more upon others. They had the homely part to do. She was frightened when the war broke out that there would be a hysterical rush to do things, and then people would get tired. She was glad to hear Miss Rimmer's list, because it showed they were not getting tired. She wanted their enthusiasm to last as long as it was needed, and she was afraid they would have to make it last even after the war was over, because it would be a long time before the country came again to its normal conditions, and those who had the means would still feel that it was their duty to help those who were impoverished by the war. Where they could pay for something being done, it was better than a dole or a gift. It was splendid to see the ladies doing the work themselves, but where ladies could afford to pay somebody to do the work they were doing two things. If they could sometimes put their feelings on one side, and feel that they could go on spending their incomes and deny themselves some luxury so that they might keep those whom they generally helped to keep by giving wages, she thought that was one of the things they should do. They ought not to underpay people because there were a number of them willing to do the work. They knew that as a rule women's work was underpaid. They did not want the result of this war to make it more difficult for the wage-earning women to get along. Month by month there would be more for them to do. They would have to try and make money stretch out a little, but let them determine that they themselves would be the ones who would have the "short end," and those they employed should not suffer any more than could be helped. In conclusion, she said it seemed a terrible thing that in our churches we were praying for the success of our arms, and in their churches the Germans were praying just as fervently for the success of their arms. It seemed so terrible that we should all feel we were right, and yet this Christianity which had been amongst us all this time had not been able to make it possible that these disputes should have been settled without all this loss of life. She did not mean that it might have been, but it seemed as though there had been something wrong somewhere.

Mrs. Mackay moved a vote of thanks to Mrs. Nichols and Miss Grundy.

Miss Housman seconded.

Mrs. H. Brodrick supported, and referred to the excellent work done by the Birkdale Centre.

The resolution was carried, and Mrs. Nichols and Miss Grundy having responded, the meeting terminated.

The Schoolmistress, Nov: 5th. 1914.

Women's Work.

Honours and Awards.

The King has been graciously pleased to confer the decoration of the Royal Red Cross upon Mlle. Eugénie Antoine, of Vailly-sur-Aisne, in recognition of her courageous and devoted services to the British wounded in hospital at Vailly-sur-Aisne whilst the village was under shell fire.

At the Dairy Show held by the British Dairy Farmers' Association in the Royal Agricultural Hall, Islington, the cup offered by the Lord Mayor and Corporation of London for cheese-making was won by Mrs. A M. E. Bowman, Barrow-on-Soar, Leicester. The championship for butter making was awarded to Miss Gwen B. Tuckett, Penquite, Par Station. The award consisted of a cup presented by the Lord Mayor and £5. The Elkington Cup for butter was awarded to Mrs. J. Martin, Stythians, Cornwall.

At the University of Manchester Graduate Bursaries in Education have been awarded to Hilda Carr, B.A., Jessie S. Davis, B.A., Dorothy A. Stewart, B.Sc., and to three holders of the Cambridge University Mathematical Tripos, Margaret E. Bowman, Gladys D. Mason, and Annie Ellis. An advanced studentship in education has also been awarded to Elizabeth M. Bradley.

The girls' championship for the over 100 yards competition in connection with the London Schools Swimming Association was won by E. Falkus, of Sutton.

The Queen's Fund.

One of the first objects aimed at by the committee that is finding employment for women with the help of the Queen's Fund has been to equalise employment in workshops and factories. When the war broke out wholesale tailors, faced with the problem of a greatly reduced demand for smart costumes, at once reduced their output, and an enormous number of women tailors were thrown out of work. At the same time the firms engaged in making army clothing were working night and day without being able to cope with the demand. Here the committee stepped in, and on the suggestion of commercial advisers, the work has been so arranged that now 50,000 uniforms and great coats per week are being turned out by firms hitherto not employed in this class of work, but which now instead of stopping can keep all hands busy.

An order for 50,000 flannel belts as a gift to the French army was given out to some thirty firms, and large orders for body belts were placed with other firms. The toy-making scheme goes on apace, and one of the large Manchester firms has placed a workroom at the disposal of the committee where girls are being trained in the art of doll-dressing.

In the West of England, where fruit is plentiful, employment has been found for women in a trade which hitherto centred in Germany. This is fruit pulping, bottling fresh unsweetened fruit, drying vegetables and fruits to meet the demands of the army and the ordinary market, and to use valuable fruit and vegetables which might otherwise be wasted. This new industry should soon be established on a self-supporting basis and also lead to the putting of new land under cultivation for the production of fruit and vegetables.

Then the problem of the probable shortage of yarn owing to the enormous demand for wool for knitting purposes was dealt with. In this case the committee approached the carpet yarn factories where work was coming to a standstill owing to the lessened demand. The manufacturers were asked to adapt their machinery to the production of yarn. This they willingly did, and so our supply of knitting wool is kept going and employment given both to those who produce the yarn and those who turn it into useful garments.

Numbers of dressmakers up and down the country whose work was reduced to a minimum have been kept going by receiving orders for the making of warm garments for men at the front.

Two workrooms in London are now employing ninety-six women in making cradles out of banana crates, and hundreds of other women are being trained at centres in several of our large towns in mending, cutting down, and converting old clothes into useful garments.

The Glasgow News, Nov: 13th. 1914.

OUR FIGHTING LINE.

WHAT WOMEN ARE DOING.

The second general meeting of the session of the Women's Educational Union will be held in the rooms of the Royal Philosophical Society, 207 Bath Street, to-morrow (Saturday) forenoon. Miss A. Stuart Paterson, L.L.A., will preside, and an address will be given by Mr Henry Alexander, M.A., Lecturer on Phonetics at Glasgow Provincial Training College, whose subject will be "Reformed Spelling." Owing to the war, arrangements made by the W.E.U. for lectures by Madame Montessori and others cannot be carried out, and the only definite fixtures so far are an address on "The Work of the Women's Employment Bureau," to be given by Miss Janet E. Brown in December; and an address by Miss Lumsden, LL.D., to be given in January. All propaganda having professional advancement for its object is being abandoned, and the members as individuals are doing the work of the various relief societies as recommended at the first meeting of the session. In addition, special efforts are being made to assist the mobile hospital units, which are to be called the "Scottish Women's Hospitals for Foreign Service," by having a W.E.U. bed in one of these.

Cripple Children's War Effort.

The annual sale of work done by the cripples attending the industrial centres of the Cripple Children's League is being held to-day from two o'clock, when the opening ceremony will be performed by the Hon. Mrs MacGilchrist, until ten. The sale will also be continued to-morrow. A tearoom has been arranged, and there is a cake and candy stall. A number of the cripples can be seen at the work, which includes wood-carving, beaten brass, pewter, and embroideries. There is much dainty work for babies, and a liberal provision of work that will be suitable for Belgian refugees or needy children. A leading feature this year has been the preparing of knitted comforts for our soldiers and sailors. Christmas gifts for the troops, Christmas gifts for the home, and Christmas gifts for the poor and for the refugees are offered by the cripple children, and by purchasing you will show that in our pity for those crippled at the war we are not forgetting the patient cripples whoe lot is cast at home. The cake and candy stall and tea-room are being provided by the girls of Devonbank School, Pollokshields.

The Scottish Lassie.

On Thursday evening a concert is to be given by kind permission of the officers of the 5th Battalion H.L.I. in aid of the Scottish Lassie Motor Ambulance Fund. The ambulance is to be given by working girls, who wish to make a war gift to the country, and the scheme is deserving of every support. There will be a very good programme, assisted by such artists as Miss Agnes Bartholomew, Miss Jenny Sillars, Mr John Linden, &c. Two Belgian refugees desiring to do something for Bonnie Scotland, are to appear, and the pianist will be Signorina Felicia Arcari, A.T.C.L., who has promoted the concert, and worked untiringly for its success.

Mrs Barton for Australia.

Many regrets will follow the departure of Mrs Barton for Australia, and she will be accompanied by hosts of good wishes. Her record of work in this country is a long and admirable one. For many years she rendered services on the School Board and Parish Council, and she proved an enthusiastic worker in connection with an earlier Distress Committee. One of her latest efforts was on behalf of Domestic Servants, and she took the warmest interest in the founding and management of the Home of Rest for Servants, which was opened at Helenslea, Tollcross, where she had resided prior to her visiting Australia in the cause dearest to her heart—that of temperance. Mrs Barton is now to settle permanently in Australia, but prior to her approaching marriage, she will do some temperance lecturing. Before sailing from Liverpool she was entertained in Glasgow by a few friends, who presented her with a gold bangle.

Under the auspices of the Glasgow Health Culture Society, a cookery demonstration was given on the 11th in the hall of the Royal Institute, West Campbell Street, by Mrs Twaddle. The subject was one specially suited to present circumstances—"Attractive ways of preparing cheap and nourishing food.

Cookery Demonstrations.

No matter what is going on in the outside world woman's base of operations is still the home. At Messrs. Shaw, Walker & Co.'s, Union Street, is being repeated at the present time one of the cookery demonstrations which have on several occasions been given here with the greatest success. The present demonstrations are being given by eight experts on the very latest economic appliances. This morning Mons. Fox demonstrated the making of choice and fancy cakes, and how to pipe and ornament them, and in the afternoon a lesson on domestic steam cookery of pudding, meats, vegetables, &c., will be available.

Walsall Advertiser Nov: 7th. 1914. 656/14 Bolton Evening News Nov: 16th. 1914. 656.

WOMEN AND WAR.

Although women are exempt from bearing arms and are spared the horrors of the battlefield they have, nevertheless, to make great sacrifices in time of war. They are deprived of their breadwinners, some of whom are fated never to return, while their homes are often destroyed and they are brought to destitution. Moreover, war has been the means of placing women in a position of social and political inequality with men, and in modern times whenever they have asserted their rights of citizenship they have been twitted with their sex disabilities.

Not infrequently those who are so prone to sneer at women because they are exempt from going out to fight their country's battles have themselves shirked national service, albeit they have been fit and able, had they so desired, to serve their country in her hour of need.

THE SUBJECTION OF WOMEN.

From time immemorial war has been a most potent factor in keeping women in a state of subjection. This is shown by the state of things that prevail in primitive societies where fighting is the rule, and where women are practically slaves. On the other hand, among peaceful communities women are more highly respected, and have every facility afforded them for education and culture.

When nations are constantly at war there is consequently a great decrease in the male population, and the evil of polygamy creeps in and hinders the progress of women. With the decline of war, however, we can trace the monogamic ideal, which is the firmest basis on which to establish the equality of the sexes. Instead of the girls having perforce to lead a life of domestic toil and drudgery, as so many do now, even under improved conditions, they have at least the opportunity afforded them of cultivating their mental as well as their physical powers, and thereby of raising themselves in the social scale.

Women have become emancipated in proportion as war has declined, and men have shared in the work of the fields, so that women can tend more exclusively to lighter indoor work. There are still traces left, however, of the old order of things which may be commonly seen on the Continent in those countries where there is compulsory military service. Even in times of peace the women are to be seen labouring on the farms and waving signalling flags on the railways, work which in England is always done by men.

THE SWORD AND THE NEEDLE.

Napoleon's contempt for women possibly reflects the attitude of Continental countries. At any rate, the position of women in France, which had never ranked as high as in England, declined still further under the Empire. Napoleon declared that the husband should have absolute dominion over his wife's actions. Two lines in Tennyson's "Princess" voice a similar sentiment:

"Man for the sword and for the needle she,"

averred the King, who added a little later,

"Man to command and woman to obey."

Here we have the culmination of the military spirit which is the symbol of physical strength or brute force. Woman not being fitted for a warrior, has, however, special functions to perform which are indispensable in the home. She plays a quiet and unostentatious rôle in the battle of life. She is not privileged to take up arms in defence of her country or to die gloriously on the battlefield. There are no memorials to her valour or to her humble life's work. But she is doomed to suffer at home in silence, and to remain in suspense whilst her nearest male relations go forth to hazard their lives in defence of the homeland. It may be that the absent warrior for whom she has been waiting and watching will be covered with glory, or it may be that he will fall on the battlefield. It all depends on the fortunes of war. Life consists for the most part of hope, and a woman in the seclusion of her home finds much solace in it, although hope is often succeeded by despair.

THE RED CROSS.

Apart from her domestic duties, a woman may be useful even in battle, if she has no encumbrances. There are splendid opportunities for women to show their worth as nurses under the Red Cross. If she be ambitious she can make a name for herself and raise herself from obscurity to the pinnacle of fame. However, it is not the aim of women to win renown in this direction, although Florence Nightingale won distinction in her sphere. It is not every woman, however, who is capable of becoming a nurse, even though she has the opportunity The nursing profession requires that its devotees must possess good stamina and a stout heart that will not quail in the midst of scenes of suffering.

INURED TO PAIN.

Women as a whole have been inured to pain, and through generations of suffering they have steeled their hearts against those sights which would make the sterner sex shudder. Many women have great powers of endurance, and are callous to physical pain. In former times such women could look on unmoved at gory gladiatorial combats, and in our time they are to be found at boxing displays, and in Spain at bullfights.

During the Boer War it was stated that if a Boer returned to his farm before the war was over his wife became indignant, and sent him back to fight again. Probably the Boer wife was not really anxious to get rid of her husband, nor is it likely that she was of a bellicose disposition, but she was anxious that her husband should discharge his duty unswervingly, and not return to the hearth until the war was ended, let the result be what it may.

Whatever sympathies women have for war originated largely in her respect for authority and power. She has been subjected, and her education has been restricted in the past, and the narrow views held by many women on the question of militarism are, therefore, to be excused. Woman's life has been dominated by physical force, and is the primary cause of her subjection to man, and we cannot wonder if respect for mere power often b[illegible]ds her to the fact that the assertions of l[illegible]rce can never right wrong, and is but an immediate and emotional remedy.

THE DAYS OF CHIVALRY.

Chivalry cast a glamour over the relations of women and war, so that she saw in it much that glorified herself. When she beheld the spectacle of man going forth to fight for her sake her feelings of vanity were aroused. But we are told that the days of chivalry are passed. This may or may not be so. However, the fact remains that if a man is not so eager in the present age to fight for the honour of his lady, there is no lack of men ready to fight for hearth and home when the occasion demands it.

There are various ways in which women can be useful in war-time and turn their patriotism to practical account. The various agencies which have sprung up since the outbreak of war to stave off the blight of distress and destitution which war brings in its train have provided a large field for the energies of women who, whilst they are precluded by reason of their sex from taking part in the fighting, are desirous of doing something for the welfare of the nation.

Notwithstanding that women have no voice in the making of war, and are as powerless as dumb animals when questions involving war are at issue, they have to suffer its consequences equally with the men. Hence they are just as much concerned and quite as much affected when men choose to fight as men themselves, without being the actual combatants.

WOMEN'S WORK IN WAR TIME.

Sir,—Your editorial article of Friday severely castigates those of your correspondents who have complained of the dilatory and inadequate treatment of women by the war authorities. Will you please allow me, as one of the writers, space for a mild reply? It is because we have had more than "a slight appreciation of the magnitude and complexity of the problem" that these complaints did not find public voice or pen during the first two months of the war. But when the initial blunder seems likely to go on it is time to protest.

At the beginning of the war, it was pointed out by competent observers that the method of attempting to pay the separation allowances from camps and military stations, instead of from or through local enlistment offices, would certainly lead to delay and confusion. But the War Office would not listen, and even now they are apparently unwilling to drop the unw[illegible] system. Hasn't the War Office enough [illegible] to manage the war and collect new men wi[illegible] trying to do what it is confessedly and obviou[illegible] unfitted as well as unprepared to do? The pa[illegible]ments to wives and dependents is not really a military matter at all. It is, or should be, the work of a special home department

But the criticism of the authorities, we amateurs have ventured upon, is trifling compared with your own implicit but damaging indictment. Passing over your cryptic allusion to a certain "act of gross ineptitude for which the War Office has no blame at all" (whose blame, then, was it?) one comes upon ur amazing assertion that these delayed allo ances should have been made by the Local Relief Committee—"not as relief but as advances to be repaid to the Committee when the allowance arrives" from the proper authority. Do you really mean that the policy adopted in Bolton, as in most large towns, of making grants of grocer's orders to soldiers's wives has been only as temporary loans to be repaid? And do you seriously suggest that those who have been in receipt of these food orders should be asked to pay back their value when their war money comes along? Why, there are scores, if not hundreds, of cases where the money they do get even now has to be supplemented by food grants for at least a few weeks after the war pay begins. And the prospect of recovery or repayment—well, it is surely grotesque!

Even more astonishing is your criticism "that women have not risen to the height of the great opportunity which was theirs." You rightly say that it was at once obvious that the distinctive work of women would be to look after all that concerned the homes of England. But you apparently forget or ignore the fact that what women have tried to do has met with but little official encouragement. Even Queen Mary's Committee has been mildly patronised, and the Women's Emergency Corps, promptly organised by Suffragists, has been repeatedly snubbed, while what women are on local relief committees have almost had to beg their way there. Even so, the War Relief throughout the country has been and is being very largely administered by women—"a fact which nobody would imagine from"—your leading article.

You say further that "an ounce of suggestion would be worth a pound of criticism." Yet your own suggestions are quite outweighed by your criticisms, for on one matter of urgent vital importance, i.e., providing employment, you say that "a Women's Council could probably solve the problem," which doesn't get us much further. The women themselves know that. But why haven't they been asked? And you don't suggest what authority or means they would have for carrying their solution into effect. One is particularly glad to note, however, your protest against the order advising police surveillance of soldiers' wives, with threats of censure and stoppage of their wages. (Fancy such a thing being proposed for men—with votes!) That it was adopted and sent out by the Home Office with its record for such things is not very wonderful, but one will deeply regret if any attempt is made in Bolton to put the order into practical effect. (Was it this, by the way, you refer to as "an act of gross ineptitude"?)

One other word. It is said that Queen Victoria remarked during the Crimean war: "How I wish we could have a Florence Nightingale at the War Office." Yet the nation is still muddling along with male management in all its chief places, and complaining that women don't come forward promptly to help them through times of crisis. One thing is certain. Though women are not to blame for the present European war, they are paying their full share both in the suffering and in the helping. Perhaps one of the lessons of the whole affair will be the discovery by the nation's governors that if the full value of women's help is wanted in times of war it must not be refused and despised in times of peace.—Yours, etc.,

J. DAUNTSHIRE

The Cambridge Chronicle, November 7th 1914.

WOMEN'S WORK IN WAR TIME.

"Prepare for Peace."

INTERESTING DETAILS OF THE TOY-MAKING INDUSTRY.

A well attended meeting was held at the Guildhall, Cambridge, on Tuesday evening under the auspices of the Cambridge Women's Suffrage Society, when interesting addresses were give on the subject of "Women's Work in War Time." Mrs. Bethune-Baker presided, and explained that the meeting had been called by the Suffrage Society, but it was not a meeting to talk about suffrage in any kind of way. It was a meeting at which some of them hoped to learn some of the better ways to help at this time of stress and trouble. They had been fighting for a long time for opportunities of service; well, now circumstances had brought all kinds of opportunities of service. Some of them were obvious and easy, very varied, and some of them very humble, but they all snatched at them. She recollected how last summer in the tents their Society and others put up for the comforts of the soldiers, some of their most distinguished workers and speakers undertook the most humble of tasks. This sort of work was very easy, but there were far more difficult ways in which they had got to learn to help the situation which had now arisen. Woman's special lot always must be to cherish, and where possible to preserve life, and at this moment this was what they were all particularly concerned in doing. Far away the most appealing and heroic possible way was what their nurses and the doctors were doing—that splendid work they were doing right away from almost the front to the great base hospitals like the one they had in their midst. (Applause.) This was possibly the most appealing form at the present moment, but other work which also needed doing was, and it was very pathetic in its needs, the helping of poor mothers and young children, and, if possible, to safeguard young girls and boys at times like this. She would like to say one word about the general aspect of this war; they knew that what they were really fighting against was brute force and the dominating spirit. They were fighting on behalf of the rights of even the smallest peoples to an independent mind and free spirit, and the right to develop on their own lines. Now this was exactly the thing they of that Society always were fighting for. They felt this war was a righteous war. One of its great consolations was that it brought home to everybody the importance of the individual mind and the free spirit. She thought one other matter of consolation was the feeling of oneness which they all had at this time. They forgot party, they forgot opinions, they forgot class, and they forgot sex. They were all heart and soul in one great cause, and what she hoped and believed was that when this war was over more people would feel than had felt in the past that although their duties as a citizen were various, there was one standard of right and justice for them all. (Applause.)

Miss C. E. Marshall, hon. secretary of the Employment Schemes Sub-Committee of the Central Committee for Women's Employment, first took a general view of women's share in national work at the present moment, and dealt with it in its connection with the women's movements. She thought they could all notice a very great difference in the attitude of the general public, anti-suffrage as well as suffrage, towards what they considered to be woman's sphere in the national crisis at this moment. She thought this was no doubt the outcome of the steady progress of the women's movement during the past years. Miss Marshall proceeded to deal at length with the work of the Central Committee for Women's Employment, and referred to the various schemes undertaken by the Committee. She then spoke of women's work in preparing for peace. It seemed to her that in this respect a very special duty fell upon women as women, and particularly to those who had worked in the women's movement. All the work they were doing was, after all, making up for harm that had been done; it was mending and patching. This was, of course, essentially women's work, but it was also women's work to provide against the need for mending ad patching. It seemed to her that if they used their imagination there were ways in which women could help, not only nationally, but internationally, to provide against repetition of this horror which had come upon the whole civilised world at this moment. It was their share now to build up public opinion that would make peace-making easy when the time for peace came. To her it seemed that this was a great call to-day to the women's movement, not only in this country, but in every land where it existed. (Applause.)

Mrs. McCubin, founder of the toy-making industry in England, followed with an interesting address on the toy-making industry which has been started in London by the Women's Emergency Corps. Originally they started a class for 12 girls; at present they had at their headquarters 74 girls; they had also five branch rooms in London where 100 girls were employed. Next Monday they had placed at their disposal an old chapel which had been secularised, and which was originally built for the Hugenots. It had now been lent to them by the Duke of Portland for the benefit of the toy industry. She hoped to have 130 girls working there next Monday. (Applause.) They were at present getting orders for toys as fast as they could turn them out, and they had already sent out export orders to Cape Colony and Natal. (Applause.) One of the most interesting things connected with the workrooms was the discovery that there was a great deal of undeveloped talent in their country, and it was most wonderful to watch the daily improvement in the quality of the work. There was a big field for toy-making in England, and it seemed to her essentially a trade which should be carried out by girls. It would be an extraordinary thing if, when matters were normal again, they could not make toy-making pay as it never had paid in Germany. In addition to five branches in London, they also had twelve branches in the country; the teachers in these branches were people first trained in their workrooms. They were doing excellent work. Mrs. McCubin said she felt most strongly that if they succeeded in establishing toy-making as an industry for women and girls, they should, when the war was over, be given just a little encouragement. She hoped they would be given a little protection against the cheap German toys, crates of which were now lying in Holland and at Nuremburg ready to be dumped down into this country. She thought something of this kind might be done, at any rate until the industry in this country was thoroughly established. Such an action would be a decided advantage, and she hoped someone would bring this to the notice of the proper authorities a little later on. (Applause.)

The meeting closed with the usual votes of thanks.

Sunderland Echo, Nov 19th 1914.

"SOLDIERS' FAMILIES' WELCOME."

TO THE EDITOR.

Sir,—I shall be grateful if you will allow me to appeal through your columns for help in the organisation of a new kind of "welcome" for our soldiers.

The Mayor and Mayoress of Gateshead, Alderman and Mrs Wardill, have begun their year of office generously by placing the house No. 21, High West Street, Gateshead, at the disposal of the Gateshead Women Workers' Committee (of which the Mayoress is president) for the purpose of opening a "Soldiers' Families' Welcome," a house where the wives and children coming in from the country to visit their soldier husbands and fathers may find rest, recreation and cheap food. It is proposed to open the "Welcome" each week-day from 2.30 to 9, to invite the women and children to stay as long as they like during those hours, and to invite the men to meet them there, so that they may talk in comfort. The committee feel that the place will be a boon to soldiers' wives, especially those from the country districts where trams and 'buses are few and far between, particularly when the weather is cold.

Already some furniture has been promised, including a large number of chairs, a couple of tables, a suite of sitting-room furniture, and some crockery. More is wanted—curtains for five windows, floor-coverings (linoleum preferred) for five rooms, hall, staircase and landing, small tables, more crockery (especially large cups and saucers), knives, forks and spoons, table linen, pictures, a couple of wash-hand stands, enamel ewers and wash-basins, towels, etc., and it is in the provision of this furniture that we ask for the help of your readers. We feel sure that we shall not ask in vain. Articles of furniture, etc., Mr Wardill has kindly arranged to receive at his place of business, 4, High West Street, and gifts of money will be thankfully received by me at the address below.—Yours, etc.,

ELENOR SHEARD,
Hon. Sec and Treasurer, Gateshead Women Workers' Committee.
464, High West Street, Gateshead,

WOMEN ARE CHEAP - - By George Lansbury

AT last the authorities have spoken, and we now know at what price the Government value the lives of soldiers and sailors.

The new scale of pensions and allowances are a slight improvement on the old. This was bound to be, for the old were so disgracefully mean that it was impossible to do worse. In some quarters we are told to accept the new proposals in a right spirit and be grateful for what is proposed to be done. By very artfully dragging in the National Insurance Act the figures are made to appear much better than they really are.

Leaving out of account, as we should do, all allowances from other quarters, the published figures show first of all that those who have settled the scheme have very little knowledge of social conditions; and secondly, in how flagrant a manner the whole scheme works to the detriment of women.

Children by the tens of thousands will be left fatherless, and some will be left motherless. For the former it is proposed that a mother and one child shall receive 12s. 6d. a week, with two children 15s., with three 17s. 6d., and with four 20s. a week. For motherless children 5s. a week for each child where there are three will be paid, but above that number a deduction of 1s. will be made. This means that a mother is expected to bring up children cheaper than a sister or a stranger, and, as if to add insult to injury, it is gravely stated that certain committees and officials connected with the Education Authority will investigate and report as to how the money is being spent. A much more sensible arrangement would be for the authorities to provide some kind of education for the mother with, say, two children, instructing her how to spend the money in order to secure such a standard of living as Mr. Seebohm Rowntree tells us is necessary.

Poor Law Guardians who board out children in the country pay 5s. a week, and in addition pay extra sums each quarter for clothes and doctoring, and always pay for the start in life, but no Board would dream of boarding one child with a woman whose only other income was 7s. 6d. a week. Even at the rate named above, it is not at all unusual for the foster-parents to try and get rid of the children when they reach the age of ten or eleven, because then they eat too much.

In a Poor Law school a child costs to bring up anythi to 10s. a week. At this moment the Poplar Board of Gua is paying several other Metropolitan Boards 10s. a week f maintenance of children whose ages range from three to t years. No orphanage or other semi-public institution dealing children could possibly maintain children and give them a in life on the sum laid down by the Government. The fact matter is the mother will be expected to go to work and ma the deficiency. Where there is only one child, this may practicable arrangement if the woman knows a trade; if no will probably sink into one or other of the sweated industrie assist in lowering the general standard of wages.

Where there is a family of children the mother will have enough to do to care for them and bring them up properly woman should be expected to bear children and earn her at the same time; the economic freedom of women does not the enslavement of women by making them mere machine work. Therefore the Government, in fixing this scale, shou compelled to fix it at such a rate as will enable us to look housekeeping and the care of children as a profession for we ought to pay the very highest price.

The case of a woman without children is a deplorable She will receive 7s. 6d. a week; a single man will receive 14s. a week. Again, it is a question of work; no sort of provision is made for the woman who, for a variety of reasons, may not be able to work.

There are many other points in the scheme which need discussion and amendment, and it is the business of organised women, no matter to what class they may belong, to at once set to work, and by energetic action get the whole of these scales revised. People talk of the economic freedom of women and St payment to mothers for babies. A paltry 5s. a week standa to be lowered for a quantity, is being set up. It is for all wom who believe in economic freedom and child-bearing to see to that this miserable scale has no chance of being brought existence. Incidentally, the whole of these arrangements more demonstrate that women without votes are at all t treated as of less value than men.

Christian Commonwealth, November 25th 1914.

Women's Kingdom.

"Unmarried Wives."

A remarkable discussion on the status of the "unmarried" wives of soldiers was raised at the Southwark Diocesan Conference last Saturday. It was pointed out by Canon Deedes that the separation allowances granted to the wives of soldiers were paid to women who were not in some cases legally married. He thought this lack of discrimination in the new War Office order placed "marriage and concubinage" practically on a level in the eyes of the administrators of the public funds. He insisted that a discrimination ought to be made. Archdeacon Escreet, however, while yielding to none in his desire to maintain the sanctity of the marriage vow, said that if a man had lived faithfully with a woman for years, but had not legalised his position—though he wished the man had—he saw no reason why the State should not respect the man's position. He deprecated talk of looseness or impurity in the case of men and women who lived loyally together. The Bishop of Southwark said that he had placed a scheme before the Soldiers and Sailors' Association by which a real differentiation would be made between married and unmarried wives. Some representation had also been made to the Government, and the conference passed a resolution expressing regret that the State should sanction the administration of the soldiers and sailors' funds without safeguarding the distinction between married wives and unmarried dependants.

A Delicate Problem.

This is an exceedingly delicate problem to handle, but the first and most obvious thing to say is that whatever the "distinction" the Church is anxious to make between the women, it certainly ought not to mean that the unmarried woman is penalised as against her married sister. There is no need to talk of the State subsidising irregular unions of this kind. All that the State has done is to recognise the fact that for a variety of reasons many soldiers have not married the women with whom they live. Archdeacon Escreet seems to us to take the humane and reasonable view of the matter. He told an interviewer that "a marriage consists in the resolve of a man and woman in full piety to live together. That is good theology. No registrar and no priest makes a marriage. It is for the sake of giving solidarity to the marriage that the State registers and the Church offers solemnisation of marriage." Whether these irregular unions would lead to the disintegration of society—the great argument—is another question. Novelists, dramatists, and sociologists have a great deal to say about the ideal and economic aspects of free unions; and the Church has legitimately insisted that there is a sacramental and moral value attaching to the marriage ceremony. No one in his senses wishes to encourage people to play fast and loose with each other in this most intimate and vital of all human relations. But, on the other hand, the unmarried wife has a sufficiently heavy burden to carry without authority adding to it an economic penalty.

Women and Employment.

As a nation we cannot escape the charge that we are much too sentimental. One evidence of the fact is that (at the time of writing) the fund started by Princess Mary to provide Christmas gifts for the soldiers at the front is actually higher by a couple of thousand pounds than the fund started by Queen Mary to provide employment for women. The Princess's fund was started a considerable time after the Women's Employment Fund: it stood on Monday at £93,000; the Queen's fund stood on the same day at £91,000. It is rather serious to reflect that the nation takes the question of women's employment so lightly as the latter figure indicates. And the problem of the out-of-work woman is becoming urgent. In spite of the efforts of the Women's Central Committee, which acts in close co-operation with the local committees, there is still a tremendous amount of unemployment among women. The "New Statesman" says that in London 20,000 were turned off at the outbreak of war and only some 3,000 of these seem to be provided for by the "women's training centres" started by the Women's Central Committee. "Throughout the whole country we cannot learn that as many as 20,000 out of the probable total of a quarter of a million unemployed women wage-earners have any sort of 'training' offered to them or other maintenance provided. The Cabinet Committee, in fact, refuses to take the unemployment among women wage-earners seriously." Neither, one may add, does the nation as a whole; and it is really time that both the Government and the nation wakened up to the realities.

The German Peril

THE WOMEN'S PORTION.

MRS. PANKHURST AT EXETER

There was a crowded audience at the Exeter Palladium last night, when Mrs. Pankhurst, the veteran leader of the militant Suffragettes, spoke on "The German Peril." But, instead of advocating the beliefs of the party, with which she has been so vitally associated, Mrs. Pankhurst urged upon her hearers, with the eloquence of which she is capable, the nation's danger and the needs of the crisis. She received a tremendous ovation upon her appearance upon the platform, and was the recipient of a handsome bouquet. The chair was taken by Mrs. Dacre Fox. The band of the 3rd Devons, under Bandmaster Cox, was in attendance, and, among other music, played the national airs of the Allies, while Miss Gertrude Blomfield sang the famous marching song, "It's a long way to Tipperary."

At the outset the Chairman referred to irreparable loss the nation had sustained the death of Field-Marshal Lord Roberts, said they wished to say, as a mark of ect to that great soldier, that his life and work, now finished, should be an incentive the young men of the nation to go and their duty as he had done throughout his (Applause.) The Women's Social and tical Union, she continued, was holding etings all over the country with a view to rousing it to the German menace. They had been told over and over again that women had no place in war and no place in politics, and, if that were so, international politics had nothing to do with them. But they had never accepted that situation, and what they had been saying all along had come to pass. Just as much as the men were concerned in what happened to the country, so were they. It was their country also, and the destinies of the men and women in it were so bound up together that everything that touched that nation, its honour and its credit, whatever became of it, whatever might befall it, was as important to the women as to the men. (Applause.) And what Mrs. Pankhurst was urging the men of the nation to do she had done herself. She had been willing to give her life for a great cause, and she called upon the men of the nation to give their lives for a great cause. (Applause.)

Mrs. Pankhurst, who was most enthusiastically received, said she would leave to the superior people the discussion of what should have or should not have been done before the war broke out. After the war was over, then would be the time to make inquiry into the rightness or wrongness of secret diplomacy. But what they should decide was whether their side of war was righteous. Her doubts were solved when the first German soldier set foot on Belgium territory. (Applause.) She was in France when war broke out, and in France the French people did not want war. Had not that gallant little Suffragette nation Belgium done what her big enemy never thought she would have had courage to do? Had she not filled the gap—at what horrible and terrible cost?—we would, probably, now be realising what invasion was in a practical sense. We could never pay our debt of gratitude to Belgium. Mrs. Pankhurst referred to the aspect of civil life in France, and said that there, practically, the whole of the agricultural work and the ordinary business of France was in the hands of women. The fact of invasion was one they should look full in the face. She thought it was on the cards, and there might be an invasion. Certainly it was very much in the hands of British men. If they were to have one, the sooner they were prepared to train themselves to stave it off the better the way to prevent it from happening. The English, she remarked, had a way of thinking we should be right when the day came—that we should rise to the occasion when it came. She admired our capacity for rising to occasions, but she would rather they were ready beforehand. (Applause.) And she wondered what certain types of men would do. What would the Tolstoian peace-lover do to such men who acted as the Germans had acted in Belgium? If the invading Army came here, and they saw wives and daughters, old women and children treated like those women and men in Belgium and in the North of France had been treated, to any man who held his household dear it would be an appalling thing. She had often been told that women should not have a vote because they had not to fight. And now the men were in the dark. The women were the jury and the judges, and were watching to see how they were going to fight for them against the perils of life, and all its dangers. If they had decided that women must not fight, if for generations since civilisation began they had decided that, physically, women must not be developed, must lead domestic lives, which made them weaker, they should remember how terrible it was when a war like that came for women to wait quietly, and how they were longing to see men rise to the occasion, so that they might be proud of them, admire them. Why did men hold back? Large numbers were holding back because they did not wish to have to leave their dependants relying upon charity. A good many men were afraid of what would happen to their business. That was a wrong view. They might, before long, have no business at all to attend to. The German Emperor would take over the business, and they might be merely permitted to do some inferior work in their old businesses. Yet, she insisted, it was quite clear that a great deal of their business might be managed by the women of their families, and they should begin training and teaching them a little. She would like to see recruiting offices opened for women as well as men—recruiting for women who were willing to fill the situations left vacant by men who had been patriotic enough to leave their posts to enter the Army. In the public service, in many Municipal offices, they had many men doing work that women could do very well. Yet still the Government kept on its dark spectacles, and could not see that women existed at all. She believed that out of that war there was going to come a better understanding of what women should do and could do, and that there was a valuable reserve force in the women of the nation. The men should realise at once that the more that were willing to fight the less would have to fight. Some men had said it would be all right because Russia would win in the conflict. She did not want it to be said that Russia would win the victory. If Russia was allowed to do it, it would be a sign of decadency on our part. If we could not preserve our national existence ourselves, if we could not fight for peace, then we were unworthy of the forefathers who won it for us. We did not deserve to keep it. We had better decay. So she said to those men who were hesitating—and she had a right to say it, because even in the City of Exeter she had looked death in the face—there was nothing in life worth having at the price of submission to wrong, and nothing better giving their lives for than freedom, and to keep freedom intact and hand on to those who came after what their forefathers sacrificed for. They should account themselves rich that they lived for a time when there was something worth living for and something worth dying for, and then men and women, terrified by war, would join hands, and make the country better, and nobler, and stronger than it was before, and hand on to their children that great tradition, who in their turn would take up the burden of duty and maintain it. (Applause.)

At the conclusion a collection was taken in aid of the Belgian Relief Fund.

Hampshire Independent, November 21st 1914.

WAR AND THE WOMEN'S PART.

BISHOP OF WINCHESTER'S SPLENDID TRIBUTE.

CONFERENCE AND MEETING AT SOUTHAMPTON.

The Winchester Diocesan Union for Preventive and Rescue Work held a series of gatherings at Southampton yesterday. In the morning there was a conference of workers at the Victoria Rooms, at which the Bishop of Guildford presided, and at which the "Mental Deficiency Act and the Rescue Worker," and "The Supply and Training of Workers," were discussed.

Early in the afternoon there was a service of intercession at All Saints' Church, at which the Rev. Canon Hough, vicar of Lewisham, gave an address, and later in the day a public meeting was held at the Victoria Rooms, at which the Bishop of Winchester presided over a very large attendance. The Bishop was accompanied by the Hon. Mrs. Talbot. Among those on the platform were the Bishop of Guildford, Bishop of Southampton, the Archdeacon of Surrey, Miss K. Townend, Revs. Neville Lovett, F. G. J. Jellicoe, E. L. Franklin, R. E. Payne, Mered J. Rush, and W. S. Swayne, vicar of St. Peter's, Cranleigh-gardens, Mr. G. H. Pember, J.P., and others.

The Bishop expressed his great satisfaction at such a crowded gathering, and, in regard to the subject of the meeting, said it seemed that a time of war was a time in which they ought to give fresh and special attention to that matter. That was a platitude he knew, because at least, as regarded the subject of moral and spiritual interest, it was true that the war gave to them a new meaning, requiring fresh thought and attention. It was true also of simpler and more practical things. The war created new circumstances and called out special forms of temptation, and gave a fresh call and created fresh opportunities for rescue and preventive work. He rejoiced that they had the opportunity of looking at the matter in a new light. He had always felt—little as he had been able to do in the cause—that there was none which was more closely congenial to the hearts of Christian workers because to the heart of Christ. He had always felt that the strength or weakness of the interest of Christian people in this work was a sure index of the rise or fall of the real Christian vitality of the Church. Speaking in especial regard to the

DUTIES AND OPPORTUNITIES OF WOMEN,

his lordship said his first word must be one of profound respect, reverence, and sympathy for the attitude of English women at this time. People talked always of "our gallant men," but they could not talk too much of our gallant women—the women that give; the women that suffered; the women who were agonised with anxiety, and the women who lost. He did not in his own experience know of a case of any women—mother or wife—who had suggested that husband or son should take the course which was away from duty rather than in the way of it. There was another respect in which women were making perhaps the greatest contribution to the country's cause. He believed the women were doing, as they always did, the largest part of the praying. (Applause.) That came partly from the sad circumstance of being left behind and alone and having more opportunity, and partly because of a certain gift which God had given them of devotion. He had been struck, his lordship went on, as everyone must be, by the way in which women of every class, and especially the educated and leisured class, had thrown themselves into all forms of work and energy to supply the needs of the war. It was perfectly amazing what a quantity of work was being done. Then there had been the enormous task of ministering to a murdered nation, the Belgian refugees. All around the air was vibrating with the sounds of work being done. But there were other things which the war had brought out which they grieved to have to face. His friends told him with one voice that on the whole there was an immense increase in intemperance among women, at any rate in some parts of the community and in some places. The new strain had found a weak point. He would not dwell upon the circumstances; the possession of a little more money than usual, and the strain, but they could not help thinking that, whether for men or women, intemperance at a time of emergency like the present was particularly scandalous and particularly shameful. They could not help feeling that the call upon them was for more frugality, more sobriety in every sense of the word, and more of self-restraint in this solemn time. (Hear, hear.) Another weak point had come out under the strain, and that was the indiscipline of the children, and the inefficiency and feebleness of parental control. He hoped that the conference would result in a greater output of the right kind of energy, working through love and inspired by hope. (Applause.)

The Rev. W. S. Swayne, vicar of St. Peter's, Cranleigh-gardens, spoke especially of the duty and opportunity of women in inspiring the men of the nation to realize their duty of service. He feared there was a great lack of imagination amongst the people as to the meaning of the war, though he felt sure that the men would not be wanting when the great national need was fully realized. It was, he said, the duty of the women of the country to do away with that unjustifiable self-complacency which in some cases existed.

Miss Townend, of the "League of Honour," speaking of the activities since its institution of that body, said that the measure of progress during the last two months had been perfectly extraordinary. Its purpose was to uphold the honour of the Empire to the Empire's defenders by means of prayer, purity, and temperance, and already it was a means of absorbing much misdirected enthusiasm, and proper loyalty of feeling into the right channel.

The Bishop expressed the meeting's thanks to the speakers, and mentioned that there were already 15 bands of the League of Honour in Southampton, the local secretary being Mrs. Burton, of Winn-road.

The Bishop added his hearty endorsement and approval of the League of Honour, while emphasising the purpose of the meeting, namely, the support of preventive and rescue work within the Diocese. Those who were in any special degree responsible for that work desired that it should be looked upon as a leading and honourable branch of the common diocesan work, in the promotion of which active members of the Church of England were pledged.

A gathering which must have had in it great encouragement for the promoters closed with the episcopal blessing.

The Gentlewoman, November 21st. 1914. 656/18 656.

Silver-Lining the Blackest Clouds.

Trumpet Call to the Gentlewomen of Great Britain.

SOMEWHERE, not far from where we all live, there are mean little streets with the tale of woe written over every cottage door. You pass by, glance at the dirty windows, an acrid smell poisons your nostrils, and you guess the condition of the people down the mean little streets. It is not a sunny picture that your imagination paints. It is one of sympathy and thoughtfulness. You wonder how those mortals live. You guess, but never correctly. They know not how they exist themselves, and marvel as they wake from a hunger-sleep to find themselves still breathing! Through the open windows comes the wail of a crying child. It is not the ordinary healthy cry of a well-clothed, well-fed child, but the plaintive appeal of an infant struggling with the pains of hunger and the lack of nourishment. Before the War the women were able to earn a small weekly wage, just sufficient for the bare necessities of life, but their services were no longer required when trade became slack. They had never been able to save for the proverbial "rainy day," and now they taste the gall of poverty—some for the first time, perhaps—and because of that, the experience is infinitely more bitter. The majority of these women have no husbands. Some have been deserted, while others are widows or spinsters. They have no support beyond that which they receive from their own toil, and it is a poor reward they reap for unremitting labour and sacrifice of health, and the little pleasures that go to make life a little superior to Hades.

That is one little picture. The other is on the battlefield. Far away, those men who have responded to the bugle call of the Empire are burdened with all the hardships of War. But they are brave men every one of them. Their own troubles are nothing compared to their anxiety for the dear ones they have left at home. Are they being cared for? Are they happy, comfortable, and provided for? Those are the questions which nearly every fighting man is asking in his mind. He is pluckily conquering the world's greatest enemy. He gets no reward beyond the knowledge that he is saving his country in its hour of peril. It is his patriotic effort to do just a little—just to sacrifice his life should need be—but he desires that his loved ones should be properly provided for. Hence we have two pictures—two black clouds that require silver linings to brighten them in the eyes of those poor mortals steeped in poverty, and of those brave fighters on land and sea. Are you going to "silver-line their blackest clouds," make life "worth the candle," and cheer them just a little till trouble is o'er?

THE QUEEN'S "WORK FOR WOMEN" FUND.

The great task which the Central Committee on Women's Employment has set itself to perform shows signs of considerable progress each week. Financed by the Queen's "Work for Women" Fund, which shows a continual rise each day, the Committee are finding employment of a very useful character for all kinds of women who have been thrown out of their positions owing to the slackness of trade caused by the War.

The experimental schemes for providing work for women started by the Central Committee on Women's Employment have already been adopted as a model by many Local Representative Committees.

Islington is a very good example. The Labour Exchanges registered 700 women and girls out of work in a recent week, and a grant has been obtained from the Queen's "Work for Women" Fund for the assistance of women who have lost their work owing to the War. Eighty-four women are now employed by the Local Employment Committee, and arrangements are being made to give work immediately to two hundred. Two private workrooms are also helping to decrease the numbers of unemployed.

An unoccupied girls' school has been lent to the Women's Employment Sub-Committee, the Gas Company has given gas fittings, a firm has provided washing-basins, and chairs and tables have been given or lent. Two large workrooms are already occupied. The women were to-day engaged in making up oddments of material which have been given as presents. Second-hand garments were being renovated and remodelled, and belts and bonnets were being knitted for babies. Girls' petticoats were being fashioned out of quarter-yard sample pieces, and one tiny piece, brought by a forewoman, was being made into a neat little skirt. A number of packing-cases (a gift from a grocer) had been covered with wallpaper, and stood upon one another to form a cupboard. The finished baby clothes were described as "rather grubby," but the women are many of them unused to needlework. Shorthand typists had not knitted since they were at school, and factory workers had never had time to sew. Two sisters, who had a tobacconist's shop before the War, have lost everything, and are glad of the sewing; a showroom assistant with a widowed mother has been out of work for weeks, and the family has been existing on 4s. a week which her brother earns.

There is a bookfolder and a shirt hand, two sisters, who have both been out of work, and have been living with their mother of seventy-four on her old-age pension. There is a manageress of a large kitchen, who had been turned out of her lodgings and her clothes kept for rent; there are two sisters from a family of five, only one of whom has been earning 5s. And there is a desolate woman whose husband, after being out of work for two months, went out and never returned. The workers are to be given dinner and tea next week for 3d. At present they bring pieces of bread or sandwiches to eat in the spacious dining-room, and the Secretary gives them tea. One woman had not even the bread to bring, and she was discovered fainting for lack of food.

The Central Committee on Women's Employment are starting to train sixty women in Islington in domestic economy. The women will be taught cooking, laundry work, and needlework, and lectures will be given in the elements of hygiene and infant care. A cradlemaking workroom is also to be opened, for the maternity outfits scheme drawn up by the Central Committee is to be followed. Poor mothers in the neighbourhood are to have the gifts, while the children's clothes now being made will also be given away to the destitute homes of Islington.

Home cookery classes are given twice a week in the afternoon at the Stepney Centre, for in the morning the pupils are busy preparing dinner on a large scale for the women in the workrooms adjoining. This they are able to do now quite well under the supervision of the teacher. To-day's dinner, which was given to the women for threepence each, consisted of roast mutton, greens and potatoes, and poor man's trifle. A cup of tea and bread-and-butter later on is included in the charge.

It is to the afternoon class that the women look forward, for they are eager to learn something new. They are very much interested in food values, and they are taught how to make up simple, nourishing dinners. They can distinguish between what they call flesh-making, warming, and bone-making foods, and they know that peasoup which contains no fat should be followed by suet pudding. The value of fruit and vegetables is being brought home to some of them for the first time. They didn't "bother with them" before.

Every week some of the pupils change place with others from the mending and remodelling room. This is the second part of the domestic economy training, to be followed, if the classes can be arranged, by simple laundry lessons.

The girls are almost as pleased with the needlework as with the cooking. They are taught how to make down grown-up people's clothes for children, and how to mend and make the best of everything. In the dinner hour they can be seen studying the list of suggested alterations hung on the wall, and they bring newspaper with them to cut out patterns they want to take home.

The women chosen for the domestic economy training are mostly young. A mother whose four children had no stockings or shoes when she came to the workroom is eagerly learning to sew. She has been employed in jam making, and never had time before. Tailoresses, vest makers, paper-bag makers, and a typist are all looking forward to their turn in the kitchen.

PROFESSIONAL CLASSES WAR RELIEF COUNCIL.

Since the inauguration of the Council a little over a week ago much ground has been covered, especially in the Training and Emigration Department. The governing Body of Bedford College for Women has offered twenty scholarships at a reduction of two-thirds of the usual fees, and the Court of University Hall, St. Andrews, have also offered to take girls at much reduced rates. All these scholarships are only for nominees of the Council. In the realm of Domestic Science and Household Crafts, too, many offers have been received for free and reduced trainings, Swanley Horticultural College, Stoke Prior Colonial Training College, and others coming well to the fore in generous co-operation. Some girls have already been placed in the South-Western Polytechnic for Domestic Science courses, and are receiving admirable training. It is estimated by this department that an average of $15-20 will not only maintain a student in one of these colleges for six months, but will also give her a training which will enable her to earn a living on leaving the college. It is a rare opportunity for a benefactor who wishes to do individual good to pay this small maintenance fee for one girl. The students are carefully selected by the Council, and only those to whom the training is likely to prove of real benefit are enrolled.

In other departments the relief work is going well forward. The nursing home for wives of professional men will soon be opened in the house Mr. J. Pierpont Morgan has so generously lent for the purpose, but more furniture is required for this. It is hoped that those who find themselves unable to give money will help the scheme by lending what they can spare out of their own homes. A list of things still required can be had on application to Mrs. Hills, 32, Prince's Gardens, S.W.

The work found, if not permanent, must be emergency, just to enable the applicants to live through the period of stress until normal conditions are again in force. This particularly applies to the many cases of musicians and singers who have made nothing since the War began. For this latter class it is hoped to arrange concerts, especially in districts where soldiers are quartered, which will give employment, though at low fees, to good professionals who are in serious difficulties.

Many applications still continue to come in from all over the country, and the Council are dealing with them as effectively and expeditiously as possible; but in a great undertaking such as this, where distress is widespread and difficult of help, the progress must necessarily be slow. The work is also hampered by lack of a central fund with which to deal with unorganised professions. Money is greatly needed to increase this fund. It is not that a colossal sum is required, but it is required at once, that the relief work which is so essential should be able to go straight forward unhampered. There must be many readers of this paper whose sympathy goes out to men and women of their own class who are in great need and trouble through the falling off of work in professions that have been dislocated by the War. Those who have understood this distress and need are most earnestly invited to contribute to the Central Fund of the Council. Cheques (crossed Messrs. Coutts & Co.) to be made payable to the Treasurer, 13 and 14, Prince's Gate, S.W.

"It is splendid"——

IS the phrase so frequently used by Secretaries in writing of the Queen's "Work for Women" Golf Competitions.

OVER 270 Competitions have already been arranged by the Ladies' Golf Clubs throughout the Country for the Queen's "Work for Women" Brooch Medals presented free by "The Gentlewoman."

WHEN next you go to your Club take a copy of "The Golfing Gentlewoman" with you, and show the scheme to your Captain, Secretary, and to the Members of the Committee. Interest every one of them in the idea, and get them to arrange a Competition as the other Clubs have done and are doing.

IT is one of the best methods of helping Her Majesty the Queen to reach a million pounds with her fund, which is doing such a great good among the poor women of England.

THE medals are well worth competing for as they form a tangible memento of this, the greatest of all wars, and in addition they are handsome little brooches that anyone might wear.

THE OFFICIAL WEEKLY STATEMENT.

In the Weekly Statement all four societies wish to intimate that no more Nightingales are required; also that for the present no more helpless shirts, bed socks, bed jackets, cotton garments of any kind, or pillows—unless of down or vegetable down—are required.

The special requirements of each society for the coming week are:—

QUEEN MARY'S NEEDLEWORK GUILD.—Cardigans and sweaters, comforters, towels and sheets, vests and pants (preferably woven), blankets, dressing gowns, flannel dayshirts, flannel pyjamas, women's stockings, youths' clothing, babies' head flannels.

ST. JOHN AMBULANCE ASSOCIATION.—Dressing gowns, nightshirts (flannel), pyjamas (flannel), vests and pants (woven), pneumonia jackets, mittens, blankets (coloured preferred), towels and sheets, cigarettes and tobacco, pipes.

Methylated spirits and medical stores of all kinds.

All parcels should be addressed "St. John Ambulance, 56, St. John's Square, Clerkenwell, E.C."

Information respecting patterns, &c., to be obtained from the West End Depot, 35, Park Lane, W.

ST. JOHN AMBULANCE ASSOCIATION INDIAN SOLDIERS' FUND.—Socks, gloves and mittens, flannel belts, mufflers, sweaters, flannel shirts, undervests, drawers, pyjamas (flannel), pillows, tea, tobacco, spices, and sweets.

Note.—It is requested that all parcels of clothing or comforts, with list of contents inside, may be sent direct to the Secretary, Warehouse Committee, 20, Somerset Street, W., marked on the outside "Indian Soldiers' Fund."

THE BRITISH RED CROSS SOCIETY.—Cardigan jackets, dressing gowns, vests and pants (preferably woven), dusters and gloss cloths, mufflers, woollen gloves, woollen caps, blankets, napkins, down pillows (20 by 30), jaconette pillow cases (20 by 30), sheets, towels.

Special Medical Requirements.—Plain lint, boracic lint, plain gauze, jaconette.

Note.—For the present no more small pillows or pillow cases of any kind are required, nor Bracknell shirts. No more muslin jug-covers will be required at all.

WOMEN AND THE WAR.

PATRIOTIC MEETINGS AT WARMINSTER.

FORMATION OF A LEAGUE.

The large room at the Town Hall was not by any means big enough to accommodate the immense attendance of women at the patriotic meeting held on Wednesday afternoon. The gathering extended far beyond the entrance into the adjoining room and down the stairs, and finally it was decided to hold an overflow meeting in the Police Court.

The Countess of Radnor presided, and was supported on the platform by the Duchess of Somerset, Miss Douglas and Miss Trotman (of Bristol), Mrs. Whytehead, Lady Kathleen Thynne, Lady Emma Thynne, Mrs. Burton, Misses Mackenzie, Mrs. Vicary, and others. People were present from many of the villages.

The speeches were interspersed by patriotic songs by Lady Kathleen Thynne, who splendidly sang "Land of Hope and Glory" and "It's a long way to Tipperary;" Miss Randall, who was applauded for "The old Regiment;" and Miss H. Bradfield, who contributed the French National Anthem.

WOMAN'S WORK.

The COUNTESS OF RADNOR said they were all proud of the men who were at the Front fighting the battles of the nation in the greatest war that had ever been known. The question came, what was woman's work while all that was going on? She had to help the men to go, pray for them while they were away, and be ready to welcome them when they returned. How was she going to do that? Certainly not in an emotional spirit, not in giving way to any undue grief or excitement. She must do her best to stand by her home and support it, to look after her children, and bring them up to know why their fathers, brothers, and relations were fighting, and be ready to do her best in whatever she might be called upon to do. Women throughout the country were animated with one spirit—"How can we support, cheer, and help the men?" They ought to realise and help to guard against the temptations of those who were weaker, and to train their children to understand what it meant to be

RESPONSIBLE PEOPLE.

They should realise that it was their duty to see to it that the young men who were now training to go forth to the fight should go forth untarnished by a thought of anything that had happened before they went. Let them stand by each other and feel they were working with one great object, and then they would be influenced to help those men to stand up for England and be worthy of the great traditions of the country. We were fighting not only for our own homes but for England and the Empire, and if the enemy—it was almost unthinkable—if the enemy were to be successful England would go under. The British flag, which had been respected all over the world because it stood for liberty, honour, and uprightness, and keeping faith with the weaker nations, would go under. And what came instead would be something so cruel, so tyrannical, and so terrible, that it was almost beyond one's power to conceive what it would be.

LOVE AND SUFFERING.

Miss DOUGLAS asked what did they mean by being patriotic. It meant that they loved their country, and that was a feeling which was born in us and was absolutely natural. And it was that love of country and Empire which filled them with hope at the present time—the sure and certain hope that, please God, we were going to win in this terrific struggle. They knew that as their heroes went out, and fought and struggled and died in that great war, more and more would come on in an endless stream of devoted men filled with the love of their country. If they had any doubt that that stream of patriotism would dry up then they would have no hope. But there was the hope that this dear land of ours would somehow or other be better because of the war. The women were going to stand shoulder to shoulder and see that somehow or another it was going to be not worse for this terrible conflict but better. And how was that to be? They knew there was terrible suffering and that there was more to come, and that there was terrible anxiety, but how was the land

GOING TO BE BETTER

for all that? They knew that a country not only had a body but a soul too like human beings. Belgium's body had been terribly torn and wounded, but she had not lost her soul. It was true somehow that love and suffering went hand in hand, and the women of England would see that through that suffering, which was so bad and hard to bear, the love for their country would live as it had never lived before. Would it not seem that the suffering were worth while if that could be realised. They would say never mind the suffering of the body if England could be a better land for it. She believed that the war was going to make us think as we had never thought before. The war was going to make us see and know what mattered most—the war was going to make us more religious. They could not alter England in a minute, but they could all do their bit in the direction indicated. This war would make the nation sober. So they hoped that these meetings would help them to be better and more determined to do something towards making the country a fair and great land in the true meaning of the term.

RUM IN THE TRENCHES.

Miss TROTMAN said they knew that the English soldier was braver and a cleaner fighter than the soldier of almost any other nation. Didn't they think that the women had had something to do with that? She thought they had had a great deal to do with it, and the men who were training now were going to be good soldiers and clean and honourable fighters according as the women treated them now. A League had been formed and women were asked to join it. Members of the League promised to do all they could to uphold the honour of the nation in this time of war by prayer, by purity, and by temperance. And it was proposed that that afternoon any of those present who were willing to join the League should sign a paper to say so. Then in a week's time they would be asked to come back and sign a League card, when they could make another promise, although they were not bound to do so. It was called a promise for war time, and it was to say that they would not, during the war, touch any alcoholic liquor. It had been said that it was a bad thing to serve round rum in the trenches at the Front. She did not agree with that. The soldiers were often fighting for days and weeks together in wet and muddy and very cold trenches, and they not only needed a little rum but deserved it. (Applause.) But the ladies were not in the trenches, and she believed that a large number of them could do without it.

Mrs. WHYTEHEAD, who presided in the absence of the Countess of Radnor, who had left to address the overflow meeting, supplemented Miss Trotman's remarks upon the League. She hoped that a great number of them would become members. Tens of thousands of women had joined all over the country, and a small badge was given to them to wear. Upon that day week at three o'clock in the afternoon and eight o'clock in the evening there would be meetings for those who had decided to join, when they would receive their badges.

The Countess of Radnor expressed her thanks to the speakers and vocalists for their speeches and songs.

Upon the proposition of Mrs. Whytehead a hearty vote of thanks was passed to the Countess of Radnor for presiding. Mrs. Whytehead remarked that they hoped before long the Countess of Radnor would be able to welcome Lord Radnor back again, together with all their husbands, sons and brothers from the war. (Applause)

The meeting closed with the National Anthem.

In the evening there was a crowded meeting of girls, when Countess Pierre-fon (niece of Mrs. Burton), whose husband is at the war, presided.

Miss Trotman gave an admirable and enthusiastic address, her theme being "Your King and country need you."

Mrs. Hogan followed, and explained to the meeting the object of the League of Honour which they were asked to join.

Lady Kathleen Thynne was again loudly applauded for her songs "Land of Hope and Glory" and "It's a long way to Tipperary." Miss Eva Robinson and Miss Greenland were also very popular vocalists, the former singing "Our Island Home" and the latter "Rule, Britannia."

Mrs. Whytehead thanked the Countess Pierre-fon for presiding. They had already heard that her husband was at the war, and it would be interesting for them to know that he was French—(applause)—one of that brave and noble nation which now stood fighting side by side with our soldiers. (Applause.)

The meeting again concluded with the National Anthem.

WORK AMONGST THE WOMEN

MUCH ACTIVITY CENTRALISED AT THE PAROCHIAL HALL.

In order to give everyone who is interested in the various branches of work amongst the women of Huddersfield necessitated by the war an opportunity of seeing and hearing about that work, the members of the Huddersfield and District Women's Committee for the Sick and Wounded Soldiers and Sailors arranged to be "at home" at the Parochial Hall on Tuesday and again to-day. At the first of the series of four "At Homes," which took place on Tuesday afternoon, the Mayoress (who is president of the Women's Committee) presided over a very large gathering of ladies.

MORE IMMEDIATE NEED.

In cordially welcoming the visitors, the Mayoress said that other "at homes" had been arranged for the ladies from other districts. She thanked Canon Rolt for the free use of the Parochial Hall during the past four months. She regretted the absence of Mrs. Marshall, for her work had inspired them all. When they realised that 22,000 garments had already been given they would understand that someone had been very busy. The garments most needed now were cardigan jackets, mufflers, and mittens. She expressed gratitude to all who had given material, money, labour, etc., and said that all the women in Huddersfield seemed to have done something for the cause, whilst many Huddersfield men were giving their lives. They must all work together to the end of the war.

Miss Siddon said that they were fighting there under the Red Cross flag, fighting for help and succour for the soldiers and sailors, who also were fighting for their King and country. It was impossible to realise the full value of the work, because it was impossible to realise the depths of suffering and the horrors of war. Englishmen and women all over the world were doing something to remove that suffering. The soldiers and sailors had earned their undying gratitude, and she appealed for more help for them.

Miss Nellie Lowenthal, the hon. treasurer of the committee for Sick and Wounded Soldiers and Sailors, acknowledged with thanks the receipt to date of the sum of £1,098. They had been largely assisted in securing that amount by the proceeds of concerts arranged by Mrs. T. J. Dyson, by Dr. Hull, and by the Huddersfield Glee and Madrigal Society, while an American friend and well-wisher had generously given £50. They were grateful also for the smallest sums received, as every little helped. Up to date the expenditure had been about £905. As the war went on the demands on the funds would increase, and she, therefore, appealed for financial help.

A VAST UNDERTAKING.

Mrs. Demetriadi read the report of the Huddersfield Women's Committee for the Sick and Wounded Soldiers and Sailors. She invited all present to inspect the work rooms below, particularly the Belgian refugees clothing room, where a capable lot of workers, under the supervision of Mrs. Crowther and Miss Willans, had done an enormous amount of work. From that room more than 320 Belgian refugees now in Huddersfield had been clothed. An information bureau had been opened, and by means of boxes, issued from the bureau for collections towards the funds, about £100 had been realised up to the present. Miss Stewart had worked indefatigably in connection with the issue of the boxes, and Mrs. Holmes had ably superintended the work of the bureau. In the main room an enormous number of garments had been cut out, despatched to the various work centres, and returned made up. Mrs. Marshall and Mrs. Guy Crosland had cut out and arranged the work, and Mrs. Kaye had searched Huddersfield over in buying wool for socks, mittens, etc. Goods had been sent all over the British Isles, to the army in France, to the navy, and to all the Red Cross societies, British, French, and Belgian, and to the St. John Ambulance Society. She hoped that many ladies would undertake to knit jerseys, for which Lady Jellicoe had appealed on behalf of the men in the navy. The packing had been done by Mrs. Joe Lumb and Mrs. Ernest Hirst, while Mrs. Hudson and a band of workers had made up many thousands of yards of bandage. Miss Booth, of Netherton, had done a great deal of typewriting. Miss Freda [illegible] rendered great assistance in every way, and had placed her car at the disposal of the committee. The committee hoped that the energies of the ladies would not be relaxed. The women could not fight, but they could see that the men were well provided with the necessities of life, to prevent as much as possible death from pneumonia, exposure, and cold.

STITCH, STITCH, STITCH.

Miss Hickson read the report of Mrs. Marshall as to the work of the Needlework Guild [illegible]. She stated that forty-three [illegible] was and forwarding them. The Needlework Committee was still working as enthusiastically as ever, and was prepared to continue as long as there was need, and they hoped to receive the same generous support as in the past.

FOR THE REFUGEES.

Miss Willans read the report of the Belgian Refugees Clothing Committee, which stated that the committee had been at work for ten weeks. The result had been a marvellous manifestation of generosity and sympathy of the Huddersfield people. Parcels of all sizes and descriptions had poured in containing a tremendous assortment of clothing of every description, from a baby's cap to the contents of the lockers of a large golf club. Splendid gifts of cloth had been received from various manufacturers, as well as special articles of clothing, boots, etc., from manufacturers and various shops in the town. The contents of the parcels had either been given away to the refugees in the town or sent away. Altogether twelve consignments of clothing and two rolls of cloth, amounting to 8,224 garments, had been sent away either to the central depot in London or to other towns. The fact that last week 140 refugees were clothed showed the necessity for good organisation. Altogether 108 men, 63 women, and 71 children, or a total of 242 persons, had been clothed with 5,533 garments, including boots, etc., making a grand total of 13,757 garments in all, including 29 maternity bags, each containing at least 30 garments, but each counted as one in the grand total. The total receipts had amounted to £143 17s. 6d., which realised £25 for the Belgian Refugees Relief Fund. The expenditure amounted to £141 4s., leaving a balance of £2 13s. 6d., but further financial help would be welcomed.

GIFTS FOR TERRITORIALS.

Mrs. Cooper read a report stating that on the mobilisation of the 5th Battalion Duke of Wellington's West Riding Regiment the wives and relatives of the officers decided to raise funds to provide underclothing for the non-commissioned officers and men of the battalion. A committee was formed to carry out the work from the recruiting area, viz., Huddersfield, Mirfield, Kirkburton, Shepley, Holmfirth, and Meltham; a sum of money was quickly raised, the committee being greatly assisted by very many friends, who have kindly sent subscriptions and gifts of clothing. The committee has already despatched 1,299 flannel shirts, 1,495 pairs of woollen socks, 1,007 pairs of canvas shoes, and various articles, viz., helmets, towels, body-belts, scarves, mittens, etc. There was another consignment at the Drill Hall ready to be forwarded consisting of 1,117 flannel shirts, 1,10[illegible] pairs of woollen socks, and various other articles making a total of 2,416 shirts and 2,601 pairs of socks. She also mentioned that the ladies interested in the various companies were supplying their own companies with scarves and mittens. The committee was still continuing the work and would be very grateful for further help. The subscriptions amounted to about £250, which had all been sent.

Afternoon tea was kindly given by Mrs. F. W. Sykes, and the decorations of the hall were provided by the lady members of the Lindley Golf Club, who have also sent 240 garments to Lady Jellicoe for the use of the men in the Navy. Miss Nancy Dyson, in costume, recited a topical composition by Mr. Arnold W. Sykes, entitled "For the boys at the front." The ladies were also "At Home" in the evening.

The proceeds will be handed over to the fund for the Sick and Wounded Soldiers and Sailors and the Belgian Refugee Clothing Sub-committee.

ever been known. The question came, what was woman's work while all that was going on? She had to help the men to go, pray for them while they were away, and be ready to welcome them when they returned. How was she going to do that? Certainly not in an emotional spirit, not in giving way to any undue grief or excitement. She must do her best to stand by her home and support it, to look after her children, and bring them up to know why their fathers, brothers, and relations were fighting, and be ready to do her best in whatever she might be called upon to do. Women throughout the country were animated with one spirit—"How can we support, cheer, and help the men?" They ought to realise and help to guard against the temptations of those who were weaker, and to train their children to understand what it meant to be

RESPONSIBLE PEOPLE.

They should realise that it was their duty to see to it that the young men who were now training to go forth to the fight should go forth untarnished by a thought of anything that had happened before they went. Let them stand by each other and feel they were working with one great object, and then they would be influenced to help those men to stand up for England and be worthy of the great traditions of the country. We were fighting not only for our own homes but for England and the Empire, and if the enemy—it was almost unthinkable—if the enemy were to be successful England would go under. As the war went on the demands on the funds would increase, and she, therefore, appealed for financial help.

A VAST UNDERTAKING.

Mrs. Demetriadi read the report of the Huddersfield Women's Committee for the Sick and Wounded Soldiers and Sailors. She invited all present to inspect the work rooms below, particularly the Belgian refugees clothing room, where a capable lot of workers, under the supervision of Mrs. Crowther and Miss Willans, had done an enormous amount of work. From that room more than 320 Belgian refugees now in Huddersfield had been clothed. An information bureau had been opened, and by means of boxes, issued from the bureau for collections towards the funds, about £100 had been realised up to the present. Miss Stewart had worked indefatigably in connection with the issue of the boxes, and Mrs. Holmes had ably superintended the work of the bureau. In the main room an enormous number of garments had been cut out, despatched to the various work centres, and returned made up. Mrs. Marshall and Mrs. Guy Crosland had cut out and arranged the work, and Mrs. Kaye had searched Huddersfield over in buying wool for socks, mittens, etc. Goods had been sent all over the British Isles, to the army in France, to the navy, and to all the Red Cross societies, British, French, and Belgian, and to the St. John Ambulance Society. She hoped that many ladies would undertake to knit jerseys, for which Lady Jellicoe had appealed on behalf of the men in the navy. The packing had been done by Mrs. Joe Lumb and Mrs. Ernest Hirst, while Mrs. Hudson and a band of workers had made up many thousands of yards of bandage. Miss Booth, of Netherton, had done a great deal of typewriting. Miss Freda S[illegible] rendered great assistance in every way, and had placed her car at the disposal of the committee. The committee hoped that the energies of the ladies would not be relaxed. The women could not fight, but they could see that the men were well provided with the necessities of life, to prevent as much as possible death from pneumonia, exposure, and cold.

STITCH, STITCH, STITCH.

Miss Hickson read the report of Mrs. Marshall as to the work of the Needlework Guild Sub-committee. She stated that forty districts, extending as far as Holmfirth, Marsden, and Delph, were working in conjunction with the guild, and material for making garments had been distributed amongst 400 individual workers. Very valuable assistance had been given to the committee by several clothing firms, whose employees had cut out the garments. Gifts averaged about 1,000 weekly. Difficulty had been experienced in obtaining knitting wool, and the only way of obtaining sufficiently large quantities had been by ordering direct from wholesale firms. All flannel, etc., and as much wool as possible, had been bought from local tradespeople. The needlework depot had been opened as a receiving and forwarding agency for the front and the Navy, and in connection with that department a sixpenny fund had been started in order to buy wool for mufflers and mittens for the soldiers and sailors. The total number of articles sent away was 22,644, consisting of 6,850 bandages, 3,849 pairs of socks, 2,702 flannel shirts, 702 mufflers, 261 dressing gowns, also bed-jackets, helmets, mittens, etc., but such things as cigarettes, writing paper, postcards, etc., were not included in the figures. Several local firms had rendered invaluable assistance by packing the parcels in bales of can-

each counted as one in the grand total. The total receipts had amounted to £143 17s. 6d., which realised £25 for the Belgian Refugees Relief Fund. The expenditure amounted to £141 4s., leaving a balance of £2 13s. 6d., but further financial help would be welcomed.

GIFTS FOR TERRITORIALS.

Mrs. Cooper read a report stating that on the mobilisation of the 5th Battalion Duke of Wellington's West Riding Regiment the wives and relatives of the officers decided to raise funds to provide underclothing for the non-commissioned officers and men of the battalion. A committee was formed to carry out the work from the recruiting area, viz., Huddersfield, Mirfield, Kirkburton, Shepley, Holmfirth, and Meltham; a sum of money was quickly raised, the committee being greatly assisted by very many friends, who have kindly sent subscriptions and gifts of clothing. The committee has already despatched 1,292 flannel shirts, 1,495 pairs of woollen socks, 1,007 pairs of canvas shoes, and various articles, viz., helmets, towels, body-belts, scarves, mittens, etc. There was another consignment at the Drill Hall ready to be forwarded consisting of 1,117 flannel shirts, 1,106 pairs of woollen socks, and various other articles making a total of 2,416 shirts and 2,601 pairs of socks. She also mentioned that the ladies interested in the various companies were supplying their own companies with scarves and mittens. The committee was still continuing the work and would be very grateful for further help. The subscriptions amounted to about £250, which had all been sent.

Afternoon tea was kindly given by Mrs. F. W. Sykes, and the decorations of the hall were provided by the lady members of the Lindley Golf Club, who have also sent 240 garments to Lady Jellicoe for the use of the men in the Navy. Miss Nancy Dyson, in costume, recited a topical composition by Mr. Arnold W. Sykes, entitled "For the boys at the front." The ladies were also "At Home" in the evening.

The proceeds will be handed over to the fund for the Sick and Wounded Soldiers and Sailors and the Belgian Refugee Clothing Sub-committee.

WOMEN'S VOLUNTEER RESERVE.

WORCESTER LADIES ANXIOUS TO HELP.

FORMATION OF LOCAL BRANCH PROBABLE.

The idea of a Women's Volunteer Reserve is new, so far as Worcester is concerned, but interest in the movement was kindled straight away at a meeting convened by Mrs. H. W. Spreckley, and held at the Guildhall, on Wednesday, at which Miss Cryan, of the Reserve's Headquarters, expained the objects and methods of the movement. The meeting was originally arranged to be held in the Committee Room, but this proved hopelessly inadequate for accommodating the large number of ladies who attended, and an adjournment had to be made to the Council Chamber. Even this was hardly large enough, and many of those present had to stand.

METHODS EXPLAINED.

Miss Cryan, after stating that the constitution of the Women's Volunteer Reserve would be made public shortly, said she wanted to explain the methods by which they hoped to achieve their end. One valuable lesson the Women's Volunteer Reserve would teach would be that of self-reliance and resourcefulness. It would also give them common interests, and with that came increased friendship. The movement was intended to be national, and to include all classes and all forms of thought. It was entirely non-political and non-sectarian. One of the principal benefits which it would bring would be the desire among women to make themselves as physically fit as possible. To ensure this, one condition of membership was that the drills must be attended. Without physical fitness women would be unable to endure the tests which the work of the Reserve would put upon them. First aid would be another means by which the women could be extremely useful, and the teachers for this would be drawn from the ranks.

Referring to the intention of the promoters of the movement to organise long marches and camps, Miss Cryan said these would add considerable interest to the work. They also proposed forming a mounted corps, and in the branches already started many women had promised to join the corps themselves and attend the camps, so that they could share their horses with others who wished to learn to ride. Cyclists and motor-cyclists would be trained in despatch-carrying—work which could be done by women almost as well as by men. The drill would be exactly the same as that done by the soldiers, and the medical examination would therefore have to be just as strict as in the case of men.

Miss Cryan stated that promotion would be strictly from the ranks. The practice, on forming a branch, was to start drill under a drill-sergeant, and after they had obtained proficiency, to get him to promote the N.C.O.'s. and later the officers. The officers would then be in a position to carrying on the drill themselves.

The speaker said it was characteristic of human nature that they were divided by the detail of dress, and because they specially wanted that corps to be united in spirit they had devised a uniform; so that all members of the corps would be on the same footing The uniform was a plain Norfolk coat and skirt, which, with the rest of the outfit cost only £2 10s. In cases where the whole of the cost could not be paid at once, deposits and monthly instalments had been arranged for. The only other expense to the member was a shilling entrance fee and a half-penny for every drill—toward the cost of lighting, heating, etc.

HOW THE CORPS WOULD BE USEFUL.

The Chairman asked in what specific ways corps could be useful.

Miss Cryan mentioned particularly signalling and despatch carrying. In the event of a German raid, she said, they could, by doing these duties, release a large number of men who had to be kept at that particular work now.

In answer to another question, the speaker said both single and married women, provided they were physically sound, would be enrolled. They would be taken between the ages of 18 and 40, but that rule was elastic, and was only meant to ensure that every recruit was strong enough to do the work.

The Chairman asked how the corps stood with regard to the Government.

Miss Cryan: We will train ourselves. Then, if the Government want us, we will be there to do anything they want. The speaker explained that although the corps was only formed for the period of the war, it was hoped to make it a permanent organisation.

The minimum time it would involve, she stated in reply to another question, would be two hours a week for drill.

FACTORY GIRLS' LOW WAGES.

One lady present pointed out that the lowness of the wages of factory girls in Worcester would preclude large numbers from the corps, because they would be unable to purchase their uniforms.

Miss Cryan again referred to the instalment system, which, she said, met the case of the factory girls in London. In cases where any payment at all required great sacrifice, however, help would undoubtedly be forthcoming from ladies interested in the movement, but who could not join. They wanted factory girls to join.

A show of hands was taken to ascertain the number likely to join a local branch. An excellent response was made but, on the advice of Miss Cryan, nothing definite was done. It was decided to "ventilate" the idea during the next fortnight or so, and then start in earnest.

The North Mail,
November 26th. 1914.

Rendezvous for Soldiers and Their Wives.

Sir,—The members of the Gateshead Women Workers' Committee are arranging to open a "Welcome" for soldiers and their wives who come in from the country and have no place in which to meet.

The Mayor and Mayoress of Gateshead, Ald. and Mrs Wardill, have kindly lent a house for this purpose, 21, High West Street, and the members of the committee are anxious to make it comfortable and attractive. Notwithstanding the many appeals which this time of stress draws forth, they venture to ask friends who may be so kind as to help, to send gifts of curtains, towels, crockery, spoons, knives, etc., as it is proposed to have simple meals—to be paid for.

Linoleum has to be provided for the floor, and gas stoves, etc., to be put in. Any donations, whether in money or in kind, will be gratefully received at the "Welcome," 21, High West Street, by Miss Sheard, hon. secretary and treasurer.—Yours, etc.,

E SPENCE WATSON.

Bensham Grove, Gateshead.

Work for Women.

Sir,—May I call your attention to the problem of the young women in mining villages? Normally, of course, their time is occupied, until they marry, in working at home for their brothers and fathers, but now that the pits are working badly, and so many of the men have enlisted, the girls are feeling the pinch. Certainly so many of them will not be able to marry as heretofore. To them a trade at their hands would be a great boon, both now and in the future. It is to be hoped that we may be able to get help from the Queen Mary Fund for work for women, but this takes time. Meanwhile an attempt is being made to help the girls at Washington.

The trustees of the Primitive Methodist Chapel have lent us a room, and we have a class of young women doing machine and hand knitting. We can turn out socks for the troops, jerseys for the navy, stockings for poor children, etc. I see by the papers that gifts are asked for of 4,000 belts, socks, mittens, etc., for the Northumberland Infantry Brigade and the Tyneside Scottish. If working parties and private individuals who desire to send gifts to these, or other brigades, would place orders with us instead of knitting all themselves, it would give help to families here, and more gifts would be sent, since we are able to buy wool more advantageously than individuals are. Our work is good, and all profits go to the lasses at work.

Orders and donations may be sent to Miss Peile, Greenwood, Shotley Bridge; Mrs Scholefield, Usworth Villa, High Usworth, Washington; or to me.—Yours, etc.,

FLORENCE G. DRING,

YORK.

Women's Work in War Time.—The Lady Mayoress of York (Mrs. J. B. Morrell) yesterday opened, at that city, an exhibition of work done by the women of York, who have been thrown out of employment by the war, and who have since been organised and provided with employment by the Industries Sub-committee of the Citizens' Committee. The women have been at work ten weeks, and the result was seen in a fine collection of warm and useful garments, some of which were intended to be presented to the Belgian Relief Committee for distribution among the refugees

Huddersfield Examiner,
Nov. 28th. 1914.

WORK AMONGST THE WOMEN

:o:

MUCH ACTIVITY CENTRALISED AT THE PAROCHIAL HALL.

In order to give everyone who is interested in the various branches of work amongst the women of Huddersfield necessitated by the war an opportunity of seeing and hearing about that work. "At homes" were arranged to be held at the Parochial Hall on Tuesday and Wednesday in the afternoons and evenings. At the first of the series of four "At Homes," which took place on Tuesday afternoon, the Mayoress, Mrs. Blamires (who is president of the Women's Committee), presided over a very large gathering of ladies.

MORE IMMEDIATE NEED.

In cordially welcoming the visitors, the Mayoress said that other "at homes" had been arranged for the ladies from other districts. She thanked Canon Rolt for the free use of the Parochial Hall during the past four months. When they realised that 22,000 garments had already been given they would understand that someone had been very busy. Th garments most needed now were cardigan jackets, mufflers, and mittens. She expressed gratitude to all who had given material, money, labour, etc., and said that all the women in Huddersfield seemed to have done something for the cause, whilst many Huddersfield men were giving their lives.

Miss Siddon said that they were fighting there under the Red Cross flag, fighting for help and succour for the soldiers and sailors, who also were fighting for their King and country. It was impossible to realise the full value of the work, because it was impossible to realise the depths of suffering and the horrors of war. Englishmen and women all over the world were doing something to remove that suffering. The soldiers and sailors had earned their undying gratitude, and she appealed for more help for them.

Miss Nellie Lowenthal, the hon. treasurer of the committee for Sick and Wounded Soldiers and Sailors, acknowledged with thanks the receipt to date of the sum of £1,098. They had been largely assisted in securing that amount by the proceeds of concerts arranged by Mrs. T. J. Dyson, by Dr. Hull, and by the Huddersfield Glee and Madrigal Society, while an American friend and well-wisher had generously given £50. They were grateful also for the smallest sums received, as every little helped. Up to date the expenditure had been about £905.

A VAST UNDERTAKING.

Mrs. Demetriadi read the report of the Huddersfield Women's Committee for the Sick and Wounded Soldiers and Sailors. In the Belgian refugees clothing room, where a capable lot of workers, under the supervision of Mrs. Crowther and Miss Wilkes had done an enormous amount of work. From that room more than 320 Belgian refugees now in Huddersfield had been clothed. An information bureau had been opened, and by means of boxes, issued from the bureau for collections towards the funds, about £100 had been realised up to the present. Miss Stewart had worked indefatigably in connection with the issue of the boxes, and Mrs. Holmes had ably superintended the work of the bureau. In the main room an enormous number of garments had been cut out, despatched to the various work centres, and returned made up. Mrs. Marshall and Mrs. Guy Crosland had cut out and arranged the work, and Mrs. Kaye had searched Huddersfield over in buying wool for socks, mittens, etc.. Goods had been sent all over the British Isles, to the army in France, to the navy, and to all the Red Cross societies, British, French, and Belgian, and to the St. John Ambulance Society. The packing had been done by Mrs. Joe Lumb and Mrs. Ernest Hirst, while Mrs. Hudson and a band of workers had made up many thousands of yards of bandages. Miss Booth, of Netherton, had done a great deal of typewriting. Miss Freda Sykes had rendered great assistance in every department, and had placed her car at the disposal of the committee. The committee hoped that the energies of the ladies would not be relaxed.

STITCH, STITCH, STITCH.

Miss Hickson read the report of Mrs. Marshall as to the work of the Needlework Guild Sub-committee. She stated that forty districts, extending as far as Holmfirth, Marsden, and Delph, were working in conjunction with the guild, and material for making garments had been distributed amongst 400 individual workers. Very valuable assistance had been given to the committee by several clothing firms, whose employees had cut out the garments. Gifts averaged about 1,000 weekly. Difficulty had been experienced in obtaining knitting wool, and the only way of obtaining sufficiently large quantities had been by ordering direct from whole sale firms. All flannel, etc., and as much wool as possible, had been bought from local tradespeople. The needlework depot had been opened as a receiving and forwarding agency

Delph, were working in conjunction with the guild, and material for making garments had been distributed amongst 400 individual workers. Very valuable assistance had been given to the committee by several clothing firms, whose employees had cut out the garments. Gifts averaged about 1,000 weekly. Difficulty had been experienced in obtaining knitting wool, and the only way of obtaining sufficiently large quantities had been by ordering direct from wholesale firms. All flannel, etc., and as much wool as possible, had been bought from local tradespeople. The needlework depot had been opened as a receiving and forwarding agency for the front and the Navy, and in connection with that department a sixpenny fund had been started in order to buy wool for mufflers and mittens for the soldiers and sailors. The total number of articles sent away was 22,644, consisting of 6,850 bandages, 3,849 pairs of socks, 2,702 flannel shirts, 702 mufflers, 261 dressing gowns, also bed-jackets, helmets, mittens, etc., but such things as cigarettes, writing paper, postcards, etc., were not included in the figures. Several local firms had rendered invaluable assistance by packing the parcels in bales of canvas and forwarding them.

FOR THE REFUGEES.

Miss Willans read the report of the Belgian Refugees Clothing Committee, which stated that the committee had been at work for ten weeks. The result had been a marvellous manifestation of generosity and sympathy of the Huddersfield people. Parcels of all sizes and descriptions had poured in containing a tremendous assortment of clothing of every description, from a baby's cap to the contents of the lockers of a large golf club. Splendid gifts of cloth had been received from various manufacturers, as well as special articles of clothing, boots, etc., from manufacturers and various shops in the town. The contents of the parcels had either been given away to the refugees in the town or sent away. Altogether twelve consignments of clothing and two rolls of cloth, amounting to 8,224 garments, had been sent away either to the central depot in London or to other towns. The fact that last week 140 refugees were clothed showed the necessity for good organisation. Altogether 108 men, 63 women, and 71 children, or a total of 242 persons, had been clothed with 5,533 garments, including boots, etc., making a grand total of 13,757 garments in all, including 29 maternity bags, each containing at least 30 garments, but each counted as one in the grand total. The total receipts had amounted to £143 17s. 6d., which realised £25 for the Belgian Refugees Relief Fund. The expenditure amounted to £141 4s., leaving a balance of £2 13s. 6d., but further financial help would be welcomed.

GIFTS FOR TERRITORIALS.

Mrs. Cooper read a report stating that on the mobilisation of the 5th Battalion Duke of Wellington's West Riding Regiment the wives and relatives of the officers decided to raise funds to provide underclothing for the non-commissioned officers and men of the battalion. A committee was formed to carry out the work from the recruiting area, viz., Huddersfield, Mirfield, Kirkburton, Shepley, Holmfirth, and Meltham; a sum of money was quickly raised, the committee being greatly assisted by very many friends, who have kindly sent subscriptions and gifts of clothing. The committee has already despatched 1,299 flannel shirts, 1,495 pairs of woollen socks, 1,007 pairs of canvas shoes, and various articles, viz., helmets, towels, body-belts, scarves, mittens, etc. There was another consignment at the Drill Hall ready to be forwarded consisting of 1,117 flannel shirts, 1,106 pairs of woollen socks, and various other articles making a total of 2,416 shirts and 2,601 pairs of socks. She also mentioned that the ladies interested in the various companies were supplying their own companies with scarves and mittens. The committee was still continuing the work and would be very grateful for further help. The subscriptions amounted to about £250; this has all been spent, but the committee would like it to be known that they are still continuing the work, and that they will be very grateful for any further help.

Afternoon tea was kindly given by Mrs. F. W. Sykes, and the decorations of the hall were provided by the lady members of the Lindley Golf Club, who have also sent 240 garments to Lady Jellicoe for the use of the men in the Navy. Miss Nancy Dyson, in costume, recited a topical composition by Mr. Arnold W. Sykes, entitled "For the boys at the front."

The proceeds will be handed over to the fund for the Sick and Wounded Soldiers and Sailors and the Belgian Refugee Clothing Sub-committee.

Nov: 27th. 1914.

WOMEN'S INTERESTS AND THE WAR.

Sir,—In your report of a deputation which appeared before the watch committee on Tuesday last there is a slight error. The deputation represented the Women's Advisory Committee. This committee consists of representatives from all the women's organisations engaged in social and relief work in the city. Its president is the Lady Mayoress, and its vice-president is the ex-Lady Mayoress.

The functions of this committee are to co-operate with existing organisations and to co-ordinate their work so as to promote efficiency and, as far as possible, to prevent overlapping. The committee, being thoroughly representative, is in a position to suggest and promote new forms of work appealing to the active sympathy of women of all sections.

At our meeting on Monday last the moral question as to the effect of the presence of such large numbers of young soldiers in the town and the consequent attraction of many young girls to the neighbourhood of the parks and camps was seriously discussed. It was felt that the women's organisations could do much to help the town authority in influencing the girls (who are often very young and act in thoughtlessness rather than evil intention), and in providing counter-attractions for them. A resolution in support of the system of women patrols, as initiated by the National Union of Women Workers, and approved by the Home Office and the Chief-commissioner of Police in London, was passed, and in furtherance of that a deputation was appointed to lay our views before the watch committee and to ask their sympathy and approval.—I am, &c.,

JANET PRICE WILLIAMS,
Hon. Secretary.

Common Cause, Dec: 11th. 1914.

"Woman's Part in War Time."

Now that our country has been at war over four months, it becomes possible to get some kind of idea of the part that women are playing. And passing the interminable weeks of strife in review, two aspects of "the part of women in war time" deeply, and even painfully, impress the imagination. There is the great and growing record of help given and work done; there is the daily more perplexing problem of work hindered and human lives wasted.

The moment this country knew that war was imminent, the women began to offer and organise help. The Suffrage Societies, the great bodies of organised women, individuals everywhere, set to work according to their powers and opportunities to help. Work-rooms have been opened, new industries started, workers trained, money raised, and spent. Not only so, but the women whose husbands have gone to the front, have borne the double burden of bread-winner and home-maker with a silent heroism which the nation as a whole hardly appreciates, though it unconsciously relies upon it, and is not disappointed.

There is another side to this picture, not so pleasant to contemplate. Side by side with the eulogies bestowed on the women who are helping, stand bitter and repeated complaints of the women who are hindering. Some, we are told, are wasting the money paid to them as "dependents" of men at the front. Others—mostly quite young girls—are hanging about the camps, pestering the recruits, and getting themselves into trouble. Yet others are professional camp followers, responsible, in part, for the "10 or 15 per cent." whom the Prime Minister admitted to be "wasted" from among those who have joined the colours.

Of the first class of these "hinderers," not much need be said. If a few soldiers' wives are wasting the money that is paid to them, they are very few. And it is largely because these few are now receiving more money than they are accustomed to control that they are wasting it. We remember a friend, whose husband died from eating poisoned food, and who received £200 compensation, which she promptly "wasted"—not on riotous living, certainly, but on every kind of delightful and innocent amusement for her children. The money gone, she explained with large eyes of astonishment—"Miss, it didn't seem as if anyone ever *could* spend £200!" So is it with some women to-day; only the pitifulness of the sum which to them represents such unspendable riches brings home to those who have the least power of imagination, the poverty which is their habitual lot. As the Insurance Act has revealed the almost incredible ill-health of the working-class wife and mother, so the payments to soldiers' wives is revealing a poverty which has become a national peril. A determined and steady effort to improve economic conditions among women must be made, and in the meantime every kind of help must be given to those to whom the spending of money is so unaccustomed an enjoyment. Such help would probably be given with more practical effect by women of the Co-operative Guild type, than by those who are at least as ignorant how to administer very small sums as the women of whom we speak are of large ones.

The girls around our great camps are another problem. Women-patrols report that though in some cases complaints have been grossly exaggerated, it is nevertheless true that quite young girls from thirteen or fourteen to sixteen, are making themselves a positive nuisance to the men, and are a source of danger to themselves. They are, we are told, "without self-respect"; the speakers who are invited to go and address them are begged to appeal to this non-existent virtue!

There are many girls to whom this state of affairs is odious. Yet the state of affairs remains, and it is well to face it. It represents the inevitable result of all that Suffragists have been combating for years. Let us be honest. As long as girls are taught that to attract men is the first duty of woman, and to attract one sufficiently to persuade him to marry her, is "the vocation of woman," so long as a woman who fails in this "vocation" is regarded as a maimed and wasted being who, whatever her work and value, is really "superfluous"—as long, in short, as the expression "a superfluous woman" has any meaning, so long will the temptation to hang about these places where men congregate, exist, and in many cases be irresistible. Women have been economically dependent on men for their pleasures, and even their support. They have been taught that marriage is their one vocation, and to marry they must please men. They are hardly regarded as having a human value except in this vocation (hence the expression—"superfluous woman"). Is it not, then, futile to expect any other consequences than those we see to-day?

Let girls be taught to respect themselves indeed, but it must be by our realising their value first ourselves. Every human being is of infinite value, and remains so whether male or female, married or unmarried. Marriage, when it comes, is, or should be, a great happiness, a sacred duty; but it is not upon marriage that the value of any human soul depends, nor is there any deeper profanity than that conveyed in the phrase "a superfluous woman." No one dreams of calling the men who live in countries where women are in a minority "superfluous." They have their human value as human beings, whether they find their mate or not. So it is with women. This truth was slowly emerging in the minds of all of us before the war began. Now it is in danger once more of being submerged. This is why we

As the Insurance Act has revealed the almost incredible ill-health of the working-class wife and mother, so the payments to soldiers' wives is revealing a poverty which has become a national peril. A determined and steady effort to improve economic conditions among women must be made, and in the meantime every kind of help must be given to those to whom the spending of money is so unaccustomed an enjoyment. Such help would probably be given with more practical effect by women of the Co-operative Guild type, than by those who are at least as ignorant how to administer very small sums as the women of whom we speak are of large ones.

The girls around our great camps are another problem. Women-patrols report that though in some cases complaints have been grossly exaggerated, it is nevertheless true that quite young girls from thirteen or fourteen to sixteen, are making themselves a positive nuisance to the men, and are a source of danger to themselves. They are, we are told, "without self-respect"; the speakers who are invited to go and address them are begged to appeal to this non-existent virtue!

There are many girls to whom this state of affairs is odious. Yet the state of affairs remains, and it is well to face it. It represents the inevitable result of all that Suffragists have been combating for years. Let us be honest. As long as girls are taught that to attract men is the first duty of woman, and to attract one sufficiently to persuade him to marry her, is "the vocation of woman," so long as a woman who fails in this "vocation" is regarded as a maimed and wasted being who, whatever her work and value, is really "superfluous"—as long, in short, as the expression "a superfluous woman" has any meaning, so long will the temptation to hang about those places where men congregate, exist, and in many cases be irresistible. Women have been economically dependent on men for their pleasures, and even their support. They have been taught that marriage is their one vocation, and to marry they must please men. They are hardly regarded as having a human value except in this vocation (hence the expression—"superfluous woman"). Is it not, then, futile to expect any other consequences than those we see to-day?

Let girls be taught to respect themselves indeed, but it must be by our realising their value first ourselves. Every human being is of infinite value, and remains so whether male or female, married or unmarried. Marriage, when it comes, is, or should be, a great happiness, a sacred duty; but it is not upon marriage that the value of any human soul depends, nor is there any deeper profanity than that conveyed in the phrase—"a superfluous woman." No one dreams of calling the men who live in countries where women are in a minority "superfluous." They have their human value as human beings, whether they find their mate or not. So it is with women. This truth was slowly emerging in the minds of all of us before the war began. Now it is in danger once more of being submerged. This is why we feel bound to emphasise it here. A pamphlet which reached us recently, containing an address to the students of Newnham College, puts the point with perhaps unusual brutality. It is useless, the author believes, to deny that many of us are at present superfluous. It is also, let us add, useless to appeal to the self-respect of girls who are in the same breath taught to regard themselves in a way which makes self-respect impossible. It is true that, from our knowledge of Newnham girls, such teaching will, in their case, fall on deaf ears. The most respected tutor in the world will not persuade them that they are superfluous, and self-respect is too ingrained a habit of mind in them to be destroyed even by war. But while this is equally true of many young women in every rank of life, it remains a fact that to destroy a young girl's belief in herself and respect for herself as a human being, is sometimes only too fatally easy. And we submit that, if we are to appeal to her self-respect on behalf of her country, we must first begin by respecting her ourselves, and realising her value, not as a copy-book maxim, but as a living and effective faith.

Finally, there is the problem of the professional prostitute. She represents, in an extreme and final form, the woman exploited by society. We hope that those who are now earnestly engaged in thinking out this problem will before long be able to give the result of their thought and expert knowledge to the public. In the meantime, letters that have reached us on this subject impel us to warn those who are not "expert" of the extreme difficulties of the question. It is useless simply to "drive away" these women, to imprison, or to flog them. They do not cease to exist because we hurry them out of sight; and a concealed danger is not less a danger from being concealed. It is useless to appeal (as one correspondent suggests) to their patriotism. They have none. A prostitute is without nationality. Her hand is against every man, and every man's hand against her. Society has exploited her, and she exploits society. What has her country done for her, in heaven's name, that she should know "patriotism"? Nevertheless, she is human, and every proposal which assumes that she is not, is bound to fail. It is the duty of us all to remember and to help her if we can. But it is supremely the duty of the women of the woman's movement, who painfully and with much faltering and mistaking have asserted their own human rights and human value, never to forget that the claim that they make is invalid unless they make it equally for every other human being.

pathy and approval.—I am, &c.,

JANET PRICE WILLIAMS,
Hon. Secretary.

Women and the War.

OUR DUTY TO-DAY.

IN URGENT NEED.

To the EDITOR of the PALL MALL GAZETTE.

SIR,—After seeing your excellent article of December 2, and also the letter you published from "F. Moore," we are venturing to send you fuller particulars of our work than you have hitherto had. Perhaps you will be kind enough to make known through your valuable paper the urgency of our need for support?

This organization was started at the beginning of the war to meet emergency needs as they arose. The original work was to supply the necessary garments for the wounded in Westminster and other hospitals. Very shortly the question of unemployment among good-class women came under our notice. We commenced to employ such women to make the garments, paying them for their work. This proved so successful in combating the difficulty of the position occasioned through the war, that we have enlarged and extended it to its present dimensions. We regard our efforts as purely of an emergency character, and adapt them to meet the contingencies of the moment as we think fit.

The hardships occasioned by the war touch classes which have never come before the public as needing help from charitable or other funds. Women with excellent steady employment in peace time, self supporting, self reliant, who have made small businesses for themselves through industry and frugality, are suddenly confronted with disaster which they have no power to meet. They are threatened with the loss of their savings, their possessions, and their homes. The needlework by which they live, and at which they excel, is at a standstill. Many are married, with families of small children to support; some are tailoresses accustomed to work for high-class West End firms. (This they do in small workrooms they themselves rent.)

All these come under the heading of "Home Workers." These are the women we are helping. We find out where emergency needs arise—hospital garments, soldiers' warm extra garments, comforts, etc.; for British and Indian troops, clothes for Belgian refugees, and for charitable guilds, etc., etc. We prepare, in our offices, all the garments, and give them to be made by the women at home. If we are not quite sure of the absolute cleanliness and suitability of the home, only washing things are given, and these are washed before being stocked. A large proportion of the garments are sold at the depot to those wishing to give presents to the troops at home and abroad, and to the poor. We also give away large quantities of hospital clothing to units as they are required for the sick and wounded.

Established charitable organizations from all districts have sent cases to us and commend the work as meeting a great need. We have only been supported so far from private sources, and we have the gracious approval and help of their Majesties Queen Mary and Queen Alexandra, Princess Christian, Princess Marie Louise, etc. We find many busy mothers can well do some plain sewing or knitting at home, and so earn a few shillings a week. In times like these, this may just enable them to pay their way and ward off the terrible necessity of reducing a three or two-roomed home to one single room. Women who have lost their regular jobs through war dislocations have, in several cases, had to wait a few weeks before getting fresh work. We have been able to help such as these, so that they do not have to draw on their tiny savings or sell or pawn their possessions.

We badly require funds, and must have regular support if we are to continue. Our work extends to many districts, and we cannot, therefore, make application to the Prince of Wales's Fund through one local representative committee. We appeal for help to find some method by which we *can* obtain a grant from these funds. Undoubtedly we are doing a much needed emergency work, and should have the assistance of the funds raised for those thrown into distress through the war.—Yours faithfully,

HORATIA G. ERSKINE, President.
MARGARET A. BARLOW,
Hon. Sec. and Manager.

WAR AND WOMEN'S WORK.

The Nation's Need.

IT HAS BEEN JUSTLY SAID that one of the most striking effects of the war is the universal desire to do something to help. A great wave of service has passed over the land, gathering volume and force on its path, and there is scarcely a man, woman, or child in these islands who is not waiting with outstretched, eager hands to grasp the opportunity to serve in some way or other. And yet, especially of the women, it must be said that many are sent empty away, not because there is not enough work to go round, but because, with straining eyes fixed on the fighting line, they see but one kind of work—to tend and aid the men at the front—and are blind to the need for help in their own land in other directions.

The time has come, I think, to remind them that our battles have been won not only "in the playing fields of Eton," but in the elementary schools of the whole of England. Scarcely a school but has its own roll of honour, and the men and women who have trained and fashioned the minds of the youngsters now fighting at the front may well feel a thrill of pride as they read the list of names and realise that they, too, have played their part in the defence of the Empire.

It will be an enduring shame to England if the present generation of children is sent out to fight the battle of life worse equipped than the preceding one because there has not been found a sufficient number of capable people willing to do the work that is nearest. And yet this is not an imaginary danger—it is a solemn and sober fact—that with the ranks of the teaching profession depleted as they are by the men who have gone to the front, there is not at the present moment a sufficient supply of teachers to carry on the work of education in the way it should be carried on if, in the bitter years that must of necessity follow this devastating war, the torch of culture is to be borne steadily forward, and those ideals for which Englishmen are giving their lives are to become the inheritance of the English race.

Women are wanted to carry on this work of education, and just as in the fighting line we see fighting shoulder to shoulder men drawn from all ranks of the community, so it is to all ranks of girls and women that we appeal. To those who up till now have been leading pleasant and leisured lives, to those who, secure in the knowledge of a home in the background, have been satisfied with unorganised employment which has supplied them with pocket money, and to those who are facing the problem of how in these troublous times they may best earn a livelihood we would say come forward and do this work for King and country.

And just as men have joined the Army for divers reasons, so we would welcome into the army of teachers those who enter into it from purely patriotic and missionary motives and those who, equally patriotic in spirit, look to it as the means of gaining an honourable livelihood.

The army of teachers wants recruits; it had been wanting them for some time before the outbreak of the European War, and since the increase of demand over supply can in great measure be accounted for by ignorance of the conditions of the service and the advantages attached to it I may perhaps be excused for giving a brief summary of these.

First, with regard to the measures to be taken in order to enter the profession, it should be clearly understood that any girls and young women who have received a good education in a secondary school and who have before leaving school obtained a qualification which has enabled them to take situations in business, commercial, or secretarial life can become candidates. With such a qualification these young women could apply to the Board of Education for recognition as students willing to be trained in a training college for two years, and so help in the immediate future to fill up ranks left vacant by those who have gone out to the actual fighting. The process is not so difficult as may appear on the surface. All who have passed an examination of the type of the senior local examinations of Oxford or Cambridge or the matriculation examination of one of the Universities are in a position to apply to one of the education authorities to be recognised as student-teachers between the ages of seventeen and eighteen for one year. During this year they would receive a preliminary training which would make them acquainted with the requirements of a teacher, and this training would be received in the very best way. At the same time their services would be amply remunerated by the education authority; in London, for instance, they would receive £30 for the year in addition to a bonus of £15 on entering a training college. They have an option of entering for a two-years' course either a residential college, where they would receive tuition, board, and residence at a cost of £25 for the two years, or a day training college, where they would receive training free of cost and a grant from Government of £20 per annum in cash towards their maintenance expenses. In both cases the training received would enable them to obtain Government recognition as a teacher and a certificate of qualification. Those who have one of the examinational qualifications mentioned above and are over eighteen years of age are eligible for acceptance immediately as students in a training college and may omit the preliminary student-teacher year of training if they so desire.

Among the advantages attached to the profession I would mention first of all that, unlike other professions, there is security of tenure. Arduous and harassing as the work of teaching may be, the teacher has not to add to other anxieties that of fears for the morrow. What that means to women only those in unorganised employment, who at this moment are threatened with utter loss of livelihood because of the dislocation of commerce, like can fully realise. Secondly, there is a pension for old age, a pension that lays once and for all the horrible spectre of destitution which has made the future gloomy for many a woman. Thirdly, compared with other professions, it offers a fair rate of remuneration for women. The salary in London commences at £70 and rises to £170, while there is room at the top for all those whose natural capacities fit them to be leaders and organisers. Lastly, and perhaps most important of all, it is work for which there is a crying need and work that is emphatically worth doing, for, in the noble words of the Minister of Education in his address to teachers, "We are trustees for posterity. We guard the lines of communication between the present and the future."

WARTIME IN A NEUTRAL COUNTRY.

656/22

By AN ENGLISHWOMAN IN HOLLAND.

OUTWARDLY, Amsterdam, save for the number of soldiers in the streets, cafés, and milk salons, and for the ubiquitous "war bread" (made, by mandate of the Burgomaster, of flour in its natural state, with sometimes the addition of potatoes and cereals—except for an occasional roll, no white bread is to be seen in Holland just now), seems little affected by the war. Though Dutch ladies are so domesticated, I saw no one knitting. "The Government provides all those things," they told me. But the Belgian refugees and the proximity of this war have resulted in a great seriousness. It was a curiously silent crowd that promenaded the Kalverstrasse, the principal evening parade of Amsterdam.

Picture-palaces invited the soldiers to enter at half-price. The shops showed many war books and postcards. Their neutrality was shown by picture postcards of the Crown Prince side by side with that of the Prince of Wales. Germany has been particularly busy disseminating literature glorifying herself and belittling England. Weedy-looking Highlanders of idiotic expression are the chief butts of the comic papers. Even "Jugend" descends to the feeblest jokes apropos of our Scottish regiments.

Powder Magazines.

All the principal magazines ordinarily devoted to art and literature appear to have become war journals pure and simple. The "Internationale Monatschraft" contains nothing but a series of signed articles, either upholding Germany or abusing England—"the merchant—not the kingly merchant who, while he works for himself with positive strength, serves also the good of his people, but rather the petty retail shopkeeper, who fears his competitors, and tries by all means lawful and unlawful to damage and destroy them."

Germany, on the other hand, is described as the selfless teacher of other nations, whose only crime lies in asking for "the light and air that others enjoy." "We trust to God," says another writer, "that He will not permit our destruction. We will win, and we are certain that we will win. If we do not win, then we cease to exist. We are determined to battle to the last man."

"Does England think herself prepared for us as she was prepared for smaller nations?" asks another writer. "Does she not know that we are more splendidly equipped for war than was ever any nation in the whole world?" Obviously Germany is in mortal fear of England. These articles prove it.

The Ubiquitous Spy.

And, needless to say, the German spy is ubiquitous in Holland. Germany herself would probably be the last to deny it. In a railway compartment in which I travelled two Belgian ladies who had just come from Brussels were describing their experiences. Suddenly noticing the expression on the face of a man sitting in the corner (he was ludicrously like a villain let loose from a cinematograph), they stopped short, and would say nothing more about Brussels, to which they were returning shortly. This is a common occurrence in Holland just now. The furtive watcher and the listener are never very far away. It does not need a Sherlock Holmes to know when they are near.

If the treatment accorded to a British woman travelling alone be any criterion of the attitude of a country, then my own experience would prove that Holland is the friendliest country in the world. Everywhere I was treated with quite remarkable kindness by all classes of people. The Germans appear to be cordially detested. "When war broke out," said a leading social worker to me, "50 per cent. of the Dutch people were in favour of the Germans and 50 per cent. against. Now the temper of the people has entirely changed, chiefly owing to the conduct of the Germans in B[illegible]m; and about 75 per cent. are in fa[illegible] the Allies and 25 per cent. in fav[illegible]rmany."

Unemployment [illegible] general Amsterdam, thoug[illegible]des have [illegible] hit. At [illegible]en's Exchange (an admirably equipped one with reading-rooms and waiting-rooms) the only seekers for work while I was there were a number of charwomen—sturdy, bare-headed, bare-armed, cotton-frocked women, quite different from our black-robed "char-ladies." "Typists, shopgirls, and needlewomen have not been affected," said the superintendent, Fraulein Van Oorschot, "but there are thousands of charwomen out of work. This is partly due to the number of women who are doing their own work since the war broke out and to the number of workless men whose wives are seeking employment."

The Salvation Army is doing some excellent work in Amsterdam, and eight members are chairmen of the Committees of the Central Support Committee founded on the outbreak of the war at the instigation of the Queen for the relief of distress. "Twenty thousand guldens are given every week to the poor," Commandant Ridsdale told me. "The money is raised locally, and administered as each town thinks fit. (Haarlem, for example, has set 500 men to work at road making.) Any deficit is supplied by the Central Committee at The Hague." The closing down of Van Houten's big model cocoa factory in Weesp, just outside Amsterdam, threw 1,500 people out of work. Five thousand diamond cutters have been thrown out in Amsterdam alone, and Rotterdam is much worse. Amsterdam has been kept busy caring for refugees, 12,000 of whom poured into the town in one evening, and the Salvation Army, under Commissioner Cunningham, has been indefatigable, not only in Amsterdam, but in The Hague, Rotterdam, Amersfoort, Leeuwarden, Flushing, and other places.

Forced Labour.

On my way through Utrecht I saw two of the homes organised by the Salvation Army for refugees—the Corn and the Fruit Markets respectively (the markets are still held once or twice a week). Boy Scouts, dressed like our own, and Free Sisters (young ladies working for the Central Refugees Committee) were in attendance, helping the energetic lady superintendent. A sick man lying on a mattress told me that the Germans had made him and 150 other Belgians prisoners of war. He had to dig trenches for them, and while he worked they hit him with the butt end of their rifles and kicked him continually till he was bleeding all over. He escaped at night by crawling through a wood on his hands and knees.

The Hague when I reached it looked dignified and peaceful. And the same might be said of the head registration offices of the Belgian Refugees Committee, which has been most ably organised by Baron Clifford, a young cousin of Lord Clifford of Chudleigh, who came over from Canada at the outbreak of the war and before going to the front has been working from nine o'clock in the morning till eleven o'clock at night, putting refugees all over the country in touch with one another. Over 70,000 names have been registered, and 300 or 400 inquiries for missing relatives are received daily.

A Nurse's Story.

His chief assistant is Mme. Dora Van Wynberger, herself a refugee, who was the only nurse left with the Belgian Red Cross superintendent when the Germans entered Antwerp. They made her a prisoner of war for five days, and took from her various mementoes bestowed on her by the British soldiers—epaulette buttons and the like. She spoke in highest praise of the abilities of the English Red Cross nurse and the bravery of the British soldier. "I have seen them smile and joke when suffering tortures," she said. "No other soldiers are quite like them."

There was a great rally to the Red Cross in Holland when war broke out. So Mr. Mexol, the secretary, told me when I saw him at the "Pages' House," a romantic sixteenth-century building, once the residence of the royal pages, now the headquarters of the Red Cross, which also owns a small model hospital staffed by 12 or 14 trained nurses. The membership is about 7,000, and the flourishing condition of the Red Cross now is due largely to the interest of Prince Henry, who reconstructed it after the Boer War. The Queen also takes the greatest interest in it, and always sees [illegible]s personally before they go to the [illegible]he mobilisation of the Red Cross [illegible]n war was declared was her idea.

[illegible]

The Lady's Pictorial, December 5th. 1914. 656/23 656.

WOMEN'S WORK IN TIME OF WAR.

The British Red Cross Society.

AS the war goes on the British Red Cross Society meets more and more adequately the many and varied calls upon it. The hospitals under its auspices are very full, especially those on the South Coast, for the reason that the men are there in excellent environment for health, and also well situated for returning to their regiments as soon as they are fit to do so. This is their greatest desire; those who are not too badly hurt to care for anything care only to get back! More and more warm clothes are needed for the men at the front, and what is most urgently required now that the cold weather is here is a great quantity of undervests and drawers woven. Our uncomplaining soldiers say that those who have received these things from friends are the warmest men in the cold army. Mrs. Payne Whitney has brought over from America a staff of well-known surgeons, fifteen fully trained nurses, all of them giving gratuitous services for a field hospital which is entirely equipped by Mrs. Whitney at her own expense. She has also brought over a very large store of clothing and supplies. Motor ambulances designed for this hospital had already arrived here. Nothing that could render it perfectly efficient had been forgotten. It is to be established as near to the fighting line in France and Belgium as is possible, and it has the authority of the British and French Red Cross Societies. It will, however, be used for German and Austrian as well as for the Allies' wounded. Mr. Payne Whitney is well known here as a great sportsman and an enthusiast for polo. His wife is a daughter of Mr. Cornelius Vanderbilt, and is a cousin of the Duchess of Marlborough. Mr. and Mrs. Whitney, who have had their beautiful property in France destroyed by the Germans, are probably o the same family. The invaders broke up their fine collection of Sèvres china, looted their beautiful enamels, entered the ladies' rooms—which had been hurriedly evacuated—tore up their clothes, and slashed the pictures.

There is some variety in the Indian working parties for the Red Cross. The Parsee ladies love needlework and greatly like to do it. The Hindoo ladies will work but spasmodically, but prefer the social aspect of work meetings; they love to decorate the portrait of the King Emperor and European workers with garlands of flowers. Nevertheless the amount of work gone through in India for troops in the field is wonderful.

Women's Volunteer Reserve.

A WOMEN'S Volunteer Reserve has been formed as a branch of the Women's Emergency Corps, with Viscountess Castlereagh as Colonel-in-Chief and the Hon. Evelina Haverfield as Hon. Colonel. The Corps will enrol qualified motorists, motor cyclists, and aviators, and will specialise also in signalling, first aid, cooking, riding, and driving, &c. The object of the W.V.R. is to organise, train, and drill suitable women to form disciplined bodies all over the country who will, in the contingency of invasion, or any other national crisis, be ready to assist the authorities in transport, the carrying of despatches, and in any other way. It is felt that since the country has been flooded with Belgian refugees all telling harrowing stories of the dastardly actions of German troops, the best means of averting a panic among non-combatants in the event of a raid or coast alarm, would be the existence of bodies of trained women to reassure, help, and protect the helpless members of the community, and co-operate with the military and civic authorities in all emergencies. Four companies of women are already drilling, the average number of women in each company being sixty. Branches have been formed at Reading and Walthamstow, and others are in process of formation. It is hoped eventually to form each branch into a recreation club for the members so as to combine a certain amount of amusement and social intercourse with the more strenuous work of the Corps. These clubs should prove a real boon to women, whose time during the week is occupied in shops or offices, and who have but little opportunity of obtaining exercise and fresh air. The age limit of recruits is eighteen to forty, and a medical examination by one of the Hon. Medical Officers of the Corps has to be passed. Further information may be obtained from the Hon. Sec., Women's Volunteer Reserve, Old Bedford College, Baker-street, W.

THERE is no excuse in war time for a meeting without a purpose, and one held recently at the headqu arters of the Young Women's Christian Association, when the Hon. Emily Kinnaird took the Chair and Miss Grace Tottenham, Director of the postponed London Finance Campaign, gave graphic accounts of the work done by the Association since the first days of the war, and the work the Association is planning to do in the next few months.

"If your place is a small place
Tend it with care,
He set you there
If your place is a large place,
Guard it with care,
'Tis He not you
Who set you there."

Miss Tottenham spoke of the great use the hostels and institutes had been since the outbreak of the war. The Victoria Hostel has been crowded with foreign girls, even though the Association has enabled over 1,000 girls to travel to their own countries in safety. On the register of the Employment Agency there are many hundreds of girls—typists, dressmakers, milliners, &c.—who are out of work owing to the war. For some of these situations have been found by the Agency, and some are at present receiving temporary employment in the Central Institute Clubroom at 3d. an hour. This can only last as long as orders are received and the Help Committee's fund lasts. The most important work of the Y.W.C.A. since the first days of the war, was explained by Miss Picton Turbervill, which is amongst girls at the towns where the Territorial and New Army Camps are situated. This is an urgent need, for the girls who frequent these camps are doing so at grave moral danger. But for this work workers are needed, and Miss Picton Turbervill explained the three kinds of workers that are needed: (1) Experienced "Organisers," to remain in the different towns for a week only to start the League of Honour, Y.W.C.A. Girl Guides, Clubs, &c. (2) "Followers-up," who will follow up these organisers and remain in the town until the war lasts. (3) "Supplementary workers," who will take the place at home of those who are more experienced and who volunteer to go to these towns.

Any educated worker will be welcomed if she applies to the Director of Work Amongst Girls, 20 Georgestreet, Hanover-square, W.

Huddersfield Chronicle, December 5th. 1914.

MASS MEETING FOR WOMEN.

On Tuesday evening the Town Hall was filled to overflowing, when a meeting for women and girls was held for the purpose of inaugurating the "League of Honour." The chair was taken by the Lord Bishop of Wakefield, who was supported by the Revs. Canon Rolt, D. S. Lees, B. Gregory, D. C. Tincker, the Mayoress, Lady Armitage, Lady Brooke, Miss Siddon, Mrs. James Hirst, Miss Blakeley, and representatives of all the societies, guilds, and classes for work among women in Huddersfield and district. The speakers were Mrs. Steinthall (Ilkley) and Miss Dashwood (London), who, at a few hours' notice, kindly took the place of Mrs. Morgan, who was prevented by illness from being present. Mrs. T. J. Dyson, whose singing always gives so much pleasure, was the vocalist, and the Huddersfield Ladies' Orchestra, conducted by Dr. A. Eaglefield Hull, added greatly to the success of the evening by their delightful and artistic playing. Messrs. Sheard and Osborne kindly presided at the organ.

The Bishop expressed pleasure in welcoming so large a gathering, and said he was present to make an appeal to the womanhood of England that their influence should be stirred to the uttermost on the side of honour, purity, courage, and temperance. This was the time when character was made and tried in the furnace of fire. He urged English women and girls to help and not to hinder the brave men who were going out to give their lives, if need be, for their country's honour; to let their memories of their women be unstained; to be worthy of them during these months of hardship and trial, and to be able to welcome them, on their return, with pure hearts and untarnished loyalty. He referred to the loneliness of soldiers' wives and mothers, and urged friends and neighbours to do their part in cheering and upholding those who sorely needed friendship to help them to withstand the many temptations which at such a time surrounded their lives. They had read in the newspapers that the Czar had forbidden the use of vodka, that curse of Russia, during the war, but even the power of the autocrat was small compared with the power of womanhood if they in a body would fight against the foe of intemperance.

Miss Dashwood said the League of Honour had been formed to uphold the standard of women's duty and women's honour during this time of war, and to create a strong public opinion for temperance. Already 120,000 women and girls were wearing the badge. She hoped all present would that evening sign their names for membership and would, themselves, become recruiters for the league. Our King and country needed every woman, as well as every man, to help at this present time. She wished to impress that the badge would be forfeited if the member did not live up to her pledge. A girl must therefore think before she took her badge into doubtful company or into undesirable places. The type of girl the League of Honour wanted were those who would help men to be true to their colours and true to themselves. The present time was full of opportunities for work and influence; if each girl would influence even one friend, England would be all the richer for it.

Mrs. Steinthall took for her subject the danger of small sins. "Broken promises" so often caused terrible sufferings to others. She hoped that those girls present who had promised to be true to men who had gone to the "front" would never forget their word of honour or behave in any way which would be unworthy or untrue. She urged parents to be firm with their children, never to promise what they could not give, never to threaten what they did not perform. Many young lives were ruined by the laxity of mothers who had failed to inculcate a sense of honour in their children. She spoke of the danger of "excitement" at this time. It was a time for women to think and act calmly if they wished to help others. Another foe was "over anxiety." It was natural enough, when dear ones were away and in hourly danger, but it caused brooding, and sometimes led to intemperance and sin. She herself had two sons, both at the war, and she could therefore speak with sympathy to all anxious mothers, but she would not have held them back, even had she known that their lives would be laid down for King and country.

Richmond Times, Dec: 5th 1914.

Women and the War.

A NEW DEVELOPMENT IN RICHMOND.

The Presbyterian Hall in Quadrant-road was crowded on Thursday evening on the occasion of a rally of local branches of the League of Honour for Women and Girls of the British Empire. The effort was designed to stimulate the existing branches and to widen the radius of local influence.

The League of Honour has been organised for the period of the war with the object of banding together women and girls to uphold the standard of women's duty and honour, to raise a strong force of public opinion and support among women and girls, and to combat some of the social and moral dangers emphasised by the war. It also aims at deepening the sense of woman's responsibility for the honour of the nation, and makes it clear that the manhood of the country is either raised or lowered by the influence of its womanhood. The league, too, it is hoped, will provide opportunities for mutual help, encouragement, and spiritual influence among women of all ranks.

Thursday evening's meeting took the form of a tea party, at which there were present some 250 girls and young women. St. John's Club had a contingent of 61, brought by Sisters Ethel and Lloyd; Mrs. Gouldsmith brought a party of 84; Miss MacQueen and Miss Cockburn came with members of St. Ursula's and the Violet Clubs; while in addition to those present from the Girls' Friendly Society, Miss Bugler was in charge of a large party of old St. Mary's and Holy Trinity scholars, whom she enrolled at the end of the proceedings. Lady Yoxall took the chair, and was supported by representatives of the committee in Mrs. Tempany, Mrs. Herbert Chapman, the Misses Mackenzie, the Misses Bugler and Culver, Mrs. Gates and Mrs. Bailey (representing the Richmond Committee of Women Workers), and two ladies from the National Union of Suffrage Societies. Mrs. Stewart, as hon. secretary of the committee, was responsible for the entire arrangements of a successful evening.

Light refreshments having been served, a short musical entertainment followed, and then Miss Maud Royden, the well-known speaker and worker among women, gave her address on "How Girls Can Help the Empire." She first of all enumerated the objects of the league, emphasising the dire need at this moment for womankind to rule their conduct after high ideals. Special sacrifice could be made by signing the pledge of total abstinence during the war. If Russia and France could do without strong drink England ought to be able to do so, too. Lastly, women could pray for protection, and for an everlasting peace.

Members of the league may be enrolled at next Thursday's meeting of the Parish and St. Matthias' Churches' Mothers' Union, in Ormond Lodge.

Evening Standard. 8th. Dec:

WHERE WOMEN CAN HELP.

Sir,—One of the difficulties affecting recruiting may, I think, be found in the fact that many men who would be glad to give their services to their country occupy responsible positions from which they feel they can ill be spared in these critical times.

May I suggest through your interesting paper that this is a difficulty which our women might help to solve, if only some united, intelligent effort could be made. The larger number of women now in commercial houses are employed as secretaries, correspondence clerks, and typists; but there is no reason at all why a number of capable business women should not be quickly fitted to carry on the work of company secretaries, accountants, cashiers, shipping clerks, and so on.

Should not the various associations interested in women's work be able to help by arranging short, practical courses of instruction designed to fit women more particularly for these branches of commercial work? Such a course, followed by a short experience in the actual work, would soon enable women to replace men in these positions, and release them for military duty.

It would be necessary to make a condition that such appointments be held only until the original holder could resume his position after the war; but there can be very few women who would not willingly accept so fair a condition. And when the war is over we hope business all over the Empire will be so good that there will be room for all.

Some associations, I see, are gratuitously training women shorthand writers and typists; that seems a great pity, as this branch of work is terribly overcrowded, and to send more into it is only increasing the disadvantages under which many capable, well-trained women already suffer.

Women and the War.

OUR DUTY TO-DAY.

THE PASSING OF THE UNTRAINED WOMEN.

It is extraordinary, when we come to think of it, what effect some of the wars of the last century have had on women's work in the world. The Crimean War brought into prominence the need that existed for the nursing of the sick and wounded being undertaken by women of education and training. The St. John Ambulance Brigade, with all its bearing on women's work, was the outcome of the Franco-Prussian war later on, and it seems as though the present great national crisis will mean the final passing of the untrained woman. It has not, of course, in any instance been the war itself that has worked the advance Certain conditions have prevailed, and it has taken the shock of war to make women realise the necessity of altering them.

Careers for Educated Workers.

The world is full of women workers to-day, and conditions of war, which have meant in many cases a lamentable shrinkage of income, have forced hundreds of others into the field. Totally unequipped are the latte for the battle of life, for, never anticipating such a contingency as having to earn their own living, these women have made no preparation for such an event. Very opportunely, therefore, comes a new publication, entitled "Careers," price 1s. 6d., published by the Central Bureau for the Employment of Women, 5, Princes-street, Cavendish-square, W. The book in question is really the fourth edition of "The Fingerpost"; and whoever compares it with the first edition of that work, published only ten years ago, will realise how enormously conditions have changed in the field of women's occupations in that short space of time. Even now "Careers" does not pretend to have said the last word in the matter, for conditions are constantly changing, and scarcely a month passes without important modifications in one or more branches of occupation.

Wide Experience.

Over one hundred articles, each written by an expert worker in the profession described, are contained in "Careers," and at the back of it all is the Women's Employment Bureau, who have had so many years of experience in dealing with the advantages and disadvantages under which women work. This is no organization of mushroom growth, nor one called into being by the present national crisis. It has the experience of many years to fall back upon, and is therefore able to avoid or surmount the difficulties that crop up in the paths of other organizations of more recent date. Those out of employment at the present moment cannot do better than apply at 5, Princes-street, where Miss Spencer, the secretary, will be found ready to give the best of advice and help, and to take a kindly human and personal interest in each applicant.

Help for Musicians and Singers.

Lowell tells a charming story in verse of a shepherd whom some called shiftless because he had hands too slender "to plow or reap or sow," but who made music so sweet that it filled men's eyes with tears, and earth seemed sweeter to live upon. Since the early days of August the industrial woman and her work have filled the minds and days of many people, to the exclusion of the musicians, artists, etc. These professional women who have been going through deep waters the last few months should now apply to Miss Spencer at the address given; who is prepared to extend help to them quite as much as to the young girl who cannot make up her mind as to what she is most fitted for, and needs the advice of some one who knows all the

he many temptations which at such a time urrounded their lives. They had read in the newspapers that the Czar had forbidden the use of vodka, that curse of Russia, during the war, but even the power of the autocrat was small compared with the power of womanhood if they in a body would fight against the foe of intemperance.

Miss Dashwood said the League of Honour had been formed to uphold the standard of women's duty and women's honour during this time of war, and to create a strong public opinion for temperance. Already 120,000 women and girls were wearing the badge. She hoped all present would that evening sign their names for membership and would, themselves, become recruiters for the league. Our King and country needed every woman, as well as every man, to help at this present time. She wished to impress that the badge would be forfeited if the member did not live up to her pledge. A girl must therefore think before she took her badge into doubtful company or into undesirable places. The type of girl the League of Honour wanted were those who would help men to be true to their colours and true to themselves. The present time was full of opportunities for work and influence; if each girl would influence even one friend, England would be all the richer for it.

Mrs. Steinthall took for her subject the danger of small sins. "Broken promises" so often caused terrible sufferings to others. She hoped that those girls present who had promised to be true to men who had gone to the "front" would never forget their word of honour or behave in any way which would be unworthy or untrue. She urged parents to be firm with their children, never to promise what they could not give, never to threaten what they did not perform. Many young lives were ruined by the laxity of mothers who had failed to inculcate a sense of honour in their children. She spoke of the danger of "excitement" at this time. It was a time for women to think and act calmly if they wished to help others. Another foe was "over anxiety." It was natural enough, when dear ones were away and in hourly danger, but it caused brooding, and sometimes led to intemperance and sin. She herself had two sons, both at the war, and she could therefore speak with sympathy to all anxious mothers, but she would not have held them back, even had she known that their lives would be laid down for King and country.

Gates and Mrs. Bailey (representing the Richmond Committee of Women Workers), and two ladies from the National Union of Suffrage Societies. Mrs. Stewart, as hon. secretary of the committee, was responsible for the entire arrangements of a successful evening.

Light refreshments having been served, a short musical entertainment followed, and then Miss Maud Royden, the well-known speaker and worker among women, gave her address on "How Girls Can Help the Empire." She first of all enumerated the objects of the league, emphasising the dire need at this moment for womankind to rule their conduct after high ideals. Special sacrifice could be made by signing the pledge of total abstinence during the war. If Russia and France could do without strong drink England ought to be able to do so, too. Lastly, women could pray for protection, and for an everlasting peace.

Members of the league may be enrolled at next Thursday's meeting of the Parish and St. Matthias' Churches' Mothers' Union, in Ormond Lodge.

Evening Standard. 8th Dec:

WHERE WOMEN CAN HELP.

Sir,—One of the difficulties affecting recruiting may, I think, be found in the fact that many men who would be glad to give their services to their country occupy responsible positions from which they feel they can ill be spared in these critical times.

May I suggest through your interesting paper that this is a difficulty which our women might help to solve, if only some united, intelligent effort could be made. The larger number of women now in commercial houses are employed as secretaries, correspondence clerks, and typists; but there is no reason at all why a number of capable business women should not be quickly fitted to carry on the work of company secretaries, accountants, cashiers, shipping clerks, and so on.

Should not the various associations interested in women's work be able to help by arranging short, practical courses of instruction designed to fit women more particularly for these branches of commercial work? Such a course, followed by a short experience in the actual work, would soon enable women to replace men in these positions, and release them for military duty.

It would be necessary to make a condition that such appointments be held only until the original holder could resume his position after the war; but there can be very few women who would not willingly accept so fair a condition. And when the war is over we hope business all over the Empire will be so good that there will be room for all.

Some associations, I see, are gratuitously training women shorthand writers and typists; that seems a great pity, as this branch of work is terribly overcrowded, and to send more into it is only increasing the disadvantages under which many capable, well-trained women already suffer.

Since the early days of August the industrial woman and her work have filled the minds and days of many people, to the exclusion of the musicians, artists, etc. These professional women who have been going through deep waters the last few months should now apply to Miss Spencer at the address given; who is prepared to extend help to them quite as much as to the young girl who cannot make up her mind as to what she is most fitted for, and needs the advice of some one who knows all the ropes to guide her into the right avenue.

Disabled Soldiers and Sailors Workrooms.

The Queen, accompanied by Princess Mary, and attended by Lady Bertha Dawkins, paid a surprise visit to the Disabled Soldiers and Sailors' Workrooms, at 122, Brompton-road, S.W., yesterday afternoon. Her Majesty made numerous purchases for Christmas presents, and was much distressed to hear that in consequence of the war the sales of the disabled men's work had decreased by nearly £1,000 during the past three months.

New Zealand Gifts.

The High Commissioner of New Zealand has sent a generous gift of clothing from the people of New Zealand for the poor of London, the Soldiers and Sailors' Families Association, and relief societies dealing with distress caused by the war. Eighteen enormous iron-bound packing cases have arrived at the headquarters of the Women's Emergency Corps in York-place, and will be opened by Mrs. Pember Reeves to-day. The clothes will be sorted, listed, and allotted as soon as possible to the various agencies already selected to distribute them.

LIFE LINES: How Women ar Helping Wome

MUCH useful work is being done by the Women's Suffrage National Aid Corps. organised by the Women's Freedom League, and with Mrs Despard, sister of General French, as President. Not only in London, but all over the country. in every town where the League has a branch, an intelligent effort is made by the Corps to do work that really helps.

Dining on 1½d.

If you look in at 1, Everitt-street, Nine Elms, you will find Mrs. Henry Tippitt, the well-known novelist, cooking meals for those who cannot afford to spend more than a penny or so on their dinner, and it is not unlikely, if you happen to call at the right time, that you will find a popular actress scrubbing the floor. The restaurant is a great boon to women who have been hard hit by the war. For one penny soup, bread, and pudding can be bought, and it is possible to dine quite well on 1½d Most of the provisions are given, and all the work is done by members of the corps. Mrs. Tippitt thinks nothing of cooking 170 meals a day.

Customers can either take their meals in the restaurant or carry them away to

Mrs. Henry Tippitt cooking the famous Penny Dinners.

Women and Girls out of Employment making Children's Clothes.

heir own homes—an arrangement which uggests very well the sympathetic lines n which the corps works. Between 12.30 nd 2 o'clock there are busy scenes at the estaurant, and many a customer has been heard to say that "she'd never have thought the Suffragettes were such good orts."

Polly Atkins.

In Riseholme-road, South Hackney, a workroom has been organised, where a number of women thrown out of employment are happily engaged in making soft toys. Some of the artistic members of the corps have designed surprisingly novel dolls and animals. One soft doll, known as Polly Atkins, is so promising that she has been registered. The workers are paid from 3d. an hour, and they are busy from 9 to 5. Saturday is an off-day, so that they may try, if they like, to find more remunerative work—the toy-making being looked upon by the corps as primarily a stop-gap.

An Outfit for 7s. 6d.

At 21, Edgware-road there is another workroom, where women and girls make clothes for children at 3d., 4d. or 5d. an hour. A good sale is found for the clothes, chiefly shirts and complete outfits for children. An order has already been received from the War Office for 250 shirts. The children's outfits, which can be bought for 7s. 6d., include not only a suit but underclothes as well.

When it is remembered that similar workrooms are being organised by the League's many country branches, it will be realised that the work is on a really helpful scale. The general secre corps, Miss F. N Stephen, at street, Adelphi, has come into c several distressing cases. One w had lost her employment as artificial flowers, was literal when she called at the office given a meal at once, and Stephen succeeded in finding

WOMEN'S WORK IN WAR TIME.

THE BRADFORD SCHEMES.

One of the features of this time of war which must have struck all who take an intelligent interest in affairs is the large amount of social work that has been taken up by women. To say that there has never been anything even comparable to it would be absurdly inadequate, for the simple reason that what one may describe comprehensively as the "women's movement"—the quickening, politically and otherwise, of the desire for social service among women—which has supplied the workers, is in so large a degree a modern growth. So far as the women's political organisations are concerned the truce declared at the beginning of the war has been loyally observed; none now is for a party, all are for the State; and sectional differences seem to have been obliterated in the all-absorbing duty of helping the country through its hour of trial. It may be of interest, therefore, to draw attention to some of the phases of women's work in Bradford, which are typical of the best work of the kind being done in the country.

THE WOMEN'S EMPLOYMENT COMMITTEE.

Perhaps the largest of the schemes is that conducted under the auspices of the Lady Mayoress's War Guild. The organisation embraces, by means of its ward committees, the whole city. The Guild is engaged in making garments for our soldiers and sailors, and every week huge bales of articles are sent off to the naval and military depots and hospitals, the number that has been despatched so far being 25,000. Originally the Guild received all kinds of garments, but there has since been a sub-division of work. Garments intended for general relief purposes are now sent to a committee whose headquarters are the Cinderella Club; and worn clothing is sent to the Women's Employment Committee, whose depot is at the Friends' Meeting House.

The Women's Employment Committee, by the way, is a most interesting organisation. The idea originated with the National Union of Women Workers, and it was taken up with enthusiasm by the Bradford branch of the National Union of Women's Suffrage Societies and other bodies—there being over twenty women's organisations represented at the conference at which the scheme was launched. The committee has been of great service in providing work temporarily for women out of employment. Those so assisted have been principally dressmakers and other needleworkers, some machinists, and casual workers. Three work-rooms are in use—in each case the premises have been lent to the committee—and the women employed are engaged wholly in the making of garments for relief purposes, so that they do not compete at all with ordinary labour. In addition to making new clothes—materials for which are supplied by means of donations—the workers do much in the way of mending and adapting worn clothes, which are then turned to good account. The Women's Employment Committee, it should be stated, is a sub-committee of the City Representative Committee. It is in close touch with the Labour Exchange, and Miss Drinkwater (head of the women's department of that institution) is ex officio a member of the committee. Work of this sort is going on all over the country, and in London, where the National Union of Women's Suffrage Societies have established a great many work-rooms, the toy-making industry is being started.

MEALS FOR NURSING MOTHERS.

A scheme which is to be inaugurated on Monday has for its object the provision of meals for expectant and nursing mothers. The National Union of Women Workers, the National Union of Women's Suffrage Societies, the Women's Co-operative Guild, the Women's Labour League, the British Women's Temperance Association, and other bodies have all interested themselves in this question. They brought the matter to the attention of the Health Committee, who gave it sympathetic consideration and support. The Health Committee has for some time been grappling very earnestly with the problem of infant mortality and by means of the milk depot has done something to combat the dangers attending the artificial feeding of babies. But primarily, of course, they wish to encourage the natural feeding of babies, and as one of the great causes of the inability of mothers to feed their infants in the natural way deficient nutrition the committee realised that the scheme was one that deserved their assistance. It is equally important, if children are to be born healthy, that the expectant mother should be properly nourished.

For the purposes of this scheme the Health Committee have taken over the kitchen at the Cartwright Hall, where the necessary cooking will be undertaken. The meals—which will be carefully prepared to meet the needs of the class of persons to be fed—will be taken by motor-van to eight centres in different parts of the city. The service of the meals and the control of the centres will be undertaken by the Women's Maternity Care Committee, which is composed of representatives of the various societies already alluded to. The intention is to provide one good meal a day—dinner, at 1.30—for those poor expectant and nursing mothers who are considered to need the assistance of the committee. The women inspectors of the Health Department are getting into touch with such cases and reporting them at the depots, and on Monday there will probably be 150 dinners served.

CLUBS FOR SOLDIERS' WIVES.

Another movement which promises to be very helpful to a class of women who should have every consideration in this period of crisis is that which is aiming at providing clubs or recreation-rooms up and down the city for soldiers' wives. Many of these women, naturally, are very lonely; they are anxious about the welfare of their husbands and are in need of some place where they can meet together to be cheered by society and to read the papers. This need it is hoped to meet by the clubs for soldiers' wives, of which, probably, there will be fifteen for the whole city. Two of them are about to be opened, one of which will be on the premises of the Young Folks' Club in White Abbey.

A committee over which Miss Gregory presides and in which Mrs. F. T. Woods, wife of the Vicar of Bradford, is taking an active interest, is starting a League of Honour for girls, in connection with which a mass meeting will be held to-morrow evening in the Mechanics' Institute. The formation of a similar league for women will be attempted later. The objects of this movement cannot be better stated than by quoting from the league's explanatory leaflet. They are:—

(1) To band together the women and girls of the Empire, with the object of upholding the standard of women's duty and honour during this time of war.

(2) To raise a strong force of public opinion and support among women and girls, with which to combat some of the social and moral dangers emphasised by the war.

(3) To deepen, among women and girls of all classes, the sense of their responsibility for the honour of the nation, and to make clear the fact that the manhood of our country is either raised or lowered by the influence of its womanhood.

(4) To provide opportunities for mutual help, encouragement, and spiritual influence among women of all ranks.

The condition of membership is a pledge "to do all that is in my power to uphold the honour of our nation and its defenders in this time of war, by prayer, purity, and temperance." The promoters of the movement hope to establish centres for the league in different parts of the city—using as far as possible existing girls' clubs—and to interest the young people in ambulance and cookery classes, and so on. To-morrow evening's meeting is being organised through the Bradford Union of Girls' Clubs, the committee of which has been promoting the league. The secretary is Miss C. A. Law.

One other matter remains to be mentioned. It is hoped shortly to have in Bradford a women's patrol. The desirability of such patrols in places where there are large numbers of troops seems to have been recognised by the Chief Commissioner of Police. The patrols would be voluntary and would, of course, in no sense be women police.

656/26 63c

Evening Standard, Dec: 14th. 1916.

WINTER AND THE WAR.

The public meeting at Queen's Hall next Wednesday, December 16, at 8 p.m., in connection with the Women's Service scheme of the London Society for Women's Suffrage should prove unusually interesting to those women, and men, too, who are anxious to give real thought to the ethics of wartime. Very considerable interest is being felt in the appearance on this occasion of Professor Gilbert Murray, who, not only by reason of his high academic distinction but also as author of a philosophic treatise on the position of our country, has a large following eager to hear what further he has to tell the public.

Problems Affecting Women's Status.

Another speaker whose views will command attention is Sir George Pragnell in his threefold rôle of a leading business man, chairman of the National Patriotic Association, and serious student of all problems affecting women's status and employment. Last but not least, Lady Frances Balfour will be in the chair, and will make her first public pronouncements in the south since war began. Admission is free, while numbered and reserved seats may be obtained from Miss P. Strachey, 58, Victoria-street, S.W., or at the Queen's Hall. A collection will be made and divided between the "Women's Service" and the Queen's "Work for Women" funds, while doors will be open at 7 p.m., and there will be music at 7.30 p.m., when patriotic songs will be rendered by the North London Collegiate School for Girls.

The Standard, Dec: 16th. 1916.

Viscountess Castlereagh, who is to speak at the meeting in support of the Women's Volunteer Reserve which is being held at the Mansion House at three o'clock this afternoon, has taken a great interest in all the efforts which have been made since the war began on behalf of the woman worker thrown out of employment. In peaceful times she is devoted to out-of-door pursuits, hunting, shooting, stalking, and gardening being her favourite recreations in this direction. Other speakers at the meeting will be Mr. Henry Chaplin, M.P., and the Hon. Mrs. Haverfield. The Lord Mayor will preside.

Another keen worker for women's welfare in these hard days is Lady Roxburgh, the hon. secretary of the Queen's "Work for Women" Fund, who is to speak to-night at a public meeting on "Winter and the War," to be held in Queen's Hall. Lady Frances Balfour will preside, and the speakers will include Mrs. Henry Fawcett and Sir George Pragnell.

The Standard, Dec: 22nd. 1914.

WOMEN WHO WORK.

The Marchioness of Dufferin and Ava yesterday opened Helena House, which is the outcome of a practical attempt to meet the needs of professional women of gentle birth who by reason of the war have suffered loss of income or work.

Helena House, 17, Holland Park-gardens, has been given rent free for the duration of the war by Mr. Eugene Sandow, who, with his wife and daughter, has worked hard for the success of the scheme. Mrs. James Burn has provided most of the furniture, other friends have helped, the National Food Fund will supply provisions, and the net result is a very charming house, luxuriously furnished, where the catering arrangements are such that guests are only asked to pay 6s. a week to cover boarding expenses.

There is accommodation for about 30 people, but at present a little more furniture is needed, and £100 in cash to start the undertaking free from debt. "After we have that," said Mme. Bertha Moore, the honorary treasurer, "we shall be able to run our own concern."

The Queen, December 12th. 1914. 65/27 65

SUBSISTENCE LEVEL.

By MRS MARGARET HEITLAND.

THERE ARE MOMENTS when I feel that we oughs all to come down to subsistence level, and be content to stay there till at least the crisis of this war shall have passed. There are moments when it seems that we ought to be content and even grateful for the bare necessaries of existence, without asking for books or stimulating society or art, or any of the beautiful and delightful pleasures which the people of our race have evolved in the long traffic of their life upon the globe.

In this mood I decide that the Government which directs our fate ought to apportion a tiny maintenance grant to each of us who is unemployed, and instruct us that if we are not wanted for the military, naval, medical, or nursing service, we should remain perfectly quiet and keep out of other people's way. The female civilian would not be wholly idle: she would knit, of course, and cook the meals for her family. The male civilian—it is not quite so clear what he would do—but he would read the papers at the free libraries, smoke, and possibly fill coal-scuttles out of chivalry.

The policy, however, of keeping policy at subsistence level, has a simplicity about it which obviously commends it to governing bodies in general. The various committees which are administering the big public relief funds are, I observe, quite at their ease when they are arranging schemes by which large numbers of distressed persons are to earn (or, anyhow, receive) the now stereotyped "minimum" wage of threepence an hour. They move with a manifest assurance and self-confidence when drafting schemes of this sort. They show a resolute bearing in carrying out a policy which is not easily criticised. For they are ensuring that the people under their care shall have only bed and board—bare bed and bare board—without superior benefits to anybody. The whole system is even and level as the ocean becalmed.

The policy, however, of keeping people at subsistence level, whether by the giving of maintenance grants or by the payment of a bare subsistence wage, only settles the difficulties of some people and for a certain time. On a short exciting journey travellers are content to have little property and few amusements. Similarly during a few months of tremendous national stress people are content merely to wait and exist if they cannot actively serve. But there comes eventually a moment when they tire of inaction or of a much suppressed condition of life, and begin to demand the more complicated interests and occupations that have always been habitual to them. We have seen lately how even the war-driven Belgians have quickly resumed in this country the even tenour of their way, or at least a fair imitation of it. Scholars go on with their studies, musicians organise concerts, the women make clothes for their soldiers at the front, and reconstruct a family *ménage* out of the rather unpromising materials which the British cheap house-builder provides. And the families soon range themselves according to their places in the social scale at home—professors, teachers, managers of businesses, clerks, *chefs de rayon* and ladies of the counter, artisans and farm labourers all quickly falling into line at just the spot in the procession which life has hitherto reserved for them. There is no such person as the refugee who can be described as "a refugee and nothing more." And there are a great many refugees for whom life at subsistence level is not enough. If this is the case among folk who have lost their property, their professional appointments, and, for the time being, their national foothold, how much stronger and more urgent is the call for congenial labour and interests on the part of our own people?

Our civilians, and more particularly the women civilians, are waiting for a lead from the Government, its departments, and committees, in regard to two matters. They call for a lead with regard to their duties in relation to the war and all its future contingencies. They want to know how they can best serve the interests of their country as national units. Many persons have asked what duties they, as civilians, should be ready to perform in the event of the country being invaded. This, however, is not by any means the only British civilians' question. Civilians do not care to feel that they are regarded merely as part of the country's "live stock" which, under pressure, must be moved about from one place to another of possibly greater security. They would like to know what they can do that would really most effectually strengthen our side in the war.

Some people have, of course, received their answers to this question. The stronger and younger men know theirs—to cease to be civilians. The older and weaker men are left in evident perplexity.

Women receive hardly any lead at all. They have to lead each other without Governmental guidance. A powerful lead was given the other day by Mrs Scharlieb, who, in a letter to one of the newspapers, put forward the suggestion, advanced by me in these pages somewhat earlier, to the effect that women ought to seize the present opportunity to begin a course of professional medical preparation.

The medical profession, of which this distinguished surgeon is a revered member, satisfies every wish that now torments the civilian woman of ability. Does such a woman long to take her share in the war by putting fresh life into those who are fighting for our cause? She can do so as a doctor. She cannot do it easily, it is true; the Government and the military authorities do not ask for the services of medical women. But they are not refusing them. The medical women in charge of the hospitals sent out by the Scottish Federation of Women's Suffrage Societies are going to France and Serbia, and their services will certainly do something to relieve the strain which now falls on the overworked medical men. Members of this noble profession are almost the only civilians who can, as a profession, feel that they are, without question, performing in time of war just the kind of patriotic service that is of the highest value. There is accordingly no manner of doubt that a public lead should be given to women to become doctors.

It ought, too, to be a lead of a practical kind. The country, recognising that its supply of medical women is, as Mrs Scharlieb has pointed out, quite insufficient for the present demand, ought to ensure that young women students and practitioners should be able to gain experience in a large number of hospitals. At present many hospitals have no medical women on their staff, and, in effect, close their wards to women medical students. A kind of inertia, rather perhaps than hostility, prevents them from making such changes in their arrangements and ideas as would allow of women gaining the wide knowledge of cases and treatment which they need.

But apart from medicine (for which the present can only be a time of pupilage), what calling is there just now for women who wish to live above subsistence level? Admittedly, such a calling is hard to name.

This is the other side of the matter on which women are asking for a lead from the highest public bodies. The Central Committee for Women's Employment has for some time past promised to draft a scheme to meet the case of women who require something other and better than the threepence an hour workroom. It is quite time that the scheme or schemes should be drafted and circulated. Every week now the difficulty becomes more manifest.

The difficulty is shortly this. People who have had a very great deal of wealth now perceive that, owing to war taxation, they will have less. They are in many cases (unhappily by no means in all) giving away large sums of money for the benefit of those who are beneath subsistence level. This is bringing them, the very wealthy, a little nearer to that level themselves, though they are still a long way above it. Also—and this is an important circumstance—these very wealthy persons have much less leisure than in times of peace for the enjoyment of works of art, fine music, beautiful gowns, jewels, curiosities, &c. What, then, is to be done?

It is often assumed that unless very wealthy people are spending lavishly upon themselves the rest of the world must groan in misery. The suggestion put forward by Mr Sidney Webb in one of his pamphlets cuts this knot, I think, in a manner which should be satisfactory to all parties. Mr Webb proposes that the very rich (who are not you or I) should buy for other people some of the things they would—to release the rest of us from poverty—have bought for themselves. This idea would have, of course, to be adapted and altered a little, and could not be applied quite literally. It would be no use giving a first edition to a child in Hoxton or a twenty-guinea evening "model" to a Flemish refugee at Marshy-le-Soken. But, with modifications, the idea might be carried out pretty thoroughly and in a way that would help a good many of those whose whole education and manner of employment demand that they should live distinctly above subsistence level. The woman who is not buying a first-rate evening gown this winter might order from the otherwise disappointed dressmaker one or two pretty frocks for young relatives with small means. The man who thinks he must resist the picture sales himself or feel a selfish pig could have the much greater satisfaction of presenting to an institution or public gallery some work by a young artist just making his way when the war broke out. Schemes of this kind will come into the mind of each person, granted that the mind is open to receive them.

There are, I know, persons who consider that the poor or the relatively poor should be made to "feel" the war. They imagine (oddly enough) that children who rarely have an egg for breakfast will feel the war more if they go on not having an egg. There are others who have already reduced the wages of their servants, alleging a similar motive rather than the desire to pay less for the same amount of labour. I do not propose to argue with people of this school of thought, who, I fancy, are inwardly opposed by an uneasy conscience.

In considering any and every scheme for the maintenance of people above subsistence level, the point we must always keep before ourselves is that it is on the *exchange of labour* that the social and economic health of a community depends. The exchange of labour is in the social organisation what the circulation of the blood is in the physical body. Recognising, then, the enormous importance of the exchange of labour when it works naturally and freely, we must do all in our power to ensure that this exchange, already checked by the war, shall not be further checked through any stinginess of ours. The lowering of the wages of workpeople or the dismissal of well-paid workers and the taking on of inferior hands in their stead are acts which tend to check the exchange of labour and to bring down more people to subsistence level instead of keeping them on their own level.

We cannot create a false demand for elaborate luxuries which people do not require. Do what we may, there must remain workers for whose skill there is no present call. The Countess of Lovelace, I see, suggests that some kind of loan fund might be raised to help these people over their present troubles. It seems to me that it might also be possible considerably to extend the present Civil List by adding to it a sort of War Civil List with its own fund, out of which grants could be made to really meritorious professional people and artists whose unemployment is directly due to the war, and may be expected to terminate when peace returns.

Woman's World.

Ministering Angels at the Front.

(BY OUR SPECIAL LONDON CORRESPONDENT.)

War, as carried on in the days of Florence Nightingale, the Ministering Angel of the Crimean War, was a very different affair to the warfare of to-day, but the splendid work continues, and thanks to Miss Nightingale's noble example we have hundreds of ministering angels with the soldiers at the front, soothing and comforting the wounded and dying, as did the Lady of the Lamp in olden days. It is, however, of especial interest to read the testimony of a Guardsman, who writes of his experiences in the late battles, and is now in a French hospital recovering from his wounds. "Before closing," said Trooper Walklett, "I must give a word of praise to the nurses of the Red Cross. No one save those who have had the experience can realise the happiness and comfort they bring. Cheery in manner, stout in heart, and far above the average masculine nurse, their names should be recorded in history's pages, for they are none other than the ministering angels to poor 'Tommy.' One cannot find sufficient words of praise for them." It is to be hoped that some special Order for Merit, answering to the Victoria Cross, may be awarded to these brave women at the conclusion of the present terrible war.

THE WELCOME MEDICAL MUSEUM.

The old war relics now on view at the Welcome Medical Museum in Wigmore Street should be seen by all interested in these things. Amongst them are some letters from the Lady of the Lamp, Florence Nightingale, and they show the great care and sympathy she manifested for the poor soldiers in the Crimea. One dated from a branch hospital at Skutari, dated September 22, 1855, refers to some small parcels, containing watches and trinkets belonging to dead men, whose last words were that she should send them to their friends. It is deeply interesting to read these old letters in view of the present war. But then surgery was rude in comparison with the present day, there were no blessed anæsthetics, and the awful operations performed had to be conducted in full consciousness of the agony. There is also a collection of amputation knives, saws, crude tourniquets, &c. One of the instruments shown was actually used in amputating Nelson's arm There is also the hero's medicine chest and the medical chest which was carried amongst the Duke of Wellington's baggage during the Peninsular War. My own grandfather went through the Peninsular War, and received a bullet in his leg, which was never extracted. His young wife, with two children, one an infant, was outside the fort of Gibraltar during the whole of one night in a small open boat, trying to get to her husband, who was inside the fort, and her experiences were most thrilling.

THE WATCH OF INTERCESSION.

A nation knelt in prayer; below in the crypt lay the bodies of Nelson and Wellington, above a thousand people had gathered in the early dawn, the first to keep the special watch of intercession, which lasted for a day and night, and it was a most wonderful, a most impressive sight, devoid of all the ceremony and pomp so usually associated with our great metropolitan Cathedral. And, perhaps, the most impressive thing was that it was pre-eminently a woman's gathering, women predominated. Looking through that vast assembly in the dim light of early morn, women were to be seen everywhere, mothers, wives, sweethearts, hundreds in mourning, all engaged in sending up agonising petitions for the safety of the men they loved and the ending of the war. The women knelt in earnest intercession, it was their hour of prayer.

EMPLOYMENT OF GIRLS.

It is somewhat of a problem how to employ young girls of sixteen who have been thrown out of employment by the war. There are thousands of these girls in our great city who have been the breadwinners for their families, and are now thrown out of their berths. They are the dressmakers' assistants and apprentices from the West End, factory girls from West Ham and other districts, usually bottle-washers and unskilled workers in pickle and jam factories. In the provinces there are hundreds too more especially in Lancashire, where the mills have closed down or reduced their workers. These mere children, were they of the middle class would still be at school, and well would it be if the greater number could be sent there now, but their wages were an asset the home counted upon for its maintenance, were it only a few shillings earned at matching, and without them the rent cannot be paid. Go to any of the large drapers' shops in the West End, or elsewhere, and you will see these "cute" little shoppers, mere children of 12 and 14, or even less, matching silks and ribbons with a skill beyond their years, chatting with one another and checking the shop assistants if they are not sufficiently sharp. They are often pretty children, and very energetic and hard working. But it is the elder ones amongst them who are in the most danger. It is here women can help The Central Committee of Women's Employment are taking the matter in hand, and it is thought that a great opportunity is offered to use this period of enforced unemployment to give the girls useful training in various trades. The training should be undertaken where possible by the local education authorities, and a maintenance grant coming from the Queen's Fund be given to girls who have been wage-earners, through the local relief authority. Instruction in various trades, cookery, laundry work, making and mending clothes, household management, or elementary housewifery for the unskilled will be given, while classes in shorthand, bookkeeping, commercial arithmetic, and office routine might be formed for those who are skilled. The Board are prepared to facilitate the formation of such classes, and have suggested that the fees should be remitted. Girls receiving such training might receive grants of 4s to 6s a week, and a midday meal in addition. Those of my readers who feel they can help in this most desirable work should communicate with Miss Mary Macarthur, hon. secretary, General Committee on Women's Employment, 8, Grosvenor Place, Hyde Park Corner. S.W

DOLLS' TEA SETS.

There is nothing a small girl loves so much as a dolls' tea or dinner set, and up to the present I believe the majority of these have been made in Germany. But why not British made? The above committee have taken this matter in hand, I hear, and are employing women in making dolls' tea sets. The work is going on favourably in the Potteries, and particularly at Stoke-on-Trent, and one firm report they are thus able to employ more women than for a long time past. Girls are especially clever at the work who have been employed in pottery-ware making, and in the above town alone some 23,000 women and girls are normally employed in this trade, but since the war unemployment has been the result. The manufacturers have been urged by the toy shops to take up the work, as the demand for these tea sets is very great at Christmas. Toy dinner, tea, and desert services, also toilet sets are all made by a process the girls quickly pick up, and at which they speedily earn good wages. Box-making is also another industry which is being taken up, and the making of the boxes for the tea sets, also the packing of them, will afford further employment to women and girls Hitherto all these things have come from Germany, but if our British women and girls can capture the trade, and there is no reason why they should not be equally skilful, much good money may be earned. It is for women to buy only English and French made goods, and thus help once more to keep business going as usual.

WOMEN WORKERS & THE WAR.

(To the Editor.)

Sir,—I see in to-day's "Daily News" a suggestion about an advisory committee to take special precautions against a repetition of the scandals in regard to Army contracts which were brought to light after the South African War. May I supplement that suggestion with a recommendation that two or more practical women should represent on the committee the feminine side of labour?

This side needs much adjustment and protection from the person (male or female) who looks upon a war crisis as an opportunity to make money out of the workers. A standard price for each garment or article, set by an expert, and Government protection in seeing the thing carried out, would save thousands of women from distress and the unpalatable course of taking through charity what they have earned with hard work.

Women have the kicks, and not the halfpence, of war. Very few of the laurels fall their way. But suppose they stopped working. Would not our new Army find itself in the position of Dick Swiveller—unable to go out because it had no clothes, not even an umbrella?

So let us be represented on that suggested committee.

MAUDE A. CLARKE.

Leyton Old Hall, Leyton, Dec. 18.

LONELY WIVES AND MOTHERS.

CLUBS AND AMUSEMENTS.

DEPTFORD'S CARE FOR SOLDIERS' HOMES.

RECORD RECRUITING.

The borough of Deptford, which includes New Cross, St. John's, and a large part of Brockley, has risen to the occasion in connection with the war. It has provided 5500 recruits to the new Army, enrolled at a well-organised recruiting station at the Town Hall. More than this, it is looking after the interests of the wives and children of the brave men who have left their homes, and it is doing so in a very satisfactory manner without any flourish of trumpets.

Lady St. Cyres has, at her own expense, established a women's club at All Saints' Institute, New Cross. Here, amid comfortable surroundings, the wives of soldiers and sailors are entertained at tea every Wednesday afternoon, and, what is more, they are allowed to bring their babies under three years of age. A concert or some other form of entertainment is provided, and meanwhile many of the women knit comforts for their husbands or sons on service. A band of local women render willing help in arranging for the comfort and pleasure of their guests, serving out tea, nursing the babies or doing other acts of kindness. Some 50 or 60 women assemble each week, and when they were asked whether they would like the club discontinued for Christmas week—always a busy time for the housewife—they unanimously decided against any break in the continuity of the meetings. Lady St. Cyres provides copies of illustrated papers for the use of the women, and, in short, everything is done to bring a few hours of pleasure into the lives of Deptford's lonely wives. The women are taught to cut out and make children's garments, which they may purchase at the cost of the material when completed, and it is proposed to give lessons also in the preparation of economical dishes.

Established by Mr. R. C. Phillimore, one of the local London County Council members, Unity Hall, in Evelyn-street, Deptford, is also doing good work with a club for wives and mothers of soldiers and sailors. The work here is conducted by members of the London Society for Women's Suffrage under Miss Goddard. A girls' club has also been opened at 405, Evelyn-street.

MAKERS OF TOYS.

The Deptford Fund has opened, at the Albany Institute, a toy-making centre, which it is hoped may develop into an attempt on a small scale to capture German trade. Here Mrs. Lamert, the energetic secretary of the Deptford Fund, with a capable committee, is doing excellent work. In connection with the Roman Catholics in Deptford, Father Segesser has inaugurated a club for wives and mothers of soldiers, and one or two other churches have established similar institutions. The work does not clash, inasmuch as by mutual arrangement the several clubs have been opened in different parts of the borough.

Mrs. W. A. Schultz, wife of an ex-mayor, at the request of the Mayoress (Mrs. Wayland), is conducting the work of the Queen's Work for Women Fund, of which Miss Morton and Miss Prestige (sister of Mr. Theodore Prestige, L.C.C., prospective Moderate candidate for Deptford), are joint honorary secretaries. Two workrooms, one for women and one for girls, have already been opened, the first at Corpus Christi Mission Hall, New Cross, and the second in Giffin-street, Deptford. It is a pleasant sight to witness the women at Corpus Christi Mission happily engaged in making children's and babies' garments, which are handed to the Mayor for distribution in cases of distress. Women of the committee take turn daily in serving tea, which is provided at the cost of one halfpenny, and the clergy, committee, and friends give an occasional entertainment. The Central (Unemployed) Body find work for 100 women in Church-street, 25 coming from each of the boroughs of Deptford, Greenwich, Woolwich, and Lewisham.

Deptford also does not forget the husbands who fall in the war, for the Borough Council has decided to devote a portion of the cemetery for a heroes' corner. It will thus be seen that the borough is not backward at this time of crisis. It has a special interest in the war, for Deptford has been the home of naval heroes since the Spanish Armada, and many notable men rest beneath the shadows of old St. Nicholas' Church. Besides, did not the present Czar's illustrious ancestor, Peter the Great, learn much while working in Deptford Dockyard which helped his country?

KENNINGTON CLUB.

Though only opened a week, the Kennington Cross Club for soldiers' wives has justified its establishment. As the entrance fee is only threepence and the subscription but a penny a week, wives of soldiers and sailors are taking every advantage of the amenities provided by the new club. All the furniture has been generously provided by supporters of the scheme, and a piano has been given, so that the members may have musical afternoons. The club has reading and writing rooms, whilst special arrangements have now been made to entertain the babies, which the mothers are invited to bring with them when they go to spend a pleasant afternoon at their club.

WINTER AND THE WAR.

GOVERNMENT AND CHARITY.

Lady Frances Balfour, president of the London Society for Women's Suffrage, took the chair at a women's service meeting at the Queen's Hall, last night, on the subject of "Winter and the War." The proceeds of a collection made at the meeting were to be divided between the Queen's Work for Women and the Women's Service Funds.

Sir GEORGE PRAGNELL said that to the business mind the worst feature connected with all the good work which was being done was the terrible overlapping, not only of institutions and collections but of effort and enthusiasm. Everyone was delighted to know that the British Red Cross Society and the St. John Ambulance Association had joined forces, and the point he particularly wished to draw attention to (and it was the unspoken opinion of every business man he met) was that the worst remaining case of overlapping and of mismanagement was the enormous number of appeals to the charitable public for clothing required by the troops, which ought to be provided by the Government.

With a long war and a hard winter in front of us, charity ought not to be diverted from its proper channel, and the State ought not to be competing with such magnificent institutions as the Red Cross, the St. John, and all the old-established societies for the relief of suffering and distress. The inevitable consequence was that some of our men had plenty of friends collecting things for them, and had more than they required, whilst others were miserably under-clad. Meanwhile all our proper charities will suffer too.

QUESTION OF UNEMPLOYMENT.

He was not saying that they should not send these things to our soldiers if they were cold or wet or shivering. In fact, he was sending things to them nearly every day. But he main ain d that they ought not to be cold or wet or shivering, because the authorities ought to clothe them properly without appealing to the public.

If there had been no unemployment or fear of unemployment there would have been no necessity for this particular fund or this particular meeting. If the authorities from the beginning of August had placed the contracts properly for articles required by the troops there need not have been any unemployment at all. It was not only our Army abroad and our Navy at sea which had to be clothed and fed, but our vast armies and navies in training, our sick and wounded, and, on the top of all of these, the armies and navies and the sick and wounded of France and Russia. Every business man in a position to know would say that if these colossal orders had been properly distributed no woman who could work and was willing to work ought to have been unemployed since the commencement of the war.

"Mittens are wanted badly by the troops, and they are scarce. The sock only wears out in the foot part, and if this is cut off and a hole made in the other part for the thumb to go through, an excellent mitten can be made without any expense. I am paying unemployed typists to sew them over, but in three months I have exhausted my circle of friends. May I ask you to send me all the old (clean) socks you can collect, in order in this way to provide more work and more comforts without cost and without interfering with the living of any other class? I lay great stress on that point—finding work for women which won't interfere with the living of other women. May I venture to add that old stockings will do equally well." (Cheers.)

The Queen's Committee and the Queen's Fund were doing great things under great difficulties. They wanted more co-operation from the authorities, and more help from the public. They could all help in some degree. Might their gracious Queen and all those who ever kept such faithful watch and ward be enabled, through their efforts, to increase the rate of their precise and beneficent activities. (Cheers.)

QUEEN MARY'S SCHEME.

Lady ROXBURGH described the Queen's Work for Women scheme. When the war began there were cases of women being thrown out of work. Four thousand typists in the City, for instance, lost their employment. The Queen saw at once that something had to be done, and being both practical and kind, her Majesty set to work to raise a fund and to get the best people to see that the work of organisation should be well done. Crowds of women came to ask for work, and it would have been heart-breaking to see them if there had not been means to help them.

When the scheme was put in force there would be no unemployment, but she must ask the generous public for more money.

Professor Gilbert Murray, Miss Helen Ward, Mrs. Henry Fawcett (president of the National Union of Women's Suffrage Societies), and Dr. Florence Willey were also speakers.

The Daily Telegraph. Dec 26. 1914

WOMAN'S WORK IN 1914.

SURVEY OF THE YEAR.

Looking back on the first seven months of the year now fast drawing to its close, one recalls but few outstanding events from the point of view of women's advancement. For the autumn there was promise of one or two developments of interest, but on the outbreak of the war the whole field of activity was changed. Women, even as did men, saw things in a wholly new and startling perspective. Matters which had seemed so pressing before Aug. 4 appeared so trivial that to think of them amounted to mere fussiness. New considerations, new needs had sprung up at a stroke, and the old scale of values was no more.

"What can I do that will be most useful?" was the demand of every woman in those anxious first days, when the invader pressed on towards Liège and Namur, and the swift, decisive answer that came set many women thinking as they never did before. Some nurses, of course, were wanted to tend the sick and wounded, but they would bear a very small ratio indeed to the rest of the feminine population. For the real reply came in the perception that in wartime women can do little else than cultivate the ordinary domestic virtues; to care for the children and the aged that remain, and to sew and knit for the comfort of those engaged in the stern work of war.

It has been a small revelation to many how little the "queenly art," as Ruskin called it, of the needle has really been superseded. When her Majesty, with sure intuition, called into existence the Queen Mary Needlework Guild during the second week in August everyone wanted to do something for it. Of course there was a proportion of amateurish work, and perhaps the shapes of some of the shirts and socks sent in caused the expert to smile. But such things soon righted themselves, and no complete record will ever be made of the admirable handicraft contributed by women to this guild, and in response to other appeals, like that of the Navy League, the Mine Sweepers' Gift, and the various calls on behalf of ships and regiments.

BELTS AND SOCKS.

There was one truly imperial service that the women of the Empire rendered when they responded to the Queen's call to supply 300,000 pairs of socks and a like number of belts for the Army. The full resources of the country in those directions were known in the great drapery warehouses in the City. To requisition them would have been a serious matter, and prices generally would have been affected.

By securing the collaboration of women in this voluntary effort two valuable points were achieved. First, there was additional production that did not interfere with the ordinary output of woven goods needed for the New Army in training; secondly, it was made known that socks or belts, provided they were of good quality, bought from the retail shops would be acceptable. In this way trade was maintained, and the outfitters holding any stocks of these articles were able to dispose of them. Thus women, all unconscious of the larger economic questions that were touched, helped in a far bigger sense than the individual buying the wool and plying her needles then realised.

NURSING MOBILISATION.

Few outside nursing circles were at all aware of the foresight that both the Admiralty and the War Office had exercised during the past two or three years in regard to the immediate command of efficient reserves of nurses. Under peace conditions Queen Alexandra's Royal Naval Service and Imperial Military Service are strong enough for all wants, and are most admirable organisations. But there have existed efficient reserves for both, and the matrons of the leading hospitals have kept lists, revised by them and the medical branches of both departments every six months, of nurses available for instant duty, for duty at a fortnight's warning, and for duty later on during hostilities.

When put to the test, at the very outset of the war, the system worked with perfect smoothness. Indeed, as early as Aug. 4 the first contingent of twenty nurses went from the London Hospital to Haslar, and a rather smaller party from St. Bartholomew's to Chatham. The calls for Army nurses were also extensive, and the rule was laid down that on all the carrier-ships bringing the wounded to Southampton the matron and sister should belong to Queen Alexandra's Service, while the rest should be drawn from the reserves. In waiting for any naval needs are six hospital-ships, and a new departure in nursing at sea is that all carry four sisters of the Naval Service and reserve, in addition to the sick-bay attendants.

An immense number of nurses volunteered for service in the hospitals of the British Red Cross and St. John Ambulance organisations. These societies rightly exacted a high standard of efficiency, and have only sent out qualified women.

OTHER ACTIVITIES.

Turning to some other phases of feminine activity earlier in the year, there are a few features of interest. The more noisy section of the Suffrage movement were busy and mischievous, putting "bombs" in churches, doing damage in Westminster Abbey even, slashing priceless pictures, and defying authority in every way. Mrs. Pankhurst was in and out of prison under the "Cat-and-Mouse" Act; but "hunger strikes" and other forms of misdirected enthusiasm have now faded into the background. All the Suffrage societies, whether militant or law-abiding, recognised that in war-time there was no room for controversy, and they turned their well-organised systems into various channels of help for women affected by loss of employment.

The creation of the Queen's Work for Women Fund and the Central Committee on Women's Employment, with their very influential committees, having the Marchioness of Crewe in the chair of both, was in each case a practical step to help large classes that would feel the dislocation of the labour market. Happily, there was less unemployment than at one time seemed inevitable, though the high-class dressmakers and those contributing to "luxury trades" have suffered appreciably.

With the approval of Queen Alexandra, the London County Council has formulated a scheme under which the ancient St. Katherine's Hospital—always specially under the care of the Queen Consort of England—will be restored to the East-end, and made a centre for training women as health visitors among the poor. The movement for extending schools for mothers has developed in many directions. At King's College the department of household and social science was opened, and a conference at the Salters' Hall on "Domestic Teaching," presided over by Lady Baring, was a notable demonstration of the numbers of ladies now finding useful vocations in this branch of instruction.

ELIZABETH FRY.

By a rather curious coincidence, Lord Henry Bentinck proposed to the Standing Committee on the Criminal Justice Administration Bill that police women should be officially recognised and appointed on the same day that a statue of Elizabeth Fry was unveiled at the Old Bailey by her descendant, the Countess of Dudley, who delivered an address remarkable for its insight and sympathy with the great pioneer of prison reform.

Other notable events for the welfare of women were the opening of the Mary Curzon Hostel for Women and the Jewish Girls' Club—a ceremony that was performed by Princess Alexander of Teck, in the presence of representatives of all the leading Jewish families in our midst. Earl and Countess Cadogan laid in June the foundation-stones of the splendid buildings that are to supersede the too limited premises of the Chelsea Hospital for Women, and the Salvation Army added a finely-equipped Mothers' Hospital to its many works of benevolence. The Women's International Congress was held at Rome in May, but did not attract a large number of delegates from this country.

GERMAN SOCIALIST WOMEN AND THE WAR.

"THIS INSANITY OF WORLD STRIFE."

A remarkable declaration of the attitude of the Labour and Socialist women of Germany towards the war is made by Frau Clara Zetkin, the leader of the women's side of the democratic movement in Germany. Writing to the "'Labour Woman," the monthly publication of the Women's Labour League, in reply to a manifesto of sympathy and friendship from the British section of the Socialist movement, Frau Zetkin says:—

"You may rest assured that we are at one with you in execrating the present world-war as the most awful crime that capitalist Imperialism has committed. We share your deep sympathy for the sufferings of the lands which have been laid waste by this bloody strife. We think with deep grief of the horrors of devastation in East Prussia and Galicia, and with no less pain of the disaster which stalks along the roads of France, and in which in unhappy Belgium has caused a wicked breach of international law."

In another message to the same journal Frau Zetkin declares that Socialist women must call upon the women of all nations to set themselves against the further continuance of this insanity of world-strife. Our cries, she says, must ring forth irresistible from millions of voices:—

"Enough of slaughter, enough of devastation. The peoples must not be drained of life, they must not bleed to death. Peace, lasting peace, and therewith no violation of the independence and dignity of any nation. No annexation, no humiliating conditions of peace. For such are no assurance of safety for neighbours but rather bring temptations of a burdensome competition of armaments and new world-horrors. Make room for peaceful work. Leave the way free for the fraternity of the peoples and for their co-operation in bringing to flower the culture of international civilisation."

Christian Commonwealth
Dec 23/1914

The New Spirit in War.

Will the war mean that women will return to the old ideal of service embodied in the phrase "ministering angels"? Prof. Gilbert Murray hinted this in the address he delivered at the Queen's Hall last Wednesday, at a meeting organised by the London Society for Women's Suffrage. Dr. Murray said that through close association with wounded soldiers and others it had been borne in upon him that the demand now made upon women was a demand for that old-fashioned, unspecialised form of service which women have rendered to men since history began. We are getting a touch of that primitive state of society in which the men fought, and the business of the women was to love and pray. There was a serious intention behind Dr. Murray's words. Men are going to the war, he said, happy, gentle, contented men, young men with long lives before them, offering to die for us. "That is a thing that haunts me, and when I say that it is our business to love and pray I mean, in general, that we are to remember that. Let us remember what they are doing, and let us be able when they return to look them in the face." Dr. Murray's speech, which was full of the fine feeling and sincerity of the man, was one of a series of quite striking utterances relating to the part that women are playing in the war, and of the problems arising from it. Lady Frances Balfour, who presided, declared, amid applause, that the recent Home Office circular dealing with the police supervision of the wives of soldiers was not satisfactory to any woman. We cannot, she said, have women under police surveillance, whatever they were doing or not doing. The other speakers included Mrs. Henry Fawcett, Lady Roxburgh, who appealed for help for the Queen's "Work for Women" Fund, Sir George Pragnell, Miss Helen Ward, and Dr. Florence Willey. Mrs. Fawcett, warmly endorsed Dr. Murray's hope that the cessation of party controversy would leave behind it a permanent effect.

Reynolds Newspaper Dec 27/1914

Work for Women in War Time.

EXCELLENCES AND LIMITATIONS OF THE TRAINING CENTRES.

The extent to which unemployment has been caused by the war must remain a matter of speculation. The recent White Paper on the subject covered something like half the industrial workers of the country, but it is probable that more complete returns would show a somewhat less satisfactory result. The firms canvased for the purposes of that inquiry employed an average of two hundred hands each. It is among the casual workers, and the small firms of two or three persons, that the principal distress has been felt. But one thing is abundantly clear. It is among women that the economic effects of the war are being experienced in the severest form.

The effects of the war are not felt at home so much during the actual period of fighting. Mr. Lloyd George has given it as his opinion that for something like five years after the war we may even expect a period of boom. But then, according to the Chancellor, we shall be up against the most serious industrial crisis in our history. It will be one result of the work among women that a number of workers at any rate will be better equipped to face that crisis than they would otherwise have been.

The Women's Training Centre is a highly significant place. It is highly interesting, too, as anyone may prove who will visit one of them. Its significance lies in the fact that it marks the new era of thoroughness upon which social work has entered in this country. Formerly we were content to deal with the immediate and obvious needs of the moment without regard to the wider facts of the Labour market. The reports of the Poor Law Commissioners—particularly the minority—impressed upon us the fallacy of that procedure. Hence the principal of one of the workrooms I visited last week was careful to impress upon me that one of the chief considerations borne in mind was that the women and girls should emerge with a higher economic status than they had when they entered the rooms. Where the worker is set at her own trade, she is put to some more difficult department of it than that to which she has been accustomed. "That young woman," said the lady, indicating the businesslike young person who was in charge of the room, "came here as an ordinary hand. We found her very promising; and she is now the forewoman. The probability is that she will take a better place after the war than she was able to take before."

Special attention is given, too, to the training of workers for trades in which British industry is now making a start. Toy-making, for example, is a department in which we have too long been content to let the German have things all his own way. When the British child sees the sort of toys now being made by British women and girls the days of the cheap and nasty German product will be numbered.

The casual observer would hardly realize the economic difficulties with which the promoters of these schemes were confronted. On the face of it, nothing seems simpler than to open workrooms and sell the goods. But immediately there is the ordinary labour market to be considered. To introduce a new competitor in this way would be merely robbing Peter to pay Paul. It was necessary, therefore, to lay it down that all the articles made should be given away to necessitous women and children, and that, as far as possible, care should be taken to prevent it going to quarters that would normally be supplied through ordinary commercial channels. Even now the subject is not entirely free from complications. He would be an incorrigible optimist who expected any economic question to be free from them.

The function of the Committee is to co-ordinate the work of the various bodies that are dealing with women's work, to administer the national funds, make grants, &c. It is here that most ground for criticism appears to exist. When it is made by serious persons that criticism will be entirely kindly, for a Committee of which Miss Mary Macarthur is the secretary may be trusted to put the interests of the workers first. But many of us feel that an error of judgment has been committed in fixing the conditions on which grants are allotted. In order to gain a grant from the fund, a society must show that it is not paying more than 3d. an hour, with a maximum of 10s. a week. Apparently it may pay as little as it pleases! The New Constitutional Society for Women's Suffrage, which has an excellent room in Knightsbridge, has been refused a grant for exceeding this not very liberal allowance. One rather revolutionary body in the East-end has made £1 a week its minimum instead of adopting 10s. as a maximum, and is, of course, quite outside the pale.

The reason for the position taken up by the Committee is expressed in the familiar plea that half a loaf is better than none. But is that plea always a sound one? The assumption that these workers have other sources of income is, I have reason to know, in many cases quite unsound, and 10s. a week—it is often less—is not a living wage. Surely it would be better to treat a smaller number more generously. The humanity of the nation would not allow the others to starve. Trade Union opinion has already, in some instances, expressed itself on this matter, and it is at least conceivable that the "Work for Women" Fund would be even more generously supported by the public than it is now if this matter were put right. The training work being done is excellent, but it is surely a thousand pities to set up a standard which will be used for years to come as an argument against those who are striving to elevate the pitiably low standard of women's wages. The contention that what is being given must not be regarded as wages is put forward quite sincerely, and theoretically it has some justification. But where it is all the woman has to subsist upon the argument has an unsatisfyingly academic air about it.

The defect here is the exact reverse of that to which we have been accustomed in these matters. Instead of meeting the difficulty of the moment and ignoring the future we are doing a work whose future value will be considerable, but providing very inadequate relief to the necessities of the present. And still worse is the moral effect, which goes far beyond the few women directly concerned. The 10s. maximum is opening the door to an unjust, but, after all, plausible accusation of "sweating" against those who have established themselves as the guardians of women's rights in industry.

The Times Dec 30.1914

WOMEN AND THE WAR.

A RECORD OF QUIET SERVICE.

(FROM A CORRESPONDENT.)

Some of the easy judgments which we passed six months ago would appear rather foolish to-day. In the pacific era there were those who sadly contrasted the Englishwoman—"bridge her only interest"—with the businesslike Frenchwoman or the domesticated German frau. To-day our admiration for the daughters of France has assuredly not diminished, and we do not doubt that the women of Germany are meeting the trials of war with the fortitude which we associate with Teutonic stolidity. We respect our neighbours no less, but we have formed a more correct opinion of our own womankind.

Lanam fecit, domi mansit was the Roman ideal of feminine virtues. To-day the women of Great Britain are also knitting their wool, and if they are not staying at home it is because there is work to be done out of doors and in the homes of others. In London the initial heavy work of the War Refugees Committee was almost wholly done by women, and we have seen and appreciated the service given by women to the Queen's Work for Women Fund, the National Relief Committees, and kindred organizations. What we perhaps do not fully recognize is the loyal and silent work which is being performed by women in the towns and villages throughout the kingdom.

The war has brought with it duties which can best be performed by women. When war was declared and the Reservists were called out, many a family lost its only bread-winner. There was delay in the payment of separation allowances, and relief funds had not yet been organized. In the smaller towns and in the villages families were temporarily destitute, and only the ready intervention of the women workers of the Soldiers' and Sailors' Families Association prevented much suffering.

THE EXAMPLE OF PORTSMOUTH.

Throughout the country the women workers, of whom little is heard, have acted together in the most ready and energetic manner. To review the whole of the work that has been done is too great an undertaking, but one may instance the case of a town which presented a special problem. In Portsmouth there are many dependents of Service men. Here, at the request of the mayor, the local agents of the Soldiers' and Sailors' Families Association have joined hands with the National Relief Committee, to form a joint body of 80 ladies with their headquarters at the Town Hall. For greater efficiency the work was divided between a Service Committee, which looks after the dependents of Service men, and a Civilian Committee. To these two committees has fallen all the war relief work of the town—no light matter. Since August 4,000 separate families have been visited, and their needs carefully considered and supplied. There is a large hospital for the wounded, controlled by the Red Cross Society and the St. John Ambulance, and staffed by the ladies of the association. At Southsea similar work is done at the Red Cross hospital for wounded British and Belgians.

The way in which all classes are joining together in the work is illustrated by the organization in a small town in Kent. A woman's committee, assisted by local medical men, does practically all the work of the hospital. School teachers, shop assistants, housemaids, and charwomen give up a portion of their small leisure for the patriotic call. The wives of men employed in the factories devote part of their morning to the washtub at the hospitals, while others overhaul and repair the clothing of the patients.

A great deal of useful work has been done at Folkestone by the women who have been giving their services to assist the refugees arriving from Belgium and France. The vast majority of refugees have been women and children, and the care of them has naturally fallen upon the shoulders of the women workers. Day after day, and in all kinds of weather, a little band of women has been at Folkestone Harbour helping the women and children, providing them with food and useful advice during their first hour on English soil, and then passing them on to others who deal with them according to their needs.

WOMEN'S WORK IN IRELAND.

BY THE COUNTESS OF FINGALL.

FIVE months ago, when the war cloud broke suddenly over the United Kingdom, the members of the various Suffrage societies met together to consider their future action, and with virtual unanimity decided to drop active political work for the time being, and, in common with all constitutional societies, to work for the service of the Empire. Women in their hundreds have risen since the call came, and all over Ireland they are working—organising in recruiting offices, visiting soldiers' wives in their own homes, starting working classes, learning first-aid (that they may assist those trained women who nurse the wounded), preparing hospitals and homes for Belgian refugees, starting industries, toy making and other sources of work for the many unemployed. Unoccupied women are few. We may, as a nation, have been unprepared, but now as individuals we are playing our part, and the Suffrage societies lead the way. Our own work has been interrupted, but it is willingly laid aside in full confidence that when the war is over the nation will see to it that we shall not again be disappointed of our rightful hopes. Our strong desire for the enfranchisement of women could be postponed for no other reason than the bigger issue of fidelity to the Empire. To that we yield

> Not that we love Cæsar less,
> but Rome more.

Women's work in Ireland has been helpful in recruiting during the last four months. In order to understand what Ireland has done towards supplying men for the Army it is necessary to consider first the towns, and secondly the country districts. In the first place, one may note that out of some eleven thousand soldiers stationed in Dublin district 70 per cent. are Irish born. In proportion to her population Ireland has more sons in the Army than any part of the kingdom. Suffragist women have one cause of dissatisfaction in Dublin, and that is in the fact that the largest and best drapery establishments in the city are mainly staffed by men, of whom a number are young and strong. This is just as it ought *not* to be. We feel instinctively, in time of peace, and much more strongly now, that these young shop assistants should be urged and encouraged to give up what is no work for men and to go to the recruiting centres, where the heart of the nation is answering the call of the drum. There are scores of women quite competent for their work and much better suited to perform it.

It is necessary to understand a different problem to see why recruiting has been slow in the country parts of Ireland. The centre of the land has been largely given up to grazing, the population is small and naturally there is no enthusiasm for a war of which the people really know very little. Realisation only comes with knowledge, and the country folk read little, and have been at times easily led by agitation. In the cities we hear the tramp of armed men; motors with the flags of the Allies move through the busy thoroughfares; picture palaces unfold to the eyes of city folk the pomp and circumstance of war and its inevitable accompaniment of shattered houses and ruined churches. We see the posters in the streets, and, perhaps, we read two or three papers daily, and our enthusiasm is fed by knowledge. There is a movement on foot which hopes to send a lecturer with slides through the country districts that the needs and duties of this time of war may be shown and interest be stimulated by pictures of our men at the Front. This is a plan of the United Irishwomen, who work hard to benefit the country. They have also issued an interesting and suggestive leaflet on the conservation of food supplies—a most important reminder in war time.

Ireland is in the main self-supporting. She can produce her own beef and mutton, pork and bacon, eggs, butter, etc., and she has a very large export trade in livestock, poultry, eggs and butter. Unfortunately, her wheat and barley fall very far short of meeting her home demands, owing to the fact that only 11 per cent. of the land is under crops. The Department of Agriculture is trying to promote tillage over a larger part of the country, which would increase the wheat and barley supply and be of great advantage to the farmer. It is hoped that women may be found who are willing to live in the country and there work at tillage. It is quite a practicable proposal when one reads that in France just now the whole male population of military age having been withdrawn for the war, the old men and boys and a large proportion of the female population have worked with a will, and have successfully harvested a vast quantity of grain.

Poole

LADY ARNOTT WITH HER TWO DAUGHTERS AND A CONSIGNMENT OF SOCKS, ETC., FOR DESPATCH TO THE TROOPS.

Unionist Suffrage women in Ireland have taken up work in connection with the Soldiers' and Sailors' Families Association, and many members and friends visit the women in their homes and try to encourage thrift and cleanliness. They report on each case, a member holding herself pledged to visit each family on her list at least once a month. So it is hoped that when the men return they may find their wives and children doing well, and not without some friendly interest having been given them by their visitors. Only in such ways can we hope to influence the women and to encourage them while the war lasts.

I would like also to mention the work of the Church League, whose members have opened a workroom for women, where many are employed and good work done, and the Suffrage Emergency Committee, who have started a toy making industry, and who are helping many unemployed girls.

Truly it is said that women's work in war time never ends. They, too, have battles to fight, but in a solitude which none can share. To them, as to the men, comes a summons to action, but in a different form; to the man as a trumpet call to rise and go; to the woman to give up her son or her husband or her lover without delay; and she gives, hiding the anguish of her soul that her loved ones may go with quiet minds. That sacrifice is offered daily now, and we know not how great the cost may be. Many have gone from our sight since the war began, some to return and rejoice with the friends that love them, others have given their lives and fallen in the fight for the honour of the Empire. It is well with them. Of them it is written, as of the soldier whose name was "Valiant," that they "passed over, and all the trumpets sounded for them on the other side."

South Wales Argus, Jan: 6th. 1915.

ADAPTATION.

War and the changed conditions which follow in its train have led to processes of adaptation. Society never was perfectly organised,—the House of Life never yet has been perfect in all its parts,—it was (and still is) more like a town of toy bricks, which a child had not the patience or the skill to finish, than an enduring monument in stone or marble to the imagination of the artist and the skill of the craftsman. War came, and as the wind swept in through the door which hate had opened, part of the toy city came toppling down. Fortunately, there were prompt, strong hands to keep other parts of the structure from falling, and the bricks which once soared ambitiously in embrasured towers and castle battlements (useless, out-of-date, though not without beauty) are being adapted for other purposes. In fact, on every hand a process of material, economic, and spiritual adaptation is taking place. The sooner we carry out the process the better for our prosperity and our peace of mind. A point in which this district is specially interested is the scarcity of tonnage. For a variety of reasons,—first of which is the withdrawal from the trade of the world of the whole of the German mercantile navy, and second the demand of the Government for vessels to do the carrying in connection with the operations of war,—there are too few ships to deal with the trade of the world. As a result, freights have rushed up to an amazing extent. Now there is one way in which we can adapt ourselves to the changed conditions, if only to a limited extent—by restoring to the carrying trade those German vessels which we hold as prizes of war. Newport Chamber of Commerce at their last meeting dealt with this question, not for the first time, and some impatience was expressed as to the slowness with which the authorities move, and with the confusion which exists in consequence of the number of authorities who seem to be concerned with prizes of war. Liverpool Chamber of Commerce on Tuesday followed Newport's lead, and decided to write to the Government asking them to expedite the sale of enemy ships, captured and to be captured, so that the trade of the world may have the advantage of their service. That is a common-sense adaptation of means to ends. There should be no delay. The sooner we adapt ourselves to changed conditions, the less we shall lose. Let not the man in the street and the woman in the kitchen think that this is a thing which does not concern him or her. If the cost of carrying a quarter of corn to this country is doubled, that amount will be added ultimately to the cost of bread. Scarcity of tonnage means dear transport, dear transport means an addition to the cost of living. Let us have the German ships at work under the British flag.

There is need for adaptation in another direction. The war has greatly affected many branches of women's work. Dressmakers and tailoresses have found a great falling-off in the demand for their services for the production of ordinary garments. It is natural enough. There are thousands of men and women among the more wealthy classes who never really "wear" their clothes. Many a dress and many a suit is worn a few times, and then goes into the wardrobe (some people have a mania for preserving discarded clothes). It is a pitiable thing to say (and proof of the need for a great social adaptation of means to ends), but an enormous amount of labour has been expended upon wasteful luxuries or upon necessities (such as clothes) which are wastefully used. But wasteful luxury has been a commonplace of our national life in normal times; many industries largely depend for their prosperity upon this very wastefulness; and when war compels even a measure of carefulness and economy—when wealthy women wear their evening gowns six times where they wore them three, and twenty times instead of ten, when men wear their suits twice or three times more than formerly, it tells upon the workers in the trades concerned. The Central Committee for Women's Employment in London are trying to divert the skill of these women who used their needles to other work; but this great problem of adapting skilled capacity to new ends is a difficult one. Still they in London, and we at Newport, must do our utmost to find useful necessary work for women who lack employment in their usual grooves. It will have been noted that in Hertfordshire a number of factory girls have gone on the land, and are trying to learn the practical work of farming. Is there an opening in Monmouthshire for work on the farm or in the garden? The great point ever to be kept in mind is that so far as possible all labour should be directed to really productive ends. We do not want to employ one gang of men to dig holes which we employ another gang to fill up. We do not want women to potter about uselessly. But if woman can be trained to do the work of cultivation successfully, if her patience, deftness, and intelligence can be used in increasing the food supply, that is so much gain.

War calls upon us, too, to readjust our moral standards—to apply our principles to new problems which the changed conditions of the world prevent us from ignoring any longer. A process of spiritual adaptation is called for in connection with our attitude towards other races. Already we have learned a great deal as to what the Belgians, the French, the English, the Russians, the Serbians, and the Montenegrins have in common. The truth is that in fundamentals humanity is one, and it is time that the Briton purged his mind of that contempt for the foreigner which is a legacy from times when our insularity—bad enough now—was pitifully marked. We are looking and hoping for peace—peace universal and enduring—after this war. That will never be attained unless we get rid of the idea that we are a superior race destined to dominate the world and to subdue all nations to our ideals. It is just that delusion which has led Germany to the pitfall in which she now wallows. No, we must recognise that this is a world which needs the best that every nation can give of thought and inspiration and service if it is to be saved from violence, lust, and suffering. There is work for every nation to do, and every nation—and all the children of every nation—who feel stirring within them the impulse to service should be allowed to go forward on the path of destiny. Artificial barriers should not be interposed—barriers of race and colour should be thrown down before the march of a humanitarian ideal, and the test should be not "Where were you born? What is the colour of your skin?" but "What would you do for mankind?" There is a practical application of this principle. It appears that Indian medical students feel that they are not getting their fair share of resident appointments in the hospitals. There is a prejudice against them on the part of staff, patients, and fellow students. Let us fight against these prejudices so long as they are founded upon nothing more real than a difference of race and colour. If the Indian is an efficient doctor and an honourable gentleman there ought

fectly organised,—the House of Life never yet has been perfect in all its parts,—it was (and still is) more like a town of toy bricks, which a child had not the patience or the skill to finish, than an enduring monument in stone or marble to the imagination of the artist and the skill of the craftsman. War came, and as the wind swept in through the door which hate had opened, part of the toy city came toppling down. Fortunately, there were prompt, strong hands to keep other parts of the structure from falling, and the bricks which once soared ambitiously in embrasured towers and castle battlements (useless, out-of-date, though not without beauty) are being adapted for other purposes. What is the colour of your skin?" but "What would you do for mankind?" There is a practical application of this principle. It appears that Indian medical students feel that they are not getting their fair share of resident appointments in the hospitals. There is a prejudice against them on the part of staff, patients, and fellow students. Let us fight against these prejudices so long as they are founded upon nothing more real than a difference of race and colour. If the Indian is an efficient doctor and an honourable gentleman there ought to be no barrier; he should be judged by the standards of morality, honour, and courtesy which we ought to apply to British medical students—but often do not.

The Daily Telegraph, Jan: 9th. 1915.

AMERICAN WOMEN AND THE WAR.

HOSPITAL WORK.

The splendid help given to this country in her hour of need by American women, and the promptness with which it was rendered, is not fully realised. The idea of a society of American ladies who had married British men banding themselves together in the good cause occurred to several of them simultaneously when hostilities broke out. The American Women's War Relief Fund is the result, and what it has achieved in the five months of warfare is wonderful and deserving of warmest gratitude. Through this society the chief efforts of American women in this country and at home have been directed. The organisation is excellent. Lady (Arthur) Paget is president of the fund, Mrs. John Astor vice-president, the Duchess of Marlborough chairman, Lady Lowther and Mrs. Harcourt joint hon. secretaries, and Mr. Walter Burns, hon. treasurer.

The earliest meetings were held at the house of Mrs. William Leeds, when the words of Abraham Lincoln, "To care for him who shall have borne the battle, and for his widow and orphan, to do all which may achieve and cherish a just and lasting peace," were adopted as a general policy, and it was felt that care of the wounded was the earliest need. Mr. Paris Singer gave his beautiful residence, Oldway House, Paignton, Devon, and, in addition, £5,000. It was forthwith transformed into a perfect hospital of 200 beds, up to date in every particular, and the American Women's War Relief Committee decided to run it. Since the arrival of the first batch of wounded on Sept. 27, 600 patients have passed through the hospital, many being very serious cases, and only one death has occurred, that of a man shot in the spine.

These American ladies are anxious that much kindness extended to them in their enterprise should be acknowledged; they are grateful to the fishermen of Brixham, who have supplied 120lb of fish a week free; and to local game-dealers and their employés, who prepare all the game presented by friends for use in the hospital, doing this work gratuitously, often late at night. Such practical sympathy has been found very encouraging.

VISIT BY THE QUEEN

The visit on Nov. 12 by the Queen, who travelled 400 miles for the purpose, was keenly appreciated by all in the hospital. It was made privately. Her Majesty, who was attended by Countess Fortescue and Commander Sir Charles Cust, R.N.—Lady (Arthur) Paget and Mrs. Harcourt also making the journey with her—brought a gift of 300 garments, and made a stay of three hours. In this time all the wards were visited. The Queen spoke to nearly every patient. One, whose arm was noticed by the Queen to be elaborately tattooed, said, "Yes, your Majesty, there is a portrait of the King and yourself done at the time you visited India." Very serious head and body wounds and cases of tetanus have been successfully treated. The first matron appointed was Miss Fletcher, who chose her staff, and several eminent surgeons gave their services. Later, when the American Red Cross Society sent two units, of three doctors, a matron, and twelve nurses, to each belligerent country, one of these, in charge of Mr. Howard Beal, head surgeon, and Sister Mabelle, matron, was given to the hospital. Still later, the second unit, which had gone to Haslar, was also secured, Mr. Hinds being head surgeon and Sister Beatrice matron. There are in all forty-two nurses, six surgeons (resident), and eighteen probationers. Of these six surgeons and twenty-six nurses are American, while some of the probationers are young American ladies, Mr. Howard Beal being the controlling medical officer.

Early in their work the committee wished to have an ambulance ship in their scheme. It then transpired that motor ambulances were badly wanted at the front, and it was decided to offer five or six. Lord Kitchener said, characteristically, that he would be glad to accept six. Needless to say, they were given, all being 20 to 30 h.p. cars, strong, and well equipped, accommodating four stretchers each. These ambulances have been in constant use for three months, and are still running most successfully. One day an American lady, on the eve of her return home, called at the offices of the society to know what was most wanted. She was told motor ambulances. Within three weeks a cheque was received from her to buy one, on which was to be painted "From Friends in Boston." It is daily saving life and mitigating suffering.

GIFTS FROM OVERSEAS.

Quantities of clothing come from America to the society for distribution where most required. One lot contained 7,000 odd garments from the Panama Canal Relief Committee, three cases of clothes were made by the women of Darien, Connecticut, and sent by Mrs. Arthur Phillips, president of the Darien Women's Civil League, and dated from "The House in the Trees." Every stitch, a covering message stated, was put in with love and tenderness for such brave men. Mr. Ralph Sanger sent, on behalf of the New York War Relief Society, 3,000 tubes of bouillon, now in use at the front. A very spacious and beautiful house, formerly the property of the Foxes, Lords of Ilchester and Stavordale, No. 31, Old Burlington-street, has been placed at the disposal of the society by the firm of Lenygon, American and English decorators. Here the work goes forward.

In addition, there is an economic relief scheme worked by the society, to help poor women to employment. Of this the Duchess of Marlborough is president, and the joint hon. secretaries and treasurers are Mrs. H. C. Hoover and Mrs. Reginald Owen; the latter lady is the wife of an English officer and daughter of Mr. Secretary Bryan, of the United States Government. Space permits only mention of the fact that a large room at St. Pancras having been given by Mr. Henry, brother of Sir Charles Henry, seventy-five women, many of whom had lost work through the closing down of a soda-water factory from a shortage of bottles, are permanently employed making garments presented to the hospital, to the Queen's Work for Women Fund, and other societies. Another similar room at Woolwich employs forty women. A grant of £15 a week was made to keep a room at Greenwich going until the Queen's Work for Women Fund took it over. Also there is a knitting-room at Islington, where woollen necessaries for the hospital and for the troops are made. All the women employed receive trade-union wages, they have a free and a good tea provided, and can get a nourishing hot meal at midday for 2d.

NOTABLE AMERICAN WOMEN.

Among the best-known Americans engaged in this good work are the Duchess of Roxburghe—who is also president of the Royal Base Hospital at Boulogne, which she helps very substantially—Princess Hatzfeldt, Madame de Dominguez, the Marchioness of Dufferin and Ava, the Countess of Essex, the Countess of Granard, Cora Countess of Strafford, the Countess of Ancaster, Countess Pappenheim, Viscountess Acheson, Lady Arthur Butler, Lady Camoys, Lady Monson, Lady Greville, Edith Lady Playfair, Lady Barrymore, Baroness Von André, Lady Naylor-Leyland, Mrs. Perry Belmont, Mrs. William Leeds, Lady Cunard, the Hon. Mrs. Lionel Guest, the Hon Lady Herbert, Mrs. Adair, Mrs. Burns, Mrs. Joseph Chamberlain, Mrs. Bertram Falle, Mrs. McCormick Goodhart, Mrs. Benjamin Guinness, Mrs. Columbus Iselin, Mrs. Oliver Iselin, Mrs. Rudyard Kipling, Mrs. Irwin Loughlin, Mrs. Whitelaw Reid, Mrs. John Leslie, Mrs. J. Lorrilard, Lady Randolph Churchill, Mrs. Bradley Martin (junr.), Mrs. Maurice MacMillan, Princess Edmond de Polignac, Lady Waldstein, and many more.

The private hospital given and kept going at Beigate by the Hon. Mrs. John Ward, and the hospital ship and private hospital given by Lord and Lady Leith of Fyvie and the Hon. Mrs. Rosdew Burn, are among many other enterprises affording most valuable help to the wounded. Of American ladies resident in England who are working themselves and causing paid work to be done for the use of hospitals and charitable institutions, and are subscribing to local hospitals, there is literally no end.

Glasgow News, Jan: 11th. 1915.

THE BATTLE AT HOME.

WHAT OUR WOMEN ARE DOING.

NO SHIRKERS IN GLASGOW

("NEWS" SPECIAL.)

While men war, women work. This truth is strikingly brought home by an investigation and enumeration of the various activities of women during this trying period. Whoever may be shirking their share of the new responsibilities which have arisen, it is certainly not the women of Glasgow. We are not referring here to private efforts, to shirt-making, stocking-knitting, or the thousand and one small schemes in the way of concerts, At Homes, whist drives, sales of work, and individual sales of flowers, needlework, cakes, candies, &c. Our subject is the organised efforts of women. These are astonishingly far-reaching. The cry of "Votes for Women" is meanwhile silenced in the land, while societies such as the Women's Educational Union have laid aside their legitimate objects. In a word, ladies have practically dropped all other pursuits to undertake work connected with the war. These voluntary helpers are toiling from early morning till late in the day at such tasks as attending to soldiers' dependents, forming "Cheer Up" clubs, organising charities, making garments, ministering to the wounded as they pass through the city, and fitting themselves to become nurses.

Attending the Soldiers' Wives.

Perhaps the most wide-reaching society in its appeal is the Soldiers' and Sailors' Families' Association, of which Lady Chisholm is the energetic head in Glasgow. Hundreds of ladies are now undertaking the work of investigating and relieving cases under the auspices of this society. This free labour is an enormous saving to the community; without it the expenses of administration would be very heavy indeed. The great good thus accomplished should make it easy for critics to overlook the occasional cases of dictatorial and tactless visitors. Undoubtedly the soldiers' wives have received from the ladies engaged in this work helpful consideration and sympathetic friendliness. What has been said of the Soldiers' and Sailors' Association applies also, of course, to the work of the National Fund. There are several representative ladies on the Citizens' Distress Committee, and the administrative work in this case is also largely carried on by these unpaid voluntary workers.

Members of the Suffrage Societies have given the most practical proof of their qualities as citizens. The work begun at the National Union of Women's Suffrage Societies at 202 Hope Street has been merged for the time being into that of a temporary war society the "Voluntary Workers' Exchange." So admirable is the system carried on there—also entirely by voluntary workers—that it is likely such a clearing-house will always be maintained, in order to regulate the ever-growing pressure of women's social work and to avoid the danger of over-lapping. The Exchange registers all the efforts that are being made and ladies who have no outlet for their energy can, by applying here, be drafted into the particular line with which they wish to be associated. The work is divided into sections, each with a competent woman at the head.

"Cheer-Up" Clubs.

As a suffrage society, their most recent effort has been the opening of "Cheer-Up Clubs"—sisters of the Tipperary Clubs of London. A vitally important point kept in view by the promoters is that the clubs are to give pleasure to women; they do not seek to "improve" patrons. At the same time, the society, while offering entertainment, has no wish to be associated with those who are insulting the wives of our gallant protectors by suggesting that such places are merely alternatives to the dangers of the public-house.

The same society has taken a very large part in the promoting of the Scottish Hospital Units. The number of ladies who have volunteered for service in these has been most gratifying, and there are now Scottish hospitals abroad "manned" by women. Then, again, hundreds of Glasgow ladies have trained for ambulance work. The voluntary aid detachments of these ambulance students, being part of the Territorial Forces, are now under the control of the War Office, and are occupied in the work of attending to the wounded as they pass through our railway stations.

Providing Work for Women.

In the way of providing work for unemployed women, the Glasgow ladies have done yeoman service. The most interesting work-rooms so far opened in Glasgow are under the auspices of the National Council for Women's Trades. They are subsidised largely by money which was obtained on Women's Flag Day. An experiment which is attracting attention in these rooms is the making of toys. This opens up great possibilities. Local shops which have been buying from these work

the good cause occurred to several of them simultaneously when hostilities broke out. The American Women's War Relief Fund is the result, and what it has achieved in the five months of warfare is wonderful and deserving of warmest gratitude. Through this society the chief efforts of American women in this country and at home have been directed. The organisation is excellent. Lady (Arthur) Paget is president of the fund, Mrs. John Astor vice-president, the Duchess of Marlborough chairman, Lady Lowther and Mrs. Harcourt joint hon. secretaries, and Mr. Walter Burns, hon. treasurer.

The earliest meetings were held at the house of Mrs. William Leeds, when the words of Abraham Lincoln, "To care for him who shall have borne the battle, and for his widow and orphan, to do all which may achieve and cherish a just and lasting peace," were adopted as a general policy, and it was felt that care of the wounded was the earliest need. Mr. Paris Singer gave his beautiful residence, Oldway House, Paignton, Devon, and, in addition, £5,000. It was forthwith transformed into a perfect hospital of 200 beds, up to date in every particular, and the American Women's War Relief Committee decided to run it. Since the arrival of the first batch of wounded on Sept. 27, 600 patients have passed through the hospital, many being very serious cases, and only one death has occurred, that of a man shot in the spine.

These American ladies are anxious that much kindness extended to them in their enterprise should be acknowledged; they are grateful to the fishermen of Brixham, who have supplied 120lb of fish a week free; and to local game-dealers and their employés, who prepare all the game presented by friends for use in the hospital, doing this work gratuitously, often late at night. Such practical sympathy has been found very encouraging.

VISIT BY THE QUEEN

The visit on Nov. 12 by the Queen, who travelled 400 miles for the purpose, was keenly appreciated by all in the hospital. It was made privately. Her Majesty, who was attended by Countess Fortescue and Commander Sir Charles Cust, R.N.—Lady (Arthur) Paget and Mrs. Harcourt also making the journey with her—brought a gift of 300 garments, and made a stay of three hours. In this time all the wards were visited. The Queen spoke to nearly every patient. One, whose arm was noticed by the Queen to be elaborately tattooed, said, "Yes, your Majesty, there is a portrait of the King and yourself done at the time you visited India." Very serious head and body wounds and cases of tetanus have been successfully treated. The first matron appointed was Miss Fletcher, who chose her staff, and several eminent surgeons gave their services. Later, when the American Red Cross Society sent two units, of three doctors, a matron, and twelve nurses, to each belligerent country, one of these, in charge of Mr. Howard Beal, head surgeon, and Sister Mabelle, matron, was given to the hospital. Still later, the second unit, which had gone to Haslar, was also secured, Mr. Hinds being head surgeon and Sister Beatrice matron. There are in all forty-two nurses, six surgeons (resident), and eighteen probationers. Of these six surgeons and twenty-six nurses are American, while some of the probationers are young American ladies, Mr. Howard Beal being the controlling medical officer.

Early in their work the committee wished to have an ambulance ship in their scheme. It then transpired that motor ambulances were badly wanted at the front, and it was decided to offer five or six. Lord Kitchener said, characteristically, that he would society for distribution where most required. One lot contained 7,000 odd garments from the Panama Canal Relief Committee, three cases of clothes were made by the women of Darien, Connecticut, and sent by Mrs. Arthur Phillips, president of the Darien Women's Civil League, and dated from "The House in the Trees." Every stitch, a covering message stated, was put in with love and tenderness for such brave men. Mr. Ralph Sanger sent, on behalf of the New York War Relief Society, 3,000 tubes of bouillon, now in use at the front. A very spacious and beautiful house, formerly the property of the Foxes, Lords of Ilchester and Stavordale, No. 31, Old Burlington-street, has been placed at the disposal of the society by the firm of Lenygon, American and English decorators. Here the work goes forward.

In addition, there is an economic relief scheme worked by the society, to help poor women to employment. Of this the Duchess of Marlborough is president, and the joint hon. secretaries and treasurers are Mrs. H. C. Hoover and Mrs. Reginald Owen; the latter lady is the wife of an English officer and daughter of Mr. Secretary Bryan, of the United States Government. Space permits only mention of the fact that a large room at St. Pancras having been given by Mr. Henry, brother of Sir Charles Henry, seventy-five women, many of whom had lost work through the closing down of a soda-water factory from a shortage of bottles, are permanently employed making garments presented to the hospital, to the Queen's Work for Women Fund, and other societies. Another similar room at Woolwich employs forty women. A grant of £15 a week was made to keep a room at Greenwich going until the Queen's Work for Women Fund took it over. Also there is a knitting-room at Islington, where woollen necessaries for the hospital and for the troops are made. All the women employed receive trade-union wages, they have a free and a good tea provided, and can get a nourishing hot meal at midday for 2d.

NOTABLE AMERICAN WOMEN.

Among the best-known Americans engaged in this good work are the Duchess of Roxburghe—who is also president of the Royal Base Hospital at Boulogne, which she helps very substantially—Princess Hatzfeldt, Madame de Dominguez, the Marchioness of Dufferin and Ava, the Countess of Essex, the Countess of Granard, Cora Countess of Strafford, the Countess of Ancaster, Countess Pappenheim, Viscountess Acheson, Lady Arthur Butler, Lady Camoys, Lady Monson, Lady Greville, Edith Lady Playfair, Lady Barrymore, Baroness Von André, Lady Naylor-Leyland, Mrs. Perry Belmont, Mrs. William Leeds, Lady Cunard, the Hon. Mrs. Lionel Guest, the Hon Lady Herbert, Mrs. Adair, Mrs. Burns, Mrs. Joseph Chamberlain, Mrs. Bertram Falle, Mrs. McCormick Goodhart, Mrs. Benjamin Guinness, Mrs. Columbus Iselin, Mrs. Oliver Iselin, Mrs. Rudyard Kipling, Mrs. Irwin Laughlin, Mrs. Whitelaw Reid, Mrs. John Leslie, Mrs. J. Lorrilard, Lady Randolph Churchill, Mrs. Bradley Martin (junr.), Mrs. Maurice MacMillan, Princess Edmond de Polignac, Lady Waldstein, and many more.

The private hospital given and kept going at Reigate by the Hon. Mrs. John Ward, and the hospital ship and private hospital given by Lord and Lady Leith of Fyvie and the Hon. Mrs. Rosdew Burn, are among many other enterprises affording most valuable help to the wounded. Of American ladies resident in England who are working themselves and causing paid work to be done for the use of hospitals and charitable institutions, and are subscribing to local hospitals, there is literally no end.

truth is strikingly brought home by an investigation and enumeration of the various activities of women during this trying period. Whoever may be shirking their share of the new responsibilities which have arisen, it is certainly not the women of Glasgow. We are not referring here to private efforts, to shirt-making, stocking-knitting, or the thousand and one small schemes in the way of concerts, At Homes, whist drives, sales of work, and individual sales of flowers, needlework, cakes, candies, &c. Our subject is the organised efforts of women. These are astonishingly far-reaching. The cry of "Votes for Women" is meanwhile silenced in the land, while societies such as the Women's Educational Union have laid aside their legitimate objects. In a word, ladies have practically dropped all other pursuits to undertake work connected with the war. These voluntary helpers are toiling from early morning till late in the day at such tasks as attending to soldiers' dependents, forming "Cheer Up" clubs, organising charities, making garments, ministering to the wounded as they pass through the city, and fitting themselves to become nurses.

Attending the Soldiers' Wives.

Perhaps the most wide-reaching society in its appeal is the Soldiers' and Sailors' Families' Association, of which Lady Chisholm is the energetic head in Glasgow. Hundreds of ladies are now undertaking the work of investigating and relieving cases under the auspices of this society. This free labour is an enormous saving to the community; without it the expenses of administration would be very heavy indeed. The great good thus accomplished should make it easy for critics to overlook the occasional cases of dictatorial and tactless visitors. Undoubtedly the soldiers' wives have received from the ladies engaged in this work helpful consideration and sympathetic friendliness. What has been said of the Soldiers' and Sailors' Association applies also, of course, to the work of the National Fund. There are several representative ladies on the Citizens' Distress Committee, and the administrative work in this case is also largely carried on by these unpaid voluntary workers.

Members of the Suffrage Societies have given the most practical proof of their qualities as citizens. So admirable is the system carried on there—also entirely by voluntary workers—that it is likely such a clearing-house will always be maintained, in order to regulate the ever-growing pressure of women's social work and to avoid the danger of over-lapping. The Exchange registers all the efforts that are being made and ladies who have no outlet for their energy can, by applying here, be drafted into the particular line with which they wish to be associated. The work is divided into sections, each with a competent woman at the head.

"Cheer-Up" Clubs.

As a suffrage society, their most recent effort has been the opening of "Cheer-Up Clubs"—sisters of the Tipperary Clubs of London. A vitally important point kept in view by the promoters is that the clubs are to give pleasure to women; they do not seek to "improve" patrons. At the same time, the society, while offering entertainment, has no wish to be associated with those who are insulting the wives of our gallant protectors by suggesting that such places are merely alternatives to the dangers of the public-house.

The same society has taken a very large part in the promoting of the Scottish Hospital Units. The number of ladies who have volunteered for service in these has been most gratifying, and there are now Scottish hospitals abroad "manned" by women. Then, again, hundreds of Glasgow ladies have trained for ambulance work. The voluntary aid detachments of these ambulance students, being part of the Territorial Forces, are now under the control of the War Office, and are occupied in the work of attending to the wounded as they pass through our railway stations.

Providing Work for Women.

In the way of providing work for unemployed women, the Glasgow ladies have done yeoman service. The most interesting work-rooms so far opened in Glasgow are under the auspices of the National Council for Women's Trades. They are subsidised largely by money which was obtained on Women's Flag Day. An experiment which is attracting attention in these rooms is the making of toys. This opens up great possibilities. Local shops which have been buying from these workrooms are well satisfied with the goods, and believe that this is a step towards capturing the German trade in toys.

With just a reference to the workroom opened by the Women's Freedom League, to the splendid work of the numerous ladies who attended to the Belgian refugees, and to the fact that women's activity has taken on a more martial character with the formation of a rifle club which has 300 members, it will be easily recognised and appreciated by all that the ladies of Glasgow have risen magnificently to the occasion. It is pleasing to record, in conclusion, that Government contracts and other circumstances have prevented the amount of unemployment among women that was expected. Except in a few trades the circumstances are not much worse than in a normal winter.

WOMEN AND WAR

BY MRS. FENWICK MILLER
("FILOMENA").

"WOMEN hate war—but they adore the Army." So declared the late Admiral Maxse, supposing himself to be pointing out a flaw in the womanly brain or conscience. But that statement, though true, is no instance of our inconsistency. We do "adore" bravery, manly strength, devotion to duty, willingness to give up life itself at its best moment for the sake of Motherland and Home, brotherly comradeship, grim resolution, and all the rest of the splendid qualities by which soldiers in part redeem war from being all horror. But all the time we hate the monstrous cruel business of war. The more we love and admire the precious qualities of the soldiers, the more we feel the sacrifice of such men to be detestable and intolerable.

Noble-minded soldiers themselves hate the evil side of war. One of them, General Sir William Butler, declared—"War is the sum of all human villainies;" and, more tersely, General Sherman says—"War is Hell."

We must needs hate it on our own account, indeed. To look around one's own peaceful home and to realise even dimly what has been wrought upon thousands of homes, and what their women inmates and their children have endured, just a few miles off, during recent months is horrifying! But most of us are bearing bravely up against such thoughts of our personal peril. It is the moment to do so! In whatsoever other ways we may be able to help our men throughout this crisis to keep up our own courage must be the primary duty. It is the time to obey the injunction of the Prophet Joel—a wonderful foresight into what modern science calls "Auto-suggestion" or "Self-hypnotism." The Prophet bids—"Let the Weak Say, I am Strong."

But still we hate war by our nature, as men cannot do, for there is a difference, deep-seated, in our very constitution. We are all, as men and women, potential mothers and fathers of the race, and much of our mental make-up is thereby affected. In those far-away days in which the roots, in the rough, coarse, primitive conditions of our civilized souls are to be traced, it was the office of the father, the primæval man, the cave-dweller, to be always ready to fight for his family; wild beasts and savage human foes and the perils of the chase called daily on his manly quality of self and family defence. If one of those early men failed to fight, his children were killed off; the coward then had no posterity. The primæval mother, meanwhile, sought such peace and safe seclusion as she could secure for her task of bringing forth her young and bringing up to maturity their helpless feebleness. The fighting males, the peace-seeking females, who were our progenitors, are in us still, in the depths of our inherited natures; and not until men and women alike exercise their collective influence on public affairs can the world hope to get rid of or even keep in check these too-frequently recurring spasms of violence, this red ruin, destruction, cruelty and horror that is called war. In the meantime, when the need is here, women turn to their own tasks.

Brave endurance in silence of apprehension and of sorrow as their men go forth, and efforts to relieve the sufferings that war brings, are our part. Thousands of women are helping. Knitting needles were seized so readily that the shops are all sold out of these implements, and busily they click, and the little sewing needle gleams, in making "comforts." Hundreds of women are nursing the wounded, and thousands more are ready to do this work to the best of their power, and only regret that opportunity is lacking for them to devote their whole strength to efforts at healing the wounded. Voluntary women helpers are engaged by the thousand in the often thankless but very necessary task of carefully and conscientiously administering charitable funds, and above all, countless women, bravely stilling their own hearts have answered "Yes," when the best-beloved man has asked—"Are you willing that I shall offer myself for the defence of my country?"

It cannot be avoided, even though the enemy be kept from our own shores, and though we may individually have no men to yearn and grieve over. This Moloch will have our sacrifices! The poorest old women in their single-roomed homes feel the rise in prices. The professional working woman and the widow bringing up her boys and girls on her small portion that the State calls "unearned income," are called on for heavy income-tax. The working woman whose employment is closed, and the growing girls who must in future face the world and struggle alone for a livelihood in solitary celibacy because the men, whom perhaps they never saw, but whom in due course of time they would have met and married, are lying under foreign soil—all must bear their portion of the penalty.

That last-mentioned consequence of war—the compulsory celibacy and lifelong self-dependence of thousands of girls who should have mated with the men whose young lives are wasted—is a cruel feature of war that has not been noticed hitherto. Boys, now little chaps, will soon grow up, and refill the places in the State that are left vacant; but nothing can replace for the girls of this generation the men who match them, taken in their prime for their country's need. There must be, in the next half-century, so to speak, thousands of these war's brevet widows amongst us, single women who are so because of this war. Then the actual young widows: those who have to give up "heart's life, love," and continue to live, as best they may, on tender and passionate memories. Oh, women have cause indeed to detest war—and yet to "adore the Army!"

Yes, indeed! Let us do all we can to show every brave fellow who is helping to stave off from us the terrible fate of poor, pretty, peaceful Belgium, that we do honour and thank them for their courage, and appreciate their sufferings and labours. Besides all the work that women are doing for the soldiers, there is a possibility easily open to many of us. It is simply to stand still, and look the interest and admiration that we surely feel, whenever we meet a detachment of our soldiers on the march, whether they be Regulars, "Terriers," or "Kitchener's Army." I always do it myself; I just stand still, and regard them with my best wave of "magnetism" and my most interested look, "thought-reading" my thanks to them all; and I feel sure that if women in general would pay this small tribute to our brave young defenders, it would not fail to be appreciated by many of the boys. "Eyes front" notwithstanding, many of them do not fail to see, I warrant you; and if a good many women would make a point of thus mutely offering their interested admiration and gratitude, it would be of no small effect.

Birmingham Post. 9.1.15.

THE DUTY OF WOMEN IN THE CRISIS.

A BIRMINGHAM APPEAL.

The special appeal to the women of Birmingham to encourage recruiting, which has been organised under the auspices of the Birmingham Parliamentary Recruiting Committee, will be made on Wednesday next at a public meeting for women only which is to be held at the Grand Theatre. Addresses on the duty of women in the national crisis will be delivered by the Lady Mayoress (Mrs. Bowater), who is to preside, Mrs. Winston Churchill, Miss Chamberlain, and Miss Julia Varley. Mrs. Churchill is coming from London specially for the meeting, in which she is taking great interest. The tickets for the gathering are being largely applied for, and it is anticipated the theatre will be filled to overflowing. In addition to the speeches, there will be a little musical and other entertainment, in which Madame Minadeau, Miss Mabel St. James, and Mrs. Arthur Brampton will take part. The vote of thanks to the speakers and entertainers will be moved by Lady Lowe and seconded by Mrs. E. Parkes. It should be understood that admission to the meeting is free, and that only women will be allowed to be present. It is believed this is the first meeting of women only, and addressed only by women, that has been arranged in this country in connection with the national crisis, and the result of the experiment is being awaited with interest in many districts, as it is now recognised that much may be done to encourage recruiting, as, possibly, something is being done to hinder it, by the influence of women over their male relatives.

56/35

Islington Gazette, Jan: 12th. 1915.

NORTH LONDON STUDENTS

MISS PANKHURST ON THE WAR.

The meeting of the North London Students' Association at the Islington Central Library was devoted to the consideration of "The War as it Affects Women."

Dr. White, deputy-chairman of the Association, presided.

Miss Sylvia Pankhurst gave an interesting lecture on the subject. After dealing with the loss by women through the absence of their husbands, fathers, and sons with the Colours and the dislocation of trade, she criticised severely the delay of the War Office in making the necessary payments to wives for separation allowance and their consequent inconvenience.

This led her to describe or explain the work done in Poplar and adjoining districts by the East-end Federation of Suffragettes, in which she is one of the moving spirits Its members visit, advise, and assist the wives of absent soldiers and sailors, and press their claims on the War Office, the Admiralty, and other authorities. They have founded and are maintaining a factory in Old Ford where they employ these and other women in making clothing and toys of all sorts, where the Lecturer proudly announced they were paying "fair wages." This, she added, was more than most Government contractors — especially sub-contractors — were doing. The Federation was endeavouring to get this remedied, and although success could not as yet be claimed for their efforts, they intended to keep pegging away until this injustice was ended. In connection with the work in the factory, Miss Pankhurst explained that they had established a creche or day nursery where the infants were taken care of for 1s. 6d. a week, food included, whereas the charge in ordinary cases varied from 3s. 6d. to 4s. 6d. a week.

Of course, Miss Pankhurst could not keep her hobby, "Votes for Women," altogether out of her lecture, any more than could Mr. Dick keep King Charles's head out of his stories. The claim was, however, put forward only as in a constitutional way to be used solely for the purpose of exerting influence for the removal of these wrongs of women in the same way as members of the trades unions have been able by political action to improve the position of male workers.

Dr. White in putting to the meeting a vote of thanks to the lecturer, referred to the splendid work of our soldiers at the Front, and dwelt on the one great effect of the war in breaking down barriers between the various classes of society, political and religious, as well as social. He also gave a most interesting resume of the work of the Stoke Newington Distress Committee, of which he is secretary, and explained the means by which he was able to hasten the payment of separation allowances, &c., by the War Office.

The vote was passed by the large audience with acclamation, and as Miss Pankhurst had explained that the work of their federation was not as yet self-supporting, the Students' Asociation made a collection for the federa ion, which realised the handsome sum of £3 5s., and also assisted in the sale of the toys and clothing that Miss Pankhurst and her stewards had brought by way of specimens of their work.

Evening Standard & St. James's Gazette, Jan: 9th. 1915.

IN THE COUNTRY.

RUSTIC RECRUIT: FROM PLOUGH-TAIL TO THE COLOURS.

WOMEN WHO WORK AS MEN.

By Our Country Correspondent.

Recruiting still goes on in our countryside, though a majority of those able or willing to go to the wars have gone long since. Week by week a ploughboy somewhere ploughs his last furrow, and joins the Colours. The long-for change and a new life is the best recruiting sergeant in the country.

Then men are going now, in the wake of more adventurous comrades, who hitherto have been tied to home by their affairs: like a friend who is a publican, also a farmer, a coal-dealer, a cartage contractor, and general utility man to his village—besides being the father of a quiverful of children. The affairs of such a man cannot always be settled in a moment.

Others have debts to pay off, or affairs of estates, large or small; to settle up, before they can be honourably justified in joining—with much striving and self-sacrifice gradually their way is cleared. Others again, only these many months since the war began, have been able to arrange for the continuance of some work which they were bound by honour or by contract to see through. So the tale runs—and there flows on from the country a thin, steady stream of the country's best blood, offered for England's sake.

Some Hang Back!

Naturally, we hear a deal of talk about any man who might, it seems, go to the wars, yet stays behind—this is partly because laggards are rare in this day of heroism. And we hear now and then of mothers, wives, and sweethearts who are the chief cause of the laggards' backwardness—the cause of their shame.

Our village policeman, who has done yeoman service as a recruiter, could tell you how in many and many a case, while dealing with rustic youths, he has had far more trouble with mothers than with the young fellows themselves. One goodwife of our village insisted on accompanying her boy when he went to the doctor for his medical examination.

"'Tain't ne'er a morsel of good his worrying you, doctor," she said, "for no man can deny his heart be too uncertain-like for soldiering." In contrast to the almost proverbial "weak heart" excuse, in this case the heart of this mother's son did fail to satisfy the doctor—and a proud mother she was who marshalled that son of hers home again, with many a "Didn't I tell you so, Jack?" to lighten the way.

She makes no secret of her exultation. "Most of us has something to put up with—there is always something," she says, with the philosophy of the poor. "If so be 'tis not a weak heart," she adds, "'tis a weak head"—this last a poisoned dart for any argumentative neighbour who should take another view of the case.

Brave Women.

Withal, she has the satisfaction of seeing her weak-hearted boy's name inscribed on the record of honour on the church door, in the place reserved for those who volunteered, but were rejected.

But throughout this terrible time of stress and unnerving strain, the country women as a whole have proved themselves wonderfully calm and resourceful. They have come out in the colours of heroines.

Here is one striking case within my personal knowledge—it concerns a little poultry farm now being established a mile or two out of the village. The war has claimed the two men at the head of the enterprise, who were making their little capital spin out in the most promising way.

They were Reservists—and the laconic summons, "Mobilise," had to be answered in their case—with their lives if needs be. Then and there they were obliged to abandon the little brick cottage, half-built, all the out-houses, the hen-coops, and all sundries, most of which were still planned only on paper.

Building the Home.

Their womenfolk were left with half a cottage, a supply of building materials, and what looked like a total wreckage of their hopes and plans. But they were not the women to sit down and bemoan their hard fate. The little house is now almost built, and built by the two brave women.

Their own bricklayers, plasterers, paper-

Daily Telegraph, Jan: 16th 1915

MRS. CHURCHILL ON THE WOMEN'S PART.

BURDEN OF WAITING.

OUR TWO MILLION MEN.

From Our Own Correspondent.

BIRMINGHAM, Wednesday.

A remarkable gathering was held at Birmingham to-day under the auspices of the Parliamentary Recruiting Committee. It was a mass meeting composed of women only, and the capacious Grand Theatre was filled, many people being unable to gain admittance. Speeches dealing with the duty of women with regard to the national crisis were delivered by Mrs. Winston Churchill, Miss Chamberlain (daughter of the late Mr Joseph Chamberlain), and Miss Julia Varley, a local Women's Labour leader. The Lady Mayoress, who was announced to preside, was unable to be present owing to indisposition, and Mrs Ebenezer Parkes took her place.

Mrs. Winston Churchill said women suffered as cruelly as men from the losses and horrors of war, but they have not the same consolations in the excitement of going to the front, in the ardour of engaging the enemy, and in the glory of action itself. Nearly always the lot of women in war was simply to suffer privations in their homes, and a gnawing anxiety in their hearts for those dearer to them than life itself. Hard as the present war pressed upon the men who were fighting, the burden of the women who waited at home was not less wearing, and it was right and necessary that they should meet together to cheer their hearts and brace their minds to bear their trials with fortitude by dwelling upon the character and the meaning of the cause for which great sacrifices were readily made.

NOT WISHED FOR WAR.

It was the wish of the overwhelming mass of the people of this country, and not only the Government but the leaders of both political parties, to remain at peace with Germany. We had not wished for war; had not planned it; never willed it. We in England had promised solemnly, by Treaty, to protect the independence and neutrality of Belgium. She had appealed to us to act up to our word, and we intended to do so. (Cheers.)

"Whatever may happen to any of us in this country," continued Mrs. Churchill; "whatever may happen to our husbands, or brothers, our sons at the front; whatever may happen to our brave Allies; be the future bright or dark; be the road long or short; be our operations prosperous or unfortunate, we will never cease from this quarrel until every inch of Belgian soil has been liberated and until full reparation has been made for the hateful injuries she has received." (Loud cheers.) There were many other issues of great importance raised by this war, but this was the greatest and simplest, and was complete in itself. How splendid was the response which had been made by all classes, all parties, and all races of the Empire. More than two million men dear to homes and friends were now either fighting at the front or preparing to enter the conflict, and there was not one of these men who was not a volunteer. (Cheers.) No such spectacle had ever been witnessed since the beginning of the world as the spectacle of two million citizens voluntarily engaging themselves to proceed and fight beyond the seas without hope of gain or desire for booty, but simply for a cause, for a spiritual and moral ideal.

A GREAT CRUSADE.

To find anything approaching a parallel one must look back through the mists of history to the days of the Crusades. But the movement which had called into being the great volunteer armies now training in our land was one not only greater in its scale and proportion, but one based upon clearer vision and more reasoned conviction than those which animated the Crusaders of old.

With such a spirit and resolution, with the vast resources of our country and the resources all over the world which our command of the sea enabled us to use, we might be sure that in the end victory would be ours. The dark menace which had weighed so long upon Europe would be rolled away; the cruel and hateful system of military violence and brutality which Prussia had embodied would be irretrievably broken; the beautiful capital of Belgium would awake from her nightmare to the sound of the British drum; her Soldier King would enjoy his own again; and our own dear country would emerge, with her faith and honour stainless, from the gloomy shadows of this terrible war into the bright sunlight of a lasting peace. (Cheers.)

Miss Chamberlain remarked that she had not come to tell the women of Birmingham what their duty was in this crisis. True to its motto, Birmingham had gone forward, and had been found in the van where there was work to be done, sacrifices to be made, patriotism to be shown in word and deed. The country was engaged in a life and death struggle with an enemy most powerful and most terribly in earnest, and if we grudged the smaller sacrifices we

The Glasgow News, Jan: 15th 1915.

OUR FIGHTING LINE.

WHAT WOMEN ARE DOING.

Skilled Work for Women.

When the men have gone to the war it is not enough that the women should cheer them on their way and knit socks for them. (What would have happened to that web of Penelope had she been the wife of a soldier of to-day?) Some serious problems are waiting for us at home. In a somewhat incoherent letter which I received the other day it was pointed out that now was woman's opportunity. The writer was indignant that the best we could do for our out-of-work women should be to set them to sew and knit and cook, with post office people working overtime and the tramways short of workers. Well it seems to me a poor sort of patriotism to send away our countrymen to fight and die for us and then to think about capturing their trade as though they were so many alien enemies. That is one reason why I did not wholly sympathise with a speaker who suggested the systematic training of schoolgirls so that they might be able to take up work. Certainly if they must work they should be trained, but we accept far too readily the assumption that outside work is desirable for women.

An Experience.

The workrooms opened at the Spoutmouth under the auspices of the Queen Mary Work for Women Fund are in the main experimental. Should they succeed and should their methods be continued, as in that case no doubt they would be after the war, we will probably find that we have taken a great step in the direction of solving many of our present difficulties. It is proposed to take unskilled girls, to give them two months' training, then to send them out as competent machinists, who are nearly always in demand. A garment was shown on the opening day which had been made after two days' tuition, and which showed how amenable the girls are to teaching. Arrangements at the Spoutmouth have been made by the Consultative Committee represented by Mrs Johnstone, Mrs Brownlie, and Miss Agnes Young, who have taken an enthusiastic interest in the movement, and by Mrs Elizabeth Ross, of the Labour Exchange, as a member of the Citizens' Relief Committee.

The Domestic Outlook.

Miss MacLean is in charge at the Spoutmouth, and an interesting side is in the capable hands of Miss Dick, whose services are given voluntarily, and who superintends the catering and trains the girls. Each day a three-course dinner is served for threepence. I have heard of another workroom in which the girls were inclined to make a fuss about paying threepence for the midday meal, but having once visited the Cosy Corner restaurant where it was served, they were quite delighted, and thought their coppers well spent! It may as time goes on be possible to provide a training for domestic servants, and the dearth of this class is always remarkable. I have been much struck by noticing an advertisement inserted by a lady who wants a maid to go to a small East Coast town. Hitherto it has been the overflow from such towns that has supplied Glasgow with its domestics.

Women's Intercessionary Service.

Does such a topic seem out of place in "Our Fighting Line"—or is it not generally admitted that prayer is one of the strongest arms women can wield? The idea of a special service of intercession for women and women's work is, however, new, and may be regarded as experimental. All over Great Britain such services are being arranged, and will take place next week, the day chosen for Glasgow being a week day, Tuesday, the 19th. The Rev. John White, M.A., of the Barony, will conduct the service, which will be held in Glasgow Cathedral. Special intercession will be made for women and women's work, most of which is at present concerned with war interests. The service will be under the auspices of the National Union of Women Workers, of the Glasgow Branch of which Miss Marion B. Blackie is president.

The drawing-room meeting at the residence of Dr Louise M'Ilroy takes place this afternoon. Miss Macfarlane Park will occupy the chair, and a collection will be taken in aid of the Scottish Women's Hospital for Foreign Service and Social Clubs for Soldiers' and Sailors' Wives.

BEATRICE.

By Our Country Correspondent.

Recruiting still goes on in our countryside, though a majority of those able or willing to go to the wars have gone long since. Week by week a ploughboy somewhere ploughs his last furrow, and joins the Colours. The long-for change and a new life is the best recruiting sergeant in the country.

Then men are going now, in the wake of more adventurous comrades, who hitherto have been tied to home by their affairs: like a friend who is a publican, also a farmer, a coal-dealer, a cartage contractor, and general utility man to his village—besides being the father of a quiverful of children. The affairs of such a man cannot always be settled in a moment.

Others have debts to pay off, or affairs of estates, large or small, to settle up, before they can be honourably justified in joining—with much striving and self-sacrifice gradually their way is cleared. Others again, only these many months since the war began, have been able to arrange for the continuance of some work which they were bound by honour or by contract to see through. So the tale runs—and there flows on from the country a thin, steady stream of the country's best blood, offered for England's sake.

Some Hang Back!

Naturally, we hear a deal of talk about any man who might, it seems, go to the wars, yet stays behind—this is partly because laggards are rare in this day of heroism. And we hear now and then of mothers, wives, and sweethearts who are the chief cause of the laggards' backwardness—the cause of their shame.

Our village policeman, who has done yeoman service as a recruiter, could tell you how in many and many a case, while dealing with rustic youths, he has had far more trouble with mothers than with the young fellows themselves. One goodwife of our village insisted on accompanying her boy when he went to the doctor for his medical examination.

"'Tain't ne'er a morsel of good his worrying you, doctor," she said, "for no man can deny his heart be too uncertain-like for soldiering." In contrast to the almost proverbial "weak heart" excuse, in this case the heart of this mother's son did fail to satisfy the doctor—and a proud mother she was who marshalled that son of hers home again, with many a "Didn't I tell you so, Jack?" to lighten the way.

She makes no secret of her exultation. "Most of us has something to put up with—there is always something," she says, with the philosophy of the poor. "If so be 'tis not a weak heart," she adds, "'tis a weak head"—this last a poisoned dart for any argumentative neighbour who should take another view of the case.

Brave Women.

Withal, she has the satisfaction of seeing her weak-hearted boy's name inscribed on the record of honour on the church door, in the place reserved for those who volunteered, but were rejected.

But throughout this terrible time of stress and unnerving strain, the country women as a whole have proved themselves wonderfully calm and resourceful. They have come out in the colours of heroines.

Here is one striking case within my personal knowledge—it concerns a little poultry farm now being established a mile or two out of the village. The war has claimed the two men at the head of the enterprise, who were making their little capital spin out in the most promising way.

They were Reservists—and the laconic summons, "Mobilise," had to be answered in their case—with their lives if needs be. Then and there they were obliged to abandon the little brick cottage, half-built, all the out-houses, the hen-coops, and all sundries, most of which were still planned only on paper.

Building the Home.

Their womenfolk were left with half a cottage, a supply of building materials, and what looked like a total wreckage of their hopes and plans. But they were not the women to sit down and bemoan their hard fate. The little home is now almost built, and built by the two brave women.

Their own bricklayers, plasterers, paperhangers, and carpenters, they have shown that we need not go homeless though our countryside is populated chiefly by women. And they are going on till their farm is in full swing, with all its complement of crowing cocks and clucking hens. Success to such gallant endeavour!

Rain—and always rain. We have seen life of late through a blur of rain—the long line of our bulwark downs is blotted out by it. Many a good tree has gone down in the past week after standing through the gales of five hundred years.

OUR TWO MILLION MEN.

From Our Own Correspondent.

BIRMINGHAM, Wednesday.

A remarkable gathering was held at Birmingham to-day under the auspices of the Parliamentary Recruiting Committee. It was a mass meeting composed of women only, and the capacious Grand Theatre was filled, many people being unable to gain admittance. Speeches dealing with the duty of women with regard to the national crisis were delivered by Mrs. Winston Churchill, Miss Chamberlain (daughter of the late Mr Joseph Chamberlain), and Miss Julia Varley, a local Women's Labour leader. The Lady Mayoress, who was announced to preside, was unable to be present owing to indisposition, and Mrs Ebenezer Parkes took her place.

Mrs. Winston Churchill said women suffered as cruelly as men from the losses and horrors of war, but they have not the same consolations in the excitement of going to the front, in the ardour of engaging the enemy, and in the glory of action itself. Nearly always the lot of women in war was simply to suffer privations in their homes, and a gnawing anxiety in their hearts for those dearer to them than life itself. Hard as the present war pressed upon the men who were fighting, the burden of the women who waited at home was not less wearing, and it was right and necessary that they should meet together to cheer their hearts and brace their minds to bear their trials with fortitude by dwelling upon the character and the meaning of the cause for which great sacrifices were readily made.

NOT WISHED FOR WAR.

It was the wish of the overwhelming mass of the people of this country, and not only the Government but the leaders of both political parties, to remain at peace with Germany. We had not wished for war; had not planned it; never willed it. We in England had promised solemnly, by Treaty, to protect the independence and neutrality of Belgium. She had appealed to us to act up to our word, and we intended to do so. (Cheers.)

"Whatever may happen to any of us in this country," continued Mrs. Churchill; "whatever may happen to our husbands, or brothers, our sons at the front; whatever may happen to our brave Allies; be the future bright or dark; be the road long or short; be our operations prosperous or unfortunate, we will never cease from this quarrel until every inch of Belgian soil has been liberated and until full reparation has been made for the hateful injuries she has received." (Loud cheers.) There were many other issues of great importance raised by this war, but this was the greatest and simplest, and was complete in itself. How splendid was the response which had been made by all classes, all parties, and all races of the Empire. More than two million men dear to homes and friends were now either fighting at the front or preparing to enter the conflict, and there was not one of these men who was not a volunteer. (Cheers.) No such spectacle had ever been witnessed since the beginning of the world as the spectacle of two million citizens voluntarily engaging themselves to proceed and fight beyond the seas without hope of gain or desire for booty, but simply for a cause, for a spiritual and moral ideal.

A GREAT CRUSADE.

To find anything approaching a parallel one must look back through the mists of history to the days of the Crusades. But the movement which had called into being the great volunteer armies now training in our land was one not only greater in its scale and proportion, but one based upon clearer vision and more reasoned conviction than those which animated the Crusaders of old.

With such a spirit and resolution, with the vast resources of our country and the resources all over the world which our command of the sea enabled us to use, we might be sure that in the end victory would be ours. The dark menace which had weighed so long upon Europe would be rolled away; the cruel and hateful system of military violence and brutality which Prussia had embodied would be irretrievably broken; the beautiful capital of Belgium would awake from her nightmare to the sound of the British drum; her Soldier King would enjoy his own again; and our own dear country would emerge, with her faith and honour stainless, from the gloomy shadows of this terrible war into the bright sunlight of a lasting peace. (Cheers.)

Miss Chamberlain remarked that she had not come to tell the women of Birmingham what their duty was in this crisis. True to its motto, Birmingham had gone forward, and had been found in the van where there was work to be done, sacrifices to be made, patriotism to be shown in word and deed. The country was engaged in a life and death struggle with an enemy most powerful and most terribly in earnest, and if we grudged the smaller sacrifices we should lose all. With ever-increasing forces we must fight steadfastly on until we could secure terms which would not allow Germany to set the world on fire any more. (Cheers.)

Penelope had she been the wife of a soldier of to-day?) Some serious problems are waiting for us at home. In a somewhat incoherent letter which I received the other day it was pointed out that now was woman's opportunity. The writer was indignant that the best we could do for our out-of-work women should be to set them to sew and knit and cook, with post office people working overtime and the tramways short of workers. Well it seems to me a poor sort of patriotism to send away our countrymen to fight and die for us and then to think about capturing their trade as though they were so many alien enemies. That is one reason why I did not wholly sympathise with a speaker who suggested the systematic training of schoolgirls so that they might be able to take up work. Certainly if they must work they should be trained, but we accept far too readily the assumption that outside work is desirable for women.

An Experience.

WOMEN WORKERS AND THE WAR.

WHEN TIME IS MONEY.

The perpetual readjustment of values that is taking place to-day sets all sorts of familiar things in a new, and strange, light. Habits of mind, or scales of expenditure, we subscribed to without a thought but yesterday, are now being subjected to a scrutiny such as they never bore before, and we are realising, for the first time, how much of luxury goes into the fabric of our daily lives.

Not luxury as the millionaire understands the word, but merely the enjoyment of things which cannot by any stretch of the imagination be described as necessities. Our clothes, our meals, our amusements, our holidays—the whole standard of living in short—has been on the upward grade for years, until we have accepted that as natural and necessary which our own parents regarded as extravagance, and their parents as wanton waste of money.

Only now, when fate has forced us all into a willy-nilly stocktaking, do we realise what a small part necessity played in opening our purses under post conditions. We had got into the habit of spending; the habit of saving we are acquiring, along with some totally new views on the difference between what we want and what we need.

No class of the community has felt this new state of affairs more acutely than the women earners, who have seen filched from them by the war that independence so newly won. The tragedy of the truly independent woman, whose daily bread depends on her own exertions, is poignant indeed just now, when her post may disappear between one day and the next. Noble work is being done by women themselves for these cases, though, alas! no fund can hope to reach all.

DRAWING-ROOM INDUSTRIES.

But there is another class of worker who, whilst her actual hardships are almost nil, is discovering things she never knew before. The girl who, living at home, finds her services as clerk, or typist, dispensed with, is not faced with destitution—but she does face, for perhaps the first time since school-days, the strange sensation of no money to spend. "I've made all my own Christmas presents this year," said one such girl, a a week or two ago, as she showed a tableful of dainty trivialities that represented many hours of patient labour, "but, of course, it wouldn't have been worth while spending all this time on them if I'd had my usual screw coming in"—and one was forced to agree with her.

But, coming away, one reflected on the complete volte face that time has brought about in the matter of women's occupation and what is "worth while." A generation ago, when, in the middle classes at least, women-earners were few and far between, and the office-girl unknown, what might be termed "drawing-room industry" knew no limits. Such a mass of meaningless fancy articles as were the plague of the master of the house sprang into being, and mats spread like a woolly measles over all polished surfaces. So far from time being begrudged, nothing was allowed to appear au naturel. The simple palm-leaf fan was covered with satin and lace-edged, and forthwith became a wall pocket; the empty cream jar rejoiced in a coat of enamel and a bow of ribbon about its neck, ere transition to the "chiffonier." The odd kitchen saucer found itself laboriously covered by a mosaic of used stamps, whereupon it, too, was raised to the peerage so to speak. And when all these failed, was there not that eternal drain-pipe jardiniere to be-stick with broken pottery and be-dizen with gold paint?

These were the occupations that filled the leisure hours of those whose girlhood passed in the days when to "go out to business" was rather shocking, and distinctly ungenteel.

ENTER THE BUSINESS GIRL.

Then came the breezy advent of the business girl, with an ever-ready purse and dashing independence, that speedily made her the envy of her stay-at-home friends, whose scanty, and often wholly casual "allowances," rendered a quarter of a pound of chocolates, or a new pair of gloves, a wild extravagance, indulged in haphazard. That phase, too, passed, and presently the business girl, or rather the girl trained to earn in some way or other, reigned alone. Sometimes she contributed to the home funds; more often, perhaps, she financed her own dress, holidays, and amusements, her parents being content to provide bed and board. Either way, she had money to spend—and most certainly she spent it.

For it was with the arrival of the girl-earner, ex and actual, that buying took the place of making.

Useless drawing-room fripperies were the first thing to go—and few would deplore their loss. But along with the patience to concoct such futilities went the patience to make anything at all. Bought blouses and ready-to-wear "undies" replaced home-stitcheries, and from lacking time, or inclination, to darn good stockings, it was but a step to buy cheap cotton and mercerised silk hose, to be thrown away when holes appeared. Once begun, this disastrous policy invaded every department of feminine needs. Cheap costumes and showy coats, worn for a time and then cast aside, ousted good workmanship, and no one ever dreamt of asking that time-honoured question—"Will it wear well?" Even the old clothes dealer reflected the spirit of the day, for the best material, practically unworn, was rejected as "too unfashionable," if more than six months old.

Some new concession to fashion, and the criticisms of the office clique, every week a visit to the pictures, or a theatre, whenever she and her purse chose; more frocks for the summer holidays, and still more finery for the winter dance season—this was where the earnings of the pin-money worker went, keeping up a mad whirl, she herself had served to start.

THE SPENDER AS STAY-AT-HOME.

She was hardly to be described as an earner. She was a spender.

And now, all at once, she finds herself set back on the shelf, so to speak, to contrast the chastened outlook of the stay-at-home with the variety of business life.

At first she is appalled—and frankly says so. But presently, if she is worth her salt at all, she discovers there are compensations. She begins to find that if her purse is less so are her needs. With time on her hands she sews and re-models instead of buying. Her costumes get brushed and cared for as they never were before; her hats are put away instead of being thrown down anywhere, as in the days when she was always on the rush. Stockings she would have voted worn out, with a week's salary due, are now treated to the darning-needle, and her gloves are similarly repaired. In short, she begins to realise that, if time is not exactly the same thing as money, one can lose an astonishing amount of hard cash in seeking to save time.

We may not retrogress all the way to those "good old-fashioned women," who unpicked, turned, and made-over, until the patch-work quilt gave well-earned rest to the ultimate fragments of gown or cloak. But we are beginning to realise their point of view as never before. Time cost nothing then. Woman had not learned to put a market value on her hours, and strike a balance between what she could earn, and the time spent in saving. She had nothing to spend, indeed, but time—and she spent that right royally. Perhaps the cynic would declare the monumental works of patience she achieved were no more than evidences of the incorrigible spendthrift in woman!

GUINEAS—TO LOOK AT.

At any rate, she learned to possess her soul in patience, and a purse that was furnished much like those of the Vicar of Wakefield's daughters. Who, "for the honour of the family," says good Dr. Primrose, "were never without money, as my wife always let them have a guinea each, to keep in their pockets, but with strict injunctions never to change it!"

It is a far cry from this eighteenth century vignette of girlish dependence, to the pert product of the typing school, who scatters her twelve or fourteen shillings a week on frocks and cinemas at her own sweet will. No one would wish to go back all the way. But if the war teaches us something of the old thrifty spirit of patience and making-do it will be an asset in dearnite of all.

Richmond Times, Jan: 16th. 1915.

The Spirit of the Working Women.

WHAT IS BEING DONE IN RICHMOND.

Mrs. H. M. Swanwick writes:—

"As hon. secretary of the Richmond Committee of Organised Women, which is organising the work for the prevention of unemployment of women at the Town Hall, I should like to thank you very heartily for your most appreciated leader on 'Women and the War' in your issue of January 9th. Indeed, your words of encouragement were true and necessary. The women of the poorer classes are suffering, and their spirit is a very fine one. They come to us now at the Town Hall in increasing numbers every week, and one is proud to think what a large proportion are uncomplaining, enduring, hard-working, and sober women upon whom the home, and therefore, the nation, in the last resort rests. In Richmond there are very few places where women can go out to work. The Richmond woman is essentially the home-keeping woman, and a very large proportion of the women who come to us at the Town Hall have dependents whom they support either partially or entirely. The widow or the deserted wife with young children; the married woman with an invalid husband or grown son; the daughter who keeps her father and mother, or helps a married brother.

A DOUBLE BURDEN.

"All these we have, and many of them shoulder what is really the double burden of homekeeper and breadwinner. They do not complain. They ask nothing more than that they should be given the work which they are so ready to do. Let us think of the silent heroism of the woman who, year after year, gets up early to attend to her invalid husband, perhaps after a broken night; gets the house tidy and then sits down to her machine. She has, maybe, to finish a piece of work and then bring it to the Town Hall to be paid for it, before she can buy the pennyworths of dear food which she must then take home and prepare before she has any herself. Then more housework and tendance, and more machining—perhaps late into the night. Her health, her sight, her nerves are breaking under the strain; yet she has the pluck to say that rather than abandon her men or be 'shut up for life' she will go till she drops in the track. Do we want to shut up such a true-born Briton as that 'for life'? Is it even good business? We should have to pay for her and her husband and her son. It would cost us more in the end.

DESERTED.

"And that other, with five children, a deserted wife, who is making the most splendid uphill fight to keep the children fed and clothed and rosy. So far, she has succeeded. We dare not let her fail. Another woman for whom regular work has been found is under 45, and has had fourteen children. Only one child is left in her care. It haunts one at night to think that circumstances might deprive her of that last child. Another deserted wife with three children is on our books; she asked no one for anything till the war came and deprived her of employers.

NUMEROUS APPLICATIONS.

"It is for these women that we appeal for support and commissions. We have had a great increase in the applications for charwomen and daily workers, and have met a considerable number. But many of our women must have work they can do at home, and the more material we have given us the more money there will be to spare for wages. The committee distributes finished clothes to the needy and makes such garments as are in particular request. They want, besides materials for clothing the troops, black dress materials, prints and shirtings for servants' dresses, linen and cotton for aprons, tweed and serge for boys' suits. They have to thank the following ladies for materials:—Miss Rake, Mrs. Ford, Miss Scorer, Mrs. Westcott, Miss Hales, Mrs. Thomas, Miss Estridge, Mrs. Beesley, Mrs. Sandover, Mrs. Bailey, Miss Lane, Miss Chree, Mrs. Alexander, Lady Yoxall, Mrs. Frost, Mrs. Mackenzie, Mrs. Gates, and Lady Nott-Bower.

"This work must appeal to the humane and to the patriotic; but it must also appeal to the economically-minded who desire to 'save the rates.' The ratepayer who should starve out this work would pay for his parsimony in increased rates."

Yorkshire Post,

WOMEN'S WORK IN WAR-TIME.

To the Editor of The Yorkshire Post.

Sir,—One sees and hears a good deal about various "women's corps" for work during war-time; maybe many are doing and will continue to do excellent work. It seems to me we might well take to heart the example of the womenfolk of our heroic Allies, and rather take up work which will set our men free than form ourselves into corps of would-be soldiers. The men must be spared to answer the country's call in this hour of her greatest need, and where it is possible women should try to fill the gap in the work they leave behind them.

In country districts we are faced with the problem of shortage of labour on the farms. To a large extent, women can help to solve this. We can, at any rate, go back to dairymaids. Women milk far better than men, but because true country life no more exists in the land, the man has taken the maid's place. There is much other work, too, on a farm that women used to do in old days, and could do now. Surely this is the time to take it up again. A farmer came to me only last night to ask for help from our refugees. They are already in work, and I could not help him. He said he did not know how farmers were going to get through as labour became more and more difficult to get, and we are only at the beginning of our troubles.

Let every one put their shoulders to the wheel on the spot in which they are placed. Let country-women take the country work, and as far as they are able help to carry it through. They can do a great deal if they only will. We women have to stay at home, and the work is to each one's hand. We must help to send the men and try to do their work. Let us do it, and in this we shall be helping far more than in trying to be fighting men and using up cloth and boot leather, so sorely needed for our men.

The war has come to teach us many lessons; not the least is to bring us back from artificial to natural and simple life. We country folk can do our part. Let us turn to and milk the cows and feed the pigs, and set the man free to fight for the hearth and home we are keeping for him.—Yours, etc.,

A COUNTRY WOMAN.

Markington, Jan. 14, 1915.

The Globe, Jan: 27th.

WAR AND WOMEN'S WORK.

Women have frequently been blamed because they do not take their professional and business careers as seriously as men do. It is alleged that they engage in public and private work with only a half-hearted interest, that they abandon it on the most trifling excuse, and that they turn from one kind of employment to another with a most charming inconsequence. So far as the allegation has any foundation in fact, all sting is taken from it when we recollect that most women, either consciously or unconsciously, have the possibility of marriage in mind, and for this reason may not put into their work the energy and enthusiasm which they might otherwise exercise. Indeed, when one takes into account the social and economic environment of some women, it is astonishing that they should display any degree of devotion to the work they have taken up.

It is, perhaps, for this reason that not a few women are tempted into useless employments and into work that satisfies their vanity without rendering any service to the public. These women were thrown out of work during the first few days of the war; some of them, no doubt, have found more useful labour by meeting the multitudinous demands that have been made on every section of the community; others have been idle and will remain idle until they discover work for which they are temperamentally fitted. As Mrs. W. L. Courtney points out in the *Fortnightly Review*, it is "administrative" work that at this time holds out the brightest prospects for women. She divides this roughly into two main branches—the care of the mind and the care of the body—both of which are "logical developments of woman's primitive and natural occupations." Teaching, clerical work, and public service have hitherto afforded careers for thousands of women; when the war is over and when women have come to recognise fully their own capacities, they will find in this type of administrative work a fruitful field for their energies. The war has already destroyed the trifler, and in her place it is already putting the woman who takes both herself and her work with becoming seriousness.

THE "ETERNAL AMATEUR."

ARE WOMEN HARD ON WOMEN?

By MRS. H. M. SWANWICK, M.A.

We have been recently reminded in these columns of the old tag that "women are hard on women," and the writer has told us that he did not believe it before the war, but he does believe it now. Well, he was wrong before the war, and he is wrong now. "Women," comprehensively classed as a sex, are neither hard nor soft. There are hard women and soft women, and there are women who are hard or soft according to circumstances, like men. They do not react in precisely the same way as men, and so one will find men soft where women might be hard, and vice versa. If the game of attacking the other sex were a fruitful or even an amusing one, I could give instances, not isolated, but by the million, of men's "hardness" to women. I refer to inquire what are the causes of the undoubted cruel hardships which are being inflicted on poor women, and how they might be avoided, and I will take as instances the families of Service men.

We are met at the very outset by the absurd fact that the War Office has not apparently made up its mind whether the separation allowances are the woman's wage or the man's wage. The fact that the allowance varies with the size of the family suggests that the payment bears some relation to the work done by the woman and the expenses incurred by her in bringing up the family; yet this theory is vitiated by the fact that if the man misbehaves, the woman and children are deprived of allowance. If we turn to the other view, that the allowance is the man's wage it is hard to see why it should be jeopardised, as it is, by the woman's misconduct. Further confusion of thought is exhibited in the cruel order which suddenly deprives a woman of her "compulsory" allotment if her husband say he cannot afford it, and which puts upon her the abominable onus of saying that her husband must give her what he cannot afford. The height of confusion is reached, however, when one finds military authorities referring to the wife's allowance as "relief."

Administration and Distribution.

Not unnaturally, all this confusion of ideas at headquarters is reflected in the methods of distribution, and it is not surprising that ladies and gentlemen who are voluntarily administering a voluntarily-subscribed fund in aid of what should be Government wages, are apt to look upon themselves as people to whom someone ought to be very thankful; that someone is likely to be the soldier's dependant, and she, poor soul, is sometimes pathetically thankful. The amount of effort which has had to be expended in disentangling the various orders might surely excuse a certain amount of swelled head in ladies and gentlemen unused to severe mental strain.

On the whole, I am inclined to think that the War Office, carrying out the tradition of paternal government for soldiers and their families, has really instituted a crude and undeveloped species of Endowment of Motherhood. The woman gets so much for minding the children, and it is withdrawn if she does not mind the children.

But the most enthusiastic advocates of the endowment of motherhood surely never contemplated carrying it out by the administrative methods of the Army Council. This body may be taken as the expression in the purest form of maleness. It has to perform one of the most gigantic tasks that any body of men has ever undertaken in raising, training, equipping, and transporting its army. One would have supposed that was enough. Even the Select Committee on Pensions, which consist only of men, although the bulk of the pensioners will be women and children, may invite women to speak when they are spoken to; but the War Office is like the oracle, and issues on the subject of the family copious and unintelligible and self-contradictory utterances which baffle inquiry, and may not be answered.

Everyone knows how for months after the outbreak of the war the machinery for dealing with the families had utterly broken down, and how the work had to be done somehow, haphazard, by voluntary agencies largely financed from the Prince of Wales' Fund. No persons knew exactly where they stood. Orders and instructions changed with bewildering rapidity. It was not clear whether the money to be administered was a wage or a charity. And this difficult, confused work had to be finally executed largely by women, untrained, unbusinesslike, and irregular as voluntary workers mostly are, under superior orders which they did not understand, made by men who did not know the conditions for which they were dictating.

Work for Women.

I have two pleas which I wish to urge and which I submit any man of sense must allow. (1) That the whole of the work of assessing and determining the amount and the nature of the payments to be made to women and children should be carried out by women and men in consultation together, and that the details of administration should be mainly in the hands of women. (2) That these women should be selected for their experience and capacity, and should be paid adequate salaries as men are.

The whole difficulty arises because men insist upon keeping all the power in their own hands; being busy with men's affairs they neglect women's affairs, and at last, half irritably, throw them over to women to deal with, giving them no power, no responsibility, no salaries. The women who can afford to take up this unpaid, ungrateful work are for the most part entirely untrained and inexperienced. Some of them have done wonders by sheer goodness of heart. Some have muddled badly. Some have been harsh, but largely from ignorance and want of imagination. Some, as I have personally witnessed, are harsh because they are afraid the men will disallow expenses. It is not enough to be the private wife of a public man! Women who have to do public work must be treated in the same way as men are. They must be chosen by capacity and not by chance or favour.

I believe that a large part of the genius of women is essentially social. Most men think so too, and are fond of preaching to us about the "womanly woman." But the simple, primeval, womanly woman can't interpret an Army Order. What is wanted is less preaching and more recognition. What the womanly woman needs for her full and beneficent development in this twentieth century of card indexes and percentages is (1) training, (2) wages, (3) power, (4) responsibility. So long as men treat her as the Eternal Amateur, so long will social work be muddled and tenth-rate; not because women as women are muddled and tenth-rate, but because no good work is done without concentration and responsibility.

Daily Express. February 3rd. 1915. 656/39 656.

THE WOMEN'S PART IN THE WAR.

WHAT THEY ARE DOING TO LIGHTEN THE BURDEN.

By E. SLOAN CHESSER, M.B.

When half a score of nations are passing through a period of social, economic, and moral upheaval, it would be strange indeed if women's lives and women's ideals were to remain untouched.

When, at the beginning of the war, the whole community was seized with an irresistible desire to do "something," there was no doubt that some women, as well as some men, made grievous mistakes. Zeal is often misdirected for lack of knowledge. But in the minimum of time women have settled seriously to work, perhaps because for the last few years we have been organising ourselves into societies, and so we had a useful army of workers all over the country, willing to give work and money where they are needed.

In past years most women of the well-to-do classes were, by all the laws of convention, compelled to a life of trivialities and self-indulgence. The war has changed all that. Every woman is called on to work at the present moment, to offer some unselfish effort towards the work for soldiers and sailors and their families, for refugees, and for the unemployed.

THE GREAT LESSON.

War is teaching the great lesson that unselfishness is the secret of power, that life is but the opportunity for service; and all the world of women is evincing a desire to help. They are working as doctors and nurses, as ward-maids scrubbing in hospitals at the front. They are succouring the wounded in hospital trains; and at railway stations through the cold winter nights they are serving cocoa and soup and slices of bread and butter to men straight from the trenches.

I differ from those people who are asserting that only women trained in medicine and nursing should be allowed near the war area, because I have seen something of the work "untrained" women are doing at the front. There are thousands of efficient women in this country, whose only training consists of First Aid and Nursing diplomas, whose services will be invaluable a few months hence when the need will probably be very real.

At the same time fully trained women at a time like this are of inestimable value, as the authorities are beginning to recognise. The British Women's Hospital in Paris and at Wimereux, Boulogne, under Dr. Louisa Garrett-Anderson, is working in co-operation with the Royal Army Medical Corps. The Scottish Women's Hospital (organised by the Scottish Federation of the National Union of Women's Suffrage Societies) has units in Servia, Belgium, and France which are a part of the Red Cross Associations of these different countries.

WORK AT HOME.

Magnificent work has been done in connection with the relief of unemployment and distress, and the most unexpected women have come forward with offers of help. One of the frivolous women of my acquaintance—the sort of woman who declares that she "detests the Woman Movement because it makes its adherents serious and frumpy"—has been converted, as a result of the war, into a first-class, serious worker for the Soldiers and Sailors' Families Association. Women are also closely associated with the admirable work which is being accomplished by the "Daily Express" Invalid Kitchens Fund, of which Lady Muriel Paget and Mrs. Charles Tennyson, together with Mr. H. E. Morgan, are honorary secretaries. The fund numbers among its subscribers the Queen and Queen Alexandra.

A practical aspect of women's work for the war is associated with the Queen's Work for Women Fund and the Central Committee for the Employment of Women. We have at last reached the stage of recognising that "relief" consists not in the giving of doles, but in providing work and opportunity for people to help themselves. The whole tendency of social work at the present time is in the direction of utilising money which has been contributed for national purposes to give people who are out of work the opportunity for training, so that they will become more valuable citizens after the war.

At a time like this every woman, as well as every man, in the country must contribute some measure of work and effort to the nation if they are to keep their self-respect. The elemental duty of women lies in the preservation of life, and women have thus the better part in war, in that, whatever their own suffering, they are not called on to take part in the infliction of suffering on others. The work which is being undertaken by the Women's Co-operative Guild in establishing municipal maternity centres for nursing and expectant mothers and their children is urgently needed at this time.

OTHER ACTIVITIES.

It is impossible to enumerate the various kinds of work women are undertaking for the war. One of the societies which has done splendid national service is the Women's Emergency Corps, initiated by the actresses, contributed to by all classes and types of women. Their workrooms have kept many girls employed. By collecting and distributing waste food the Women's Emergency Corps has taken a practical part in economising the nation's food. Workrooms also are being organised by the National Union of Women's Suffrage Societies, which has done a very human bit of work in caring for destitute alien girls.

Another feature of the general activity of women has been the good service given by quite young girls during this crisis. While Mrs. Haverfield has organised mature women into a Voluntary Reserve Corps, ready to undertake work for the care of women and children, despatch riding, first aid for the wounded, and the care of the aged and sick in the event of a sudden crisis, Mrs. Harley is utilising the energy of the young girl by forming an Active Service Girls' Cadet Corps. She asks that girls of leisure should interest themselves in those girls whose lives are harder and more difficult than their own.

Everywhere we have this note of service. Sir William Wedderburn advises that British women should get into touch with women in India when the men of both nations are fighting for the common good. A British-Indian women's society would help to promote international friendship and understanding. And "the woman's part" is the conservation of friendship and of sympathy—more especially at the present time.

WOMEN AND THE WAR.

—:o:—

SUFFRAGISTS ADDRESS HUDDERSFIELD RECRUITING MEETING.

STRONG APPEALS TO MEN OF MILITARY AGE.

THE LOCAL POSITION.

FULL EXPLANATION BY SIR WM. RAYNOR

A recruiting meeting, organised by the local branch of the Women's Social and Political Union, was held in the Huddersfield Town Hall on Thursday evening, when the speakers were Miss Annie Kenney and Mrs. ("General") Drummond. Except to a limited part of the hall a charge was made for admission, and ther was a fairly large gathering. The local Territorials mustered in strong force, and the band of the 5th Reserve Battalion, occupying seats on the orchestra, and almost hidden from view by a wealth of palms and other plants, played stirring military and patriotic music at intervals during the evening. In conspicuous positions were the national flags of the Allies, and the colours of the Women's Social and Political Union.

Sir William Raynor, who was accompanied by Lady Raynor, occupied the chair, and in addition to the speakers there were on the platform the Mayor of Huddersfield (Alderman J. Blamires), Mrs. Cooper, Miss Lowenthal (The Grange), Colonel Parsons (in command of the 33rd recruiting area), Colonel Cooper (in command of the 5th Reserve Battalion), Captain Alexander, Captain Wrigley, and Captain Robinson.

THE LATE MR. C. F. SYKES.

Sir WILLIAM RAYNOR, in opening the meeting, said it was only fitting that, meeting as they did in that hall, reference should be made to two unfortunate events that had occurred that day. He was quite sure their hearts would go out to Mrs. C. F. Sykes in the terrible loss she had sustained in the death of her husband. Mr. C. F. Sykes, of Moldgreen, had been known to him for nearly forty years. The deceased gentleman was a quiet, unobtrusive townsman, one whose heart was in the right place. To a woman like Mrs. Sykes, whose hand had always been ready to help every cause for the uplifting and advancement of her sex, no greater catastrophe could have happened, and her loss was indeed irreparable. He was quite sure they would all join in expressing deep sympathy with Mrs. Sykes and her family in their great bereavement. (Hear, hear.) The other event to which he referred was the unfortunate accident that had happened to Alderman Beaumont, a very prominent townsman. Mrs. Beaumont was a well-known worker in all causes that affected women, and they would all join with him when he said that he hoped her husband, who had laboured long for the town, would speedily recover. (Hear, hear.)

WOMEN'S PART IN THE GREAT STRUGGLE.

Sir William, continuing, said that when he was asked to preside over that meeting he consented readily. He did not ask what the political views of the promoters of the meeting were, or what their views on social questions were. He was told by the charming young lady Miss Kennedy, who went to see him, that they were out for recruiting, and that settled him at once. In anything that had to do with recruiting he did not stop to ask the why and the wherefore, but tried along with his fellows to put his back into the work. Every man and woman worthy the name were sinking their differences, and were knowing no politics at this crisis in our country's history. (Applause.) Men and women who stopped to quibble about politics and differences of opinion ought to stay at home with the slackers and the weaklings who did not go to the front. These were times that were helping to make strong men and strong women. When the record of this great war came to be written, as it would be written when we had reached that glorious termination we all hoped and expected, there would be no brighter or more brilliant page or chapter than the one recording the part taken by the women of this country and taken in this great struggle. (Applause.) The man who wrote "Men must work and women must weep" would probably alter it to-day, and say "Men fight and women work," and to their honour be it said. The men who supported women in this great work were but doing them bare justice.

SUCCESSFUL RECRUITING IN HUDDERSFIELD.

Proceeding, Sir William said he would like to refer to the recruiting that had been done in the Huddersfield district. A genius had discovered that people who were engaged in making khaki could be exempted from military service. That person was not only a genius, but he must have been a joker, because more than half the textile operatives of the district were women and girls. When recruiting started [illegible] he did not stop to ask the why and the wherefore, but tried along with his fellows to put his back into the work. Every man and woman worthy the name were sinking their differences, and were knowing no politics at this crisis in our country's history. (Applause.) Men and women who stopped to quibble about politics and differences of opinion ought to stay at home with the slackers and the weaklings who did not go to the front. These were times that were helping to make strong men and strong women. When the record of this great war came to be written, as it would be written when we had reached that glorious termination we all hoped and expected, there would be no brighter or more brilliant page or chapter than the one recording the part taken by the women of this country and taken in this great struggle. (Applause.) The man who wrote "Men must work and women must weep" would probably alter it to-day, and say "Men fight and women work," and to their honour be it said. The men who supported women in this great work were but doing them bare justice.

SUCCESSFUL RECRUITING IN HUDDERSFIELD.

Proceeding, Sir William said he would like to refer to the recruiting that had been done in the Huddersfield district. A genius had discovered that people who were engaged in making khaki could be exempted from military service. That person was not only a genius, but he must have been a joker, because more than half the textile operatives of the district were women and girls. When recruiting started [illegible]

of America were absolutely with the Allies in this fight against Germany. The Government of America could not be connected with the people of America so far as this war was concerned. The United States Government was neutral, but the people, young and old, apart from the people of German descent, approved of the attitude Great Britain adopted in declaring war last August. Some people feared that difficulties might arise between us and the United States in regard to the contraband question. She did not agree, considering that there would be no difficulties if Great Britain were firm and unrelenting, as that was the one thing that would arouse respect in that country. America, like our own country, was a country of ideas and ideals. The ideal of Great Britain was liberty, and the present war was a fight for freedom. In spite of all the grievances people had—and she had one—(laughter)—the British Constitution was the finest in the world. She went on to explain the difference between the neutrality of Belgium and that of other small European nations, and said that if we had not fulfilled our obligations to Belgium we should have lost, and have deserved to lose, the respect of the whole world. We had always been held up to be the friend of small nations, but apart from that we had signed a treaty, and it was our duty to stand by what we had signed. When our troops were sent to Belgium all the people breathed a sigh of relief because they realised that the Liberal Government had done their duty so far as this war was concerned. (Some laughter.) She saw that some of her hearers smiled when she said that, but she repeated it. (Applause.)

IF WOMEN WERE WANTED.

Germany's idea, she proceeded, had been to crush Britain. France she despised and hated, but Britain she feared. She feared the wonderful Empire we had built up, and our naval position in the world. For a great number of years Germany had been wrapped up in the one idea of world power. Some people said that this war did not concern women, but the more she spoke at recruiting meetings and the more she wished that Lord Kitchener, whom they all honoured and respected, would say that he wanted women to join the army. She would be the first there if she could get on the doorstep first. (Applause.) She did not say that the men had not responded. They had done so in a perfectly miraculous way, but still more was expected of them. If Lord Kitchener wanted women to join she believed that thousands would at once flock to the colours. As a woman she would prefer fighting to staying at home wondering what had happened to her father or her brother. She believed the women of the country would make fine soldiers if they had the opportunity. When they remembered what had happened to women in Belgium she wondered how men who had not joined the colours did not realise what would happen if the Germans came here. They had been wicked in Belgium, but they would be worse on British soil. Belgium, however, was no more conquered than we were conquered. If ever the soil of Belgium lived it was living at the present time. (Applause.)

AN EMPIRE TO DEFEND.

If it had been worth fighting for our great Empire, was it not worth defending that Empire? That was the way the situation presented itself to her. Did the men of the country, who had political freedom, realise what power they would have if they were under German rule? As electors the men had the power to say who should be in the Cabinet, but they would not have that power if Germany conquered us in this war. If ever the Kaiser did reach England, amongst the best fighters he would have to face would be the suffragists. They would not stand the bombastic foolhardiness of the Kaiser as the Germans did. (Laughter and applause.) When the war broke out the suffragists immediately realised that theirs was a family quarrel, and they united against the enemy. She did not care what their political views were—it was the duty of every man who could to give in his name and join the army and be proud of having the opportunity of fighting for the land of his birth. (Applause.)

ON THE GOVERNMENT'S SIDE.

Mrs. DRUMMOND said the Kaiser was responsible for many things, but one of the greatest things he was responsible for was that of bringing Sir Wm. Raynor and herself side by side on one platform. (Laughter and applause.) That showed that they looked at the common enemy as a great foe to be fought and that their differences were too individual and not to be thought of while this great enemy was knocking at our doors. She had been asked while in London why she was now fighting on the side of the Government. The question reminded her of a very common sight in London—that of a fight between a man and his wife. The latter, badly as she was treated, would not tolerate outside interference, and that was exactly her (Mrs. Drummond's) position at the present time. They were not fighting for any Government, but for their country and their country's honour, and they appealed to the men of military age to join the armed forces of the country. The women grudged the men the honour. The one and only time she wanted to be a man was when the war broke out. What was needed most of all was men in the firing line. That was the cry that went forth from every man who returned to his country from the front.

WOMEN WANT NO HANGING BACK.

If some of her hearers were hanging back because they thought of their women folk, she could tell them that she knew women sufficiently to say that they did not need them to do it. The

to the ladies who had spoken they could thank them with a will when they saw them making efforts in the right direction. (Laughter and applause.) This was a sort of militarism that was being put on the right shoulders.

In a brief speech Col. PARSONS seconded the resolution, which was passed by acclamation.

Sir WM. RAYNOR said that those conversant with recruiting in Huddersfield knew it would be difficult to find six Irishmen of military age who had not either enlisted or tried to enlist. (Applause.)

Miss KENNEY responded to the vote of thanks and thanked the band for their services. The meeting closed with the singing of the first [illegible] of the National Anthem.

country had taken in this great struggle. (Applause.) The man who wrote "Men must work and women must weep" would probably alter it to-day, and say "Men fight and women work, and to their honour be it said. The men who supported women in this great work were but doing them bare justice.

SUCCESSFUL RECRUITING IN HUDDERSFIELD.

Proceeding, Sir William said he would like to refer to the recruiting that had been done in the Huddersfield district. A genius had discovered that people who were engaged in making khaki could be exempted from military service. That person was not only a genius, but he must have been a joker, because more than half the textile operatives of the district were women and girls. When recruiting started Huddersfield was almost three weeks in advance of almost every other town in the North of England. Meetings had been held in Huddersfield and the people had got over their excitement before the other towns in the neighbourhood had started. Before the war there were in the Huddersfield recruiting area practically 1,800 Territorials, and from 1,200 to 1,500 men in the Army and Navy. At the present time there were just about 4,000 Territorials in the area, and considerably over 4,000 men in the regular services. (Applause.) He believed he was correct in saying that in an imperfect register 2,300 recruits could be traced as having enlisted for Kitchener's Army. During the Boer War 890 cases were relieved by the local Distress Committee, which had the whole of the Colne and Holme Valleys, in addition to Huddersfield, under their jurisdiction. During the present war the local committee had had 2,200 applications, and had relieved 1,021 cases, with less than half the area to serve. It could surely be said that out of the 2,200 applicants at least 1,500 belonged to the regular services. There had been a steady stream of recruits who had not enlisted near home, so that he was justified, and more than justified, in saying that Huddersfield had done its share, and perhaps in some cases, especially in connection with the metal trades, a little more than its share.

VICTORY NEAR AT HAND.

But a great deal still required to be done. They had to close and clench the hard work and sacrifice of the past six months. It was a terrible thing to think of the great sacrifices our country and our men had made; "but," he added, "we are very much nearer to complete victory than most people imagine. (Applause.) I heard an American say only to-day, 'They are beaten to a frazzle.' I am not going to say that, but they are very much nearer beaten than some of us imagine, and if we only put our backs into it in the next six months we shall see the clearance and the victory we are all hoping and longing for." (Loud applause.)

FEELING IN AMERICA.

Miss ANNIE KENNEY said she valued very much the opportunity of being there to put before them the cause of the Allies. During the last few months she had been in America and had found that almost unanimously the public conscience and the public intelligence, the latter, badly as she was treated, would not tolerate outside interference, and that was exactly her (Mrs. Drummond's) position at the present time. They were not fighting for any Government, but for their country and their country's honour, and they appealed to the men of military age to join the armed forces of the country. The women grudged the men the honour. The one and only time she wanted to be a man was when the war broke out. What was needed most of all was men in the firing line. That was the cry that went forth from every man who returned to his country from the front.

WOMEN WANT NO HANGING BACK.

If some of her hearers were hanging back because they thought of their women folk, she could tell them that she knew women sufficiently to say that they did not need them to do it. The women would rise to the occasion as they had done in every industrial crisis in the history of the country. There could be no talk of peace until Germany was crushed. (Applause.) "You have often told us," she continued, "that the men fight, and that the women ought to stay at home. Now's your chance. Don't be afraid we won't manage in Britain without you. We shall miss you, but we'll be proud to know that we are able to do our bit whilst you are gone to do yours." (Hear, hear.) She heard that some people in Huddersfield were surprised at the stand she and her colleagues were making on the question. They were just the people who had the right to do it, because they were fighters themselves. "We were prepared to give our lives," she said, "for the power of a voice in the making of laws which should leave our country better than we found it." (Applause.)

THE "FEAR OF RUSSIA."

Questions were then invited, and a lady in the audience asked Miss Kenney the following:—"If we are successful in subduing the military power of Germany shall we not have to face the successful military power of Russia?"

Miss KENNEY replied that we had all been frightened of Russia. The Germans had put the fear of Russia into our minds. Many of the things said in the Press about Russia were unfair to that nation, as well as untrue, and there was more hope in Russia evolving a high social ideal than there was in the prospect of Germany ever doing so. (Hear, hear.) The present was not the time to attempt to detract from Russia's growing prestige, but it was our duty to stand nobly and honourably by Russia, as she was standing by us. She would like to know where we should be at the present time if it were not for Russia? (Applause.)

NINE O'CLOCK CLOSING.

A vote of thanks to the speakers was proposed by the MAYOR, who spoke of the action of Russia in stopping the sale and consumption of vodka—(applause)—and the parallel action of the French Government with regard to absinthe. (Applause.) Our own country could not afford to let those nations make such sacrifices without a corresponding sacrifice from ourselves. We were on the right lines, but we were acting with characteristic British caution and timidity. At any rate, we were "closing at nine o'clock." (Applause, and a Voice: "Go one more.") As

EMETINE INJECTIONS IN AMŒBIC DYSENTERY.

Dr. F. J. Harfour and Dr. W. B. Haddad, of the Church Missionary Society, Achmoun, Menoufeyah, Egypt, record in the *Lancet* the favourable results of the treatment of amœbic dysentery in cases treated by them by hypodermic injections of emetine hydrochloride in an out-patient practice. They write :—

"In the space of eleven months twenty-seven cases were treated and in all cases the symptoms quickly disappeared, and the patients were so struck with the result that they came back for more injections even after they were apparently cured. We commenced with injections of gr. $\frac{1}{3}$ which was given on dispensary days—i.e., three times a week—but soon the dose was raised to gr. $\frac{1}{2}$, gr. $\frac{2}{3}$, and lastly to gr. 1. The majority of cases received gr. 1 at each injection with most satisfactory results. Gr. 1 gave the best and quickest result, and no untoward result was ever complained of or observed. It is interesting to note that once, when the stock of hypodermic tabloids had run short, a half-grain tabloid of emetine was given internally, and when the patient was next seen he reported that on his way home he had severe vomiting and diarrhœa. As all were treated as out-patients, they could not be restricted to a liquid diet. All the cases except one were chronic, lasting from one month to four years. The number of motions averaged about ten in the twenty-four hours; two had sixteen and one thirty motions. All patients showed remarkable improvement after the first or second injection; the hæmorrhage greatly decreased or stopped altogether, straining was much less or quite gone, the number of motions considerably diminished, and the stools became fæcal. The pallor disappeared, and the pained expression of the face entirely altered after a few injections. As a rule no other drug was given, and the majority of cases had no symptoms of the disease after four or five injections. In the case

THE MATRONS' COUNCIL OF GREAT BRITAIN AND IRELAND.

WOMEN AND THEIR WORK DURING THE WAR.

DISCUSSION.

The discussion on Miss Mollett's Paper on "Women and Their Work During the War," elicited a good many opinions, which we regret cannot for lack of space be reported at length.

The Chairman (Mrs. Fenwick) in opening the discussion, said that in regard to the scope and extent to which women can replace men temporarily in time of war, were several branches of work in which men in time of peace monopolised women's work, selling stockings and ribbons and other such items of women's wear over the counter, acting as shop walkers in authority over women, &c. She thought it was a pity more women were not attracted to work on the land in the open air, especially in the care of animals; it was in many instances not more arduous than the professional games to which many girls devoted their lives. The leisured women who were eager for work since the beginning of the war, showed no craving after such work as required technical skill, or brain work, such as banking or accounts. The majority had rushed into nursing, which apparently they did not realise was work which required definite training and skill, and were encouraged to do so by doctors and others, who ought to realise its value, but apparently did not do so. Indeed, in this connection it was extraordinary how few people, and women especially, realised that science, art, and skill were required in nursing the sick and wounded; indeed, they were profoundly ignorant of its true significance.

Miss Mollett had spoken of her experience in a Red Cross Hospital, after eighteen years' practical experience in office as a Matron. She had not experience in hospitals dominated by an untrained Commandant, who according to the regulations had autocratic powers, even to the extent of discharging the medical officer and nurses. If the Red Cross Society provided that only highly trained women should be in charge of all auxiliary military and voluntary hospitals, with the usual proportion of trained nurses and probationers under them, the system would be more satisfactory. The present system sanctioned by our War Office was wrong. It placed a hospital in charge of a Commandant, or Matron, who was as ignorant of hospital management as she was of nursing. Numbers of untrained women had since the war not

959

hesitated to assume such responsibility. The system was fundamentally wrong, and required reorganization. The whole Army Nursing Service should be co-ordinated directly under the War Office, and not deputed to a voluntary organization.

Miss Waind thought the matter was largely in the hands of the medical profession, who should refuse to work with untrained women unless they were controlled by a sufficient number of trained nurses. She knew of one instance in which this had been done.

Mrs. Walter Spencer warmly commended the work of the knitting brigade, and of sewing, as a most important part of women's work in the war. Think, she said, of the suffering there would have been if all had not done their best to make the men as comfortable as possible with warm and sufficient clothing. This work had been the salvation of many men. In it also domestic workers could take a hand. She was glad to say that she and every member of her household knitted for the soldiers. As to women's place in agriculture, girls could do well with flowers and at market gardening, but, in regard to farming, there were weeks and days when they could not go out to work in the fields. She thought managing the cows and sheep, in calving and lambing time, unsuitable work for women, and, as to milking, they would have to be in the milking sheds at 3 a.m., to have the milk ready for the early trains. Men were often up all night with the cows, and in lambing time the shepherd stayed near the animals in a hut for three weeks or a month at a time.

Miss Marquardt mentioned the recent experiences of a friend in France, where the women were conducting the whole of the agricultural work, doing the marketing, and sowing the seed for next year. They had gathered in the harvest and the grapes.

Miss Marsters thought that the holdings were smaller in France than in this country, and more easily worked.

Miss Cutler said that when she left Brussels, last September, to return to England, during a long drive, she observed women were tending the cattle, and ploughing with donkeys or mules, but many were working, doing men's work in the fields.

Miss Bickham described the work of women on a farm in Essex, which was very successful.

Mrs. Andrews believed it was quite possible for women to do agricultural work. If not, how was it possible for boys? Yet boys of thirteen had been allowed to leave school to replace the men on the farms. She refused to believe that she could not do the work of which a boy of thirteen was capable. Abroad, women did a great deal. It was noticeable that the appeals in the papers for women to do agricultural work were mainly from women interested in the question, and not from employers. The farmers preferred boys, whose labour was cheap. In many instances where women did exactly the same work as men who had gone to the front, they did not get the same wages.

Miss Clara Lee spoke of the successful agricultural work of a Women's Co-operative Guild in Sussex. They were interested in animals, and the animals knew them.

Mrs. Holgate, who said she had been working in the "back blocks" in New Zealand, mentioned that the estates there were from 100 to 1,000 acres in extent. The most successful sheep farm she knew was kept by three women, one of them a trained nurse, who said her training was of the greatest value on the farm. On this farm they lost very few lambs. They lived on the proceeds of the poultry farm, and were able to put away all the money they got from the sheep.

In regard to the Red Cross system, Miss H. L. Pearse said that trained nurses found it impossible to work under untrained Commandants. The system was wrong. She could not imagine why the Army Nursing Authorities did not provide for sufficient expansion to meet the needs of the sick and wounded, instead of depending on a voluntary society.

Miss Marsters stated that she was Commandant of a Voluntary Aid Detachment, which included five trained nurses, with V.A.D. orderlies working under them. She thought that about thirty of the seventy enrolled would make good nurses if trained, and expressed the opinion that good probationers would in the future be secured from such workers.

Mrs. Andrews hoped this might prove true, and thus help to relieve the serious shortage of trained nurses from which institutions had suffered of recent years.

Miss Mollett having replied, the discussion terminated.

Edinburgh News 19.2.15. 656. 656/42

WOMEN AND THE WAR.

[No. 2.]

(BY A WORKING WOMAN.)

Women's part in the burden of the war is, as will be easily understood, rendered more onerous by reason of the increased cares and worries which have arisen in connection with the all-important matters of income and expenditure. Around the question of separation allowances a great deal of controversy has raged. In attacking the problem all parties alike presumably agree that women and children must not suffer materially through the absence of the bread-winners on active service. It is gratifying, therefore, to know that to dependants in poor circumstances the separation allowance is such as to lessen rather than increase the normal strain and stress of living. Under the new scale of separation allowances which, it is expected, will come into operation on the 1st of March, a wife with four children, for instance, will receive 25s a week, a sum considerably larger in many cases than the husband's earnings. It should be noted also that where exceptional circumstances have increased expenses, supplementary grants from national funds have been made through the Soldiers' and Sailors' Families' Association. In many cases tradesmen's bills have been paid, and assistance given with the rent. There seems no doubt whatever that the financial circumstances of a number of families have improved since the separation allowance took the place of the husband's wages.

Where the Pinch is Most Felt.

It is in the case of the families of the better paid class of workmen, and of other earning good wages or salaries, that th pinch is being most severely felt. In tho cases the separation allowances are fou quite unequal to the keeping up of anythi like the former scale of living. The rent he makes a big hole in the income. Rarely in tho cases does rent with taxes fall below 8s a wee and, of course, in numerous instances it amoun to much more. There have been cases of famili removing to cheaper houses, but usually there a natural reluctance to take this step. The task of "keeping up appearances" has, in such instances, become considerably harder. There, however, mention should not be omitted of the fact that in a large proportion of cases where men gave up good situations their employers are acting in a generous and patriotic way. Not a few employers are continuing to pay full wages to their men who have enlisted. A great many more are paying one-half or one-third of the wages the men were earning. A considerable number of soldiers in the new Army will gratefully acknowledge this fact. While many have given up without recompense good situations in order to serve their country, it may be taken for granted that very few married men, earning four or five pounds a week, have enlisted without being able to make further provision for their families than that afforded by the Government allowance.

Matters Proceeding More Smoothly.

It is usual for working-class families to remove to a larger house as the sons grow to manhood and contribute more to the upkeep of the household. The enlisting of one or more sons has certainly placed an added burden on the housewife. Provision has been made for such cases, but it does not appear as if applications for assistance have been anything like generally made. Some people resent the preliminary inquiries, which have not always been tactfully conducted, and where assistance has been received dissatisfaction with the amount has been pretty generally expressed. In the recently-issued Special Report from the Select Committee on Naval and Military Services (Pensions and Grants) it is stated that instructions have been given to pension officers "to remember that the absence of one member of a family will increase the household expenditure per individual," and that the amount paid should "place the dependant in approximately the same condition of comfort as when the soldier was at home." It may, therefore, be hoped that in future those requiring such allowances will receive more just treatment. Complaints have been numerous as to the irregular and niggardly way in which separation allowances have been paid, and causing what seemed much unnecessary hardship. It can be readily understood that the causes of these complaints were not always avoidable. It is satisfactory to know that matters, in this respect, are now proceeding much more smoothly than at first.

Narrow-Minded and Uncharitable Objections.

With reference to the decision come to at a recent meeting of the Soldiers' and Sailors' Families Association in London, that help should be given to unmarried mothers and their children during the time their breadwinners are serving their country, it may be said that most people will find themselves in hearty agreement therewith. The fact that obstacles have all along been placed in the way of soldiers marrying should help some doubters to take a more sympathetic view of the matter. This is surely not a time to make what are really narrow-minded and uncharitable objections to a decision dictated alike by necessity and common-sense. Nor is this a time for wedded women to make the burden, which their less fortunate sisters are bearing equally with themselves, still harder to bear. One is therefore surprised to hear that at the meeting referred to certain speakers objected to the proposal on the ground that "respectable" soldiers' wives bitterly resented the idea that those women should be helped by the same association as themselves. Such sentiments are so much opposed to the dictates of Christianity and humanity that one can only hope the speakers in questions were unwarranted in ascribing them to soldiers' wives. It will be easily understood how the increased cost of living has greatly added to women's burdens at this time. If women believed that the rise in prices was practically unavoidable it is certain there would be a good deal less grumbling, and the situation would be faced with greater fortitude. But so long as they, rightly or wrongly, suspect that prices are being forced up by unscrupulous persons bent on "making their pile" by taking mean advantage of the necessities of the country, there will continue to exist a great deal of bitterness and discontent.

The Closing of Schools.

Sympathy is sometimes expressed with mothers on account of the impediments placed in the way of their children's education through so many schools having been taken over by the military authorities. It must be said, however, that mothers on the whole are accepting the new order of things with perfect equanimity. People who complain of existing restrictions are surely lacking in a just sense of proportion in regard to the relative value of things. Besides, when one considers how often the time and energies of pupils have been dissipated in futile efforts to master a variety of practically negligible subjects it may naturally be supposed that by now concentrating attention on really essential matters more good than harm will result from the restriction in school hours. Certain mothers have expressed themselves as thankful for the assistance in household duties which their elder girls are now able to render them in the morning. The practical experience in housewifery that the girls are thus gaining may well be set down as an asset against loss of instruction in subjects of problematical value. But whatever view we take of this matter it must surely be recognised that this is not a time to indulge in complaints about comparatively petty grievances. Rather should there be great thankfulness that there is so little dislocation in the carrying on of the ordinary concerns of life at a time when we are plunged in the greatest war in the world's history.

Christian Commonwealth.
24-2-15.

Women's Kingdom.

Women and the Police Order.

Six excellent reasons for the withdrawal of the recent War Office order regarding police surveillance of the wives of men on active service have been formulated by the Women's Local Government Society in a letter sent to Lord Kitchener. The withdrawal of the circular is urged on the ground that "the statements as to the drinking of soldiers' wives which called for the circulars, cannot be maintained in the face of the results of careful investigations: that to subject a woman to police supervision instead of taking her case into court where her guilt or innocence can be proved, is really, however kind the intention, to deprive her of the protection of the law—thus differentiating wives and dependants of soldiers and sailors from every other class of the community; that the employment of police would be likely to impair the good relations between the people and the force; that for State interference, directed towards checking misconduct and protecting children, the law (which includes the Children's Act) is adequate, if efficiently administered; that the so-called allowances are actually wages offered for work, and hence there should be no question of withholding except after conviction and for the benefit of the family; and that the withdrawal of the departmental circulars referred to will terminate discontent and restore confidence." This reasonable appeal is signed by many representative women on behalf of practically every woman's organisation in the country. The evidence upon which these six reasons are based has been given in this column more than once, and we think it is really time now that some attention was paid to the prolonged protest which women have made against the insult offered to their sex by the military authorities.

Shop Assistants and the War.

The appeal made by Mr. Tennant to organised Labour "to help the Government to organise the forces of labour so that when one man joins the colours another unfitted by age or disability, or a woman, may take his place," has naturally excited a good deal of comment. The Shop Assistants' Union, to whom special reference was made by the Under-Secretary for War, has sent a letter to him in which the facts are stated in a way that throws a different light upon the question. It is pointed out that the membership of the Union is about 80,000, of whom 22,137 are women, and a very large proportion of the remainder are youths between sixteen and nineteen—and who are therefore not of military age; there is also a considerable proportion of members over thirty-five. Mr. John Turner, the general secretary, estimates that considerably under 30,000 of the male shop assistants in his union are eligible for military service, and of this number he has official knowledge of 6,000 who have enlisted, and there are 2,000 or 3,000 more who have not officially notified the union of their having joined the Army. This means that at the lowest estimate a percentage of 25 or 30 per cent. have joined the Army from this class of worker. Large numbers who have offered themselves have been rejected on the ground that they are medically unfit, and, as Mr. Turner points out, shop life attracts most those who are not physically robust.

Women Shop Assistants.

Mr. Turner goes on to say that the union has taken a broad view of the question of employing women in branches of the distributive trade where they have not generally been employed hitherto. The union has had correspondence with the Board of Trade and the Women's Unemployment Committee on the question of training women, particularly for the grocery trade, and has offered every facility for training schemes, making it a condition that the entrance of women into shop life shall not be made an excuse for lowering the already low standard of conditions of employment. The movement to secure better conditions in shops, particularly better wage conditions, has, Mr. Turner states, either been refused since the war began, or met with the threat to introduce women in the place of men, though the staffs of such firms have already been heavily depleted by the men enlisting. All the facts point to the conclusion that the present is not the opportunity to introduce more women's labour in shops; and that organised labour, both men and women, should be on their guard to prevent any lowering of the standard of wages and conditions at this time of crisis.

Women Soldiers.

In this country the dearth of men is not yet so much felt that their places have to be supplied by women, but it is so in France, where the businesses and shops are very largely being run by the wives of the conscripts, and it is so in Russia. In the printing trade in Petrograd, we learn from the "Women's Messenger," women have very largely replaced men. Women compositors are, however, receiving only 20 to 25 roubles a month for doing exactly the same work for which their male predecessors were paid 36 to 40 roubles. The number of women now employed in the metal and locksmith's trade exceeds that of the men. On all special orders they receive equal pay with the men. In Moscow the wives of cabdrivers who have been called to the front have donned their husbands' attire and continue to ply their trade. At least three Russian women are serving with the army. One, a young girl of seventeen, received recently the St. George's Cross for valour on the field of battle, the first woman to be thus honoured. The famous Siberian explorer, Mme. Koudashev, is serving in a cavalry regiment; and Princess Shakors Kaia is on active service as a member of the Russian Flying Corps.

It is seldom that companies err on the side of over-caution in appraising their worth, but here is an instance where it has been done. The assets of the Sun Life of Canada twelve months ago were returned by that office as amounting to £11,450,776. These figures have since been proved by independent official experience to be very much under the mark. The Committee of the Insurance Department of Michigan, and officials of the Assurance Department of the State of New York, in the course of a searching examination of the condition of the company, valued the assets at £1,103,440 more than the sum claimed by the Sun Life Assurance Co. of Canada, whose London offices are in Norfolk Street, Strand. The progress of this company during 1914 has been remarkable. On the same conservative basis as before, assets are now returned as £12,862,000. It is safe to assume, however, that on the valuation basis adopted by the officials referred to, the present assets of the company cannot be a penny less than £14,000,000.

The directors of Peek, Frean, and Co., Limited, have decided, in view of the increased cost of living consequent upon the war, to make an addition for the present of 5 per cent. (1s. in the £) to the salaries or wages of all those in the company's employ who are in receipt of not more than £200 per annum. The directors hope that circumstances will allow them to continue this bonus during the period of the war.

DUBLIN WOMEN'S UNIONIST CLUB.

WOMEN'S WORK IN WAR TIME.

AN APPEAL TO YOUNG MEN.

WHAT DUBLIN IS DOING.

Under the auspices of the Dublin Women's Unionist Club a non-political patriotic entertainment was given in the Molesworth Hall last evening. The object of these patriotic evenings is to increase the interest of the ladies of Dublin in the war, and to secure their assistance and co-operation in the provision of comforts for the troops, and in other ways helping the cause of the country in this time of national crisis. Last evening's entertainment was organised by Lady Gardner, who is the Vice-President of the club for the Pembroke district. There was a large attendance, and the evening proved both instructive and enjoyable.

Sir Robert Gardner, who presided, on behalf of Lady Gardner thanked those present for attending in such large numbers, and in interesting themselves in the work of these meetings, one of which was that those engaged in the work should know each other better. He knew the good work the ladies of the Dublin Unionist Club had been doing in connection with the war, and he might say that they were all deeply grateful to Lady Arnott for the trouble she had gone to in having the various articles forwarded to the proper quarters. (Applause.)

THE NEW MOTOR AMBULANCE.

Mr S. W. Maddock said that at the last patriotic meeting held in connection with the Dublin Women's Unionist Club Lady Arnott had referred to the motor ambulance which had been presented to the military authorities for use with the Expeditionary Force by the club. The sum actually subscribed had amounted to £632 4/8, which had been sent to General Friend. Lady Arnott regrets that she inadvertently omitted to mention that a number of friends as well as the patronesses, vice-presidents, and members of the Dublin Women's Unionist Club had also subscribed. (Applause.) Continuing, he said the war experts were puzzled at the way the campaign was developing. As a rule the war expert was an armchair, non-combatant critic. No one could have expected a month ago that the Turkish attack on the Suez Canal would have been of such a feeble character and so easily repulsed. Who could have foreseen that the Turkish forts in the Dardanelles would have crumpled up before the naval guns? It was best for the general public to be neither unduly optimistic nor pessimistic. Clear thinking, hard work, and self-denial on the part of non-combatants would be of great assistance to the Government. In nine different parts of the globe the great issue was being fought, and nervous individuals should not be carried away if our enemies achieved some occasional local successes. The economic suffocation of the German Empire was surely bringing the great bully to his knees, and one of the dangers to be apprehended and to be faced was that he would play for a draw. Already there were signs of a movement for arresting the war on terms unworthy of the sacrifices which have been made by this country and her Allies.

WORK FOR WOMEN.

The position of women in the war was unique, the influence they exert powerful and far-reaching. Although numbers have actually offered to take a place in the firing line, every chivalrous instinct possessed by men recoiled at the idea; but the courage which faced death at the cannon's mouth was not the only kind, and there was much to be done at home—nursing, knitting, sewing, visiting the wives and children left behind, and minimising suffering. All these duties were necessary, and the soldiers expected them, and they would not be disappointed. (Applause.) A great number of the women of the British Isles were proving once again that they were worthy of their heritage. The President of the Board of Trade was inviting all women who were prepared to take employment, industrial, clerical, agricultural, etc., to enter themselves upon the register of women for war service at the Labour Exchanges. This was a step in the right direction, for it would release a number of soldiers and civilians for active service.

A CALL FOR YOUNG MEN.

It was an astonishing sight in Dublin to see the windows of our large drapery firms especially being titivated and decorated by splendid-looking specimens of masculine humanity. Surely, during a time of such gravity employers should see that women should release men as far as possible. Their theatres at night were filled by irresponsible youths who have not awakened to the fact that we have a country, an Empire, a heritage worth fighting for. There were now evidences that the young men of Dublin were in continually increasing numbers realising their duty and their responsibility in this time of crisis. In the [illegible]

The Appeal for Women Workers.

Sir.—Seeing the notice in the "Evening Chronicle" with reference to the recent appeal for women workers, and really desiring employment with Messrs. Armstrong, Whitworth and Co., I called at the Labour Exchange in my district expecting to get an introduction card for the above-named firm to commence work. I was informed that I was too old (my age is 34), as the age-limit is 23. When thrown out of employment, two months ago, I registered at the Labour Exchange for the same class of work, got a card, and wasted three days waiting among the unemployed girls to get started, but without success. Up till now I have not found suitable employment, either through the Labour Exchange or through my own efforts. Several women of my acquaintance have been treated in this manner, yet we are willing to work, and I know that women several years older than I have obtained work at Elswick. Between the ages of 30 and 40, are we too old? Yet we are strong, healthy, steady women, who have to work to keep our little homes together. How is it that Elswick will not employ us now?—Yours, etc.,

HARD LINES.

The Draper
20/3/15.

UNEMPLOYED TYPISTS.

Situations found for nearly 400.

Owing to the closing of the Stock Exchange, and to the fact that the war completely stopped business among a large number of foreign agents and others in the City, a great many typists and women clerks were thrown out of employment last August. In September a register was opened by the National Patriotic Association, at 32, St. Paul's Churchyard, and through the kind offices of the chairman, Sir George Pragnell, temporary work was found for those who had to house and clothe themselves. For instance, thirty-five thousand flannel belts were made by 183 girls, the wages paid for the work (at threepence each article) amounting to £437 10s. Sir George also started a new industry for the unemployed—the turning of old socks into mittens. Over sixteen thousand pairs have been given to the Fleet and the troops, the refugees and wounded. More than £100 was paid to typists for the simple task of cutting off the old feet and sewing the remaining part so as to form a mitten.

411 Registeries.

Mr. Howard Williams (of Messrs. Hitchcock, Williams & Co.) also found work in the shape of shirt-making for a good number of girls. In all, 411 typists were registered, and the committee found suitable situations for 386 of these by the middle of February. The business of mitten-making has now been taken over by the Queen's Unemployed Committee, with a large stock and an initial order for 1,000 pairs, whilst Sir George Pragnell continues to send (free of charge) a sample pair and particulars to those who wish to start making these useful articles among their own friends. The old foot portion can be sold at a good price, or sent to the troops for rifle cleaning purposes. Only thick socks are suitable for mittens, and these may be sent in any quantity (clean and carriage paid) to the manager, Contract Department, Queen's Central Committee on Women's Employment, 138, Piccadilly, S.W.

of the Dublin Unionist Club had [illegible] in connection with the war, and he might say that they were all deeply grateful to Lady Arnott for the trouble she had gone to in having the various articles forwarded to the proper quarters. (Applause.)

THE NEW MOTOR AMBULANCE.

The President of the Board of Trade was inviting all women who were prepared to take employment, industrial, clerical, agricultural, etc., to enter themselves upon the register of women for war service at the Labour Exchanges. This was a step in the right direction, for it would release a number of soldiers and civilians for active service.

A CALL FOR YOUNG MEN.

It was an astonishing sight in Dublin to see the windows of our large drapery firms especially being titivated and decorated by splendid-looking specimens of masculine humanity. Surely, during a time of such gravity employers should see that women should release men as far as possible. Their theatres at night were filled by irresponsible youths who have not awakened to the fact that we have a country, an Empire, a heritage worth fighting for. There were now evidences that the young men of Dublin were in continually increasing numbers realising their duty and their responsibility in this time of crisis. In the Recruiting Office in Grafton street they were now getting eight or ten times the number of young men who offered themselves a few months ago. They all saw these men, of Kitchener's Army, which they were all proud of, in the streets of Dublin every day. They were well set-up, clean-living men, who would be able to give a good account of themselves in the coming struggle. But the call was for more men, and still more men. In England and Scotland the call had been answered bravely and nobly, and he had no doubt but that would be equally true in Dublin, now that the young men of the city were being awakened to a keen sense of their duty, they were deciding for themselves that they will now offer for service, so that they will not be ashamed of themselves, and be ready to slink into a corner when their soldiers come back victorious at the close of the war. (Applause.)

The Chairman said they would all be sorry to hear that Mr. Jellett, K.C., who was to address the meeting, was confined to his room with a bad cold, and had completely lost his voice.

During the evening there was an interesting musical programme. Songs were capably sung by Miss Story and Miss Cora Stanuell; dances, in costume, by Miss Moira Guiness (old English and Scotch), Miss Barbara Tew (Irish), Miss Peggy Martin (Welsh), and a hornpipe by Miss Pops Guiness. All the dances were given with much grace, and were loudly applauded. Patriotic recitations were given by Mrs. Turbert and Miss Norman Thompson, and pianoforte solos by Mrs. Tew and Miss Iola Turbert. The pianoforte accompaniments for the dances were played by Miss Walton. A number of pleasing selections were rendered by the Octagon Orchestra. The meeting concluded with the singing of the National Anthem.

UNEMPLOYED TYPISTS.

Situations found for nearly 400.

Owing to the closing of the Stock Exchange, and to the fact that the war completely stopped business among a large number of foreign agents and others in the City, a great many typists and women clerks were thrown out of employment last August. In September a register was opened by the National Patriotic Association, at 32, St. Paul's Churchyard, and through the kind offices of the chairman, Sir George Pragnell, temporary work was found for those who had to house and clothe themselves. For instance, thirty-five thousand flannel belts were made by 183 girls, the wages paid for the work (at threepence each article) amounting to £437 10s. Sir George also started a new industry for the unemployed—the turning of old socks into mittens. Over sixteen thousand pairs have been given to the Fleet and the troops, the refugees and wounded. More than £100 was paid to typists for the simple task of cutting off the old feet and sewing the remaining part so as to form a mitten.

411 Registeries.

Mr. Howard Williams (of Messrs. Hitchcock, Williams & Co.) also found work in the shape of shirt-making for a good number of girls. In all, 411 typists were registered, and the committee found suitable situations for 386 of these by the middle of February. The business of mitten-making has now been taken over by the Queen's Unemployed Committee, with a large stock and an initial order for 1,000 pairs, whilst Sir George Pragnell continues to send (free of charge) a sample pair and particulars to those who wish to start making these useful articles among their own friends. The War and Women.

There is, and has been for many years, an inequality of the sexes, but when the war is over that inequality will be more pronounced, and there will be fewer women of the present generation who will become happy wives and mothers. That will be true of all the nations now engaged in the great struggle for supremacy; but this is a matter which in our own country requires immediate consideration, and every girl should be taught some form of employment by which she may be self-supporting. While a girl is in her home with parents to love and care for her she may not realise the need of any special form of employment, but it is when the parents are removed and she is alone—and perhaps, as in hundreds of thousands of cases, unprovided for—that she begins to lament the fact of never having been taught any useful employment by means of which she might earn a decent livelihood. This is the day of opportunity and for definite action. Occupations are now opening up for women, and it is desirable that every girl should be in training for something.

Liverpool Post.
19-8-15.

A GREAT OPPORTUNITY FOR WOMEN.

Sir,—There seems now to be a fine opportunity for women to strike a great blow for their country.

In connection with the shortage of labour, the Board of Trade are making an appeal to women to come forward and supply the deficiency, and they will, of course, respond with the public spirit they have shown since the war began. But should not women say to this Government, which is now appealing to them, "Your Allies have effectively met their difficulty of shortage of labour by stopping the sale of alcohol, and if you would do the same the trouble of labour shortage would be ended in twenty-four hours?"

One hopes that the women leaders and the women associations throughout the country will move strongly in this matter without further delay. It cannot be doubted that Mr. Lloyd George and other members of the Government would act if they were supported by a strong expression of public opinion.—Yours, &c.,

C.

Hoylake, March 18, 1915.

Edinburgh Evening News

Women's Work.

The war will leave a deep mark on social and industrial organisation. It will result in an advance of women towards economic independence. Women have during the past few months come largely into what were new spheres of employment. Two or three months ago the Board of Trade reported an increase of 25 per cent. in the employment of women in London banks since the war, and also the existence of a similar state of things in some other Metropolitan employments. In the Post Office women are working in what were formerly men's departments, and in shops and factories there has also been a great influx of women. That the development will proceed further is made evident by the recent action of the Board of Trade, urging the registration of women at the Labour Exchanges, so that when men are at the front women will assist in keeping business going on as usual. This development may be checked in time by men returning from the armies; but still it will be so considerable when the conflict is over as to be regarded as having permanent results. Owing to the tremendous casualty lists, thousands of women will be forced to remain in the commercial and industrial ranks, and there are also well marked signs that they will directly share in the output of materials which were regarded in recent times as German and Austrian monopolies. Not only must there be a greater field for women workers in the future, but the war has developed the organising ability of women, and stimulated their inherent cleverness in many ways. Red Cross work itself is a striking case in point. At this time, when so much interest is being taken in the employment of women, a twopenny pamphlet issued by the Fabian Society, entitled, "The War, Women and Unemployment," is well worthy of consideration. It deals at some length with the necessity of developing the technical instruction of women—a line in which Edinburgh is further advanced than many other communities—and the necessity of maintaining

EFFECT OF WAR ON WOMEN'S WORK.

BILLETING KEEPS MANY AT HOME.

BREAD, FLOUR AND POTATOES COSTING MORE.

Although employment amongst women has altered but little during the past month, the general conditions show an improvement.

The effect of war on some of their industries may be gathered from the following details furnished by the "Board of Trade Labour Gazette":—

Cotton-workers.—Such an improvement has taken place that there is at present practically no distress.

Dressmaking.—Spring trade and new fashions are beginning to benefit dressmakers, although the business is still among the trades most seriously affected by the war.

Millinery.—Trade in London said to have recovered to a great extent.

In districts where large detachments of soldiers are billeted the number of women desiring work has materially declined, as women who went out ither for industrial or domestic work now find occupation at home. In many cases they even needed additional help, and the two influences combined have in some districts resulted in such an unusual state of affairs that the supply of charwomen is insufficient to meet the demand.

FOOD INCREASES.

Dealing with food prices during the month of February, the "Gazette" says the two articles which showed the greatest advance were flour (rise of about 8 per cent.) and bread (rise of about 7 per cent.). Next in order came potatoes (about 5 per cent.), cheese (4 per cent.), meat, and fish.

Milk showed an upward movement in some places, notably in London, where 4½d. per quart appeared to be rather more frequent than 4d. Tea, sugar, and margarine showed practically no change. Decreases obtained in bacon, butter, and eggs.

In Berlin, according to the same authority prices had increased as follows:—

	Per cent.
Rye bread	15.6
Wheat bread	11.7
Wheat flour	10.4
Beef	2.7
Mutton	8.7
Pork	11.0

The effect of war on laundry work and prices may be gathered when it is mentioned that the majority of launderers in the London district are said to be in favour of an increase of 15 per cent. "There is little hope of laundry prices remaining as at present," said Mr. J. J. Stark, Secretary of the Launderers' Association, yesterday.

The Shirtmaking Trade Board (Great Britain) have resolved to fix a minimum rate of wages of 3½d. per hour for female workers other than learners.

South Wales steelmakers have decided to grant similar war bonuses to those in the tinplate trade—1s. a week to those earning under 15s. a week; 2s. between 15s. and 20s.; 3s. between 20s. and 30s.; and 2s. between 30s. and 40s. It is estimated that 6,000 of the 8,000 workers in the trade will participate, and that the increased wages bill will be £40,000 a year.

After hearing a deputation representing the outside grain porters, the Staff Committee of the Port of London Authority decided yesterday to grant the porters an increase of 10 per cent. on piecework rates. This means an average increase of 3s. a week.

In view of the money now being earned by the men the committee declined to concede any additional advance to the dockers.

WOMEN.

Sir,—There seems now to be a fine opportunity for women to strike a great blow for their country.

In connection with the shortage of labour, the Board of Trade are making an appeal to women to come forward and supply the deficiency, and they will, of course, respond with the public spirit they have shown since the war began. But should not women say to this Government, which is now appealing to them, "Your Allies have effectively met their difficulty of shortage of labour by stopping the sale of alcohol, and if you would do the same the trouble of labour shortage would be ended in twenty-four hours?"

One hopes that the women leaders and the women associations throughout the country will move strongly in this matter without further delay. It cannot be doubted that Mr. Lloyd George and other members of the Government would act if they were supported by a strong expression of public opinion.—

Yours, &c.,
C.

Hoylake, March 18, 1915.

Women's Work.

The war will leave a deep mark on social and industrial organisation. It will result in an advance of women towards economic independence. Women have during the past few months come largely into what were new spheres of employment. Two or three months ago the Board of Trade reported an increase of 25 per cent. in the employment of women in London banks since the war, and also the existence of a similar state of things in some other Metropolitan employments. In the Post Office women are working in what were formerly men's departments, and in shops and factories there has also been a great influx of women. That the development will proceed further is made evident by the recent action of the Board of Trade, urging the registration of women at the Labour Exchanges, so that when men are at the front women will assist in keeping business going on as usual. This development may be checked in time by men returning from the armies; but still it will be so considerable when the conflict is over as to be regarded as having permanent results. Owing to the tremendous casualty lists, thousands of women will be forced to remain in the commercial and industrial ranks, and there are also well marked signs that they will directly share in the output of materials which were regarded in recent times as German and Austrian monopolies. Not only must there be a greater field for women workers in the future, but the war has developed the organising ability of women, and stimulated their inherent cleverness in many ways. Red Cross work itself is a striking case in point. At this time, when so much interest is being taken in the employment of women, a twopenny pamphlet issued by the Fabian Society, entitled, "The War, Women and Unemployment," is well worthy of consideration. It deals at some length with the necessity of developing the technical instruction of women—a line in which Edinburgh is further advanced than many other communities—and the necessity of maintaining unemployed women while so engaged. The writers of the pamphlet are not explicit as to how the resources are to be provided, say, in times of depression— when the whole community are on shorter commons than are now being experienced. The demand for girl and women workers will, it is reasonable to suppose, lead to an advance in their wages, which are often on a low level. A return prepared by Mr Sidney Webb showed that in 1912 10,600,000 males at manual work had average earnings of £1 5s 9d per week, while 4,600,000 women at manual work earned on the average 10s 10½d per week. The difference is not all accounted for on the ground of industrial efficiency; custom and exploitation have been at work at the expense of girls and women. The remarkable fact is brought out in this instructive pamphlet that more than half the entire female population of these islands between the age of 15 and 25 is at work for hire, and at the most employed age 70 per cent. are at work. The earnings of women generally are a social necessity. An inquiry by the Fabian Women's Group, extending over thousands of cases in practically the whole range of women's occupations, showed that about half the women wage-earners canvassed were supporting wholly or partially, either children or parents, or brothers and sisters, or disabled husbands, or other dependent relatives. Probably at least three millions of women earning wages are responsible for the maintenance, wholly or in part, of others besides themselves.

home. In many cases they [illegible] additional help, and the two influences combined have in some districts resulted in such an unusual state of affairs that the supply of charwomen is insufficient to meet the demand.

FOOD INCREASES.

Dealing with food prices during the month of February, the "Gazette" says the two articles which showed the greatest advance were flour (rise of about 8 per cent.) and bread (rise of about 7 per cent.). Next in order came potatoes (about 5 per cent.), cheese (4 per cent.), meat, and fish.

Milk showed an upward movement in some places, notably in London, where 4½d. per quart appeared to be rather more frequent than 4d. Tea, sugar, and margarine showed practically no change. Decreases obtained in bacon, butter, and eggs.

In Berlin, according to the same authority prices had increased as follows:—

	Per cent.
Rye bread	15.6
Wheat bread	11.7
Wheat flour	10.4
Beef	2.7
Mutton	8.7
Pork	11.0

The effect of war on laundry work and prices may be gathered when it is mentioned that the majority of launderers in the London district are said to be in favour of an increase of 15 per cent. "There is little hope of laundry prices remaining as at present," said Mr. J. J. Stark, Secretary of the Launderers' Association, yesterday.

The Shirtmaking Trade Board (Great Britain) have resolved to fix a minmum rate of wages of 3½d. per hour for female workers other than learners.

South Wales steelmakers have decided to grant similar war bonuses to those in the tinplate trade—1s. a week to those earning under 15s. a week; 2s. between 15s. and 20s.; 3s. between 20s. and 30s.; and 2s. between 30s. and 40s. It is estimated that 6,000 of the 8,000 workers in the trade will participate, and that the increased wages bill will be £40,000 a year.

After hearing a deputation representing the outside grain porters, the Staff Committee of the Port of London Authority decided yesterday to grant the porters an increase of 10 per cent. on piecework rates. This means an average increase of 3s. a week.

In view of the money now being earned by the men the committee declined to concede any additional advance to the dockers.

NATIONAL CONFERENCE OF WOMEN.

TO DISCUSS THE BASIS OF A PEACE SETTLEMENT.

LONDON, WEDNESDAY NIGHT.

To-day's conference of women in the Central Hall, Westminster, was not a meeting to demand peace now nor to discuss the origins of the war. About 450 women attended either as delegates or individuals. Among the larger associations sending delegates were the National Federation of Women Workers, the Women's Trade Union League, the Women's Co-operative Guild, the Women's Labour League, the Irish Reform League, the Union of Democratic Control, the Railway Women's Guild, the Women's Freedom League, and several other suffrage societies, as well as some branches of the Women's Liberal Federation and of the Adult Schools. Friendly messages were read from women of Denmark, Holland, Italy, and South Africa, and from Miss Emily Hobhouse, Mr. Edward Carpenter, and Mr. Norman Angell.

By far the most contentious resolution was that urging the Government to declare without delay the terms upon which the Allies would be willing to make peace. This was passed, however, by a very large majority. It was moved by Miss Catherine Marshall, who admitted the difficulties and dangers of such a declaration, but held that the advantages greatly outbalanced these. It was, she thought, our right and duty to know what we were fighting for. Governments made war, but only peoples could make a lasting peace, and it was not at the last moment that they could do this. Loyalty to our men at the front demanded that we should know what they were fighting for. A peace to be lasting must be based upon right and not upon what the victors could extort. The Government would need the democracy to back it in such an endeavour, and it ought to be preparing the democracy to do this. By withholding the statement we enabled the Germans to draw a picture of the terrible fate that would befall them if we conquered and so to keep Germany united. We should ask ourselves whether we were fighting against militarism or only against the militarism of Germany, for oppressed races or only those oppressed by our enemies, to avenge Belgium or to restore Belgium. At the beginning of the war Mr. Asquith and Sir Edward Grey had spoken of the possibilities of a true European partnership, but other objects antagonistic to this were arising and being pressed with energy, and it was necessary to arouse the support of the country for the earlier ideal. It was not a formal offer to the enemy that was required, but a statement to our own people of general principles.

Mrs. Despard urged that we must try to understand the mentality of our enemy. The Germans believed that the Allies wished to crush their nation, but no one wished that except "a very few very mad ppeople."

"Vernon Lee" held that we must come to a compromise with our Allies and make them understand what we stand by.

Miss Marshall, in replying to some criticisms by Miss Eleanor Rathbone, admitted some danger of dissension between the Allies, but if there were danger now, she held it would be much greater later on if the Allies were victorious. If our military, financial, and naval support were of value to our Allies, they would be prepared to listen now.

Peace Terms and the Military Situation.

Lady Courtney of Penwith, in moving a resolution calling upon British and Irish women to discuss and help to form public opinion upon the principles of national policy by which the peace may be a permanent one, declared that some people said the nature of the peace would depend on the military situation, but it was also true that the military situation depended partly on the supposed terms of peace. Women as non-combatants had more access to women of other nations, and knowledge of human nature was as important as expert knowledge.

Miss Margaret Bondfield, in pleading for international communication between women, pointed out that it was German women at the Berne Congress who declared that "the war began by the violation of Belgium" and who demanded repatriation for Belgium. "We are asked," she said, "not to talk of peace now. But the vested interests, we may be sure, are talking of the peace they want."

Mrs. Swanwick and Mrs. Strickland had charge of a resolution advocating democratic control and reform of the Foreign Office and diplomatic service. Mrs. Barton and Miss Ashton moved and seconded one demanding equal representation of menand women. Mrs. Despard moved a resolution advocating the claims of an Ialnations, and spoke from both the ethical and the politic point of view. Miss K. D. Courtney, in seconding this, urged her hearers to mean what they said. Some people thought this resolution was too obvious, but there was a danger of repeating it without recognising the

WOMEN AND THE WAR

MRS PANKHURST'S SUFFRAGE UNION.

QUESTION OF CONTROL.

Mrs Pankhurst addressed a public meeting in St Andrew's Hall, Glasgow, last night on "War and Wages: What is our Duty to the Nation." Widespread interest was manifested in the visit of the suffragist leader, this being the first time she had been in the city since March of last year, when amid a scene of great disorder the police stormed the platform and arrested her under the "Cat and Mouse" Act. Her appearance last night on the same platform to urge the national duty of unity in face of the common foe was striking evidence of the manner in which the voice of strife at home has been stilled by the war. The meeting, which was held under the auspices of the Women's Social and Political Union, was attended by a large audience. Mrs Pankhurst urged the duty on everyone to avoid industrial strife until the close of the war. She was questioned regarding her right to dictate the policy of the Women's Social and Political Union, and said it was by the same right as that by which she founded it. There was no compulsion on anyone to remain in it, and she did not want anyone in it who did not agree with her. "General" Flora Drummond presided, and among those on the platform were Sir Samuel and Lady Chisholm, and Councillors P. G. Stewart, A. R. Turner, and Mollison, and Captain Ross.

THE GLASGOW'S SUCCESS.

The Chairman said that while they were gathered that night their memory went back to another gathering—(hear, hear, and loud applause)—which was just as successful as that one would be that night. (A Voice—"More so.") Then they were fighting for the great principle that the voice of the people must prevail. To-day they still went on working and fighting for that principle. To-day they found that women were able to take an equal stand with men in putting forward their point of view, and it was very necessary to have the woman's point of view put forward at this time. Glasgow had had a great victory. She meant His Majesty's ship. (Applause.) They all felt very proud of that ship, and hoped the name would inspire the men of this city to follow suit and to vanquish the enemy as rapidly as did the Glasgow. (Applause.)

KAISER RECKONING WITHOUT HIS HOST.

Mrs Pankhurst, who was accorded a hearty reception, said she made no apology in talking to them about the action those who were responsible for the working of the Women's Social and Political Union were taking in this great national crisis. The militant women who had faced more in pursuit of the democratic ideal than any living man in this country had the right to speak in every national crisis, especially when, as in the present crisis, their very existence as a nation was at stake. When war broke out she was in France, and her daughter asked her what they should do for their country in the crisis, saying she could not stay there any longer. She shared the feelings of her daughter, and they talked over what they should do and settled their plans. They wished to show that if the German Emperor and his followers counted on the militancy of the women of this country to help him he had counted without his host. (Loud applause.) Some people even in Scotland had wondered why she was supporting the Government. Why were they militant in order to get the vote? If they had wanted the vote and the rights of citizenship they could have gone to other countries and had the vote without fighting for it. They fought for it in Britain because they loved Britain and wanted the vote in Britain. If the German Emperor offered to give votes to women as the first fruits of victory in Britain she for one would say—"No, I won't have it from you." (Applause.) Nothing was worth having that they had not won for themselves. (Applause.) A society was being formed for democratic control, founded mainly by a man who in the House of Commons would never go into the anti-Government lobby to get Government control. She advised women not to be misled by that kind of thing. She had faced death twelve times for democratic control, but this was not the time to talk of it, when they were engaged in a fight to decide whether we were going to have a democracy at all, or were merely to be a province of Germany. (Applause.) When she got back to London it was decided that it was not the function of the Women's Social and Political Union to open soup kitchens or workrooms, splendid as these were. Ever since the union was formed it had lived to make those who ruled the country do their duty, and they felt they had to continue that work in a way adapted to the needs of the situation. They had always held that with regard to distress arising out of unemployment and dislocation of national business it was the duty of the Government to deal with that matter, and they felt it was their mission to bring pressure to bear on the authorities to get them to realise their responsibilities, but they did not rush into open criticism, feeling rather that if they had criticisms or suggestions to make it should be done quietly. That was what they had done. She did not like the spirit of opposition on the part of men to women helping in the industrial and business work of

could extort. The Government would need the democracy to back it in such an endeavour, and it ought to be preparing the democracy to do this. By withholding the statement we enabled the Germans to draw a picture of the terrible fate that would befall them if we conquered and so to keep Germany united. We should ask ourselves whether we were fighting against militarism or only against the militarism of Germany, for oppressed races or only those oppressed by our enemies, to avenge Belgium or to restore Belgium. At the beginning of the war Mr. Asquith and Sir Edward Grey had spoken of the possibilities of a true European partnership, but other objects antagonistic to this were arising and being pressed with energy, and it was necessary to arouse the support of the country for the earlier ideal. It was not a formal offer to the enemy that was required, but a statement to our own people of general principles.

Mrs. Despard urged that we must try to understand the mentality of our enemy. The Germans believed that the Allies wished to crush their nation, but no one wished that except "a very few very mad ppeople."

"Vernon Lee" held that we must come to a compromise with our Allies and make them understand what we stand by.

Miss Marshall, in replying to some criticisms by Miss Eleanor Rathbone, admitted some danger of dissension between the Allies, but if there were danger now, she held it would be much greater later on if the Allies were victorious. If our military, financial, and naval support were of value to our Allies, they would be prepared to listen now.

Peace Terms and the Military Situation.

Lady Courtney of Penwith, in moving a resolution calling upon British and Irish women to discuss and help to form public opinion upon the principles of national policy by which the peace may be a permanent one, declared that some people said the nature of the peace would depend on the military situation, but it was also true that the military situation depended partly on the supposed terms of peace. Women as non-combatants had more access to women of other nations, and knowledge of human nature was as important as expert knowledge.

Miss Margaret Bondfield, in pleading for international communication between women, pointed out that it was German women at the Berne Congress who declared that "the war began by the violation of Belgium" and who demanded repatriation for Belgium. "We are asked," she said, "not to talk of peace now. But the vested interests, we may be sure, are talking of the peace they want."

Mrs. Swanwick and Mrs. Strickland had charge of a resolution advocating democratic control and reform of the Foreign Office and diplomatic service. Mrs. Barton and Miss Ashton moved and seconded one demanding equal representation of menand women. Mrs. Despard moved a resolution advocating the claims of sm lalnations, and spoke from both the ethical and the politic point of view. Miss K. D. Courtney, in seconding this, urged her hearers to mean what they said. Some people thought this resolution was too obvious, but there was a danger of repeating it without recognising its meaning. It was a step away from the "physical force argument."

Mrs. George Cadbury moved a resolution demanding the restoration of Belgium to her place, an dMiss J. O. Ford, in seconding, deprecated our adopting the pose of the magnanimous lion protecting Belgium. We should try to understand what Belgium thinks of us. Miss Sophy Sanger and Miss A. Maude Royden spoke to a resolution condemning the dootrine of the balance of power. The reduction and nationalisation of armaments were the subject of another resolution.

All these were passed unanimously, and a last resolution, expressing the hope that women would accept the invitation of the Union of Democratic Control to co-operate, was passed with a good deal of enthusiasm and only one dissentient.

Mrs. Rackham took the chair during both the morning and afternoon sessions, and related that a Cambridge undergraduate, writing from the trenches, said: "I hope you are doing all you can to keep the U.D.C. going strong. I can tell you that when we come home we shall want to join it."

---

with men in putting forward their point of view, and it was very necessary to have the woman's point of view put forward at this time. Glasgow had had a great victory. She meant His Majesty's ship. KAISER RECKONING WITHOUT HIS HOST.

Mrs Pankhurst, who was accorded a hearty reception, said she made no apology in talking to them about the action those who were responsible for the working of the Women's Social and Political Union were taking in this great national crisis. The militant women who had faced more in pursuit of the democratic ideal than any living man in this country had the right to speak in every national crisis, especially when, as in the present crisis, their very existence as a nation was at stake. When war broke out she was in France, and her daughter asked her what they should do for their country in the crisis, saying she could not stay there any longer She shared the feelings of her daughter, and they talked over what they should do and settled their plans. They wished to show that if the German Emperor and his followers counted on the militancy of the women of this country to help him he had counted without his host. (Loud applause.) Some people even in Scotland had wondered why she was supporting the Government. Why were they militant in order to get the vote? If they had wanted the vote and the rights of citizenship they could have gone to other countries and had the vote without fighting for it. They fought for it in Britain because they loved Britain and wanted the vote in Britain. If the German Emperor offered to give votes to women as the first fruits of victory in Britain she for one would say—"No, I won't have it from you." (Applause.) Nothing was worth having that they had not won for themselves. (Applause.) A society was being formed for democratic control, founded mainly by a man who in the House of Commons would never go into the anti-Government lobby to get Government control. She advised women not to be misled by that kind of thing. She had faced death twelve times for democratic control, but this was not the time to talk of it, when they were engaged in a fight to decide whether we were going to have a democracy at all, or were merely to be a province of Germany. (Applause.) When she got back to London it was decided that it was not the function of the Women's Social and Political Union to open soup kitchens or workrooms, splendid as these were. Ever since the union was formed it had lived to make those who ruled the country do their duty, and they felt they had to continue that work in a way adapted to the needs of the situation. They had always held that with regard to distress arising out of unemployment and dislocation of national business it was the duty of the Government to deal with that matter, and they felt it was their mission to bring pressure to bear on the authorities to get them to realise their responsibilities, but they did not rush into open criticism, feeling rather that if they had criticisms or suggestions to make it should be done quietly. That was what they had done. She did not like the spirit of opposition on the part of men to women helping in the industrial and business work of the nation at present. She did not believe there would be any labour disputes at this moment if employer and employed in Glasgow understood how serious the situation was. Women who had shown they could give up everything for principle, even life itself, had earned the right to speak to their brothers on a matter like that. The women saw victory for the franchise cause within their grasp, yet because of the national peril they sacrificed it for the time being, and, thank God, they did make the sacrifice. (Applause.) It had been said she had deserted her principles and turned Jingo. She had had the courage to express her disapproval of some British wars in the past, but she was thankful that in this one she had no doubt at all. (Applause.) It was a war between two ideals, and if we lost it would mean the crushing out of the women's movement, as they knew it, for generations. Let them all join together in brotherly love and affection and see that terrible business through to a happy conclusion. (Applause.)

ADVICE TO DISCONTENTED MEMBERS

A number of written questions were handed up. She always tried, she said, to avoid using the word "England" for "Britain." She was asked why she blamed trade unionists for being selfish when they advocated that women doing men's work should receive the same wages. She said what she objected to was trade unionists refusing to allow women to be trained or employed even when they did demand men's wages.

Another question asked, By what right Mrs and Miss Pankhurst decided the policy of the Women's Social and Political Union?

Mrs Pankhurst said it was by the same right as that by which they founded the Union and directed its policy. They had always said it was an organisation on an Army basis. If there were people who believed in the democratic management of a society there were plenty of societies for them to join that were managed in that way. People who joined the Union knew its basis and its constitution. They who brought the idea of militancy into the women's movement claimed the right to direct its policy. There had been no misunderstanding and nobody had been deceived. If those who had framed that question did not like the Union they should not weaken it by remaining in it. As long as the W.S.P.U existed and she was alive she would claim that her daughter and she should decide what they considered best for the future of the Union. (Applause.) If everybody left them, they, two women, would build it up again from the beginning. They did not want people who did not agree with them.

A number of questions were put from the body of the hall on the engineers' strike, and ultimately the chairwoman intervened with the remark that it was not a meeting of a debating society.

Mrs Pankhurst was awarded a hearty vote of thanks at the close of the meeting

WOMEN AND THE WAR

STRIKING SIGNS OF THE TIMES.

(By a Lady Correspondent).

A very interesting set of three meetings is to be held on Monday next, March 22nd, in the Central Hall, Westminster, to consider "The Religious aspect of the women's movement in its relation to War and Peace." These meetings which will be held at 11 a.m, 2.30 p.m., and 6.m., respectively have been arranged by The Collegian, which is, to quote its own words "a body which exists to discover by corporate prayer and conference, the Will of God for Modern Life." The object of the gathering is to consider the contribution of women to the establishment of

A CHRISTIAN CIVILIZATION

in the future. The discussion of the present war is no part of the plan.

The Chairman will be the Rev. W. Temple and the very varied and able list of speakers includes among others:—Mrs. Bruce, Glasier, Miss Maude Royden, Dr. Orchard, Dr. Percy Dearmer, The Bishop of Lincoln, H. W. Nevinson (the well-known war correspondent), Miss Eglantyn Jebb and Rev. A. H. Gray.

Another forthcoming event of importance somewhat on the same lines is a National Conference of Women to discuss the basis of a permanent Peace Settlement. This is to meet in the Central Hall, Westminster, on April 14th, and is called at the suggestion of the Union of Democratic Control.

There will be two sessions, morning and afternoon, for women only, and a public meeting in the evening, addressed by Mrs. Philip Snowden, Mrs. Swanwich, Miss Mary Macarthur, Mr. Chas. Trevelyan, M.P., and Mr. H. N. Brailsford. The Hon. Lady Barlow will take the chair.

Another sign of the times, and a very hopeful one, is the International Women's Congress proposed to be held in Holland next April. At a very enthusiastic meeting held to discuss the congress, at Caxton Hall, Westminster, on February 26 last, £300 was raised on the spot towards the expenses of the congress, which is estimated to cost about £1,000. It is a very significant and hopeful fact that when there is so much of strife between the nations of Europe a women's international gathering can be projected and arranged

THE WOMEN OF GERMANY

are pledged to contribute one-third of the expenses and the Dutch women another third.

A preliminary meeting has already been held in Antwerp and a programme drawn up. The first resolutions deal with the peace settlement and ask the Governments of the belligerent countries publicly to define the terms on which they are willing to make peace; urging that all future international disputes be referred to arbitration or conciliation; that foreign politics should be subjected to democratic control—the democracy to include women—and that there should be no transference of territory without the consent of women.

Other resolutions will urge that women delegates should take part in the conferences determining the terms of peace, and that women should work with all their power for political enfranchisement.

The essential idea of the congress will be embodied in an appeal that means should be used for promoting mutual understanding and good will among nations.

WILL WOMAN LOSE HER BALANCE?

By BEATRICE HERON-MAXWELL,
The Well-known Novelist and Thinker.

There was a touch of delightful humour in the recent idea of taxing women's hats! Evidently the deduction, by logic, which is man's prerogative, was that woman, owing to her rise in life, would suffer from swelled head! *Ergo*, hats would have to be larger.

But woman, like the ant, has a way of circumventing hills that are too high; and she is learning to evade this expense in many cunning ways. She is managing in quite a wonderful fashion to keep a level head, although she has come into her queenship—a sphere where she is no longer superfluous in her hundreds, but most welcome in her thousands.

For one conceited woman to-day you may find, by just glancing round, scores of the other sort—the capable keen worker whose pride in her own efficiency, and incidentally in her personal appearance while at work, is but a natural and proper one: the self-respect that wins respectful admiration from onlookers.

Women have started their various new tasks since the war began with many handicaps, the first and foremost being a concentrated and particular criticism.

Whereas men, undertaking any work, meet with only the necessary amount of question and scrutiny, hampered by no foregone conclusion that they are sure to be in fault somewhere, women find themselves against a barrier of distrust, disparagement, or probably amused contempt.

With a man the presumption is that he can fill the place more or less efficiently; with a woman that she cannot possibly fill it well and is practically certain to fail in it. She is at very best a make-do, and many employers would prefer nowt to 'owt, if the 'owt means feminine assistance.

At a crowded cross-roads in London yesterday the largest and most heavily laden wagon—a piled-up load under which the pair of good horses staggered—swayed slightly against a cart that was cheek-by-jowl with it when the signal was given to proceed. "A woman driver!" growled a man onlooker, his comment losing the bitterness of its point, however, as the huge vehicle, recovering itself instantly, went smartly on its way. But that attitude has taken time—nearly two years now!—to mitigate, and more skill and perseverance and grit than ever was needed by men in their home undertakings.

The absence of self-consciousness in women who are facing a critical public of both sexes all day long is a very sure proof of their lack of conceit. They are neither bold nor shy, extreme shyness being most certainly a form, and a very tiresome one, of conceit.

* * * * *

There is just one class of girl, a "detail" of some years' existence, who is spoilt by an exaggerated idea of her own cleverness, and this is not her fault—since youth is her excuse—but the fault of men-employers. They find it pleasant in their offices or shops to have the help of a young, bright, attractive little person whose occasional flashes of intelligence (often only flukes) seem to their rather wearied business brains useful searchlights. The employer praises, consults, and finally hands over work that is quite above the average girl's compass. She becomes "swollen-headed," and makes many mistakes which she is able to conceal because the firm's correspondence passes through her hands. Complaints from clients, customers, or contributors are therefore rendered invalid; and if eventually chance reveals that the omnipotent "young lady" has made a muddle of things the employer blames women workers *en masse*. He fails to realise that he has brought the trouble on himself by thinking that a smattering of experience at accounts, or sorting, or typing, or shorthand, or telephoning, or what not, coupled with a pretty face, argued real ability to advise him or act on her own judgment.

One hopes that this type will pass.

Again, men are not very wise in their selection of women supervisors as heads. They are apt to choose the masculine woman who, possessing hard angles of character, has managed to force her way to the front. This is a pity. The feminine unaggressive personality is the right one to dominate other women. Otto Weininger, the anti-feminist, to whom the fair sex spelt no character, divided all women into two kinds—one, the woman "of no importance," and the other a blind, colourless, passionless embodiment of the maternal instinct. But among the many fictions that he tried to establish as facts he said one true thing, that there are many divergences of sex nowadays, and there is too much of the feminine temperament in many men, and too much of the masculine element in many women; these last being always unpopular with their own sex. A man superintendent may be the best as chief of a female staff, but next to him undoubtedly is the sympathetic womanly matron with no touch of masculinity who does not attempt to ride roughshod over those under her, but is tolerant, comprehending, and motherly.

Perhaps on this point also improvement will come.

* * * * *

But the girl or woman of the moment is as anxious as any man could be not to prove a fool at the work she is attempting, and she enters into it as a rule with all idea of her own importance or power to excel merged in the one great desire to learn and know.

There have been misgivings that women having found out their own capacity will become arrogant, and while wresting man's work from him will depreciate it, spoil his market, and establish their own—that they will, in fact, get "above themselves."

But there are any number of reasons against this theory, and one of the first is that love, even if it should cease to be the whole existence of some, will always dominate her heart, of which she will still want man to be "lord and master," an hereditary sovereign elected without ballot. She will continue—taking the average of a great majority—to desire a home, a perfect home, and it is to keep the possibility of this in the future that she gives her work now.

Without an income, how can a home and all its growing responsibilities be kept up? If men must lapse from the ordinary pursuits of bread-winning and take to the strenuous art of defence and offence, women must earn the profits of the country's trade.

Marriages—which had decreased before the war because money had become so much more necessary (in a community devoted to social things) to keep love from flying out of the window—will become more numerous because the wife will be able to contribute to the household. Again, there will be fewer men for

Miss Hay, who initiated the scheme for employing women to take the places of chauffeurs who have joined the Army or Navy, taking out wounded soldiers for a drive through London.

WILL WOMAN LOSE HER BALANCE?

By BEATRICE HERON-MAXWELL,
The Well-known Novelist and Thinker.

There was a touch of delightful humour in the recent idea of taxing women's hats! Evidently the deduction, by logic, which is man's prerogative, was that woman, owing to her rise in life, would suffer from swelled head! *Ergo*, hats would have to be larger.

But woman, like the ant, has a way of circumventing hills that are too high; and she is learning to evade this expense in many cunning ways. She is managing in quite a wonderful fashion to keep a level head, although she has come into her queenship—a sphere where she is no longer superfluous in her hundreds, but most welcome in her thousands.

For one conceited woman to-day you may find, by just glancing round, scores of the other sort—the capable keen worker whose pride in her own efficiency, and incidentally in her personal appearance while at work, is but a natural and proper one: the self-respect that wins respectful admiration from onlookers.

Women have started their various new tasks since the war began with many handicaps, the first and foremost being a concentrated and particular criticism.

Whereas men, undertaking any work, meet with only the necessary amount of question and scrutiny, hampered by no foregone conclusion that they are sure to be in fault somewhere, women find themselves against a barrier of distrust, disparagement, or probably amused contempt.

driver!" growled a man onlooker, his comment losing the bitterness of its point, however, as the huge vehicle, recovering itself instantly, went smartly on its way. But that attitude has taken time—nearly two years now!—to mitigate, and more skill and perseverance and grit than ever was needed by men in their home undertakings.

The absence of self-consciousness in women who are facing a critical public of both sexes all day long is a very sure proof of their lack of conceit. They are neither bold nor shy, extreme shyness being most certainly a form, and a very tiresome one, of conceit.

Without an income, how can a home and all its growing responsibilities be kept up? If men must lapse from the ordinary pursuits of bread-winning and take to the strenuous art of defence and offence, women must earn the profits of the country's trade.

Marriages—which had decreased before the war because money had become so much more necessary (in a community devoted to social things) to keep love from flying out of the window—will become more numerous because the wife will be able to contribute to the housekeeping. Again, there will be fewer men for years to come, and of those who "win through" so many will be disabled from taking up such work as they did hitherto.

Surely a country where all the work can be done by its own people, women and men alike, must become more prosperous than one dependent on aliens, friendly or unfriendly, to make its wheels go round?

WOMEN'S WORK AND THE WAR.

SUFFRAGISTS AND THEIR OPPORTUNITIES.

Women suffragists, although not responsible for any militant tactics during the war, are still very vocal in their demand for the vote, and at a meeting under the auspices of the Women's Freedom League at Welshpool, on Wednesday evening, the speakers, referring to the present work women are doing in the war and the attitude of the Government in desiring to engage more women workers in many industries where male labour is scarce, affirmed that the present situation opened a new era fraught with the most favourable prospects and opportunities for "the woman's movement," a movement which one of the speakers said not only meant that women should have the vote but also be admitted to all the spheres of work and positions which men are admitted to.

The meeting was arranged by Miss A. M. Clarke, the secretary of the Montgomery Boroughs branch of the Women's Freedom League; and the veteran president of the League and sister of Sir John French, Mrs. Despard, was advertised to speak. To the disappointment of the fairly large audience present, Mrs. Despard was unable to fulfil her engagement through a serious illness, which had necessitated her removal to a London Nursing Home. She had good substitutes in Miss Eunice Murray, President of the League for Scotland, and Miss Anna Munro. Miss Clarke presided, supported by the speakers and Mr. and Mrs. Busch-Mitchell, Crosswood, Guilsfield.

Miss Clarke, in apologising for the absence of Mrs. Despard, said she had recently been over to France to take the greetings of the women of Great Britain to the women of France. Meetings were organised by Mrs. Despard all through France, and she visited many hospitals, where she took words of cheer and comfort to our wounded soldiers. Her brother, Sir John French, was fighting for justice and liberty in the same way as his sister for many years had been spending her life working for the freedom and emancipation of her fellow-women. They were suffragists because they were patriots, and they were patriots because they were suffragists. They considered that in holding high the suffrage flag they were doing their greatest duty to the nation. At the beginning of the war they raised a Women's Suffrage National Aid Corps, and that corps had done very excellent work not only in London but in all the large industrial centres of the country. Apart from that body, women all over the country had given their best to the nation, not in the work of destruction but in the work of construction. They were helping to nurse back to health the sick and wounded, and they were trying to remedy the great dislocation of industry caused by the severe struggle. They were also looking after the nation's homes, so that when the war was over they would have a strong powerful race to take the place of those who had fallen in the war. Heroic deeds were not all done on the battle field. They were done by women in nursing the sick and by the women who were facing economic pressure at home. She did not wish to belittle the part men were playing. They paid them the warmest tribute; but women were doing their best to follow in their footsteps. (Applause).

Miss Murray, in the course of her address, said that when war broke out women at once rallied round to see what work they could do for the country. They had no voice in the counsels of the nation; and, therefore, it was no good for them to discuss the rights and wrongs of the war. Women's foremost work was, of course, in healing and tending the sick and wounded and in different parts of the country great "women's suffrage" hospitals were raised. In Scotland, the Women's Suffrage Federation had sent out already three units to the front, and they were prepared to send out another three before the month of April was over. (Applause). The first woman doctor who had lost her life in the war was a member of the Women's Freedom League. Besides nursing the sick and wounded, women had done a great deal of other work. In August the Women's Emergency Corps was formed, and in inaugurating the war service for women the Government had appealed to that body for assistance, because it had declared there were no other organisations so well equipped as the suffrage societies, through which women workers could be reached. There had been a great change in public opinion since the outbreak of war. Before the war they were told that woman's place was in the home. Now, however, they were told that women's place was out in the world, helping their brothers and husbands. Dealing with the scarcity of labour and the Government's efforts to recruit more female labour, Miss Murray said the Government would have adopted any alternative and even employed boy labour rather than have recourse to women. They knew, however, that the outcry against them would have been too great so they had to turn to the women. But though the Government had launched its scheme it was afraid it would not be able to carry it into effect successfully owing to the uncompromising opposition of the men workers of the country. In London, there was the taxi-cab industry. Fifty women went to a garage and offered their services to be trained as motor drivers. The result was that Scotland Yard and the Trades Unions absolutely refused to allow the women to be registered although one of the largest employers of labour said there were to-day 1,600 taxis standing idle because there were no men to drive them. Yet, in spite of this, men opposed the entry of women into the industry. The same thing applied to numerous other industries, and yet, although the Government said the women were wanted they were debarred by the old prejudice and convention of men. There was no reason why women should not do the work except for narrow-minded pre-

COMMON SENSE AS APPLIED TO THE WAR.

III.—Women in War Time.

WHEN the war broke out a large number of women at once lost their employment, and a large number who had never had any employment decided they must do something for their country. The impulse was patriotic, but not all the effects were fortunate. Nothing could be more fitting or more appealing than the enthusiasm of the women who offered themselves as nurses. But they rather forgot that nursing, particularly surgical nursing, is a skilled profession that requires training. They were a little disillusioned by the reluctance of the War Office, which, being overwhelmed with applications from thousands who knew nothing about the work, was not disposed to see its own trained nurses swamped by the untrained. It was evident that the story of the South African War was not to be repeated. Nursing classes were arranged, so that the rudiments of the work could be imparted; and some of this work was more disagreeable than many of the learners expected. Some of them understood at the finish that more than the mere presence of the nurse in the sick room was necessary to cure. The really able and devoted even realised that the amateur nurse had to take a fair share of the rough work with the professional. The slackers, the inefficient, and the over-dainty, on the other hand, were so discouraged that they threw up indoor work as too repulsive and arduous and devoted themselves henceforth to driving wounded soldiers round the Park in motors—a policy of combining fresh air with publicity which had much to commend it. This was all to the advantage of the soldiers. Only the really useful nurses remained at their posts. Common sense has triumphed, though it was not always conspicuous in the earlier days.

Common sense, too, has had to wait for its opportunity with those who devoted themselves to the knitting-needle. England, in September last, was a vast knitting machine, ceaselessly knitting socks—sometimes with heels, sometimes without. The signs were everywhere, at the seaside, in hotel lounges, in country houses, in dining-cars. A controversy was even started by the more enthusiastic on the propriety of knitting socks in church, and the clergy who protested were denounced as bad patriots. Several soldiers are known to have made their beds at the Front entirely out of the socks sent to them by their friends and admirers. Other soldiers wondered that a woman has such vague ideas as to the size of a man's feet. The pace was too quick to last. Knitting was at its height in September, by October there were symptoms of decline, and in December it collapsed.

Meantime the Government now announces its intention of "mobilising women". The idea appeals to us at the first blush. But can it be done? Experience says that you cannot mobilise women. Any trade union leader will tell you that. They are the true individualists, and they do not well endure a discipline. If any member of the Cabinet had ever attended a women's committee meeting, with its fussiness, its pettiness, its quite extraordinary faculty for thinking itself businesslike and getting nothing whatever done, he would not have talked of mobilising women without qualifying warnings and exhortations. But there is hope in the idea; and we welcome it, provided it is not too ambitiously organised or pushed to extremes as an idea. In many practical and expedient ways women can and are at this time helping the country. The withdrawal of men from industry leaves the road free for women to do some of men's work. Some of them have taken advantage of the opportunity; one hears of women clerks in lawyers' offices, even in the banks. Women, too, are being employed in factories where munitions of war are made, and the thousands of dressmakers who were thrown out of work last August have found employment in clothiers' works.

But it should be clearly realised that women have to be trained to their work, and until they are train they are of little use to the employer or the Sta Amateur enthusiasm is worse than useless if it v not consent to be trained and directed. And tha one of the questions that women will have to fac the more leisured days after the war. If they a take a larger part in industrial life, as some amb women hope, they must be prepared to train t work. If they are to receive the same payment they must do the same work as men, and do it as which they cannot do without adequate training. before, they are merely content with industrial life temporary and usually unsatisfactory alternativ marriage, they will continue to receive lower pay t men for less valuable work—and they will in effect substitutes for men. There are certain proverl characteristics about the substitute. It is occasiona useful, but it is always cheap and it is frequently u satisfactory.

The common sense of the matter can be very briefly put. Where women are ready and free to train for skilled and useful work let them do so. But let us be on our guard against all vagueness and fuss. All honour to the women who have done and are doing able and devoted work as nurses, organisers and dispensers of relief; and all credit to those who can be invited to fill competently the gaps in our industrial ranks. But we must not imagine that those women are in any way to be censured who, finding they are not fitted for these things, have decided to stay quietly at home and to give their energies to house and family. Enthusiasm without ability and training merely gets in the way. War, as every day we are learning to our cost, is a skilled business down to the smallest detail.

Yet, in spite of this, men opposed the entry of women into the industry. The same thing applied to numerous other industries, and yet, although the Government and the women were united they were defeated by the old prejudice and conservatism

a bit and see; but it will expect its statesmen to see somewhat—quite another matter. It will look two things, which have been too markedly absent m its councils in, at any rate, the near past—nely, for a reasonable measure of prevision and provision.

PRZEMYSL.

THE fall of Przemysl is one of the most important and encouraging events of the war since the German advance in France was turned back from the Marne. This may seem a surprising statement to those who have credulously read in our super-sanguineous Press of many decisive Russian victories in Poland, of frequent routs of the Austrian armies, of army corps decimated or cut off, of prisoners made in whole battalions. But it will not surprise anyone who has intelligently followed the swing and counterswing of the Russian and German armies on the Eastern frontier. There was never any question in Poland of an irresistible and continuous Russian advance across the frontiers of Austria and Germany. This was a fable of writers who were ignorant of the geography and military resources upon either side of the disputed territory. The most that any reasonably cheerful soldier ever expected in Poland was a swinging backwards and forwards of the battle line with a gradual advance of the Russian flood at each successive recoil. This was the intelligent optimist's view. There were many who did not count even upon this. They were beginning to be committed to the view that the position in Poland could never be more than stalemate. They expounded the doctrine of eternal recurrence.

Common sense has triumphed, though it was not always conspicuous in the earlier days.

Common sense, too, has had to wait for its opportunity with those who devoted themselves to the knitting-needle. England, in September last, was a vast knitting machine, ceaselessly knitting socks—sometimes with heels, sometimes without. The signs were everywhere, at the seaside, in hotel lounges, in country houses, in dining-cars. A controversy was even started by the more enthusiastic on the propriety of knitting socks in church, and the clergy who protested were denounced as bad patriots. Several soldiers are known to have made their beds at the Front entirely out of the socks sent to them by their friends and admirers. Women's foremost work was, of course, in healing and tending the sick and wounded and in different parts of the country great "women's suffrage" hospitals were raised. In Scotland, the Women's Suffrage Federation had sent out already three units to the front, and they were prepared to send out another three before the month of April was over. (Applause). The first woman doctor who had lost her life in the war was a member of the Women's Freedom League. Besides nursing the sick and wounded, women had done a great deal of other work. In August the Women's Emergency Corps was formed, and in inaugurating the war service for women the Government had appealed to that body for assistance, because it had declared there were no other organisations so well equipped as the suffrage societies, through which women workers could be reached. There had been a great change in public opinion since the outbreak of war. Before the war they were told that woman's place was in the home. Now, however, they were told that women's place was out in the world, helping their brothers and husbands. Dealing with the scarcity of labour and the Government's efforts to recruit more female labour, Miss Murray said the Government would have adopted any alternative and even employed boy labour rather than have recourse to women. They knew, however, that the outcry against them would have been too great so they had to turn to the women. But though the Government had launched its scheme it was afraid it would not be able to carry it into effect successfully owing to the uncompromising opposition of the men workers of the country. In London, there was the taxi-cab industry. Fifty women went to a garage and offered their services to be trained as motor drivers. The result was that Scotland Yard and the Trades Unions absolutely refused to allow the women to be registered although one of the largest employers of labour said there were to-day 1,600 taxies standing idle because there were no men to drive them. Yet, in spite of that, men opposed the entry of women into the industry. The same thing applied to numerous other industries, and yet, although the Government said the women were wanted they were debarred by the old prejudice and convention of men. There was no reason why women should not do the work except for narrow-minded prejudice. Women demanded two things; the right to enter these industries and to have equal pay for equal work with men, and also the vote as the only weapon to secure their rights. Women demanded equal pay with men and the vote, not only in their own interests but in the interests of men, because they would be doing very badly for men as well as themselves if they accepted low wages and pulled down the rates of pay for men. They felt that the present was a great opportunity for women, and that they had within their grasp the means to-day of getting almost anything they wished, because public opinion had changed, and the men who a few months ago were never pleased with anything the suffragists did had turned round and said the suffragists were doing most of the work in the present crisis, and a reward must come to them.

Questions were invited, and Mrs. J. H. Davies asked what the attitude of the Women's Freedom League was to total prohibition of the sale of intoxicants.

Miss Munro replied that the League had expressed no opinion on total prohibition. The only opinion they expressed on the liquor traffic as a body was that if restrictions were imposed they should be equal for both sexes and not apply more particularly to women than men. Some of the members of the League were very keen prohibitionists.

Press of many decisive Russian victories in Poland, of frequent routs of the Austrian armies, of army corps decimated or cut off, of prisoners made in whole battalions. But it will not surprise anyone who has intelligently followed the swing and counterswing of the Russian and German armies on the Eastern frontier. There was never any question in Poland of an irresistible and continuous Russian advance across the frontiers of Austria and Germany. This was a fable of writers who were ignorant of the geography and military resources upon either side of the disputed territory. The most that any reasonably cheerful soldier ever expected in Poland was a swinging backwards and forwards of the battle line with a gradual advance of the Russian flood at each successive recoil. This was the intelligent optimist's view. There were many who did not count even upon this. They were beginning to be committed to the view that the position in Poland could never be more than stalemate. They expounded the doctrine of eternal recurrence. Common sense has triumphed, though it was not always conspicuous in the earlier days.

Common sense, too, has had to wait for its opportunity with those who devoted themselves to the knitting-needle. England, in September last, was a vast knitting machine, ceaselessly knitting socks—sometimes with heels, sometimes without. The signs were everywhere, at the seaside, in hotel lounges, in country houses, in dining-cars. A controversy was even started by the more enthusiastic on the propriety of knitting socks in church, and the clergy who protested were denounced as bad patriots. Several soldiers are known to have made their beds at the Front entirely out of the socks sent to them by their friends and admirers. Other soldiers wondered that a woman has such vague ideas as to the size of a man's feet. The pace was too quick to last. Knitting was at its height in September, by October there were symptoms of decline, and in December it collapsed.

Meantime the Government now announces its intention of "mobilising women". The idea appeals to us at the first blush. But can it be done? Experience says that you cannot mobilise women. Any trade union leader will tell you that. They are the true individualists, and they do not well endure a discipline. If any member of the Cabinet had ever attended a women's committee meeting, with its fussiness, its pettiness, its quite extraordinary faculty for thinking itself businesslike and getting nothing whatever done, he would not have talked of mobilising women without qualifying warnings and exhortations. But there is hope in the idea; and we welcome it, provided it is not too ambitiously organised or pushed to extremes as an idea. In many practical and expedient ways women can and are at this time helping the country. The withdrawal of men from industry leaves the road free for women to do some of men's work. Some of them have taken advantage of the opportunity; one hears of women clerks in lawyers' offices, even in the banks. Women, too, are being employed in factories where munitions of war are made, and the thousands of dressmakers who were thrown out of work last August have found employment in clothiers' works.

But it should be clearly realised that women have

WOMEN'S WAR WORK

WOLVERHAMPTON TO HAVE A VOLUNTEER RESERVE.

A public meeting was held in the Lecture Hall of the Girls' High School, Tettenhall Road, Wolverhampton, on Thursday, to inaugurate the formation of a local branch of the Women's Volunteer Reserve.

The Mayor (Alderman A. Baldwin Bantock), who presided over a crowded attendance, said that letters had appeared in newspapers asking what work women could do, but there was work for thousands of women. The Mayoress wanted thousands of respirators to save our men at the front from the dastardly actions of the Germans. They were also about to start a recruiting campaign for our Territorials, and it would be an excellent thing if women would send to the Town Hall respirators which might save the lives of those they personally knew.

England was at present engaged in a most desperate struggle to overthrow the cursed militarism of the Germans, and the women intended to do their part in bringing about the end of her military despotism.

Letters of apology were received from Mr Alfred Bird, M.P., who wrote stating that the movement had his complete sympathy, Mr G. R. Thorne, M.P., Mr Geoffrey Mander, Dr. Malet, and Mr F. Carr.

Mrs Smythett, of London, who attended wearing the uniform of the Women's Volunteer Reserve, said the movement improved the physical fitness of girls, for there was nothing like regular drill for fitness. The movement gave every woman occupation, and one which helped others and helped the nation.

The men had and were still coming forward magnificently. They wanted the women to come forward too. The Government saw the need of it, and were offering more occupations to women than ever had been known before. The object of the Volunteer Reserve was to make a body of trained, disciplined women, who would be ready for any emergency. To do that the women had got to learn obedience, which would not be easy.

The work of the Women's Volunteer Reserve was to drill, the drill being based on the 1914 Drill Book. Members would have to have two hours' drill every week, an hour at a time, learn signalling, first aid, nursing, telegraphy, camp cooking, camp sanitation, gardening, and some of them carpentry.

The girls in the Reserve in London were extremely keen on route marching, walking ten or twelve miles on a Saturday afternoon. That was done by poor London girls.

The age limit of the Reserve was 18 to 50, and the uniform would cost £2 12s. 6d. They had to have a recognised uniform because they could not have girls marching about in their ordinary costumes. Personally she had never worn a hobble skirt, and she should not like to do cross-country work in some of the dresses she saw being worn in London. Members would also have to be able to pass an examination by a lady doctor, who would see if their hearts were all right, so that they could get over stiles quickly and run uphill. Members were allowed to wear spectacles if they could see in them. They had a great hope that the movement would be recognised by the War Office, which was now thinking the matter over.

This, added the speaker, was not a suffrage movement. All they wanted was to work for other people and for the good of the nation. She had been told that the uniforms, which cost £2 12s. 6d. in London, could be obtained cheaper in Wolverhampton, and some of the members, who were dressmakers, would be able to make their own uniforms from patterns supplied them.

At the conclusion of her address, Mrs Smythett was cordially thanked.

A vote of thanks to the Mayor was also passed.

At the conclusion of the meeting a number of those ladies who had attended enrolled themselves as members of the Wolverhampton Branch. The President of the branch is the Mayoress (Mrs A. B. Bantock) and the hon. secretary Mrs R. E. Hollis.

The first drill was fixed for Thursday evening next at 7.30 at Bricktiln Street Council School.

Women and War Work.

How to Make a Move.

ADVICE AND HELP.

(BY WOMAN EXPERT.)

We are at war, we women of Englond. I hink everyone recognises that now. This war s not being fought "somewhere in France" r somewhere at sea in latitude and longitude nknown. It is not a war that is being fought o a finish by professional soldiers on a distant battlefield—something for us to read about, talk about, pray about, but take no part in. It is being waged here in these islands, over which sinister Zeppelins are hovering, watching an opportunity to drop their death-bombs on our homes, where our children are sleeping or playing. It is being fought in the waters that wash our shores; enemy guns are turned on our defenceless seaside towns, enemy torpedoes are darting about within sight of our harbours, murdering peaceful fishermen and non-combatant travellers, trying to prevent the foodstuffs which we must import for our daily needs from reaching us

And the women of England realise that the war is not only the business—the first and most important business—of their husbands, brothers, and sons, but that it is the woman's business, too. The days of idleness and pleasure-seeking are over; every hand must help.

At the beginning we could only think of two ways of helping—nursing and knitting. I am afraid a good many of us embarked upon those occupations with more enthusiasm than aptitude.

WE KNOW BETTER NOW.

Women cannot shoulder the rifle, but every woman who can release a man from civil occupation by taking his place or help to equip him by working in armament or army clothing factories is fighting as much as any man. What we have each got to say to the man standing nearest to us is. "You go; I will take your place." Literally, of course, that cannot often be done. Training, experience, physique, and mentality all have to be considered in order to be useful. Women's work must be organised. This the Board of Trade have undertaken to do, working through the Labour Bureaux, each of which has now its special war service register of women who are either willing to take employment which will set men free to enlist, or for work in Army-clothing factories and armament works

There is also a voluntary organisation,

THE HOME SERVICE CORPS,

which is concerned principally in organising a "reserve" labour service, which may be called upon when the ordinary resources of the labour market fail. This corps is doing excellent work in getting together women whose qualifications for work do not bring them quite within the scope of the Labour Exchange, and I hope to deal with it later on.

Now, both these organisations, the one in an official capacity and the other in a semi-official capacity, are doing splendid work. Yet from letters which come to this office from women of all classes, it is evident that through some misapprehension there are women willing to register who have been discouraged from doing so, and others who, having registered, have been disappointed with the results. I think that this disappointment arises most frequently from a misunderstanding of the kind of work for which women are at the moment wanted. And from a little confusion, sometimes between applicants who want work from patriotic motives, and those who must have it for bread-and-butter reasons. Allowances must be made for the newness of the scheme. And perhaps one might plead for just a little more tact on the official side and a little more commonsense on the other side—especially on the patriotic side. It is such a wonderfully effective blend—

TACT AND COMMONSENSE—

and so much can be accomplished by its joint agency.

The mistake which I find some women make is in offering their services "in any capacity," which really means in no capacity at all. How is work to be found for a woman who will do anything, but cannot put in plain English anything that she can do?

Offer her work in any one of the dozen employments in which there is a shortage of labour at the present moment, and she will be unable or unwilling to engage in it. To this type of would-be worker I would say: Think out clearly what you want to do and are fitted to do, and then put yourself into training to become an efficient worker in that sphere. Kitchener's Army consists almost entirely of men who, a year ago, were totally untrained. But they knew what they wanted, and they went to the nearest recruiting sergeant, and said, "make soldiers of us." Some of them have been for nine months, day in and day out, learning nothing but this soldiering business, and they will go on patiently with their lessons until they are thoroughly proficient and likely to be of real use in the field. This is a lip for women who are eager—a little too eager sometimes—to help.

Another mistake is to waste experience. If you have been all your life a dressmaker it is a pity to switch off suddenly on to tram-conducting, because, you see, your familiarity with a sewing machine would make you a most useful hand in a factory where khaki is being made into soldiers' tunics as fast as it comes from the loom. The time you spend in learning to punch tickets and the other secrets of tram-conducting could be equally well employed by another woman who has not your useful workroom experience. If you have been brought up on a farm in the country don't let

THE MOST VALUABLE KNOWLEDGE

you must have acquired lie fallow while you wrestle with the intricacies of motor-driving and running repairs. The farmers will be badly in need of help for haymaking and harvesting, and there is the byre, the dairy, and the poultry-yard awaiting your labour.

If anyone is in a dilemma about the work she is best fitted for, or the best method of fitting herself for any particular work, I shall be pleased to give all possible assistance in overcoming the difficulty, and will answer all inquiries in this column. Just write to Woman Expert, "Weekly Post" Office, Liverpool. In the meantime here is a list of occupations in which women workers are wanted immediately:—

- Forewomen for armament factories.
- Motor-van drivers.
- Printer's machine-minders.
- Fetlers & feeders for khaki manufactory.
- Grocers' assistants.
- House physicians.
- Dispensers.
- Chemistry teachers.
- Telegraph & telephone operators.
- Gardeners.
- Women milkers.
- Field workers.
- Dairy workers.
- Nurserywomen.
- Byrewomen.
- Girl for milk round.
- Teachers of basket making.

In some cases experience is necessary; in others training is offered; in practically all of them the employment of a woman will set a man free to fight.

There is another aspect of woman's work with which I shall deal later. Work to many of us is not a matter of the war or of patriotism merely; it is an every-day condition of life. The war has made things harder for innumerable women workers. Work is slack in many industries; living expenses have increased. Many women are compelled to seek fresh fields of activity or face new conditions in the work to which they have been accustomed, and to these I hope I may be allowed to give advice in any difficulties that arise, as well as to the war workers. Address all letters, "Woman Expert, 'Weekly Post' Office, Liverpool."

WOMEN AND THE WAR.

It is true in many senses that, as the Bishop of St. Asaph said at a meeting the other day, the women of England have made the England which is proving herself anew to-day. The special thought dwelt on by the bishop was woman's capacity for sacrifice. We know and feel it, and in view of the tragic list of casualties announced this week, it comes closer home to all of us. It is not a thing for loud praise, but for silent sympathy and pride. Yet the bishop was right in voicing for once the general sentiment, and in reminding us, as he did, that the nation's strength does not depend on its possessions, but on its character, that character is formed in the home, and that the mother is the centre of the home. Without her beneficent influence we should not have seen the recent mighty uprising of Englishmen ready to fight for their country and for right; and now that they have gone forth in their hundreds of thousands, there is work left behind which the women must attempt. Work of all kinds. There is no newspaper which has not its column about women's work in the war, and the more men go out the more women workers will be needed. All the proposals, however, are not necessarily wise ones. There may well be, for instance, very different views as to whether women of education and refinement should go on the land. The land needs workers, and many educated women, we are told, are ready to go. In considering the matter, it is important to remember that the problem is not merely temporary. Therefore unless the higher class of women are ready to take up agricultural work for an indefinite period, it might be better for them not to commence it. Sundry practical obstacles also stand in the way. Such women must be at least decently, if not comfortably, housed; they could not rough it as a male labourer would do. Besides the needs of patriotism will surely supply occupations in which their acquirements can be better utilised. A more feasible plan would certainly be to train country girls to farm work, and in the girls in the higher standards at elementary schools there is promising material for a solution of the problem, especially considering that by their employment the housing difficulty would be largely avoided. In all districts the demand for milkmaids is very great, and there is much other work about a farm which a woman could perform as easily as a man. In some towns women and girls are already working in departments of shell making, whilst women tram-conductors and motor car drivers are to be seen in many places. A London catering firm is employing women as van drivers; for this work a good salesmanship is as necessary as a knowledge of horses. Errand girls form a class by no means unknown in Nottingham. A firm of provision merchants in London has engaged a hundred young women to call for and deliver orders by cycle, and owing to the scarcity of errand boys, the example is likely to be followed. Female assistants in libraries suggest a more appropriate (though possibly not so immediately useful) employment for educated women than farm labour, and there is another calling for which the feminine delicacy of touch and sense of fashion seem peculiarly suited—that of the hairdresser. Before the war there were proportionately almost as many German hairdressers as waiters in this country, and presumably their disappearance has left a notable gap. But it is a trade which has to be learned, and many of the barber's regular customers might tremble at the vision of a fair young female apprentice flourishing a razor above his chin. Still, we must all begin somewhere, and there is at least this to be said, that a clever and handy girl would acquire the necessary knack much quicker than some young men we have met. These, however, are only a few of the opportunities for women's work which the war is opening on every side.

The Kentish Independent 26/6/15.

WOMEN AND WAR.

PARTISAN SUFFRAGISM AND THE NATIONAL CRISIS.

To the Editor of the "Kentish Independent."

Dear Sir,—I observe that certain editors are giving much of their space (even in times when space must be particularly valuable), to contributed glorifications of Suffragist action in what is designedly miscalled "War Work" in order to bring it as nearly as possible into equality with fighting in the trenches; and this these editors do though their space is alleged by them to be too valuable for the admission of replies. Perhaps the most grotesque illustration of this studiously contributed misrepresentation has been the story, appearing and re-appearing, of a Primitive Methodist minister's wife, who is just now going the preaching round of her husband's district while he is acting somewhere as chaplain to the troops; as if women preachers were not a common characteristic of Primitive Methodism always and everywhere.

But the ordinary contribution from Suffragist headquarters mostly concerns hospital work, and I have seen it headed "Women Heroes in War Hospitals; what Suffragists are doing." It is natural to wonder what war hospitals have distinctively to do with the Suffragist Party, any more than they have distinctively to do with the Conservative Party or the Liberal Party or the Labour Party. The exclusive association of women's "war service" with one party of women more than another is unfair and misleading, though it is instructive. It carries with it the entirely groundless insinuation that the women who object to the Suffrage and the women who are indifferent to it are less active in the service than the women who insist on putting a suffrage stamp upon it. As treasurer of the National League for Opposing Woman Suffrage I am in a position to know from abundant evidence the unsparing devotion of our branches and our members, not only to hospital work, but to all the varied kinds of service for which the country is calling. But the principle of our Central Organisation since the war began has always been that we should throw ourselves into this work and service hand in hand with our fellow-countrymen and fellow-countrywomen without distinction of party. At the present juncture there is no room for any party except the national party; and yet the Suffrage Party seem to be bent on making room for themselves. The object of anti-suffragists (I speak for the body as a whole and not for individuals here and there) is not to make capital for their propaganda out of the patriotic work they do, and hence they sink their party name. But when paragraphs are headed for the Press "What Suffragists are doing," it is plain that the eye is not single; the ulterior object for which the patriotic action is made use of cannot be mistaken. The policy of those who merge their party and the policy of those who obtrude their party could not be more distinctly differentiated. The Suffragist policy is intended to catch the unwary and unreasoning with the specious argument, "See what noble service the women are rendering; will they not deserve the vote when the war is over?" But nothing could be more illogical than to claim that, because women can serve the nation nobly and effectively in their own way, therefore they have a right to govern it; and the prospect of government by women, even if they have been heroic hospital nurses or hospital matrons, will, even after the war, remain repellent to the vast majority of reflecting women as well as men. The service of women is no new thing: if the vote were simply an order of merit it would have been due to them before. But it is not a reward: it is a trust assigned to the sex which alone is capable of performing the essential national duties of defending the country and maintaining the law. And the lesson which this war thrusts and even thunders upon inconsiderate ears is that on men and not on women depends the fight for national existence. Women may be substitutes for men in some degree in non-combative work, but not in "War Work" in any proper sense of the term. Men and men alone can bear the whole brunt of the battle for the life of the nation.

But apart from the merits or demerits of their case Suffragists seem just now to need the reminder that this is not the season to push the claims of their particular party: and that in the midst of the common danger it would be more in harmony with national unity and the national temper if they would be content to qualify themselves for service under the flag whose record in history shall be

"Then none were for a party;
Then all were for the State."

Yours faithfully,

East Anglian Daily Times 5-8-15

656/53

One pleasing outcome of the war is the way in which the women of England have put their shoulders to the wheel and striven, and are still striving, to do their best to foster and help on any cause worthy their assistance. The herculean tasks undertaken by the ladies of the various depots for supplying Red Cross and other hospitals, and by the members of the Soldiers' and Sailors' Families' Association, who do so much to help the wives and dependants of our defenders until such time as the Government gives them the money so rightly their due, are well known to everyone, and there are many other voluntary workers of the different institutions and societies. Their quiet, unostentatious, yet none the less effective work will always stand an unfading memorial to capabilities which to a large extent were dormant in woman. If they were dormant it was solely because never before had these qualities been called for. It has been the fashion in the past to regard woman as lacking in powers of concentration, of being devoid of organising abilities, and so on. Anyone who sees the work they are now performing must feel sadly ashamed if ever he so misjudged them, and be ready to atone for his false estimate of a character the nobility of which was hidden for no other reason than that there was no special need for its display. The need arose; at once they took in hand tasks that would make many a man hesitate before he attempted them, not only on account of their magnitude, but for the intricate details that form a necessary part of them. While the women in the towns are fully occupied, there are many in the country villages who are debarred from doing what they would, the distance proving an insuperable obstacle to their joining their sisters in work in the towns. To these we would point out a way in which they could do excellent work, the chief attribute of which, however, would be its unobtrusiveness. Should women regard it as practicable, we know it will be readily undertaken.

Much has been said and written about the separation allowance to wives and dependants of men serving their country on home or foreign service. The country has shown an appreciation of what is their due that has put out of question any hint of want. While the dwellers in the town may find themselves little if any the better off, those in the country now possess a very welcome increase on the weekly wage with which they had to run their homes before the war called on their husbands to take their share in the fighting, the increase in some cases reaching nearly 100 per cent. It is to these that the would-be helper can carry her message. Take the case of a woman with four children, who now receives, if her husband is a private in the Army, an allowance of 25s. per week. Were her husband a Suffolk agricultural labourer prior to the war her weekly budget had to be planned on a wage of 14s. or 15s., an amount that suffered severe contraction in the event of wet weather, when work in the fields was impossible. With a weekly sum of 25s., and one moreover that does not fluctuate in keeping with our uncertain climate, one would picture her as passing rich, and able to put by a goodly sum each week. But instead of this, on their own confession, many find themselves at the end of each week not one penny the better off, although their incomes are nearly double those of a few months ago, and the husband, who in the pre-war budget accounted for as much food as four children are allowed, no longer draws on the household supplies. Amongst a certain class who rush to judge a multitude by the sins of a single member it is said, and believed, that drink in many cases accounts for this waste of money. There may be isolated instances of women spending more time and money in public-houses than is either necessary or good for them, but to say that such a state of things in general is cruelly unfair to those who, while their husbands are absent, go through all the agonies of suspense and uncertainty (ever the lot of those left behind at times like the present), and who take their share of the burden as willingly and unrepiningly as those away. The cause of the dribbling away of the extra money in so great cases the result of their means having been so meagre in the past that they are "lost"

should throw ourselves into this work and service hand in hand with our fellow-countrymen and fellow-countrywomen without distinction of party. At the present juncture there is no room for any party except the national party; and yet the Suffrage Party seem to be bent on making room for themselves. The object of anti-suffragists (I speak for the body as a whole and not for individuals here and there) is not to make capital for their propaganda out of the patriotic work they do, and hence they sink their party name. But when paragraphs are headed for the Press "What Suffragists are doing," it is plain that the eye is not single; the ulterior object for which the patriotic action is made use of cannot be mistaken. The policy of those who merge their party and the policy of those who obtrude their party could not be more distinctly differentiated. The Suffragist policy is intended to catch the unwary and unreasoning with the specious argument, "See what noble service the women are rendering; will they not deserve the vote when the war is over?" But nothing could be more illogical than to claim that, because women can serve the nation nobly and effectively in their own way, therefore they have a right to govern it; and the prospect of government by women, even if they have been heroic hospital nurses or hospital matrons, will, even after the war, remain repellent to the vast majority of reflecting women as well as men. The service of women is no new thing: if the vote were simply an order of merit it would have been due to them before. But it is not a reward: it is a trust assigned to the sex which alone is capable of performing the essential national duties of defending the country and maintaining the law. And the lesson which this war thrusts and even thunders upon inconsiderate ears is that on men and not on women depends the fight for national existence. Women may be substitutes for men in some degree in non-combative work, but not in "War Work" in any proper sense of the term. Men and men alone can bear the whole brunt of the battle for the life of the nation.

But apart from the merits or demerits of their case Suffragists seem just now to need the reminder that this is not the season to push the claims of their particular party; and that in the midst of the common danger it would be more in harmony with national unity and the national temper if they would be content to qualify themselves for service under the flag whose record in history shall be

"Then none were for a party;
Then all were for the State."

Yours faithfully,

JOHN MACNIE

the women in the towns are fully occupied, there are many in the country villages who are debarred from doing what they would, the distance proving an insuperable obstacle to their joining their sisters in work in the towns. To these we would point out a way in which they could do excellent work, the chief attribute of which, however, would be its unobstrusiveness. Should women regard it as practicable, we know it will be readily undertaken.

Much has been said and written about the separation allowance to wives and dependants of men serving their country on home or foreign service. The country has shown an appreciation of what is their due that has put out of question any hint of want. While the dwellers in the town may find themselves little if any the better off, those in the country now possess a very welcome increase on the weekly wage with which they had to run their homes before the war called on their husbands to take their share in the fighting, the increase in some cases reaching nearly 100 per cent. It is to these that the would-be helper can carry her message. Take the case of a woman with four children, who now receives, if her husband is a private in the Army, an allowance of 25s. per week. Were her husband a Suffolk agricultural labourer prior to the war her weekly budget had to be planned on a wage of 14s. or 15s., an amount that suffered severe contraction in the event of wet weather, when work in the fields was impossible. With a weekly sum of 25s., and one moreover that does not fluctuate in keeping with our uncertain climate, one would picture her as passing rich, and able to put by a goodly sum each week. But instead of this, on their own confession, many find themselves at the end of each week not one penny the better off, although their incomes are nearly double those of a few months ago, and the husband, who in the pre-war budget accounted for as much food as four children are allowed, no longer draws on the household supplies Amongst a certain class who rush to judge a multitude by the sins of a single member it is said, and believed, that drink in many cases accounts for this waste of money. There may be isolated instances of women spending more time and money in public-houses than is either necessary or good for them, but to say that such a state of things is general is cruelly unfair to those who, while their husbands are absent, go through all the agonies of suspense and uncertainty (ever the lot of those left behind at times like the present), and who take their share of the burden as willingly and ungrudgingly as those away. The cause of the dribbling away of the extra money is in most cases the result of their means having been so meagre in the past that they are "lost" in their laying out of the larger amount.

Is there not a chance here for a tactful woman—anyone lacking that gift would be wiser not to enter upon the business—to convey a little friendly advice to soldiers' wives in a talk over "ways and means"? Many wives will have thankful hearts later on if by a little forethought they have formed a "nest-egg" against the time when their husbands come home again to farm labour and once more earn what will then seem the pitiful wages of old. These wives and mothers should understand that the allowance they now get is not for all time, and if they spend the extra money they are now receiving they would be wise to replace their *lares et penates* that are the worse for wear and to get together for themselves and families a stock of good clothes, an event of rare occurrence in the past. Any appearance of wanting to interfere or manage the household must be avoided, but much can be done by tactful suggestion. If the idea is capable of being developed we feel sure that this role of mothers' friend will find in rural districts abundant occupation for women of understanding and common sense.

Women, Work, and War.

The Home Service Corps

WHAT TO DO AND HOW TO DO IT.

(BY WOMAN EXPERT.)

(SPECIAL.)

Women are eager to help, and there will be no hanging back when the time comes for them to take the places, during the war, of the men who have enlisted. This is proved by the great number of letters which I have received from readers, who, inspired by my article on this subject in last week's issue, have written asking for advice and help in taking up war and other work. The enthusiasm with which women have come forward, ready to undertake any task, no matter how hard, and their willingness to learn, would bring joy to the heart of a recruiting-officer if they belonged to the fighting sex. Especially do I admire the brave patriotism of those soldiers' wives, who, having already given so much, are ready to give more—even their leisure when household tasks are finished—to the country. One writer, whose husband has been for months among the lists of "missing," says work will help her to get through the time till he comes back. The courage of those words!

THE RIGHT SPIRIT.

The right spirit shines, too, through the letters of a couple of young school teachers who are willing to give up their well-earned holidays to war work. On the other hand, many letters betray a restlessness—natural enough in these disturbed days—which is prompting women to give up the useful, if ordinary, work in which they are now engaged for some more novel and exciting occupation. This, of course, is not the real spirit of helpfulness. It is useless to denude one section of necessary labour in order to fill another, and the woman who leaves work in which she is skilled to take up work in which she has no skill is much more likely to hinder than help the work of the country. Efficient domestic servants are of a higher economic value than inefficient farm hands. Many menservants have enlisted and maidservants are taking their places. And there are few families which are not making sacrifices for the war—the menfolk serving at the front; the women working hard to relieve distress at home. Any right-minded girl can co-operate effectively in such good work if she is in service, and there is no need for her to change her occupation.

Many correspondents give me no clear idea of what they can do or have done, and without this information I cannot help them much. Others think I am an employment agent. I am not, and I cannot provide them with situations. I can only help them to help themselves, and prevent square pegs getting into round holes.

THE LABOUR EXCHANGE.

There are a good many complaints from readers who, having registered at the Labour Exchange waited months, and have received no call for their services. I have interviewed the head of the department of the Board of Trade in Liverpool, and his explanation is this: The Labour Exchange has applications for a large number of women workers in various capacities. In some cases learners are taken (generally young girls), but in most some experience is desirable, and suitable applicants are promptly placed in these positions. The mobilisation of voluntary workers for war service is a different matter, the object of which is to find out what labour is available, and to classify it with a view to being able to call upon women workers to take the place of men as the need arises. The Board of Trade is feeling its way among employers of labour to discover where women can be most usefully placed to release men for fighting, and is also trying to organise a reserve army of women workers ready to be called up as need required. It is clear to everybody that a great many more men will still be required to join the colours, and it is when these men go that the women will be wanted.

I would strongly advise those women who wish to hold themselves in readiness for emergency work to enrol in

THE HOME SERVICE CORPS.

B. A. (KIRKDALE).—Have you had any shop experience? Apply to the Labour Bureau, Renshaw-street, for position as grocer's assistant.

T. K. G. (Anfield).—Register at the Labour Bureau, if you have not done so, stating your two years' practical experience in confectionary shop. Try also at some big stores. So many of their men have joined the forces.

T. L. C. (BIRKENHEAD).—I never advise people to give up work they can do for work which they are totally unused to. However, you could study bookkeeping in your spare time and attend a class one night a week to learn this work. It would be advisable also to learn shorthand and typewriting if you intend to go in for clerical work. You might, when proficient, start at 15/- per week while learning the routine of an office or cash desk, and out of this you would have to pay for board (lunch out), lodging, fares, and suitable clothing. At present you have no expenses (whatever you give your mother is put to use for you), a good home and living, so think well before you change.

E. S. T. (DOUGLAS).—Yours is the right spirit. You and your colleague see that your duty is to stick to your post, but you are willing to give up your well-earned holiday for war work. Will you enrol in the Home Service Corps? Write to Colonel Lovell, Home Service Corps, Church-street, Liverpool, and ask if she can place you both together on a farm for the holidays to help with the harvest.

NANCY (BOLTON).—Write to Raphael Tuck and Sons, London, E.C., enclosing specimens of your postcard and Christmas-card work. Patriotic ideas are popular just now. You might also try Dennis and Sons, postcard specialists, Scarborough.

STAR OF THE SEA.—Write to 22, Rodney-street, re motor-van driving, or apply in writing to the Director of Telephones, G.P.O., for position as learner for telephone work.

NURSE.—Nurses who go to the front are fully qualified and are on the active, reserve, or Territorial lists. Amateurs and semi-trained nurses are on no account allowed to go, and the training takes from three to five years. If you are over 23 you could inquire at any local hospital if they have a vacancy for a probationer. I shall have an article on nursing later.

GRIFFITH.—You are too young yet to train as a nurse. Probationers are taken at twenty-two, and at least three years' training is necessary. You could enter as a probationer at the Workhouse Infirmary or in a children's hospital, where probationers are taken younger.

L. M. (SALISBURY).—An article on grocers' assistants will shortly appear. In the meantime I should not advise you to change your occupation.

E. A. (ANFIELD).—Write to the Director, Telephone Department, G.P.O.

S. T. (PRESCOT).—Have you any experience in shop or on a farm? Register at the Labour Exchange for work you know something of. This is the only advice I can give to correspondents who give me no particulars of their practical abilities.

L. R. (SOUTHPORT).—Have you applied for this position at the local Labour Exchange? There was a vacancy in Liverpool last week, but would be filled up locally.

A. H. (BROOMHEE).—Do not give up the little income you have, but meantime enrol in the Home Service Corps at Birkenhead. They might find you occasional work later on.

K. E. M. (MORECAMBE).—See answer to "A. H. (Anfield)." You could teach yourself shorthand by getting Pitman's instruction books and studying in your leisure. Typewriting is easily acquired, and only needs practice.

M. B. (STONEYCROFT).—Yes, I think you might obtain the post you require. I am making enquiries about it for you, and will let you know to whom to apply. You have my sympathy and best hopes for his return.

M. E. B. (CHORLEY).—I am writing to make inquiries in the matter of the County Council's farm, and will let you know the result.

M. S. (WAVERTREE).—Was your previous experience in a shop of that description? If so you will have no difficulty. Register at the Labour Exchange. I will deal with this occupation next week.

J. J. (HOYLAKE).—Write to the Secretary of the Wirral Farmers' Association. Strawberry pickers are wanted now. Would you do this? If so, register at the Labour Exchange and ask to be put on this work.

F. P. (ANFIELD).—Give more particulars. Agricultural scholarships are offered by the Cheshire Board. I have also an offer of nursery (horticultural) training, but for this payment is required. The Government trains telegraphists and telephone operators. Grocer's assistants and ticket collectors are also taken for training. For the former general commercial knowledge is an advantage.

J. R. (DOUGLAS).—There are vacancies in Liverpool for motor van drivers. When you and your friends have obtained your driver's certificates and licences apply to the Labour Exchange, Renshaw-street, for work.

E. S. (RUABON).—Your writing would disqualify you for a Post Office clerkship. How would you be helping the country particularly as a tobacconist's assistant, and is it, as a rule, only young girls who are taken without any experience of shop work. Would you like to train as a waitress? More women are wanted in this employment now that foreign waiters are not so plentiful. Write to the managers of the big catering companies.

E. A. (ORMSKIRK).—Very little work is given out to home workers in the way of Army shirtmaking. You might get some home work by applying to the Women's Emergency Corps, Bold-street, Liverpool.

J. S. (CARNFORTH).—Rain out your father with you on his farm now that so many of his young hands have enlisted! You are certainly better suited for agricultural or domestic work than for nursing, having experience in the former occupations and none in the latter. Apply to the Labour Exchange for work on a farm, stating your qualifications.

F. B. (BOLTON).—There is nothing for it but patience. The need is not so much in the immediate present as in the near future. You might try for a post as a railway ticket collector. Apply to the Superintendent of the L. and Y. Railway or any of the principal companies. I have not heard of the lady postmen. Perhaps they are only doing this work in some districts. Girls could take their places as telegraph messengers.

E. S. (CLITHEROE).—The Board of Trade does not pay wages of trade workers. They are simply bodies between employers and employees. The Labour Exchanges register people and put their names down for work. There is not much to do. Apply to the Secretary, Education Offices, Dale-street, London, for details of wages as a whole when published.

"FLORIDA."—Try Vickers, of Barrow, again. They employ women for filling shells. But when a girl can't take up any definite occupation, such as nursing and completing some training, it is difficult to find work. You could train as a dispenser, and there is a demand for women in this profession, but it is a profession and costly.

J. S. (CLEATOR).—Women are employed in many post offices. The pay is good and the hours regular, but there is no chance of promotion to the higher posts. Apply to the local Post Office, Cleator, for particulars. Women are employed in the Telegraph Department, but not in the Telephone Department. Apply to the Secretary, Education Offices, Dale-street, Liverpool, for particulars.

[illegible] need required. It is clear to everybody that a great many more men will still be required to join the colours, and it is when these men go that the women will be wanted.

I would strongly advise those women who wish to hold themselves in readiness for emergency work to enrol in

THE HOME SERVICE CORPS,

which is not only organising a reserve of workers for whole, part, or holiday employment, but is giving physical training to its members to fit them for men's work. Classes for military drill are held three times daily, including a lunch-hour drill for workers in town. Route marches are arranged in the evening, and the members benefit both by the discipline and the exercise. Depots have been established in Birkenhead (Charing Cross), Prenton (Woodchurch-lane), and at Southport (Cambridge Hall). Another will shortly be opened at Waterloo and an additional one at Birkenhead. Recruits can be enrolled at the Victoria Settlement, Wavertree, or at the offices, 38, Church-street.

I had hoped to commence this week a series of articles on new employments which the war has thrown open to women, but my correspondents have encroached so far upon the space at my disposal that I must leave this for another issue.

Will correspondents please note that (1) no answers can be sent by post, and that it is therefore unnecessary to enclose stamps; (2) that answers cannot be guaranteed in the next issue, but will be dealt with in rotation; (3) that a pen-name should be given as well as the writer's real name and address, though the latter will not be published?

This week readers will identify their answers in most cases by their initials and postmark.

Address your letters "Woman Expert," "Weekly Post Office," Liverpool.

The letters of all correspondents have not been answered to-day, as some of the inquiries made by them will [illegible] looking into. All replies, however, will be given with the least possible delay.

ANSWERS TO CORRESPONDENTS.

WATERLOO says she could help either as grocer's assistant, dairy worker, or nurserywoman, but is not experienced. Some training is necessary in any of these employments, and they are so totally different that an equal aptitude for all three trades is improbable. Have you had any experience of life on a farm or in a shop? You would be paid a small wage while learning your duties in a grocer's shop, but a dependable knowledge of weights and measures, and quickness in calculating are essential. In dairy work this is not essential, but the work is not highly paid. Nursery work requires considerable training, and you would receive no wages; the Cheshire Board of Agriculture (County Offices, Chester) are offering training.

N. K.—Seamstresses are wanted in factories for making up khaki. Apply to the Labour Exchange, Mornington, Renshaw-street, Liverpool, for this work, stating your dressmaking experience. You are too young for nursing, and would, in any case, require training.

M. (BOLTON).—It is impossible to advise you without further details. You say you have to change your occupation because it was too heavy and you injured yourself in doing it. But what was it? A dispenser requires a good education (including a knowledge of Latin), long training, and special aptitude for work requiring the greatest precision and exactitude. Send further particulars.

WAITRESS.—Apply to the Labour Exchange, stating your experience, and they will find you a post.

ACCRINGTON.—Tell me what work you were engaged in, if any, before your marriage? Will them make special inquiries as to what employment is possible for you to obtain in your town. Have you applied to the local Labour Exchange?

MOTOR-VAN.—The vacancies for motor-van drivers apply only to experienced motorists with certificates. It will take you at least three months—and some expense—to learn. Is there no other work for which you are fitted?

ART MISTRESS.—Will you enrol yourself in the Home Service Corps, which is organising a reserve service and gathering in "part timers" like yourself, who drill and hold themselves in readiness for any emergency which may arise later from a shortage of regular labour? Apply to Colonel Lovell at the War Service Bureau, Church-street, Liverpool. Could you design war posters?

N. H.—You are qualified for four occupations—domestic service, laundry work, driver, and machinist—so do not waste time learning anything fresh. Why not stick to your present work? It is necessary and useful. Officers' families and many ladies who are giving every spare moment to helping the wounded and the suffering want good servants to help them, and so indirectly you can do your bit in service as well as anywhere. I should advise you to register at the Labour Bureau in Renshaw-street, but ask for some particular work—either as domestic servant, laundress, or girl for a milk round. There was a vacancy for the latter last week.

SOLDIER'S WIFE.—Any experience in skilled work before marriage? Would you go strawberry picking outside of Liverpool? If so, write to the Labour Exchange, Renshaw-street, Liverpool.

G. F. S.—There are vacancies for basketall clerks in the South, where Messrs. Willing are employing women in place of men, but they have no branches in this district. This seems to be what you are fitted for. You could, however, get a position as grocer's assistant locally. Apply for this position at the Labour Exchange, Renshaw-street, stating your shop experience.

"FLORIDA."—Try Vickers, of Barrow, again. They employ women for filling shells. But what a pity you cannot take up your maternity work again and complete your training. You could then either become a district nurse or take private cases, and it is a profitable and useful career.

J. S. (CLYDACH).—Women are employed in armament factories. The pay is good and the work, I believe, easily learnt. Motor driving, on the other hand, costs money, and proficiency is not easily acquired. Apply to the local Labour Exchange; or if you are willing to return to Liverpool, go the Exchange in Renshaw-street.

CYMERIC.—Without knowing what sort of position you have previously held, it is difficult to advise. If you have had no shop experience, it is rather late to learn. If you understand poultry-keeping, apply for a post as poultry woman. But in any case try for something in which your past experience will be of value. I suppose you would not care to increase your income by keeping poultry for profit?

C. P. (BIRKENHEAD).—It is a matter for patience, I am afraid. With your experience of business in your own shop, it would be wiser to try for a situation of this kind. You could manage a branch shop, I expect. Apply to the Scotch Wool [illegible] Hosiery Company head office, Greenock, N.B., and watch the advertisements in the "Draper's Record" for vacancies in the trade.

INQUIRER (BUXTON).—I am fraid your experience as a milliner will not help you much in "war" work. I advise you to stick to the work you can do, and try for a situation in a millinery workroom or shop. Watch the trade papers, the "Daily Telegraph," and the local papers in which situations are offered.

CARETAKER.—It is a pity not to let your daughter continue her teaching work, in which she has already made such good progress. She could get a pupil-teachership, and so complete her studies. Watch the advertisements in the "Educational Times" and other scholastic journals. In the meantime she might get a holiday situation as nursery governess. Such situations are advertised in the "Echo."

S. E. (WALTON).—Write to the Education Committee offering your services to release a male teacher for fighting. Also try the Labour Exchange. They have vacancies for teachers.

MRS. H. (BURY).—I understand that agricultural workers are more needed in Cheshire than in Lancashire. If you are willing to leave Bury, tell them this at the Labour Exchange. I presume you have had experience as a dairy worker? Strawberry pickers are wanted now. Why not apply to the Exchange for this work?

M. W. (PRINCE'S-ROAD).—Forewomen are required in workrooms and factories, and your experience in having charge of a dressmaking workroom would qualify you for such a post. Apply for it at the Labour Exchange, stating particulars.

K. F. (BOLTON).—You can learn motor driving at any large garage if you are prepared to pay the fees, which vary. When proficient you can register at the Labour Exchange or watch the daily papers, in which vacancies for lady chauffeurs are frequently advertised. As you can both drive a horse and cycle, you might get employment as a postman, or, rather, woman, to a local tradesman.

The Birmingham Post.
23/7/15

WOMEN WORKERS AND THE WAR.

LORD DARTMOUTH'S USEFUL SUGGESTIONS.

The Lord-Lieutenant of Staffordshire (Lord Dartmouth) has taken in hand the question of the organisation of women workers in the county. Yesterday he presided over a meeting he had convened at Stafford, for the consideration of the questions of thrift, food economy, care of infant life, and the employment of women on farms and in factories during the present crisis.

Lord Dartmouth said the idea had been to gather the many women's societies in the county engaged in women's work in order to see in which way the most useful work could be done by the women in the county. Since the notice of the meeting had appeared he had received an anonymous postcard which suggested a doubt whether they were right in directing their attention to the working classes when the great public bodies were an example of such waste in their financial arrangements. It was a pertinent suggestion to make, and what he would wish to be clearly understood was that though they possibly directed their attention in the first place to the humbler workers it did not end there. They should most certainly look for an example of economy from the great public spending bodies; but the difference between an individual and a public body was this, that, whereas an individual could begin practising thrift on his own lines and at once, the public bodies had a great complex machinery which could not be scrapped in a minute. This was a time when they did not want to buy anything because it was cheap. The best way to inculcate thrift was to set an example. There was no greater scope for instruction than in home cookery, and there was no direction in which thrift might be more usefully inculcated. In regard to infantile mortality, he said that in this country the infantile death-rate was one in eight children born, compared with one in twenty in New Zealand, which has a similar climate; and, as the doctors told them that 90% of the children born could, if properly cared for, live to maturity, obviously this was another direction in which the removal of ignorance and the supply of the necessary knowledge was most suitable for women's work.

The Employment of Women.

The employment of women presented a very difficult problem. There were many prejudices to be got over. The question was often asked what was the most useful work a woman could do at this crisis, and he took it that the general answer would be in this crisis to release an eligible man for enlistment. That was what they were out for. It might be asked if the meeting would be the beginning and the end of the matter. His answer was No. The future would depend upon organisation, and the first step would be that the secretary should write to the many women's societies at work in the county asking them to nominate someone to represent that particular body on a committee to go into the question of organisation. If anyone questioned the power of women to organise he had only to look at what took place in London on Saturday. (Applause.) It was one of the most splendidly organised affairs they had ever seen. If they wanted to see the results of organisation they had only to look at Germany. The organisation of the Army was magnificent, and the country was organised behind the Army. To-day there were no fewer than half a million women engaged on munition work.

The Rev. Preb. Dunkley, chairman of the Staffordshire Education Committee, spoke on the question of thrift; Miss Michaelis, County Council Lecturer in Hygiene, spoke on food economy; Miss Lawton, one of the pottery workers' organisers, spoke on infantile mortality; and Miss Lewis, of the Birmingham Labour Exchanges, spoke on the employment of women.

No motions were submitted to the meeting, but the Chairman said that the secretaries of the various women's societies in the county would be communicated with asking for a representative to be appointed to attend a county committee for organising work.

IF SURREY WERE INVADED.

The Duties That Would Devolve on Women.

The Question of War Service.

A conference of representative women of Surrey was held at the Borough Hall, Guildford, on Saturday afternoon, to consider "The duties that would devolve on women in case of invasion," and "Schemes for training women for agricultural work." Invitations had been sent to women Guardians, head mistresses of large schools, matrons of hospitals, Co-operative Women's Guilds, and other women's societies. The meeting was organised by the Surrey Suffrage Societies, with which other societies co-operated. Mr. Hutchinson Driver presided, and those on the platform included the Mayoress of Guildford, Viscountess Midleton, Countess Cawdor, Sir William and Lady Chance, Mrs. Pike Pease, Mrs. More Molyneux, Mrs. Cowen, Mrs. Theodore Williams, Miss Susan Onslow, and Mr. Ferdinand Smallpeice.

Letters of apology for absence were received from Mrs. Horne, the Hon. Mrs. Arthur Davey, the Countess of Onslow, Lady Gwendolen Guinness, Lady Farrer, Lady Roberts, Lady Jardine, Mrs. St. Loe Strachey, Miss Ogilvey, Mrs. Fletcher, and Mrs. Handley Spicer.

Mrs. Oliver Strachey, who spoke on the invasion question, said all hoped and believed there would be no invasion, but at the same time it was folly not to be prepared. Surrey was an important district, and would have complicated problems to face, and the behaviour of the civil population would be a vital matter, as the object of a German invasion would not be conquest, but terrorization. Organization was essential if this terrorization was to be prevented, and the Government, recognising this, had constituted War Emergency Committees whose business it was to prepare for invasion. Without such preparation no one would know whether to go or to stay, where to go, how to go or to whom to apply for help.

Helping the Civil Population.

The old, the sick and the children were a heavy responsibility, and the Emergency Committees could not ignore them. Even if they were negligible when compared to the army (as of course they were) confusion among them would hinder the army more than anything else. The only way to deal with the civil population was to have an organisation beforehand, which people knew of and trusted, and local leaders ready to use all resources. Every village ought to know where its food and grain supplies were, what shelters could be used, what routes must be kept clear for the military, and all farmers should know where to send their cattle. People would have to be warned not to crowd to the railway stations and panic must be prevented, but since the able-bodied men would be otherwise occupied it was clear that the able-bodied women must help in this work. Mrs. Strachey said she understood that the Imperial Defence Committee had expressed approval of the appointment of women to the Emergency Committees, and that when consenting to appoint women to the Essex Committee Lord Warwick had said this was quite in accordance with the instructions he had received. There was still in the minds of some people a notion that women were incurably nervous and inclined to faint. The surest way to make them so was to leave them in ignorance and to tell them that "everything would be done to take care of the ladies." She suggested that a small Central Committee for Surrey should be formed to consider the ways in which women might help in case of invasion.

Questions and suggestions were then invited. Miss Onslow said that she did not think the formation of a Committee necessary; she considered that women who were willing to assist in the carrying out of instructions should send their names to the Lord Lieutenant. — Lady Midleton and Lady Cawdor both said that there was extraordinary ignorance as to what should be done in case of invasion, and urged that more instructions should be given. — Mrs. Crimen suggested that women should be appointed in each village and town who would undertake, in case of need, to explain the instructions to the women in their district.—Mr. French pointed out that it was necessary to keep the instructions secret, though he was quite in favour of more organisation.

After a full and interesting discussion, Miss Allen, of the Co-operative Women's Guild, proposed, and Mrs. Frances, of Woking, seconded, "That a small representative committee of women be appointed for the County to act in conjunction with the men's Committee for the County." This was carried unanimously.

It was then proposed that the Viscountess Midleton, the Countess of Onslow, Mrs. Handley Spicer, Miss Ogilvey, Miss Philippa Strachey, Miss Allen, Miss Nocline Baker, and a representative of the National Union of Teachers be elected to this Committee. This was carried, it being understood that the committee should approach the Lord Lieutenant of Surrey and offer its services to him.

Women for Farm Work.

Miss Gardner, senior organising officer for women's work in the South-Eastern division (Board of Trade Labour Exchange), then addressed the meeting on the need for women workers in agriculture, especially for dairy workers. She pointed out that the work was hard and continuous, no days off being possible where animals had to be attended to, and that some undertaking it would find many disagreeable things to put up with, but that the life [illegible]

cookery, and there was no direction in which thrift might be more usefully inculcated. In regard to infantile mortality, he said that in this country the infantile death-rate was one in eight children born, compared with one in twenty in New Zealand, which has a similar climate; and, as the doctors told them that 90% of the children born could, if properly cared for, live to maturity, obviously this was another direction in which the removal of ignorance and the supply of the necessary knowledge was most suitable for women's work.

The Employment of Women.

The employment of women presented a very difficult problem. There were many prejudices to be got over. The question was often asked what was the most useful work a woman could do at this crisis, and he took it that the general answer would be in this crisis to release an eligible man for enlistment. That was what they were out for. It might be asked if the meeting would be the beginning and the end of the matter. His answer was No. The future would depend upon organisation, and the first step would be that the secretary should write to the many women's societies at work in the county asking them to nominate someone to represent that particular body on a committee to go into the question of organisation. If anyone questioned the power of women to organise he had only to look at what took place in London on Saturday. (Applause.) It was one of the most splendidly organised affairs they had ever seen. If they wanted to see the results of organisation they had only to look at Germany. The organisation of the Army was magnificent, and the country was organised behind the Army. To-day there were no fewer than half a million women engaged on munition work.

The Rev. Preb. No motions were submitted to the meeting, but the Chairman said that the secretaries of the various women's societies in the county would be communicated with asking for a representative to be appointed to attend a county committee for organising work.

[illegible] whom to apply for help.

Helping the Civil Population.

The old, the sick and the children were a heavy responsibility, and the Emergency Committees could not ignore them. Even if they were negligible when compared to the army (as of course they were) confusion among them would hinder the army more than anything else. The only way to deal with the civil population was to have an organisation beforehand, which people knew of and trusted, and local leaders ready to use all resources. Every village ought to know where its food and grain supplies were, what shelters could be used, what routes must be kept clear for the military, and all farmers should know where to send their cattle. People would have to be warned not to crowd to the railway stations and panic must be prevented, but since the able-bodied men would be otherwise occupied it was clear that the able-bodied women must help in this work. Mrs. Strachey said she understood that the Imperial Defence Committee had expressed approval of the appointment of women to the Emergency Committees, and that when consenting to appoint women to the Essex Committee Lord Warwick had said this was quite in accordance with the instructions he had received. There was still in the minds of some people a notion that women were incurably nervous and inclined to faint. The surest way to make them so was to leave them in ignorance and to tell them that "everything would be done to take care of the ladies." She suggested that a small Central Committee for Surrey should be formed to consider the ways in which women might help in case of invasion.

Questions and suggestions were then invited. Miss Onslow said that she did not think the formation of a Committee necessary; she considered that women who were willing to assist in the carrying out of instructions should send their names to the Lord Lieutenant. — Lady Midleton and Lady Cawdor both said that there was extraordinary ignorance as to what should be done in case of invasion, and urged that more instructions should be given. — Mrs. Crimen suggested that women should be appointed in each village and town who would undertake, in case of need, to explain the instructions to the women in their district.—Mr. French pointed out that it was necessary to keep the instructions secret, though he was quite in favour of more organisation.

After a full and interesting discussion, Miss Allen, of the Co-operative Women's Guild, proposed, and Mrs. Frances, of Woking, seconded, "That a small representative committee of women be appointed for the County to act in conjunction with the men's Committee for the County." This was carried unanimously.

It was then proposed that the Viscountess Midleton, the Counters of Onslow, Mrs. Handley Spicer, Miss Ogilvey, Miss Philippa Strachey, Miss Allen, Miss Noeline Baker, and a representative of the National Union of Teachers be elected to this Committee. This was carried, it being understood that the committee should approach the Lord Lieutenant of Surrey and offer its services to him.

Women for Farm Work.

Miss Gardner, senior organising officer for women's work in the South-Eastern division (Board of Trade Labour Exchange), then addressed the meeting on the need for women workers in agriculture, especially for dairy workers. She pointed out that the work was hard and continuous, no days off being possible where animals had to be attended to, and that those undertaking it would find many disagreeable things to put up with, but that the life was healthy, and that the women could feel that they were really doing something to assist their country. She described the experiment of three weeks' training in milking that had been given at Swanley College, and the remarkable success that had attended it. She explained that in many counties committees had been formed to interview the farmers and find out exactly where there was a shortage of labour, and if they would be willing to employ women, to interview candidates for this work, to arrange for their training, and to find suitable employment for them. She proposed the following resolution: "That a Surrey Committee for 'Women and Farm Labour' be formed with the object of ascertaining what Surrey women are available for farm and garden work, and what opportunities can be obtained for their training."

This was seconded by Mr. White, of Warren Farm, who pointed out many of the practical difficulties, but at the same time said that the experiment ought to be made.

Mrs. Pilcher, of Godalming, urged that more use should be made of women who were willing to assist in fruit picking.

Miss Onslow said that it was the wives and daughters of agricultural labourers who ought to come forward for farm work.

After further discussion the resolution was carried, and the following were elected to the committee: — The Countess of Lovelace, Mr. Hutchinson Driver, Mr. Drewitt, Secretary of the Farmers' Association; Mr. White, Mr. Kelly, Miss Blanche Egerton (subject to her consent), Mr. Sinclair (subject to his consent), and the Hon. Mrs. Arthur Davey.

WOMAN'S WORK IN THE GREAT WAR.

A book is being compiled which will be a record of the work done by the women of Britain during this great war. The subject is a large and varied one. Our beloved Queen set a noble example, from the time of the declaration of war in August, 1914, as did also the gracious Queen Mother, and many ladies in high position, laid aside their social duties and pleasures to become "Sisters of Charity" in thought and in deed. Hardly a woman in England has been idle; even children have been pressed, to their joy, into the service. Shirts, socks, mufflers, mittens, and many other "comforts" have been sent in their thousands to our brave sailors and soldiers. In town and country alike the work has gone on, and still there is no slackening of effort, for "The Queen's Work for Women" was started and touched the heart of every loyal woman. Those who were not members of the Red Cross Society began immediately to qualify themselves; and many girls broughtup in luxury are now cheerfully performing the most menial duties in hospital and infirmary wards, cherishing the hope of sooner or later being sent to help the army of brave women nurses at the front. Those who could not give personal service gladly opened their purses in respose to Queen Alexandra's appeal for the same good cause. Many items of interest will appear in the proposed work, which will be issued in volumes from time to time, and biographies and photographs of people and places will be given where it is possible, thus providing a complete account of what mothers, wives, and daughters are doing whilst their nearest and dearest are fighting for the cause of righteousness and justice.

CHANGING POSITION OF WOMEN.

WHAT THE WAR HAS DONE.

BY SARAH A. TOOLEY.

As we look back over the year of war, the outstanding feature in our social life is the changing position of women. Avenues of occupation and of long-desired public service, hitherto practically closed to women, have been automatically opened by the war.

Even the conservative "Old Lady of Threadneedle-street" has recently opened her doors to her sex, and there are now two hundred women clerks, qualified by special examination, employed in the Bank of England. They fill the places of young men who have joined the Colours, and also new positions created by the Bank's war business, notably the War Loan.

Early Victorian Prejudice.

The war is killing the last remnants of Early Victorian prejudice with regard to women entering the professions. The woman doctor is now hailed with something like national enthusiasm, and the one thousand women now on the Medical Register are all too few for the demand, and there is anxiety to induce women to enter as medical students in order to fill the ranks in the future. Queen Mary is lending her influence to promote the enlargement of the London School of Medicine for Women, and has allotted a portion of the gift of the wives of Freemasons to pay for the training of a woman medical student. Until recently women were refused staff appointments at hospitals; now they are being appointed to resident posts, particularly in children's hospitals. Posts in the Imperial Service and in the various Government Departments will undoubtedly be opened more generally to women in the future. Many more are needed on insurance work. Still, as Sir Robert Morant recently pointed out, the profession of medicine for women is only beginning.

Women Doctors and Nurses.

When the medical history of the war comes to be written, the devotion of the women doctors, as of the nurses, will form a thrilling chapter. The medical women of Mrs. St. Clair Stobart's Unit worked under shell-fire in Antwerp, and were among the last civilians to leave the doomed city, and succeeded in crossing the Scheldt on the top of a motor-bus only a few minutes before the bridge was broken up. In fever-stricken Serbia, too, the Scottish Women's Hospitals Units, organised by Dr. Elsie Inglis, have done heroic work. We think of Dr. Elizabeth Ross, after her medical comrades were dead or stricken, continuing in sole charge of a hospital of one thousand beds until she herself fell a victim to the fever. Nor must we forget the fine work of Dr. Flora Murray and Dr. Louisa Garrett Anderson in the military hospitals at Paris and Wimereux, which led to their appointment by the War Office to the unprecedented position of the charge of the big military hospital in Endell-street, London, staffed by women doctors and orderlies.

The authorities do not publish the number of nurses employed in the military hospitals at home and at the Front, but we know that the War Office is eagerly recruiting nurses from civilian hospitals to supplement the military nursing service. Some 4,000 trained nurses are also at work in the Territorial hospitals. The Red Cross Society has its

tions of the pioneers. An educated womanhood is ready to fill posts in the higher branches of the Civil Service, in State institutions, in schools and colleges, and even scientific laboratories, left vacant by men fighting for their country. The Government may not seem eager to give these placements, but the women are available. Newnham, Girton, and Lady Margaret's Colleges have not sown to the whirlwind!

The high schools, too, have done their part in training a self-reliant girlhood, rendered courageous and physically fit by outdoor sports and exercises. The war is making even young girls an emergency asset. The Girl Guides movement is justifying itself in these strenuous times. When war broke out there were already, thanks to Sir Robert Baden-Powell and his sister Miss Agnes Baden-Powell, tens of thousands of girls throughout the country and in the Colonies who had learned the meaning of their motto, "Be Prepared," and had pledged themselves "To be loyal to God and the King," "To help others at all times," and "To obey the Guide laws." In addition to the badges for "work in the home," "physical development," &c., a war service badge has recently been offered to Girl Guides, to encourage them in working for the soldiers and in emergency service. Numbers of them are giving up their holidays to fetch and carry in the military hospitals, and the authorities keep asking, "Send us more Guides." Sir Robert Baden-Powell considers that the Girl Guides are even more important than the Boy Scouts. They are the potential mothers of the future, and the training which they receive in housewifely arts and in the care of children must have a beneficial effect upon the future generation.

Women and Agriculture.

In agriculture the war has opened many opportunities for women to take the place of men on the land, and there can be little doubt that the exigencies of the time will bring women permanently on to the land as owners and cultivators. The war has brought into being the Land Council of the National Political League, which is organising co-operative farming for women in various centres and has established an emergency course of training for women in farm labour. Within a very short time 2,000 women registered under the Land Council for agricultural work.

The war emergency occupations of women as voluntary police and patrols, postmen, omnibus conductors, railway porters, van drivers, booking clerks, lift attendants, and other unusual occupations for the sex, must have permanent results when the war is over. No task is too humble or too arduous for women to undertake. We have a Royal Princess learning to nurse the wounded in a London hospital, ladies of title working side by side with factory girls at munition making, and a woman who won the Senior Wranglership of Cambridge (but did not receive it) in trudging the Suffolk lanes as a rural postman.

The training of women, stimulated by war emergency, must add to the efficiency of the nation, and we shall need all the talents and the industry and intelligence of the nation to rebuild the fortunes of

Register are all too few for the demand, and there is anxiety to induce women to enter as medical students in order to fill the ranks in the future. Still, as Sir Robert Morant recently pointed out, the profession of medicine for women is only beginning.

Women Doctors and Nurses.

When the medical history of the war comes to be written, the devotion of the women doctors, as of the nurses, will form a thrilling chapter. The medical women of Mrs. St. Clair Stobart's Unit worked under shell-fire in Antwerp, and were among the last civilians to leave the doomed city, and succeeded in crossing the Scheldt on the top of a motor-bus only a few minutes before the bridge was broken up. In fever-stricken Serbia, too, the Scottish Women's Hospitals Units, organised by Dr. Elsie Inglis, have done heroic work. We think of Dr. Elizabeth Ross, after her medical comrades were dead or stricken, continuing in sole charge of a hospital of one thousand beds until she herself fell a victim to the fever. Nor must we forget the fine work of Dr. Flora Murray and Dr. Louisa Garrett Anderson in the military hospitals at Paris and Wimereux, which led to their appointment by the War Office to the unprecedented position of the charge of the big military hospital in Endell-street, London, staffed by women doctors and orderlies.

The authorities do not publish the number of nurses employed in the military hospitals at home and at the Front, but we know that the War Office is eagerly recruiting nurses from civilian hospitals to supplement the military nursing service. Some 4,000 trained nurses are also at work in the Territorial hospitals. The Red Cross Society has its contingent of trained nurses in its own and other military hospitals, and there is a little army of members of Women Voluntary Aid Detachments of the Red Cross doing useful work under the trained hospital staffs all over the country. Leading London hospitals have arranged short courses of training for V.A.D. members to act as hospital orderlies.

Referring to the early months of the war, the *Times* says: "Every possible woman, trained or partially trained [in nursing] was mobilised, and called up as the pressure on those already employed became greater." The aggregate of women now engaged in nursing our sick and wounded soldiers and sailors marks little short of a revolution, when we recall how Florence Nightingale fought the sentiment and prejudice of the world by introducing a tiny band of women nurses into military hospitals during the Crimean War.

The Civil Service.

To turn to other walks of service, the national emergencies created by the war have justified the higher education of women beyond the most sanguine expecta-

Prepared," and had pledged themselves "To be loyal to God and the King," "To help others at all times," and "To obey the Guide laws." In addition to the badges for "work in the home," "physical development," &c., a war service badge has recently been offered to Girl Guides, to encourage them in working for the soldiers and in emergency service. Numbers of them are giving up their holidays to fetch and carry in the military hospitals, and the authorities keep asking, "Send us more Guides." Sir Robert Baden-Powell considers that the Girl Guides are even more important than the Boy Scouts. They are the potential mothers of the future, and the training which they receive in housewifely arts and in the care of children must have a beneficial effect upon the future generation.

Women and Agriculture.

In agriculture the war has opened many opportunities for women to take the place of men on the land, and there can be little doubt that the exigencies of the time will bring women permanently on to the land as owners and cultivators. The war has brought into being the Land Council of the National Political League, which is organising co-operative farming for women in various centres and has established an emergency course of training for women in farm labour. WOMEN IN WAR-TIME.

ALLEGED CHEAP LABOUR IN GOVERNMENT FACTORIES.

Mr. Laurence Housman and Mrs. Pethick Lawrence addressed a meeting last night at the Milton Hall, Manchester, on the subject of "Women in War-time." The Rev. A. L. Cornibeer presided.

The resolution upon which the speeches were made, and which was carried, called upon the Government to guard the interests of the men at the front and of the women who have taken their places by giving equal pay for equal work, and to "give expression to the principle of freedom and self-government for which we were fighting by giving votes to the women of the country."

Mr. Housman said he believed that the neglect in the past of the things that made for peace had helped to make us and other peoples ready for warlike solutions of international problems and disputes. People who had lived comfortably on sweated labour, who had consented to preventable deaths in industry for the sake of greater profits, were in tune for the atrocities of war. War was man's exhibition of what peace conditions had made him. Suffragists had been prophetic about the connection between war conditions and peace conditions; they had fought against the things that meant sex war, class war, and race war. They had also said, what was now proved true, that war concerned women as much as men. Women were called upon to bear the pains and dangers of war, but they had not been given the corollary right of full citizenship.

Mrs. Lawrence said that anti-suffragists used to urge as a reason against giving the vote to women that women could not take part in war. But the fact was that though woman was not allowed actually to fight because she had a more important service to perform, yet nothing could save her from suffering as deeply as men from the effects of war. The story of war from the woman's point of view had never been written, probably because it was too awful. Modern war was decided by exhaustion, which meant by the starving of the non-combatants, chiefly the women and children. For this reason, if for no other, women as well as men should have a voice in the counsels that would determine the issue of peace. In so far as the war was paid for by the rise in food prices it was paid for by the very lives of the children who had to go short—by the health of the future generation. If women had had the vote before war broke out there would not have been the rise in food prices that we saw to-day.

Mrs. Lawrence went on to say that the men in the trenches were being betrayed by the exploitation of women's labour at home. She read an advertisement asking for women's labour in a Government-worked factory at 3d. an hour, or 13s. 11d. for a 55-hours week. She also quoted the case of women ticket collectors at Victoria earning 15s. a week, while men's pay for the same work was 35s., and of women engaged on packing-case work for 5d. per hour—work for which men had been paid 10d.

THE WOMEN'S PART IN THE WAR.

THOSE who lately watched the procession of women passing as a deputation to the Government, or read an account of the speeches that were made on that occasion, must inevitably have thought how small a part this active and organised demonstration represented in the sum of splendid and devoted work which the women of the country are doing to-day. This procession represented but a fraction of the work which women have done and are doing since war broke out—doing without processions or committees, without any great sense of its value, quietly and unconsciously, in thousands of homes. The procession was well enough. Here, indeed, one saw one branch of women's work—namely, the organisation of women for industry. But without in any way belittling the value or importance of this kind of service, one must say at once that it is far less important and less essential than many other kinds which are less publicly offered and acknowledged. In measuring the country's debt to the women of Great Britain, one naturally begins with other things. One does not begin with the women's Press and the women's platform. One does not even begin with the women who have offered to work in the factories or to take men's places in offices and railway stations. Still less does one begin with the women who dress themselves in khaki or urgently press plans and policies upon the Government. One begins quite simply and inevitably with the women who stay at home.

And first of all one begins with the women who at home not only—as we shall see—do the most important and difficult work of all, but who have also, without complaint or difficulty, with gladness even and pride, incurred the possibility of poverty and bereavement in speeding their men to the Front. The proportion of married men in the new armies whose wives have had to lower at once their standard of living, who are in danger of something like a social catastrophe should their husbands be maimed or killed, tells a wonderful tale of women's patriotism. They have nothing but the sheer spirit of sacrifice and loyalty to prompt them. For the men there is the call of a new life of adventure and uncertainty, excitement and perhaps hope of distinction. They, at least, will get something out of the new life—new experiences and points of view, fresh discoveries concerning themselves and the world, the savour of novel discipline and friendships, the delight a man has in the acquirement of new aptitudes. His motives for going to the war are necessarily more mixed than are the woman's motive for putting no difficulty in his way. She, indeed, has in most cases one motive alone. Patriotism in its most single-hearted and its purest form is found among the women of the nation or it is not found at all. This is the first gift the women of Great Britain have brought to the service of their country.

But this, perhaps, should be taken as a thing apart from the less exalted, the merely practical, discussion as to how the women of the country are best employed at this time. For the majority of women there can be no doubt at all. Whether their men be at home or enlisted it is their immediate task to look to the economy and maintenance of their households and families. We have lately heard many public speeches from Ministers and experts on the absolute need of the nation for thrift and a wise employment of its resources. If we are to come successfully through the war, and out of the war with credit unimpaired, we are told, the country must spend wisely and look continually to its pence. In the important and vital matter of expenditure it is the women who determine. According to the ability and the will they are showing to-day will depend our financial position. High finance has done its part in declaring and explaining the necessity for thrift and for preferring one sort of expenditure to another. Household thrift and management must do the rest.

This is a task of no small responsibility and no small difficulty. It has been a way of the inexperienced and untaught to imagine that household economy is a simple, because it is a homely, matter. Many of its practitioners, to whom skilful management has become easy from constant habit, themselves tend to underrate their ability. One hears women who manage their household affairs with thrice the vigilance and shrewdness of a Local Government Board actually deploring that they are not "clever" enough to help in the war. They are tempted by talkative friends, who would reduce a household to chaos in three weeks if asked to devote to higher things to

to underrate their ability. One hears women who manage their household affairs with thrice the vigilance and shrewdness of a Local Government Board actually deploring that they are not "clever" enough to help in the war. They are tempted by talkative friends, who would reduce a household to chaos in three weeks, to aspire to higher things, to sit on committees, or count hands at a public meeting. Let these women be reassured in time. They are employing the experience and training of a lifetime to scores of small problems of adjustment and of ways and means every week of the year, each one of which, successfully solved, is at this time of profit to the nation. In estimating the value of women's work in the war it is essential, if we are to get true proportions into our reckoning, to think first of the thousands of homes where watchful and intelligent management is making the best of things by the thriftiest means. Not less must we insist upon the injury which may be done by well-meaning enthusiasts who in any way hinder this good work by speciously decoying its experts into other fields. It is possible for any woman to learn in three weeks how to punch tickets or distribute letters. This work must not be done by expert housekeepers. Housekeeping is not learned in three weeks, or even in three years.

Organised and special work naturally falls to the women who are free of responsibilities at home. Of this work, undoubtedly the finest is done by the women of the Red Cross. From the fully trained nurses who are bravely working to the limit of their endurance abroad and at home, to the local workers of the Voluntary Aid Detachment, every rank is filled with a fine devotion. There is no work of which the mere dilettante so easily tires. It is hardly necessary to dwell on the monotony, hardship, and unpleasantness which thousands of women have cheerfully consented to endure in this great profession. Many of these women had had, as yet, no work or responsibility to face of any kind until they were enrolled for this particular service. Those who are serving to-day have been tried to the utmost. The trifler is soon wearied of this work, and has long been eliminated. Those who remain have given up all their time, and

---

pleasure, and are as ready, if need be, to give their lives. They stand easily at the head of those free women who have banded themselves together to help in the war.

We come last to the women's work which falls under the general head of organisation for war. The work of women in making munitions, in replacing men who have enlisted, in working in the fields (this should be more generally looked to), in managing charities and funds and relieving distress—all these kinds of work are useful. They show an anxiety to help and a willingness to work in the public service which is wholly admirable. But all such work requires very careful leading. There are extremes of fussiness to be avoided—extremes which, in the earlier stages of the war, were not infrequently reached upon local committees. There is really no need for women who have work to do at home and are doing it to the best of their ability to assume that all patriotic work involves a chairman and the confirming of minutes. There are signs that this is being gradually but generally realised to-day. We can trust to the general sense of the women when confronted with the registration forms to fill them in with circumspection. "Not incompatible with home duties" is a convenient phrase to describe the service which most women are free at this time to offer. The State will be grateful to those who, not being in a position to be usefully employed at home, are ready to fill the gaps elsewhere. But not to these is all the praise, or the chief praise, for direct and valuable service in the war. To "mobilise" the expert housekeeper to serve in other ways would be disastrous. Let the women at home be assured that their work is indispensable. The war is repeating for our instruction some simple and necessary lessons—among them being the lesson that the foolish talk which not so long ago was popular among certain people concerning the limitation and low estate of "woman's sphere" was pernicious and shallow nonsense. The country needs more than ever to-day the wise management and care of the women at home. Nor need we stop short at the merely economic value of the part they are called to play. Upon the women of Great Britain rests the moral and spiritual strength of the country as well—its capacity for cheerful endurance and for the preservation in war of the sanity, the right proportion, and the [illegible]ness of life. They are helping everywhere to [illegible]art and in chivalry the ideals for which th[illegible]

NATION MUST ACCEPT WOMAN'S SERVICE.

Mrs. Despard Says The Time Has Come.

NO COMPULSION NEEDED.

Great Reservoir Of National Force Still Untapped.

LORD KITCHENER'S SISTER ON THE GIRL SLACKER.

Women who want to do work that will help the nation during the great war crisis have been insistent in pressing their demand for the use of their services.

At a remarkable gathering of women in the Kingsway Hall last night, to draw public attention to their demand, women of all classes filled the hall, and the "platform" was just as representative as the audience.

Not only was it representative; it was remarkable also in its constitution. It included Sir John French's sister (Mrs. Despard) and Lord Kitchener's sister (Mrs. Parker).

These ladies were supported by Mr. Ben Tillett in insisting upon woman's right to work, and Lord Derby would have associated himself in that appeal, but an attack of influenza prevented his attendance.

It was almost exclusively a women's meeting, and it enthusiastically acclaimed a resolution approving the organisation of the energies of women for national service.

LESS THAN TWENTY MEN.

There was less than a score of men in the audience.

The question of the girl slacker, which was ventilated in the *Daily Sketch* last week, was not lost sight of.

MRS. DESPARD.

It was mentioned by Lord Kitchener's sister, and in a sincere appeal to the womenfolk of the country she urged that there should be no ground for any reflection of this kind.

Some plain and sensible advice was offered by Mrs. Parker. "The best thing," she said, "is to find something to do, and when you have found it stick to it and do it."

The next homely hint she asked her women hearers to bear in mind was:—

If you undertake to fill a man's position and expect to get the same wages you must make up your mind to put in the same number of hours and do the same work.

A story illustrative of the true womanly spirit in regard to the war was told by Mrs. Parker.

HAPPY LAD IN KHAKI.

Walking along a busy London thoroughfare a few days ago, she saw several boys in khaki, and the happiest amongst them was one who had lost an arm.

"What a sad pity that that young man should have lost a limb," she overheard a woman remark.

"But don't you see," she said to the woman, "that boy is the happiest of the whole lot!"

After a moment's reflection the woman replied: "Ah, well, I suppose he feels that he has done his duty, and it is only right that he should feel happy."

Mrs. Parker added: "That woman told me that she had two sons in the Army. Just then a 'bus came along and we were separated. I should like to have had a longer talk with her, and I hope we may meet again."

DEMANDING—NOT PLEADING.

Reasons why women should work were put before the meeting in a concise speech by Mrs. Despard.

Frail of figure, but firm of voice, her twenty minutes' address was more in the nature of a demand than a plea.

In her opening sentence she explicitly stated the position when she said:—

> The time has come, not merely when woman should seek to render the highest possible service she can for the nation she has always been ready to do that—but when the nation should accept the service which woman is able to render.

A striking demonstration of the desire of women to do their share was furnished by the manner in which the audience greeted her remark that women must not be compelled to work above all things in the world they wanted to be allowed to work.

"Although our men are ready to go to the front, and endure all the hardships and face suffering and death, they can do nothing without the hand of labour behind them," she cogently reasoned.

"And if we are to conquer the enemy soon we must throw our whole force into this business."

GREAT RESOURCES UNTAPPED.

"I am perfectly convinced," she continued, "from all I have read and all I know that there is at this moment a great reservoir of force that is practically untapped. And that great reservoir is

MRS. PARKER.

BEN TILLETT.

just that which we women of the country are ready and anxious to give. We are more than anxious, we are desperately anxious to give this service. Women are ready to labour in a way that they have never been accustomed to labour. All they ask is to be allowed to serve."

NOTHING TO SPARE.

Mr. Ben Tillett pleaded for a safeguard against women's labour being exploited by the meaner type of employer.

Speaking with knowledge and experience derived from a recent visit to the trenches he declared that whatever quantity of ammunition this country produced and whatever its resources in labour it had nothing to spare.

"One can fully endorse Mr. Lloyd George's statement that the country must rouse itself to a sense of the terrible responsibilities it has to face," he added.

In a tribute to the fighting qualities of our gallant men at the front he said:—

Quantity against quantity, brains against brains, material against material, guns against guns—everything being equal—I believe that if such a miracle could happen to-morrow the war would be over the day after to-morrow.

WOMEN AND WAR TIME.

INTERESTING ADDRESS IN HULL.

MRS PETHICK LAWRENCE

Mrs Pethick Lawrence addressed a large and enthusiastic meeting, under the auspices of the United Suffragists Society, at the Church Institute, Hull. She was accorded a hearty reception on this, her first, visit to the city, and her sterling address will not be readily forgotten.

Mrs Ernest Strachan presided, and in her opening remarks she said she had sometimes wondered if the present European war would have occurred if women had shared in the national councils of Europe during the last few years.

Mrs Pethick Lawrence, who spoke more particularly of the position of women in war time, prefaced her address by emphasising that their movement was for a closer co-operation between men and women, and not antagonistic to the men. Proceeding, she observed that it used to be said that women could not have the vote because they could not fight. As a matter of fact women could fight. What was meant was that women were not allowed to fight because the community considered they had more valuable functions to perform. It was recognised that any nation which put its women into the firing line would be committing suicide; it would know it could not hold its own in the future against other countries. In this connection she alluded to the fact that in enemy countries at the present time girls of 16 were being entreated to marry, to repair the wastage of the war. They were to go to the battlefield where life was risked, not to take life, but to give life. That, Mrs Lawrence claimed, was women's equivalent to military service, and she went on to say that women had never escaped the suffering imposed by war. Who could visualise what the women of Belgium, Northern France, Galicia, and Poland had suffered from the invader? The soldier got his food and shelter; and if he was wounded there was some agency to care for him; but the women were outside any national organisation, and it was nobody's business to see they or their children were fed and cared for, or to protect them against a terror far deeper than that which any soldier was called upon to face.

MODERN WARFARE.

Modern warfare was one of attrition, and that meant reducing the civil population to misery and suffering. The results of war hinged on the non-combatants and the most helpless and irresponsible would be those to suffer first. Women being the bulk of the non-combatants, they could say, as never before, that the suffering fell equally upon men and women. The employment of women in munition factories had moreover brought them actually into the firing line, and such women in London and elsewhere to-day were taking war risks in the same sense as men. Women were also helping to keep going the stable industries of the country which provided the money for the war, and they must not forget the women who were guarding and caring for the children that were to be the strength of the nation afterwards. They must not fail to see the mother behind the soldier. Therefore, not only by their suffering, but by service had women proved their right to equal citizenship — (applause). One problem connected directly with the war was the rise of food prices, which have advanced something like 35 per cent. A tax on the necessities of life was a tax on life itself, and when we tried to pay for the war through raising food prices, we were actually taking the lives of the children to pay for the sacrifice of the lives of the flower of our manhood. It was the most wasteful and criminal kind of taxation that we could possibly have. What were a few millions in revenue to the lives of hundreds and thousands of children?—(hear, hear). A Government that could grant a moratorium to bankers and deal with the [illegible]

PEACE FANATICS.

WOMEN'S WILD SCHEME TO "END THE WAR."

HAGUE CONFERENCE.

Women peace fanatics are becoming a nuisance and a menace. "Democratic control of our foreign policy and the abolition of secret diplomacy" was one of the things demanded by the "National Conference of Women" held yesterday at the Central Hall, Westminster. There was a suggestion of "crying for the moon" about this, but other resolutions put to a crowded audience of women and carried unanimously were even more mischievous.

The conference lasted from 10.30 a.m. till late in the evening, being "private" during the morning and afternoon and public from 8 p.m. onwards. It was simply a dress rehearsal for the International Women's Congress to be held at The Hague a fortnight hence, on April 28-30. Most of the women prominent yesterday were among those who have given in their names as pledged to attend The Hague congress, and the resolutions submitted were almost identical with those which the British committee will propound at The Hague—if the British Government allows a hundred or more educated British women who ought to know better to go to The Hague for any such purpose. One resolution merely explained that by "democratic control" of our foreign policy. the British women peacemakers mean "a system which provides for the equal representation of men and women." Exactly—and that is the purpose of both yesterday's conference and the trumpeted congress of the week after next which may or may not take place at The Hague.

No Frenchwomen.

Miss Jane Addams, with a party of fifteen women, is going to The Hague from America to attend the Congress. Belgian and Dutch women will be there, and German women. No Frenchwomen are likely to be present—they understand patriotism better in France. It will be interesting to see what happens when the British "delegates" make application to the Foreign Office for their permits to travel to Holland for the Congress. In addition to the details as to forehead, eyes, nose, mouth, chin, hair, and complexion which all applicants for passports must now supply, there is a line on the elaborate form to be filled up by each person for "any special peculiarities."

It is believed to be a matter for the Government's serious consideration whether the whole expedition should not be stopped. The Foreign Office has absolute discretion as regards the granting of permission to any British subject to proceed to the Continent during the war.

The chair at the public evening meeting in the Central Hall, Westminster, was taken by the Hon. Lady Barlow, and the speakers were Mrs. Philip Snowden, Mrs. H. M. Swanwick, Miss Mary McArthur, Mr. H. N. Brailsford, and Mr. Charles Trevelyan, M.P. The speeches consisted mainly of invitations to join a newly formed "Union of Democratic Control," which apparently is intended to make war impossible in future without a national referendum—to women as well as men.

"A Disgrace."

Miss Annie Kenny, organising secretary of the Women's Social and Political Union, stated yesterday:—"We do not believe in any compromise in regard to the war. We have nothing to do with the women who are going to The Hague to talk about peace. While our men are in the trenches and the Germans are in France and Belgium it is a disgrace that there should be any talk of peace, except in Berlin."

were because they could not fight. As a matter of fact women could fight. What was meant was that women were not allowed to fight because the community considered they had more valuable functions to perform. It was recognised that any nation which put its women into the firing line would be committing suicide; it would know it could not hold its own in the future against other countries. In this connection she alluded to the fact that in enemy countries at the present time girls of 16 were being entreated to marry, to repair the wastage of the war. They were to go to the battlefield where life was risked, not to take life, but to give life. That, Mrs Lawrence claimed, was women's equivalent to military service, and she went on to say that women had never escaped the suffering imposed by war. Who could visualise what the women of Belgium, Northern France, Galicia, and Poland had suffered from the invader? The soldier got his food and shelter; and if he was wounded there was some agency to care for him; but the women were outside any national organisation, and it was nobody's business to see they or their children were fed and cared for, or to protect them against a terror far deeper than that which any soldier was called upon to face.

MODERN WARFARE.

Modern warfare was one of attrition, and that meant reducing the civil population to misery and suffering. The results of war hinged on the non-combatants and the most helpless and irresponsible would be those to suffer first. Women being the bulk of the non-combatants, they could say, as never before, that the suffering fell equally upon men and women. The employment of women in munition factories had moreover brought them actually into the firing line, and such women in London and elsewhere to-day were taking war risks in the same sense as men. Women were also helping to keep going the stable industries of the country which provided the money for the war, and they must not forget the women who were guarding and caring for the children that were to be the strength of the nation afterwards. They must not fail to see the mother behind the soldier. Therefore, not only by their suffering, but by service had women proved their right to equal citizenship — (applause). One problem connected directly with the war was the rise of food prices, which have advanced something like 35 per cent. A tax on the necessities of life was a tax on life itself, and when we tried to pay for the war through raising food prices, we were actually taking the lives of the children to pay for the sacrifice of the lives of the flower of our manhood. It was the most wasteful and criminal kind of taxation that we could possibly have. What were a few millions in revenue to the lives of hundreds and thousands of children?—(hear, hear). A Government that could grant a moratorium to bankers and deal with the fiscal position of the country as our Government did at the beginning of the war could also regulate the prices of food upon which the existence and development of the child life of the country depended—(applause). Shipowners were making enormous profits, and the Government could just as well interfere with the profits of shipping companies as they could with the banks—(applause).

FINANCIAL INTERESTS.

The only difference was that the financial interests of the country were strong, and motherhood had not yet found its voice. It was madness to give voting powers to their financial interests, drink syndicates, and commercial houses, and to leave the motherhood of the country hopeless, helpless, and powerless to protect human life. An immense increase of women employed in industry, Mrs Lawrence continued, had taken place, and it was very unjust to the men at the front that while they were fighting for their country the standard of wages should be lowered at home by the women who had taken the men's places—(applause). Men had struggled for years to get a living wage, and employers were now offering women a much lower wage. This was true of Government-controlled factories, and Miss Silvia Pankhurst had called Mr Lloyd George's attention to the matter. Mrs Lawrence apprehended that after the war this would be responsible for great bitterness between men and women, and that there might be a sex war. She was not so sure, she said, that the anti-suffragist element in the Government was not counting upon it to keep women from getting the vote. In other countries where women had the vote they had been able to enforce equal pay for equal work in all Government departments, and so it would be in this country when the franchise was extended to women—(applause).

In conclusion, Mrs Lawrence moved a resolution calling upon the Government to vindicate the principle of political liberty and self-government by conferring political liberty and self-government upon women, and granting them the vote.

Mr Walter Holmes seconded, and the resolution was unanimously adopted.

---

and British women peacemakers mean "a system which provides for the equal representation of men and women." Exactly—and that is the purpose of both yesterday's conference and the trumpeted congress of the week after next which may or may not take place at The Hague.

WOMEN IN WAR-TIME

By Lady Margaret Sackville

I.

The women of all the belligerent countries are engaged, as they have always been, in backing up their menfolk with great loyalty and determination, and suppressing those peculiar qualities for which they themselves stand in order to concentrate more fully on one sole object—victory.

Yet woman as a sex is still unborn. She is even now, on most subjects, thinking the thoughts of men and acquiescing through indolence and servility in conceptions of life which are against her own nature. To most women the idea of war is theoretically monstrous. They *know*, or should know, the value of life. The reckless destruction and mutilation of men's bodies involved in warfare, especially modern warfare, must be profoundly abhorrent to their truest instincts. If women do not stand for the creative side of life one may well ask what they *do* stand for. But if that is acknowledged—as it is conventionally, at least—why then have not all the women of the world *demanded* long ago that war, with its aggravated cruelties and oppressions, falling as they do with particular horror on the weak and helpless, should cease once and for all, and that some sort of rationality should be introduced into national as well as individual life?

II.

And the answer must be that women are still, as a sex, mentally subordinate, and that until they are mentally emancipated no amount of technical freedom from restrictions will be of any use. The conditions of freedom may be bestowed on a class or community, and freedom itself remain as far off as ever. A nation may possess the right of Free Speech and the only actual result be—Free Drivel. It can believe itself free, equal and fraternal, and yet be the dupe and slave of all who choose to exploit it. And women may be politically emancipated and yet remain as they have always been because they have not yet developed the courage to be themselves.

But the courage needed is enormous, for whilst no one denies woman's creative, peace-making function within certain limitations, any wider assertion of the same function would call down world-wide abuse and condemnation. That is to say, a woman may exert her womanly qualities when their effect is of little importance one way or another, but when men's passions are inflamed and the life of nations is at stake, the right to speak as a woman is denied absolutely. Thus the much-vaunted power of woman's indirect influence on the average man and the influence of his religion are equal. He sincerely venerates both—in private. But those principles he has learnt to consider decent and becoming where his home-life is concerned, he would think very foolish and unpatriotic if applied to national affairs.

III.

There can, of course, be no better future for the world until women have the pluck to insist on recognition. Not politically so much, though political recognition follows automatically, but on their own point of view—as women. The apologists for war have always claimed that the fighting instinct—in its crude manifestations—is an unchangeable part of human nature. They must now be asked whether, under this generalisation, they also include women. When will women answer this question for themselves and determine that the thing they stand for, which makes a decent and livable home, shall be carried further until a decent livable and let-livable nation also results? When will they cease to imprison themselves in narrow family and national relations, caring nothing for the disaster, the suffering of other families, of other nations, provided their *own* family, their *own* nation is not touched? And here let it be said that a sense of nationality rightly understood is one of the most fruitful sources of inspiration to mankind. So in a lesser degree is a sense of family. But there can be no true development of either family or nation which excludes understanding of other national outlooks and claims. To lock oneself into one's own family or nation as into a stuffy room is to create an atmosphere favourable to all the atrocities of war and peace. What Humanity chiefly needs just now is—a sense of Humanity. Nations have still to realise that their reiterated attempts at injuring one another are in their effect as though a man should endeavour to cheat himself or set careful traps for his own destruction.

IV.

Most people believe that those who work for Peace are puny, half-hearted folk for whom peace is a mere cessation of warfare. But to the true pacifist that Peace, which is only the other side of War, is of no account. To be a pacifist does not mean that one finds nothing in the world worth dying for. Those who seek for other ways of serving their country than on the battle-field would die to save their country's soul as easily as the soldier dies to save its body. Nor do they wish to rid the world of the horrors of war by merely smothering those horrors under a feather bed. They do not talk of the white page of peace. They know it is not so. They know that the page of peace has never yet been white during the course of the world's history, but grey, and soiled with nameless stains. They know that war is only the logical conclusion of the kind of peace we have had hitherto, and they recognise that some wars can be honester and better than some kinds of peace. But when the nations have reached the stage of rejecting warfare as any ultimate settlement of their problems, this increased rationality will affect the quality of peace too. It will mean, for one thing, that women have found the courage to be themselves, and are determined to make their own peculiar influence felt. And this will mark another stage in the development of humanity. For as long as one sex has remained voluntarily or forcibly cramped and inarticulate, there can be neither freedom, honour, comfort, nor rationality in the mutual intercourse of men or nations.

November 6th 1915.

WOMAN AND THE WAR.

"Every shell that bursts in a British trench tears a wound in some woman's heart." In this graphic, but true sentence Mrs. Lloyd George sums up the account she has given to Mr. Percy Alden, M.P., which we publish to-day of the part played by womanhood in the present war. It is woman's part, as ever, to work and to suffer, and perhaps in this case the suffering is even more widespread than the work. There are hundreds of thousands of women, Mrs. Lloyd George acknowledges, who can do nothing but help in their own homes—suffering and waiting patiently. The ultimate gift of a son—perhaps more than one—or a husband, is the agonising share which these brave women, quietly and uncomplainingly contribute to the cause of the allies, and of the good of man. The object of the interview, however, was not merely or chiefly to elicit the pathetic side of the struggle. It was rather to bring to light, as it does in a surprising way, the almost innumerable directions in which English women are working for the common cause. The story of what women have done through the Red Cross alone is simply amazing. Not only are there 1,800 trained nurses working to-day in connection with the British Red Cross, but in addition to this the Voluntary Aid Detachment has supplied 1,500 women to serve under trained nurses. The "V.A.D."—how insensibly we drop into the use of initials—is composed of women who have obtained certificates in first aid and home nursing, while many have also certificates in hygiene, sanitation, and cookery. Miss Olwen Lloyd George is a member of this corps which "calls nothing common or unclean," but just does the work required of it, from scrubbing a floor or washing crockery to nursing the sick and acting as orderlies. Under the supervision of trained nurses the greater part of the work of the hospital, whether cooking, washing, or scrubbing, is carried out by these volunteers, who "without payment, and with wonderful self-abnegation, have accomplished a most valuable piece of public service." Besides those who are helping abroad, the British Red Cross Auxiliary have over one hundred Home Hospitals. Another invaluable body of women workers is the Women's Emergency Corps, which was started two days after the declaration of war, originating with the women's suffrage societies, and attracting to its ranks large numbers of women of independent means. Within a fortnight it received and classified some ten thousand candidates—doctors, nurses, interpreters, motorists, and the untrained, who were anxious to receive training for any useful work. Our readers can examine for themselves the numerous other ways in which British women have nobly come forward to help; notably in looking after refugees, in toymaking, which has afterwards turned to munition making, in catering and providing comforts for the soldiers, and so on, the movement being often headed by ladies prominent in society. In one respect only they have met with discouragement; owing to the "rather conservative" habits of the British farmer, many have been refused agricultural employment, though "where the farmers are sufficiently enlightened they have been taken on." Mrs. Lloyd George was asked whether any Florence Nightingale has been discovered in the present war. She mentioned a number of leaders, and some, like Nurse Cavell, who have nobly sacrificed themselves. It seems to us that in different ways the war will bring many Florence Nightingales to notice. But, however that may be, the nobility and devotion of thousands of women will furnish a unique chapter to the history of the war.

WOMEN'S WAR WORK.

SUCCESS OF THE PATROL MOVEMENT.

Women's work in war time and the part they can play in the reconstruction of the nation after the war was the theme of an eloquent address delivered to a number of Mansfield ladies yesterday at the Oriental Café by Mrs. Creighton, president of the National Union of Women Workers. The Hon. Mrs. Handford, president of the Mansfield branch of the union, was announced to be in the chair, but Mrs. White, who took her place, explained her absence by the fact that she had just lost both her sons in the war. At Mrs. White's suggestion the meeting stood for a few moments in silence as a mark of sympathy with the president in her great sorrow.

Answering the question, how such an organisation as the union could help in a time of crisis like the present, Mrs. Creighton remarked that in London all conditions of people rushed with enthusiasm into work in connection with the war, and the union was the means of bringing together representatives of the various branches of workers so that each might hear what the other was doing, not for the purpose of criticism, but of helping each other. Out of these meetings grew a Consultative Committee representative of the people working; and one of the results was the establishment of the women patrol movement. These patrols, who had the warm approval not only of the police but also of the military and naval authorities, were now working in 80 different centres, and more than 2,000 women were to-day voluntarily taking part in this way in England and Scotland. It was a big piece of new work, and she claimed that it was an exceptional success.

The patrols found everywhere the need for attractive places in which girls could meet, and through their agency girls' clubs had been established up and down the country, centres where these young women could act as hostesses to their soldier friends. These clubs, she was glad to say, were achieving their purpose wherever they were formed. Mrs. Creighton then gave an instance where the patrols had started on a large scale a laundry for soldiers, and where they also did the mending for the men. It was known as the National Union Soldiers' Laundry.

AFTER THE WAR.

As to the work of reconstruction after the war, Mrs. Creighton said they were looking forward to building up a new England and a new world in which such a war as the present would be impossible. This could not be done by sitting still and waiting, but by putting their best thought and work into the solution of the problem. It was a mistake to say it was too soon to work for reconstruction, and if they did not do something to make a better England and a different world their hero sons would have made their sacrifice on the battlefield in vain.

Very special duties came to women at such a time as this. She did not refer to the work which women gladly did for the soldiers when in training and in hospital, but wished to speak of other matters which were preparatory to the work of reconstruction. A duty which was of vital importance to the future was the care of children, and they must remember that a new England could only be made by the vigour and energy of the mind, body, and soul of the coming generation. In thinking of reconstruction they must see how they could help to produce a generation which should be strong in body, disciplined in conduct with the discipline which came from within, and so mentally equipped that every power the child possessed was made the best use of for the service of the nation. For the latter reason she was distressed to hear the talk in many quarters of suggested economies in education. The speaker then emphasised the need for economy in domestic life, remarking that an intelligent, well-thought-out economy was a patriotic duty, and urged upon parents the importance of training their daughters for a profession or career, so that they might take a part in the work of the country in the future. Finally, in preparation for this work of construction, let them help and pray to bring about a spirit which would make for a lasting peace.

In reply to Mrs. Creighton, Mrs. Manners said the police authorities of the county thought the time had not yet arrived when women patrols should start to work in Mansfield and district. But some patrols were working unofficially in the town, and that information they collected would be placed before the Chief Constable when they approached him again on the matter. Mrs. Manners also spoke of what was being done by the Girls' Club and the Mothers' and Babies' Welcome.

Mrs. Turner mentioned that Lady Victoria Cavendish-Bentinck was proposing to start a centre in Mansfield for the making of bandages and other requisites needed for wounded soldiers. As many helpers as could come forward would be welcomed.

On the motion of Mrs. Manners, the speaker was thanked for her inspiring message.

WOMEN AND WAR.

PART THEY MAY PLAY IN ITS ABOLITION.

Miss Maude Royden, who addressed a meeting at the Mappin Hall, Sheffield, last night, under the auspices of the Sheffield Workers' Educational Association, on the subject of "Women and War," urged that the success of the women's movement would be a great instrument in the final abolition of war. She admitted that she had been rather staggered by the display of war fever among women. She did not include the enormous majority of the women of this country, who felt that the present war was inevitable and right, but was only speaking of the women who had displayed that senseless and blind hatred which one sometimes found among men, but, she thought, practically never among soldiers. They who had imagined that women would always be profoundly conscious of the hideousness of war were in many cases profoundly disappointed.

As a matter of fact, women, so far as she was aware, had never stopped any war, however unjust. They had never tried to stop any war, except in isolated and exceptional instances. And yet she was persuaded that in the long run—whether it were the next generation, or the next century, or in a thousand years—we should find some other method of settling our differences. And in the bringing about of that happier state of affairs, the women's movement, the coming of women into public service, would have a very important part to play. For the women's movement existed by a principle of which war was a perpetual denial. Feminism and militarism were so unalterably opposed that one of them would have to die. Militarism did not regard physical force as a confession of failure, however necessary, but as the real, and right and just basis of governing the world. The women's movement asserted that moral force should govern the world, and for the admission of that great principle women were bound to work. For if the weak had no rights, then for women to claim rights was folly.

No influence made for war more than the influence of fear, and no one in the world was so cruel and relentless as a person who was afraid. But fear, and cowardice, had not been obviously disliked in women. The women's movement, however, had done much to teach women, that courage was as necessary to them as to men. All of them were bound to be afraid of nothing, and to realise that a person who was afraid was not one who could be trusted. Here again she believed that women would in the future do more than they had done in the past in the cause of the final abolition of war.

Touching on women's work in connection with the present war, Miss Royden hoped that one of the results of the war would be that women would find all sorts of new ways of serving, and new powers within themselves. She also warned them that they should strain every nerve to get into whatever employment they entered on equal terms with men. She said they should "try," because she was not going to ask the impossible, even of her own sex, and she knew that in some ways it was being made a practical impossibility. But she felt that they ought to have a tremendous sense of responsibility in this matter, because the service they did to the country would be undone if it resulted, after the war, in a more terrible cleavage between the men and women of the country, in a sex war in the industrial world as disastrous, though not quite so obviously so, as the war between nations.

Mrs. Henry occupied the chair, and there was a moderately large audience, composed chiefly of women.

The Christian Commonwealth.

26. 11. 15.

Women and the L.C.C.

The London County Council has decided to employ women tram conductors, and to pay them the wage previously received by male employees in the same capacity—namely, 5s. per day, plus a weekly war bonus of 3s. They will wear uniforms. It is suggested also that women should be employed to repair cars at the depôt. They must be trained for this work, and will, it is proposed, be paid 20s. per week, with a 3s. bonus, on a forty-eight hours' week. The L.C.C. is setting an excellent example, which will not, I hope, be without its effect on other municipal employers, in thus proposing to guarantee to women workers the rate of wages formerly paid to men for the same labour. Glasgow, evidently satisfied with the results of its experiment in employing women as tram-conductors, is now extending the range of their occupations to include that of tram-drivers also. Six women after five weeks' training are to be fully recognised as (and I hope also paid as) properly qualified drivers. The training comprises a knowledge of the mechanism of the car and a month's practical experience of driving, at the end of which period they will be considered competent.

Women's Freedom's League.

The Women's Freedom League is showing considerable activity in several directions at present. A really valuable piece of constructive social work is being done by the Settlement at Nine Elms that is supported by the League. From the Milk Depôt, one of its departments, pure milk is supplied to nursing mothers and delicate babies at the exceedingly low rate of one penny a pint; the Vegetarian Restaurant serves daily 250 penny and half-penny dinners. An interesting feature, which, I learn, is unique in this country, is the Children's Guest House, where little ones are received (as guests) during the illness of their mother or her absence in hospital. Public meetings are held every Wednesday afternoon by the League at St. George's, Hart Street, Bloomsbury. Last week Mr. John Scurr was one of the speakers. A Green, White, and Gold Fair has been arranged for November 26 and 27 in Caxton Hall.

Clara Zetkin's Release.

The report that Clara Zetkin, the well-known German Social Democrat who stood with Liebnecht and the small band of loyal internationalists in that country, has been released from prison, temporarily at any rate, is confirmed by the latest issue of her journal "Gleichkeit." Her release is perhaps only during her good behaviour, as the German authorities understand good behaviour on the part of Socialists. If this is so she will probably not be free very long, for she is not the kind of woman to cease her activities (which bore fruit not long ago in the meeting of Socialist women at Berne) journal, "Gleichkeit." Her release is per-she is working for an honourable peace and has tried to keep the international Socialist and Labour women together during the war. Her views on the war are very much the same as those of the moderate members of the British Labour Party, such as Mr. Clynes and Mr. Henderson. Frau Zetkin has signalised her release from prison, I hear, by sending to all the national sections a message expressing the sorrow of Socialist women at the death of Keir Hardie.

Women in Munitions Courts.

The need for the appointment of women assessors to deal with some of the cases brought before the Munitions Courts is strongly urged by the "New Statesman."

Some of these cases are nothing less than revolting, involving, as they do, not only questions of overtime and other conditions of labour, but moral questions. One case is that of a number of girls who insisted on leaving their employment because of the literally indescribable behaviour of a foreman. The firm refused to allow them to leave, and in the Munitions Court, where the girls went to try to state their case to a tribunal purely masculine, the chairman made light of their grievance and was about to order them back with a fine. It was quietly intimated to him, however, that such a decision would be followed by a criminal prosecution, and thereupon he granted the girls leaving certificates. This is one illustration of the evil. It is monstrous that the hundreds of thousands of women engaged on munitions work should have to submit grievances of this kind and questions of personal health and fitness, and the like, to the judgment of a court composed wholly of men.

Miss Lena Ashwell's return to Kingsway is welcomed by all who appreciate her healthy influence upon the modern theatre. The run of "Iris Intervenes," a comedy which has been much enjoyed by all who have witnessed it, is interrupted this week for rehearsals of "The Starlight Express," a play by Mr. Algernon Blackwood and Miss Violet Pearn, which Miss Ashwell will produce for the Christmas season.

of the mechanism of the car and a month's practical experience of driving, at the end of which period they will be considered competent.

PREPARING FOR WAR WHILE TALKING ABOUT PEACE.

THE GREAT DANGER OF REACTION IN HUMAN PROGRESS.

THE AFTERNOON SESSION.

When the conference of Yorkshire Women Liberals re-assembled at the Marsden Mechanics' Hall yesterday afternoon, Lady Fisher-Smith presided over an augmented attendance. Reports were given by delegates of the work done in various districts since the last conference.

WOMEN AND THE RACE.

Miss Salt gave an address on "What Women Can Do for the Race." Through the war our thoughts had centred on dear old England and all that it stood for, and the fact had forced us to take a wider outlook on public affairs. What was that wider outlook going to mean to them, especially to women? The opportunity for women was here, and they should make their influence felt upon the destinies of the world. Never had the point of view of woman been so sorely needed as to-day. (Hear, hear.) War must always be appalling to women. It was wrong not only on account of the horror, but on the grounds of reason, morality, and religion. War was organised insanity. There could not be any reason in using every ingenuity of science for the deliberate destruction of life. War was not compatible with the Christian spirit. (Hear, hear.) Christ's spirit was altogether against warfare as we know it to-day. (Applause.) How did it come about that the nominally sane and Christian countries found themselves in this life and death struggle? The first answer was that the peoples had drifted into it without fully realising where they were going. In the dark days of August last year she thought we were bound to take our part, but the war came about under an old regime, for which they were not responsible. But in carrying it through they must be very clear not to make the same mistake again

POWERS AGAINST PEACE.

Everything had been against the pacifist, especially secret diplomacy. The power of the armament interest had been against them, for it had fostered shares for the sake of large dividends, and kept up an agitation for fresh armaments and battleships. Another thing had been the Jingo Press. (Hear, hear.) The Press wielded a tremendous influence, and she was sorry to say it had been used to foster misunderstanding, and to try and make us think we had quarrels when there was no justification for such beliefs. So that while talking about peace we had been preparing for war. Let them hope that the war would explode for ever the idea that the spending of huge sums on armaments was an insurance against war. It was nothing of the kind. All nations thought they were fighting in self defence, so that there must be a great misunderstanding somewhere. She pleaded for human brotherhood and the realisation that each nation had a special contribution to make to the happiness of mankind. (Applause.) False ideas of militarism were ruling the world to-day. If these could change a quiet, peace-loving people as some of them had known the Germans, what awful influence they might have upon us! There was very grave danger of the growth of militarism, not only in Bermany but nearer home. They could not kill wrong ideas by force, but by the spread of right ideas. (Applause.)

Mrs. Glaisyer, of Huddersfield, in an eloquent speech, opened a discussion.

INFLUENCE OF WOMEN.

Mrs. Acland proposed:—"That it is important that we, as a body of Liberal women, should educate ourselves to a full understanding of the principle that justice and not force should rule in human society; and that the area should make a systematic effort to consolidate opinion in its associations, and amongst all women upon the importance of securing that the voice of women shall be heard after the war in national and international affairs. She argued that women were the greatest sufferers in time of war, and instanced what had happened in Belgium and Poland. Women took a bigger share in the actual work, for the strength of the armies lay in the nations behind them. After the war they must go full steam ahead. They could not get rid of an evil unless they had something to put in its place. They were going to see that not physical force, but the will of mankind should rule. When they did get the vote it would be a tremendous asset to women. Until they had a voice in the Government their wills would never be safe, and it was nothing [illegible] women never be fully trusted. They had to get the idea that all the people and all the nations had something to give to the world which the whole world [illegible] do any good. We wanted something much stronger than the old Hague Tribunal, a permanent body to discuss not only the outbreak of war, but other vital matters, so that nations would not look upon each other as dangerous rivals. It should include some of the best women of all the nations. If the Liberal party did not take up a real democratic programme after the war, it would go under. She urged women to prepare themselves for the vote, and it would then come because they deserved it. (Applause.)

Mrs. G. Newbould, of Bradford, seconded the resolution, and an animated discussion followed. The resolution was carried unanimously. Votes of thanks to the speakers, and the Colne Valley friends for their hospitality, closed the proceedings. Luncheon and tea were provided in the Marsden Liberal Club by members of the Marsden Women's Liberal Association.

sorely needed as to-day. (Hear, hear.) War must always be appalling to women. It was wrong not only on account of the horror, but on the grounds of reason, morality, and religion. War was organised insanity. There could not be any reason in using every ingenuity of science for the deliberate destruction of life. War was not compatible with the Christian spirit. (Hear, hear.) Christ's spirit was altogether against warfare as we know it to-day. (Applause.) How did it come about that the nominally sane and Christian countries found themselves in this life and death struggle? The first answer was that the peoples had drifted into it without fully realising where they were going. In the dark days of August last year she thought we were bound to take our part, but the war came about under an old regime, for which they were not responsible. But in carrying it through they must be very clear not to make the same mistake again

POWERS AGAINST PEACE.

Everything had been against the pacifist, especially secret diplomacy. The power of the armament interest had been against them, for it had fostered scares for the sake of large dividends, and kept up an agitation for fresh armaments and battleships. Another thing had been the Jingo Press. (Hear, hear.) The Press wielded a tremendous influence, and she was sorry to say it had been used to foster misunderstanding, and to try and make us think we had quarrels when there was no justification for such beliefs. So that while talking about peace we had been preparing for war. Let them hope that the war would explode for ever the idea that the spending of huge sums on armaments was an insurance against war. It was nothing of the kind. All nations thought they were fighting in self-defence, so that there must be a great misunderstanding somewhere. She pleaded for human brotherhood and the realisation that each nation had a special contribution to make to the happiness of mankind. (Applause.) False ideas of militarism were ruling the world to-day. If these could change a quiet, peace-loving people as some of them had known the Germans, what awful influence they might have upon us! There was very grave danger of the growth of militarism, not only in Bermany but nearer home. They could not kill wrong ideas by force, but by the spread of right ideas. (Applause.)

Mrs. Glaisyer, of Huddersfield, in an eloquent speech, opened a discussion.

INFLUENCE OF WOMEN.

Mrs. Acland proposed:—"That it is important that we, as a body of Liberal women, should educate ourselves to a full understanding of the principle that justice and not force should rule in human society; and that the area should make a systematic effort to consolidate opinion in its associations, and amongst all women upon the importance of securing that the voice of women shall be heard after the war in national and international affairs. She argued that women were the greatest sufferers in time of war, and instanced what had happened in Belgium and Poland. Women took a bigger share in the actual work, for the strength of the armies lay in the nations behind them. After the war they must go full steam ahead. They could not get rid of an evil unless they had something to put in its place. They were going to see that not physical force, but the will of mankind, should rule. When they did get the vote it would be a tremendous spur to women. Until they had a share in the Government their wills would never be felt, and their working power would never be fully developed. They had to get the idea that all the people and all the nations had something to give to the world which the whole world could benefit by. (Applause.) She included Germany, because the best side of Germany had not been allowed to develop freely. We owed much to Germany and probably should do again, though Germany had much to repent of. They had not only to win the war on the battlefield but by patient constructive work for international comradeship. It was their duty and privilege to keep the question of women's suffrage in their minds. The voice and influence of women would tell against any further disastrous war in the future, because the interests of women were common in all nations. They were not the interests of commercial concerns or railways, but the interests of home, children, health, and education.

DANGER OF REACTION.

There was great danger of reaction in real human progress, and it would be a great disaster if the armies went back to their own countries and armed themselves to the teeth. That would make it harder than ever to get social reform. Armament by themselves would not

WOMEN AND WAR SERVICE.

THE DUCHESS OF MARLBOROUGH ON THE SUPREMACY OF MOTHERHOOD.

THE most important war-work for women will arise from a new realisation of the importance of motherhood. That is the emphatic opinion of the Duchess of Marlborough.

"We have a falling birth-rate," she said, "and we have suffered terrible losses in the war. This lays on us the duty to make parenthood possible by improving social conditions, and to check the appalling infant mortality. One baby out of every eight born in this country dies before it is a year old, and another before it is fifteen; and there are thousands lost before they are ever born. To save the nation's children is the duty most incumbent on the women of England to-day. That is the true war-work.

"One of our difficulties is that although all the voluntary work of this kind, such as schools for mothers, and the like, is being done by women, women are often excluded from local

Duchess of Marlborough.

government by the party system. It is time that the care of motherhood became a national responsibility. It should at least be taken up by the municipal councils. How can this sort of work be adequately appreciated and carried out by men alone?"

When the really vital history of the war is written—if ever so highly discriminative a task be essayed—the part played by women will prove to have been one of the outstanding wonders of this generation. War has hitherto been man's affair. In the present struggle woman has filled a role no less strenuous, no less sacrificial, and certainly no less requisite to victory, than that of man. She has successfully asserted her right to share man's labour and hardships, as in times of peace she had shared—somewhat grudgingly on his part, perhaps—his honours and his relaxations. In Britain, the agonies of war are turning out to be, so far as woman is concerned, the birth-pangs of a new age. Needless it is to enumerate the forms her activity has taken. These forms are before our eyes from day to day.

WOMAN'S SHARE IN NATIONAL LIFE

The Duchess of Marlborough, who graciously talked with me on some aspects of woman's participation in the war, does not share the view that the work has been taken up to any large extent, as has been alleged, by "young women to whom the war is little more than a new sensation." She doubts, indeed, if there be such women. "Of course, in all great human efforts there are persons actuated by inferior motives, but these soon drop out of the running, and are best forgotten. Woman's record in this war has been singularly clean and universally heroic."

The one strict counsel her Grace utters is that nursing should not be taken up by amateurs without a course of training. Nursing is a serious and arduous profession, requiring, like any other, special skill and knowledge.

"What effect," I asked her Grace, "is the new discovery of woman's commercial and industrial capacity going to have on England's future?"

"Is it a new discovery?" the Duchess smilingly returned. "Of course, you mean by the men; we women have known it all along. I suppose it has been brought home to the nation in new and powerful ways. I hope it is a permanent discovery. What its effect will be it is difficult to say, but women are bound to have a larger share in the national life than before. They cannot be thrust out of the employments and professions into which a great national emergency has called them, and in which they have more than proved their competency. But their position will have to be secured on the right economic lines. The trade unions are seeing to that, as are also the leaders of the women's industrial movement. Women must not be exploited and underpaid."

AFTER THE WAR.

I mentioned the fact that when the Army is disbanded many women will be found occupying positions formerly held by men. Would it be the duty of these women to give way, or must there ensue a competitive struggle between the sexes?

"I think the women will give way," said the Duchess. "They took up these new responsibilities out of patriotism, and in the same spirit they will, if necessary, relinquish them. But there will be a great many unmarried women after the war who will have none but themselves to depend on. These will have to work. But things will gradually adjust themselves.

"My own opinion is that when that readjustment has taken place conditions will be improved. Men have been occupying positions that could be quite as well occupied by women, in fact, better. The man's full powers have not been brought into use, and consequently his value as an industrial unit has deteriorated. Already the change is yielding good results. I don't often go into the shops, but I am told that customers are finding the women who have taken the place of men behind the counter more civil and obliging than the men were."

EQUAL WAGES FOR EQUAL WORK.

The Duchess of Marlborough firmly adheres to the principle of equal wages for equal work, irrespective of sex, although she admits that in some classes of work women are physically incapable of doing as much as men. In these cases, however, it is a simple matter of arithmetic.

"All the trouble in regard to women's work in the past," she said to me, "has arisen from the failure to recognise this elementary principle. And the women's case has been hopeless, because they have not been organised. They have been ruthlessly sweated and oppressed. But in this respect we are on the eve of a great change."

Asked to say how she thought the women of England had behaved in the present crisis, the Duchess replied:

"English women have arisen to the occasion magnificently. The whole responsibility of the war, in fact, seems to have been realised by them almost before it was realised by the men. It is largely owing to them that the recruiting has been so good.

"One of the facts brought out by the war," the Duchess added, "is the need for training amongst women, and it is to be hoped that one of the war's effects will be that parents will realise the importance of giving their daughters an education which will enable them to take up a profession, and thus secure the economic independence so necessary to a woman's development. The number of women in England who have had the benefit of college life is comparatively small as compared with America."

BOLTON UNITED SUFFRAGISTS.

VISIT OF MISS SYLVIA PANKHURST.

Plea for Women's Influence in National Life.

Miss Sylvia Pankhurst was the guest of the Bolton branch of United Suffragists in the Spinners' Hall on Friday evening. She had a most enthusiastic welcome from a fairly large audience. Miss Pankhurst was delayed by train arrangements, and she arrived when the meeting had been proceeding for some time, but she at once plunged into her subject. Was there something that women could bring into national and international politics? She believed there was. The women's movement was essentially the bringing to the service of the public all those qualities which they valued and which they found in the ideal mother in the home. The woman's movement must be a mother's movement. Those were qualities they had not had enough of in the management of the world hitherto. If the women's movement had something to bring into the world we had not had before, women must come out into the movement and not take their ideas from old party cries, but come with a fresh outlook and with a determination to secure the best thing they could for everyone. They must be determined that the common lot should be a good one.

Work for Soldiers' Dependents.

Did their principles carry them as far as they ought when they came face to face with concrete cases. Miss Pankhurst gave a string of touching instances of her work among soldiers' wives and mothers in East London in the terrible early days of the war, the sweating, the inadequate allowances, and the fight their Society had made to improve the lot of the women. Allowances had been improved since the awful days when soldiers who were not on the four per cent. strength of the Army brought out part of their rations to feed their starving wives and families, but still allowances were too small—allowances to soldiers' mothers particularly. Miss Pankhurst explained what their movement had done in regard to the question of the place and payment of women in munition factories. These were the things they should do if their movement was to be a movement worth having.

In Munition Factories.

There were many scandals connected with the Munitions Act. They heard a deal of the high wages, but they could not find a woman who was earning £2 a week. The average was a great deal lower than that. Did those present realize what this was going to mean? Not only was it unjust to make women do a man's work for paltry wages. After the war was over, men were going to come back to find women had taken their places at low wages, and unless they were prepared to work for those wages too, there would be no work for them. It would not only be the textile districts where they would find large numbers of married women obliged to work—it would become the rule. What was more, they would find both parents earning together less than the man alone earned before the war. What was the attitude of the women's movement to that? If they cared for the race that was growing up, if they cared for their sisters, they would have to fight against that, and they needed the vote in order to fight against it. The future of the Labour movement was going to rest largely with the women, and it was a great responsibility that rested upon them.

Refused to Sign National Register.

Miss Pankhurst briefly touched upon conscription. It was not wanted so much to get soldiers as to give a certain class power over the workers. The Munitions Act was quite bad enough. Personally, she had done some little to protest by refusing to sign the National Register. For some reason or other she and some others of her fellow workers had not been pulled up. (Laughter.) She refused to sign the Register because she felt it was the thin end of the wedge of Conscription, and she thought it would be used for industrial compulsion towards women, and she thought she would like to stand by the man who thought it was wrong to fight—she believed he ought to have the liberty of conscience. Mrs. Pankhurst spoke at length upon international politics. Our natural course should be to fight with all our might to build up a sisterhood of the nations. As a result of this war, there ought to be a great popular outcry for universal suffrage, for the vote for every man and woman of full age. In conclusion, she appealed for a truly democratic country. (Applause.)

Women's Place in War-time.

A well-known worker in the women's movement, Mr. Beanland, of Manchester, referred to the immense work which suffragists were doing for the war-stricken country. It was a stab in the back to be told that suffragists had gone to sleep but he, personally, was not sorry that the Government had given them another example of the want of care for anything concerning women in the outrageous suggestion that a Bill should be passed through Parliament, altering the Register so as to give every man who had enlisted a vote, whilst still keeping women outside the vote, although they were rendering equal service. Mr. Beanland moved a resolution urging the demands for the enfranchisement of women as the only safeguard against the exploition of women's labour and the consequent depreciation of men's wages; and calling for the application throughout the area of Government industry of the principle of equal pay for equal work. —The resolution was seconded by Miss Pankhurst and heartily carried.

The chair was taken by Mr. G. Thompson, and he was supported on the platform by Mrs. Almond (president of the Bolton Branch), Messrs. W. Addison, J. Derbyshire, and others.

Woman's Chance At Last.

By GWLADYS T. JONES.

IT'S going to be "get on or get under" with a vengeance for women when hostilities cease and the world has a little time to spare for its domestic affairs.

Wherever men and women are gathered together in these days the discussion goes on. "Out of the tears and the blood is woman's chance going to come at last, or are her higher aspirations to be crushed beneath the weight of the brute force which is dominating the world to-day?"

There is only one answer possible: "That depends entirely on women themselves."

What suffragist in her wildest dreams of a Paradise where votes are to be had for the asking could have pictured, a few years ago, an England where women ticket-collectors and conductors order about submissive men, where clear-eyed girls, faces stamped with the exaltation which comes with a mission, drive heavy motor-vans with confidence and spirit, where policewomen do their work thoroughly and politely, where neatly-uniformed girls take the place of commissionaires with apparent ease and enjoyment.

THE WAR WORK THAT DOES NOT SHOW.

These, too, are only the surface aspects of the great change, the spectacular differences which catch a roving eye. Even the munition workers, the enterprising women whose celerity and quickness astonished shock-seasoned correspondents, are but a unit in the army of women into whose hands power has so suddenly been given.

Teachers have shouldered their rifles and left the classrooms to women who to an ever-increasing extent must shoulder, in their turn, the responsibility of stamping the impress of honour and bravery on the generation which will make the England of to-morrow. Fathers have gone, leaving a double share of duties to the mothers. Buyers and sellers, small traders and great merchants have placed their books and their scales in the hands of women, and have been surprised to find how capable a pretty pair of hands can be. And when a man banks his money or insures his life he can only do it nowadays with the aid of the women who were once shooed off those sacred departments.

HOW WOMANLY TASKS HAVE BEEN HANDLED.

A survey, say some five or six years ago, of the part women would be called upon to play in a great British war would probably have confined their efforts to something in the brow-soothing line. And by no means the least significant point in all the changes which this war has brought to women and their outlook is the splendid way in which those duties which used to be labelled specifically "womanly" have been carried out. There is no need even to mention our nursing staffs, military and voluntary. They are in everyone's thoughts, and the strength and tenderness, the sweetness and resolution of which a good woman is capable have been crystallised for the world to wonder at in the sound of one name—Nurse Cavell.

Women who have never known what it is to do a day's work before are down on their knees scrubbing hospital floors, are blackening their hands that bright brasswork may twinkle a cheery welcome to broken soldiers. Women who used to delight in the gracious task of tending flowers in a sunshiny garden or count the washing of some priceless china a worthy contribution to the household labours are spending back-achey hours sneezing over the teasing job of manufacturing swabs from airy cotton-wool.

NEW WORK BY FIELD AND FIRESIDE.

Some women have heard the children crying and have gone down amidst darkness and dirt to save for the nation its greatest treasure. Others have thought with compassion of the poor, muddled homes where money is not wanted so much as experience, and have done what they could to teach tired wives how to make their homes sweeter and brighter places for their men returning from the trenches.

One even hears of practical bodies who travel the countryside in kitchens on wheels, in order to demonstrate how very little may be made to go a great way if wisdom and genius are brought to its cooking.

On a gallant horse a gallant woman carries dispatches at the front and a corps of plucky women, self-contained and self-supporting, have nursed, fed, washed and cheered many a thousand grateful soldiers. The problem "Should women have decorations?" toyed with idly to provoke an hour's sensation in days of peace, has solved itself.

In fact, woman has arrived. When statesmen stand in high places and proclaim that no bravery

ways, then the crowning pinnacle is added to the Palace of Power into which women have entered so quietly and unostentatiously by way of the Sea of Tribulation.

For in this matter of economy women are almost all-powerful. In this matter of economy women can show if they are worthy of their new and higher position. By this matter of economy will they be judged when the great clearing-up day comes.

WHY THE WOMAN SLACKER MUST REFORM.

The Woman Slacker will shirk the trouble of thinking out just and sensible economies, and will shrink from the inconvenience of putting them into practice, as the Man Slacker shrinks from the trouble and pain of the trenches.

In these days every silken splendour, every light frivolity, every vain and foolish conceit purchased to pander to personal delight or adornment or gratification is a bullet directed at the heart of the nation. And as a woman takes her stand on this question so is she helping or hindering her country in its titanic struggle—so is she helping or hindering the women of to-morrow, who will be judged by our deeds to-day.

I.—WOMAN AS WORKER.

By ISRAEL ZANGWILL.

It cannot be a mere coincidence that the war was made in Germany, the Male State in excelsis, where woman, in the Kaiser's favourite saying, must stick to her three K's—Kitchen, Kids, and Kirk, we may perhaps render it. Not for her the glories of the Turnverein, the beatitude of the beer-hall, or the gospel of slashing the other cheek; not even the equality of the University. It is her lord alone that makes her the Mrs. Doctor or the Mrs. Professor.

That to this status of the German woman, Armageddon may be due, is no fantastic speculation. For it is only by sheer absence of humour that Germany's brain could have tumefied with the notion of a Teutonic mission to mankind—by submarine and poison-gas—and absence of humour is directly traced by Meredith to contempt for the woman.

German Humour and the German Frau.

"If the German men," he observed in his "Essay on Comedy," "would consent to talk on equal terms with their women, and to listen to them, Comedy, or in any form, the Comic spirit will come to them." That is to say, women's corrective criticism would have brought proportion, and proportion is the mother of humour. But they have not listened to their women, and so (as by the bad fairy's gift at a christening) all the other delightful gifts of the race, all the music, science and philosophy, are spoiled. In place of humour—the dancing smile in the eyes of wisdom—the Teuton has only the grin of the gargoyle. "His irony," says Meredith, "is a missile of terrific tonnage; sarcasm he emits like a blast from the dragon's mouth. He must and will be Titan."

If, then, his insolent isolation from feminine influence is the deepest cause of his swashbuckling temper, it follows that the position of women is not a factor of history to be lightly disregarded, nor one that fails to wreak its effects because historians and politicians neglect to take it into account.

Electricians divide bodies by the resistance they offer to the passage of electric force as calculated in "ohms." Humanity may be divided into classes by the resistance they offer to new ideas. The Americans, for example, have a small ohmage, the English a high. Judged by the evolution of their women, old countries like Sweden and Finland are less resistant than even the New World. In England woman has not moved a step in any direction without a hue and cry. Tragical is the story of the first medical pioneers, and equality with the man physician is even yet not won, though every new female doctor is now hailed as a godsend by the male millions engaged night and day in making work for her. The "lost volts" is the pathetic name for the units of electricity wasted through resistance. What a ghastly waste of human force this British bulldoggedness is answerable for!

But sometimes in every country this ohmage of obstinacy is overwhelmed by sudden forces. Social evolution, which proceeds usually like the snail, proceeds at these moments like the kangaroo—"by leaps and bounds"—just as geological changes, which in normal times are imperceptibly slow, are sometimes cataclysmic. Such a volcanic upheaval has the war brought to women. In this transformation of the social landscape, the suffrage question has become a relatively insignificant landmark.

Venus and her Shell.

The cause of woman's sudden rise in status is the discovery that, like the horse, she is not merely a domestic beast of burden, but may also be useful for war. In a passive sense, the discovery was not new. Did not Sir Walter Scott announce it in his famous apostrophe to "Woman in our hours of ease"? Did not Victor Hugo glorify the Frenchwomen in the siege of Paris, who "gave to despairing combatants the encouragement of their smile, who refused, even before hunger, even before death, the surrender of their city"? But Patience smiling at grief, though it may be set on a monument, wins little real regard in the "man-made" world. Not even the active business services universally rendered in France by Frenchwomen could rescue them from the insignificance attaching to a sex that merely creates and does not destroy. And in England, though Florence Nightingale practically saved our Crimean Army, she was impotent to help the army of women pushing into the arena at home. Besides, war had not for centuries really come home to the British breast. In the great Napoleonic days, when Jane Austen was writing her quiet country-house comedies with never a word of the events that were shaking mankind, war was for England a foreign adventure, restricted mainly to two social classes, the cream of the cream and the dregs of the gutter.

If you were a Society lady or a Becky Sharp you could follow Wellington to Flanders and dance in the great Brussels ball that Waterloo broke up. At the first booming of the cannon you fled, or stayed to pray for the fighters. It was all very interesting and picturesque, but except on the black days, eloquently described

the Brieux play, "La Femme Seule," met their women competitors—with the male fist. And if the new function involved changes of vesture or appearance, then the small boy, whom I have elsewhere saluted as "the scavenger of manners," would have made life unbearable for the innovatress until she had worn him out by multiplication. But to-day? Why, the mere pictures in "The 'Times' History of the War" reveal women (in appropriate costumes) as police patrols, telegraph messengers, postwomen, ploughwomen, sheep shearers, page-girls, motorists, van drivers, commissionaires, railway booking clerks, ticket and luggage porters, omnibus and tram conductresses, bill-posters, butchers and bargees! There is even—O tempora, O mores—a games-mistress in a boys' school! The very Government offices—immemorial abodes of the barnacle—have women attendants. What wonder if there move through our streets without ragamuffin rebuke the khaki-clad warriors of the Women's Volunteer Reserve!

But in addition to the many ways in which woman is actually seen stoking the furnaces of war, there is a growing recognition that even the woman at home is playing her part in the war. That men must fight and women must weep was long the stock argument of the anti-suffragists—for who would give a vote to tears? In vain we suffragists tried to make them understand that the fighting part of a nation was only the white-crested wave that throws itself furiously on the shore—behind it was the whole ocean of national energy. In vain we pointed out that a nation was, after all, only a collection of homes, and that it was from these homes that all the national strength issued. To-day Press megaphones and flamboyant posters have proclaimed this truth to the dullest. Every hoarding has shown us the munition maker hand in hand with the soldier; warriors both. The War Loan carried on the tale. "Do you want to save our sailors' and soldiers' lives?" women, no less than men, were asked in great Governmental advertisements. "Do you want to bring the war to an end?" "You can make your money fight for you." "If you cannot use the sword for your country, you can use your pen by filling up this form." One of the latest and most decorative of these posters, though bristling with cannon and bayonets, is headed simply, "Appeal to Women." The silver bullet, in short, can be sped by a woman's hand, and the sinews of war are sexless.

Germany Discovers Woman.

With half a million German women making war-material from the very outbreak of war, with the domesticated Frau producing 40 per cent. of the explosives and 50 per cent. of the equipment, not to mention her replacing railway, tramway and motor men, with, in fact, over two million of her torn from the kitchen into industrial life, it could hardly escape attention even in Germany that the three K's had been transcended, and that the great male K (Krieg or Khaki) was not so outside the female province as that arrant K, the Kaiser, had imagined. As the "Frankfurter Zeitung" confessed with characteristic German thoroughness, "Many of us have in these months felt it to be a defect that in Germany the State, with its system of universal service, embraces only the men, and then only in so far as they are capable of bearing arms. This system was decided upon at a time when wars were conducted with weapons only, and it no longer fits the present state of things, in which everything, gold and food, industrial products and science, is a means of carrying on war, and in which the war itself consists to a great extent of scientific and economic labour."

War consists to a great extent of scientific and economic labour! So at last man has discovered mid-day at twelve o'clock! "Every pit is a trench, every workshop a rampart," cries Lloyd George, vividly lamenting the legions of miners and munition-makers a short-sighted policy had lured to Flanders. Armageddon may even, it appears, finally hinge on the manufacture of machine-tools. With war thus got beyond the tomahawk stage, the poor squaw can now as little be excluded from the tug of it as she ever was from the misery and murderousness of it. Indeed, according to the "Times" correspondent, "the full utilisation of the resources already in sight depends on female labour." Battles are won in the factory as well as the field, and in the cornfield no less than the field of war. They were always won in the kitchen and the nursery.

But it is characteristic of the titanic, humourless Teuton that, having at last discovered the importance of the other sex, he proceeds to glorify, not woman, but the German woman—notoriously the least attractive type in Europe. This creature is, according to the Berlin "Post," to rear a race of demi-gods and take "her predestined place on the throne as queen over all her sisters, the adored from afar by the men of all classes, the mate of the Germans only."

France Still Seeking the Woman.

The game of "Cherchez la Femme" has so long distorted the French vision that France cannot even now find her as quickly as Germany has done. In the German railways,

mother of humour. But they have not listened to their women, and so (as by the bad fairy's gift at a christening) all the other delightful gifts of the race, all the music, science and philosophy, are spoiled. In place of humour —the dancing smile in the eyes of wisdom— the Teuton has only the grin of the gargoyle. "His irony," says Meredith, "is a missile of terrific tonnage; sarcasm he emits like a blast from the dragon's mouth. He must and will be Titan."

If, then, his insolent isolation from feminine influence is the deepest cause of his swashbuckling temper, it follows that the position of women is not a factor of history to be lightly disregarded, nor one that fails to wreak its effects because historians and politicians neglect to take it into account.

Electricians divide bodies by the resistance they offer to the passage of electric force as calculated in "ohms." Humanity may be divided into classes by the resistance they offer to new ideas. The Americans, for example, have a small ohmage, the English a high. Judged by the evolution of their women, old countries like Sweden and Finland are less resistant than even the New World. In England woman has not moved a step in any direction without a hue and cry. Tragical is the story of the first medical pioneers, and equality with the man physician is even yet not won, though every new female doctor is now hailed as a godsend by the male millions engaged night and day in making work for her. The "lost volts" is the pathetic name for the units of electricity wasted through resistance. What a ghastly waste of human force this British bulldoggedness is answerable for!

But sometimes in every country this ohmage of obstinacy is overwhelmed by sudden forces. Social evolution, which proceeds usually like the snail, proceeds at these moments like the kangaroo—"by leaps and bounds"—just as geological changes, which in normal times are imperceptibly slow, are sometimes cataclysmic. Such a volcanic upheaval has the war brought to women. In this transformation of the social landscape, the suffrage question has become a relatively insignificant landmark.

Venus and her Shell.

The cause of woman's sudden rise in status is the discovery that, like the horse, she is not merely a domestic beast of burden, but may also be useful for war. In a passive sense, the discovery was not new. Did not Sir Walter Scott announce it in his famous apostrophe to "Woman in our hours of ease"? Did not Victor Hugo glorify the Frenchwomen in the siege of Paris, who "gave to despairing combatants the encouragement of their smile, who refused, even before hunger, even before death, the surrender of their city"? But Patience smiling at grief, though it may be set on a monument, wins little real regard in the "man-made" world. Not even the active business services universally rendered in France by Frenchwomen could rescue them from the insignificance attaching to a sex that merely creates and does not destroy. And in England, though Florence Nightingale practically saved our Crimean Army, she was impotent to help the army of women pushing into the arena at home. Besides, war had not for centuries really come home to the British breast. In the great Napoleonic days, when Jane Austen was writing her quiet country-house comedies with never a word of the events that were shaking mankind, war was for England a foreign adventure, restricted mainly to two social classes, the cream of the cream and the dregs of the gutter.

If you were a Society lady or a Becky Sharp you could follow Wellington to Flanders and dance in the great Brussels ball that Waterloo broke up. At the first booming of the cannon you fled, or stayed to pray for the fighters. It was all very interesting and picturesque, but except on the black days, eloquently described in "Vanity Fair," when casualty lists were coming in, it did not actually touch the rooted population. If this was so with the average male civilian, how much more with the female! But now it appears that the civilian cannot be left out of the business, and that the female may be as destructive as the male. Women—even ladies of quality—can actually make shells, nay, according to Mr. Asquith who saw thousands of whilom dressmakers, milliners and parlour-maids at their fell work, they can make them "perhaps a little better" than men—an opinion expressed with still more enthusiasm by that Special Correspondent of the "Times" who "saw a girl doing a particular operation on a lathe which had been previously worked by a skilled man." She was doing, he records, 150 per shift to the man's 30! And this revelation led our Arch Anti-Suffragist, Mr. Asquith, to the surmise that possibly women could do many other unexpected things. A Daniel come to Judgment, indeed! It is true there were—long before the war—seven million women, "gainfully occupied," but the State had never yet observed them, nor ever considered their employment or unemployment a factor in social phenomena. To-day every eye is upon Venus rising—as in Botticelli's picture—on her shell. The State includes women in the national register. The "Times" devotes to their services a chapter of its "History of the War." The War Office publishes the names of dead nurses in the casualty lists.

And not only does woman feed the fighting line directly as munition maker, horse trainer and general provider, and tend it as nurse, doctor and ambulance bearer, it has been discovered that in every direction she can relieve man and release him for the front. In the antediluvian age before the war, any feminine encroachment upon the male preserve would have been met—as the workmen in

---

vote to tears! In vain we suffragists tried to make them understand that the fighting part of a nation was only the white-crested wave that throws itself furiously on the shore—behind it was the whole ocean of national energy. In vain we pointed out that a nation was, after all, only a collection of homes, and that it was from these homes that all the national strength issued. To-day Press megaphones and flamboyant posters have proclaimed this truth to the dullest. Every hoarding has shown us the munition maker hand in hand with the soldier; warriors both. The War Loan carried on the tale. "Do you want to save our sailors' and soldiers' lives?" women, no less than men, were asked in great Governmental advertisements. "Do you want to bring the war to an end?" "You can make your money fight for you." "If you cannot use the sword for your country, you can use your pen by filling up this form." One of the latest and most decorative of these posters, though bristling with cannon and bayonets, is headed simply, "Appeal to Women." The silver bullet, in short, can be sped by a woman's hand, and the sinews of war are sexless.

Germany Discovers Woman.

With half a million German women making war-material from the very outbreak of war, with the domesticated Frau producing 40 per cent. of the explosives and 50 per cent. of the equipment, not to mention her replacing railway, tramway and motor men, with, in fact, over two million of her torn from the kitchen into industrial life, it could hardly escape attention even in Germany that the three K's had been transcended, and that the great male K (Krieg or Khaki) was not so outside the female province as that arrant K, the Kaiser, had imagined. As the "Frankfurter Zeitung" confessed with characteristic German thoroughness, "Many of us have in these months felt it to be a defect that in Germany the State, with its system of universal service, embraces only the men, and then only in so far as they are capable of bearing arms. This system was decided upon at a time when wars were conducted with weapons only, and it no longer fits the present state of things, in which everything, gold and food, industrial products and science, is a means of carrying on war, and in which the war itself consists to a great extent of scientific and economic labour."

War consists to a great extent of scientific and economic labour! So at last man has discovered mid-day at twelve o'clock! "Every pit is a trench, every workshop a rampart," cries Lloyd George, vividly lamenting the legions of miners and munition-makers a short-sighted policy had lured to Flanders. Armageddon may even, it appears, finally hinge on the manufacture of machine-tools. With war thus got beyond the tomahawk stage, the poor squaw can now as little be excluded from the tug of it as she ever was from the misery and murderousness of it. Indeed, according to the "Times" correspondent, "the full utilisation of the resources already in sight depends on female labour." Battles are won in the factory as well as the field, and in the cornfield no less than the field of war. They were always won in the kitchen and the nursery.

But it is characteristic of the titanic, humourless Teuton that, having at last discovered the importance of the other sex, he proceeds to glorify, not woman, but the German woman —notoriously the least attractive type in Europe. This creature is, according to the Berlin "Post," to rear a race of demi-gods and take "her predestined place on the throne as queen over all her sisters, the adored from afar by the men of all classes, the mate of the Germans only."

France Still Seeking the Woman.

The game of "Cherchez la Femme" has so long distorted the French vision that France cannot even now find her as quickly as Germany has done. In the German railways, tramways and shops a systematic substitution of women for men began simultaneously with the mobilisation of the army, in France the substituted reserve was, as far as possible, drawn from males too old or too young for war; and, although women did largely replace men, it was mainly as a family affair. Mothers, sisters, daughters, wives, stepped into the breach less as women than as relatives. The Paris "Underground" set the example—which was largely followed—of inviting the women of the family to occupy the places of their menkind and keep them warm till their return; and in philanthropy, no less than in industry, woman has not asserted herself as an independent sex, with separate organisations. Thus in France woman is still not "on her own." Nevertheless, since many of the males, alas! will never come back to their posts, some of this new labour must inevitably escape dislodgment at the end of the war. Not by thus evading the labour problem of women can France circumvent it.

In the higher circles of French femininity there is even less change. The Germans may capture French provinces, they cannot shake the fortress of French convention. War-charity among the grandes dames, if on a magnified scale, moves in the old social grooves and cliques, and is run with the same fashionable Catholic machinery. Nor has the jeune fille bien élevée been free to choose her own "good work," though, like a lay nun, she has been given plenty. But the mondaine has not abandoned her frivolity, nor has the war—after the first panic and in despite of the billowing crape in the streets—succeeded in spoiling the appearance of the Parisienne. Paris still rules the fashions as Britannia the waves.

Italy falls even below France in the handling of the woman question. At the outset of the war woman-conductors were booted off the trams. Decidedly the Latin races have a greater ohmage than the Saxon.

THE WAR AND THE WOMEN.

II.—WOMAN AS FIGHTER.

By ISRAEL ZANGWILL.

And all this new activity and all this re-interpretation and recognition of old activity takes place in the fierce light that beats upon a boom. Had not the female suffrage question been set in violent motion by the Pankhursts, it is possible that the object lessons of the war would not have been reaped for the benefit of the cause. Even a partisan of the feminine vote like Mr. Lloyd George must find fresh food for sympathy as he rides in his motor-car under the skilled steerswomanship of his chauffeuse, Miss Caroline Marsh, the celebrated hunger-striker. And nothing has more contributed to the sinking in of these morals than the wise and patriotic action of the Pankhursts in suspending their militancy, whose relative innocuousness was, moreover, suddenly revealed by the bonfires of the man-made hell. The "Suffragette," still doggedly declaring that there was no way of winning the vote save by fighting, and that in the impossibility of fighting it was useless going on, suspended publication. The other suffrage parties which had not placed their trust in their fighting power, found no such difficulty in continuing their organs, even though their activities were mainly transferred to relief work and military service of every kind, for which their existing organisation of women provided a ready-made machinery. The National League for Opposing Woman Suffrage pursued similarly the path of beneficence, so that the suffrage movement may be congratulated on having called into existence this valuable federation of female activities. The anti-suffragist women had always occupied a Gilbertian platform in emphasising from it that woman's place was the home, and the paradox was not diminished by the attempt to eke out its negations by a demand for the municipal franchise. For it is obvious that the female anti-suffragist, like Aristotle's sceptic, cannot stir a finger without self-contradiction. The crowning irony was her enlistment in the khaki-clad ranks of the Volunteer Training Corps and the National Reserve. No wonder she made a point of "eschewing advertisement" and with "patriotic abnegation" silently absorbing herself in other female bodies. A militant anti-suffragist might have touched even Mrs. Humphry Ward's sense of humour.

The Philosophy of Anti-Suffrage.

There was once a social state composed of families, each unit circling round and represented by the male bread-winner. He went out into the hurly-burly; the woman remained the delicate flower of the home. It was a conception not without its beauty. For this it is now sought to substitute families with a dual centre, and equal rights in the hurly-burly for both sexes. It is a conception not without its ugliness. But the striving for it is not a mere play of the brain. The female flowers have been already flung out of the home; millions of Englishwomen even before the war had been driven into factories, shops and offices. The anti-suffragists did not attempt to drive back this labour into the security and sanctity of the home, and the attempt to secure for it the same political status as male labour they combated. Placed between two worlds, they made the worst of both.

Their arch-antagonist, Miss Christabel Pankhurst, as soon as war broke out, abandoned her place of exile in France to tour in the States as a champion of England, and rendered valuable service in that hot-bed of pro-Germanism by her oratorical and dialectical powers; her repartee, sharpened by years of practice against the Briton, galling now the German-American. Possibly there was in this campaign of hers some of the remorse and zeal of the convert. Possibly she felt she owed reparation to England for being one of the factors that had inclined the Kaiser to war. At any rate the tyranny and truculence of which she had for years accused the British Government became now the peculiar property of Prussia, while England loomed as Liberty's one homestead and safeguard. On her return from this penitential pilgrimage she abounded even more in this sense. The "Suffragette" was revived. But the re-born offspring was no longer the legitimate organ of the movement. It should rather have been called the "War Baby," so unmistakably was it a child of military passion. (It is significant that the care of the war babies is precisely the task selected by the Pankhursts from all the philanthropic possibilities.) Not one of the Press demagogues who daily or weekly whip up the beast in man, not one of the militarists who are out to crush militarism, could vie with Christabel Pankhurst in her impassioned torrents of Jingoism. The worst extravagances of our Junker journalists were outdone. I know no male fire-eater who has set forth so drastic a programme as this "female of the species."

cratic Control" it meant a joint government of men and women, and that its object was to sweep away the secret diplomacy and veiled autocracy that nullity the male vote, and will make the female vote, when it is obtained, equally ineffective in the vast issues of peace and war. These issues mould our lives far more than the questions we are permitted to vote upon, and to bring them equally under the sphere of the vote must be the desire of every suffragist. But then there never was a person more essentially anti-suffragist than Christabel Pankhurst. Nobody has ever been allowed a vote in the affairs of her union. She is simply a dictator, born out of her due sex and time. It happened that the state of society afforded no scope for her natural driving power, and so she was reduced to the leadership of women. But her constant obsession with the image of Joan of Arc shows—as the psycho-analyst would say—that all along she has sub-consciously hankered to lead men. For Joan of Arc did not win the battles of France with an army of Amazons. Now, spurring and cheering on the army of men, bidding them roll their enemies in the dust, Miss Pankhurst is at last in her true element. And the word "Purge, purge," which she ingeminates, recalls her other ambition to be Cromwell—the Cromwell of "Pride's Purge" and "Take away that bauble." She actually calls for a Cromwell to purge a certain London club of its "pro-Germans." And her following has changed with her programme. Of the Women's Social and Political Union, practically only the name remains, and of the "Suffragette," not even the name, for it has recently become "Britannia," who has only in common with the "Suffragette" that she is a female. Even "Britannia" now stands suppressed for super-patriotic scandal-mongering. No wonder the protestants of the union call for balance and balance-sheets, in the fear that the Pankhursts are giving up to England what was meant for the suffragist war-chest.

But with the larger public, of course—apart from the Albert Hall mistake, and even that had its votaries and coteries—the new Pankhurst programme is immensely popular. Philistine M.P.'s have supported their meetings, bishops blessed their propaganda, noble lords prosed on their platform, genteel ladies walked in their processions to demand the free and equal right to make explosives, and the papers have photographed and puffed them. Reported at last and at length by the great organs that had boycotted her, acclaimed by the great mobs that had clamoured to duck her, Christabel Pankhurst, in the new-born "Suffragette," cried in capital letters with a lack of humour that touched the sublime:

"Trust the People and Defy the Cranks."

It is a tragic circle in human affairs that the ex-martyr becomes the parvenu persecutor. But this assimilation of the Pankhursts to the mob is an asset to their cause proper. The masses, taught thus to find in woman so potent a reinforcement of their prejudices, will come to recognise how stupid was the anti-suffrage policy which deprived them of so valuable an ally. It was always the fatal mistake of Miss Pankhurst to overlook that woman's suffrage was essentially a man's question, that in man's hands lay the ultimate power of granting or withholding it, and that only by pleasing men could women—in the last analysis—achieve their emancipation. Now that by a happy accident the Pankhursts' platform coincides with that of the man in the street, now that the Pankhursts are able to "feed the brute" with his own gross diet, they stand far nearer his heart and their goal. Not to fight man but to second and sponge him in his own fight is the road to female suffrage. The palm denied to the Christian martyr will be won by the recruiting sergeant.

The tragedy of this degeneration lies not in the character of Christabel Pankhurst—which is unchanged and unchangeable—but in the character of Mrs. Pankhurst, possessed by the daimon of her daughter. It is impossible to read the earlier speeches of Mrs. Pankhurst without seeing that in her the age had produced one of those rare spirits who come to interpret and incarnate the great saying of St. Paul to the Corinthians: "Hopeth all things, suffereth all things, believeth all things." The first Mrs. Pankhurst knew that the Kingdom of Heaven suffereth no violence and is not taken by assault, and her victory, had it come then, would have been a victory for "female" suffrage, for the contribution of gentleness and social reform which woman has to bring to politics. Her victory, when it comes now, will be only a victory for a swashbuckling suffrage, apparelled at all points like a man.

which had not placed their trust in their fighting power, found no such difficulty in continuing their organs, even though their activities were mainly transferred to relief work and military service of every kind, for which their existing organisation of women provided a ready-made machinery. The National League for Opposing Woman Suffrage pursued similarly the path of beneficence, so that the suffrage movement may be congratulated on having called into existence this valuable federation of female activities. The anti-suffragist women had always occupied a Gilbertian platform in emphasising from it that woman's place was the home, and the paradox was not diminished by the attempt to eke out its negations by a demand for the municipal franchise. The Philosophy of Anti-Suffrage.

There was once a social state composed of families, each unit circling round and represented by the male bread-winner. He went out into the hurly-burly; the woman remained the delicate flower of the home. It was a conception not without its beauty. For this it is now sought to substitute families with a dual centre, and equal rights in the hurly-burly for both sexes. It is a conception not without its ugliness. But the striving for it is not a mere play of the brain. The female flowers have been already flung out of the home; millions of Englishwomen even before the war had been driven into factories, shops and offices. The anti-suffragists did not attempt to drive back this labour into the security and sanctity of the home, and the attempt to secure for it the same political status as male labour they combated. Placed between two worlds, they made the worst of both.

Their arch-antagonist, Miss Christabel Pankhurst, as soon as war broke out, abandoned her place of exile in France to tour in the States as a champion of England, and rendered valuable service in that hot-bed of pro-Germanism by her oratorical and dialectical powers; her repartee, sharpened by years of practice against the Briton, galling now the German-American. Possibly there was in this campaign of hers some of the remorse and zeal of the convert. Possibly she felt she owed reparation to England for being one of the factors that had inclined the Kaiser to war. At any rate the tyranny and truculence of which she had for years accused the British Government became now the peculiar property of Prussia, while England loomed as Liberty's one homestead and safeguard. On her return from this penitential pilgrimage she abounded even more in this sense. The "Suffragette" was revived. But the re-born offspring was no longer the legitimate organ of the movement. It should rather have been called the "War Baby," so unmistakably was it a child of military passion. (It is significant that the care of the war babies is precisely the task selected by the Pankhursts from all the philanthropic possibilities.) Not one of the Press demagogues who daily or weekly whip up the beast in man, not one of the militarists who are out to crush militarism, could vie with Christabel Pankhurst in her impassioned torrents of Jingoese. The worst extravagances of our Junker journalists were outdone. I know no male fire-eater who has set forth so drastic a programme as this "female of the species."

"Institute compulsory national service, military and industrial. Tighten the blockade so that Germany shall not receive a single thing helpful to them in the prosecution of the war. Purify the official organisation of the country of naturalised Germans and of Germans born in England but of German blood. Purify it, too, of any of British blood who may be pro-German or half hearted in the prosecution of the war." Even "true-born Englishmen," you see, less bellicose than the majority, are to be kicked out of England! And it is only the other day that the papers were discussing what island could serve as the St. Helena of the suffragettes.

Christabel, Anti-Suffragist.

Of course, this root-and-branch rhodomontade is only another illustration of her headlong extremism, of her crude conception of statesmanship as militancy, and of tactics as invariably frontal and furious. The climax of this raging, tearing campaign was reached when among the men "half-hearted in the prosecution of the war" were suddenly included Mr. Asquith and Sir Edward Grey. A "Great Patriotic Meeting," called at the Albert Hall, was revealed at the eleventh hour as designed to hurl them from power—a revelation which explained why the "Times" had been daily devoting to the mere preliminary booming of the meeting ten times the space it had accorded to the most important and sensational suffrage gatherings at this same hall. The manœuvre was circumvented through the immediate refusal of the hall by its proprietors.

Infinitely more popular have been the furious rushes directed by the Pankhursts against the Union of Democratic Control, a body constituted of the very men who first risked their reputation on behalf of her derided movement. Not that they had not already been castigated the moment they had disagreed with her tactics. But she might have remembered that the Union was the first political body to announce that by "Democ-

common with the "Suffragette" that she is a female. Even "Britannia" now stands suppressed for super-patriotic scandal-mongering. No wonder the protestants of the union call for balance and balance-sheets, in the fear that the Pankhursts are giving up to England what was meant for the suffragist war-chest.

But with the larger public, of course—apart from the Albert Hall mistake, and even that had its votaries and coteries—the new Pankhurst programme is immensely popular. Philistine M.P.'s have supported their meetings, bishops blessed their propaganda, noble lords prosed on their platform, genteel ladies walked in their processions to demand the free and equal right to make explosives, and the papers have photographed and puffed them. Reported at last and at length by the great organs that had boycotted her, acclaimed by the great mobs that had clamoured to duck her, Christabel Pankhurst, in the new-born "Suffragette," cried in capital letters with a lack of humour that touched the sublime:

"Trust the People and Defy the Cranks."

It is a tragic circle in human affairs that the ex-martyr becomes the parvenu persecutor. But this assimilation of the Pankhursts to the mob is an asset to their cause proper. The masses, taught thus to find in woman so potent a reinforcement of their prejudices, will come to recognise how stupid was the anti-suffrage policy which deprived them of so valuable an ally. The Times
EDUCATIONAL SUPPLEMENT.
Monthly One Penny.

SOME SUBJECTS DISCUSSED IN THE

JANUARY NUMBER,

NOW ON SALE.

1. The Age Limits of School Life.
2. The Russian Language for Englishmen.
3. The Teaching of Patriotism.
4. Lessons in Thrift and Economy.
5. The Health of Child-Workers.
6. Modern Science and the Human Brain.
7. Mr. Dewey, the American Reformer.
8. Education in Crown Colonies.
9. The Amalgamation of Small Schools.
10. Jewish and Greek Ideals in Education.
11. Physiology for Girls.
12. Science and the State.
13. Dr. Montessori on the Imagination.
14. Indian Students in England.
15. The Retirement of Dr. Garnett.
16. Scotch Secondary Schools.
17. The Teaching of Citizenship in Ireland.
18. Welsh Intermediate Problems.
19. Children and Opera.
20. Trees in the School Garden.

The Times Educational Supplement for January (twelve pages) may be obtained for one penny through any newsagent; or post free from the Publisher, Printing House Square, E.C., for twopence. Annual Subscription, at home or abroad, 2s.

SPECIAL NOTICE.

The Times Educational Supplement, published at the beginning of every month at one penny, is now firmly established as a monthly record of educational thought and progress at home and abroad.

Its circulation is world-wide, for the quality of its contents is recognized, and its popular price brings it within the reach of every one interested in education, whether as a teacher, as an administrator, or as a student.

The articles on the following pages have appeared in recent issues of *The Times Educational Supplement*. This *Supplement*, as will be apparent to anyone who reads it, is not a purely professional organ, but is largely concerned with those national and Imperial aspects of its subject which appeal to every public-spirited citizen.

Readers who are interested in the articles on the following four pages and will sign the form given below will receive a 12-page monthly review in which the subjects are developed in more detail.

ENGLISH WARS AND ENGLISH EDUCATION.

656/70

A great war inevitably brings with it investigations into the bases of society, and much reconstruction. The necessities of war carried on on a vast scale, the provision of men of physical and mental fitness and their consequent withdrawal from industry, the revelation of social conditions which the selection and training of these men involve, the war-wastage of these fine specimens of humanity, the supply of war stores and material and the consequent withdrawal of the equivalent of these things from non-belligerent use—all this creates a demand for additional labour and for an investigation into the sources of supply (and into the social conditions which have corrupted such sources), and ultimately creates methods of supply more or less consistent with economic efficiency. Such an economic process, which in some form or another accompanies and follows every war, must have vast educational results; and it is therefore important at the present time to consider the lessons of educational history and to apply them to the great national problems which war is revealing to us.

As to the earlier periods of our history, it will be sufficient to indicate the broad general results of war. Thus the Roman military occupation of Britain brought in a new economy and laid the bases of a system of education which survives to this day; the important educational period which culminated in the age of Alcuin closed with lamentable swiftness amid the Danish wars; but it was more than restored by Alfred in the course of his deliberate economic reconstruction of society. The Norman invasion brought with it not only new economic factors to repair the wastage of war, but the means and the men to crown a living educational system with universities which are to-day, after nearly eight centuries, in the vigour of perennial youth. An educational system so built up survived the heavy strain of famine, plague, and war in the fourteenth and fifteenth centuries, and gathered new strength from the splendour and fury of the Renaissance and the Reformation. Elizabeth and her Ministers recognized the economic side of education; not only did they reform the administrative abuses which had crept into the grammar schools and the universities, but they strengthened the elementary schools and made apprenticeship in husbandry, arts, occupations, crafts, and mysteries a part of the national system of education. At the end of the Elizabethan age the universities had a greater percentage of the rising manhood of the nation than they have ever since secured; and the seventeenth century saw a new Cambridge rising in the new world which Elizabethan adventurers had thrown open to mankind. The Great Rebellion can scarcely be said to have had an adverse effect on English education. Both the universities were "disaffected"; yet Cromwell blessed them with a new endowment; and out of the turmoil of the Commonwealth we see dimly emerging new educational ideas which took effect on both sides of the Atlantic. A class of educational enthusiasts, both in the Church and in the ranks of Dissent, kept educational idealism alive and laid the basis of that principle of education for the poorest which illuminated the dark days of the eighteenth century. Through long periods of war, economic distress, and public indifference the schools fought the battle of national character, and made the intermittent struggle from 1756 to 1815 a period of national glory.

Before the close of that period the inseparable economic and educational needs of the nation had become manifest. The social conditions of London throughout the eighteenth century had been terrible. The shock of the French Revolution awakened effort in the Compulsory Education Act of 1802, entitled "an Act for the preservation of the health and morals of apprentices and others, employed in cotton and other mills, and cotton and other factories." The Act itself, which imposed a measure of compulsory education upon each apprentice "for the first four years at least of his or her apprenticeship," never became effective; but it was an imperfect mirror in which the future was brokenly reflected. It at least recognized the conjoint relationship of religious, secular and industrial training, and laid down in imperfect fashion the principle that we have recovered to-day—that sanitary and health-giving conditions are inseparable from efficiency. The shock from which Europe suffered a century ago awakened or half-awakened England to the needs of her people, and in particular to the needs of the next generation.

The Crimean War was instantly followed by new and notable educational efforts. To what extent this was due to the revelations of the war is not wholly clear; but it that not only elementary but mid and university education found new this time. It was at last fully realiz if England was to survive, in any r in any national sense, the strain immense industrial activities, she mus house in order and look into the structu her home life. The struggle for more life in a grades of education, which first became notable political fact after the Crimean War, rendered possible the far-reaching educational legislation which between 1868 and 1878 touched every grade of society from the factory child to the university Fellow and threw open the widest educational facilities to women. This movement or wave of advance had achieved its full effect by the time of the South African War. It was during and in the period immediate following that war that we saw the ne great advance. During the period of th war statesmen and administrators were busi at work in reconstructing on an immense sca the machinery and organization of our schoo The far-reaching changes included the abo tion of *cul-de-sac* higher elementary teaching the substitution for innumerable small and ineffective educational authorities of a county and borough system, the elaboration of a highly-organized system of secondary schools, and the creation of one authority, the Board of Education. The close of the war fou the country in possession of machinery w rendered it possible to grapple in some effective degree with the terrible problems disclosed by the recruiting sergeant and the new agencies for social relief.

The problem of childhood was definitely attacked about the year 1899, when Sir William Robson's Act raised the age for children in factories and workshops to twelv years. This provision was made effective b the Factory and Workshop Act of 1901, which in many cases made it impossible for a child to be a "full-timer" under fourteen years. The Children Act of 1903 empowered the local authority to declare all employment, not in factories or mines, of children under fourteen years illegal and to forbid all street trading by children under the age of sixteen years. The Act, moreover, absolutely forbade all street trading by children under the age of eleven. These measures were deterrent rather than curative. In 1904 the Report of the Inter-Departmental Committee on Physical Deterioration recommended better school con tions. It was clear that a new departure was essential if the social conditions revealed by the South African War were to be cured. The Committee of 1904 recommended "the a systematized medical inspection of scho children should be imposed as a public dut on every school authority," and should be su plemented by some system for the feeding improperly nourished school children. further Committee in 1905 recommended th the medical officer of health should abs the school medical officer, and should t make the problem of school physique part the problem of local health. The whole mo ment was crowned by the ' ' (F vision of Meals) Act of 19

tional world—a world entirely changed from that which muddled through before 1899.

In the present war the business of recruiting has proved that the old evils of overcrowding, with their concomitants, filth and disease, have by no means disappeared. The country child is handicapped by the home conditions; and till these conditions are altered the education service must be inefficient. The labour of children of school age has not been stopped, and the large percentage of heart disease among school-children may be taken as a rough and ready measure of the consequences. The length of school life must be increased to 15. Our educational system, which is from the teaching point of view very good up to the age of 11, must adopt new methods of teaching between the years of 11 and 15, and must in these years give the child a real preparation for life. And the educational principle of the after-care of school-children—that is to say, the provision, in some form or another, of suitable technical training as well as suitable watchfulness over physical conditions—must be brought into play.

New efforts must not undo the benefits of the past. This war has shown, as earlier wars have shown, that with all its faults our ucational system has produced humane, roic, and self-resourceful men and women. searching for new efficiency we must ove all things preserve that training of haracter which is the chief end and glory of chool life. So, in spite of the great disaster, England will march forward on the feet of little children; and

ENGLISH WARS AND ENGLISH EDUCATION.

656/70

A great war inevitably brings with it investigations into the bases of society, and much reconstruction. The necessities of war carried on on a vast scale, the provision of men of physical and mental fitness and their consequent withdrawal from industry, the revelation of social conditions which the selection and training of these men involve, the war-wastage of these fine specimens of humanity, the supply of war stores and material and the consequent withdrawal of the equivalent of these things from non-belligerent use—all this creates a demand for additional labour and for an investigation into the sources of supply (and into the social conditions which have corrupted such sources), and ultimately creates methods of supply more or less consistent with economic efficiency. Such an economic process, which in some form or another accompanies and follows every war, must have vast educational results; and it is therefore important at the present time to consider the lessons of educational history and to apply them to the great national problems which war is revealing to us.

As to the earlier periods of our history, it will be sufficient to indicate the broad general results of war. Thus the Roman military occupation of Britain brought in a new economy and laid the bases of a system of education which survives to this day; the important educational period which culminated in the age of Alcuin closed with lamentable swiftness amid the Danish wars; but it was more than restored by Alfred in the course of his deliberate economic reconstruction of society. The Norman invasion brought with it not only new economic factors to repair the wastage of war, but the means and the men to crown a living educational system with universities which are to-day, after nearly eight centuries, in the vigour of perennial youth. An educational system so built up survived the heavy strain of famine, plague, and war in the fourteenth and fifteenth centuries, and gathered new strength from the splendour and fury of the Renaissance and the Reformation. Elizabeth and her Ministers recognized the economic side of education; not only did they reform the administrative abuses which had crept into the grammar schools and the universities, but they strengthened the elementary schools and made apprenticeship in husbandry, arts, occupations, crafts, and mysteries a part of the national system of education. At the end of the Elizabethan age the universities had a greater percentage of the rising manhood of the nation than they have ever since secured; and the seventeenth century saw a new Cambridge rising in the new world which Elizabethan adventurers had thrown open to mankind. The Great Rebellion can scarcely be said to have had an adverse effect on English education. Both the universities were "disaffected"; yet Cromwell blessed them with a new endowment; and out of the turmoil of the Commonwealth we see dimly emerging new educational ideas which took effect on both sides of the Atlantic. A class of educational enthusiasts, both in the Church and in the ranks of Dissent, kept educational idealism alive and laid the basis of that principle of education for the poorest which illuminated the dark days of the eighteenth century. Through long periods of war, economic distress, and public indifference the schools fought the battle of national character, and made the intermittent struggle from 1756 to 1815 a period of national glory.

Before the close of that period the inseparable economic and educational needs of the nation had become manifest. The social conditions of London throughout the eighteenth century had been terrible. The shock of the French Revolution awakened our best thinkers, and gave a new impetus to the Sunday school movement and to the efforts of those who saw that no charity school system could cure the discontents of the age. Raikes, Bell, and Lancaster in the closing years of the old and the opening years of the new century initiated a new educational order. The interval of the Peace of Amiens saw a definite economic and educational effort in the Compulsory Education Act of 1802, entitled "an Act for the preservation of the health and morals of apprentices and others, employed in cotton and other mills, and cotton and other factories." The Act itself, which imposed a measure of compulsory education upon each apprentice "for the first four years at least of his or her apprenticeship," never became effective; but it was an imperfect mirror in which the future was brokenly reflected. It at least recognized the conjoint relationship of religious, secular and industrial training, and laid down in imperfect fashion the principle that we have recovered to-day—that sanitary and health-giving conditions are inseparable from efficiency. The shock from which Europe suffered a century ago awakened or half-awakened England to the needs of her people, and in particular to the needs of the next generation.

The Crimean War was instantly followed by new and notable educational efforts. To what extent this was due to the revelations of the war is not wholly clear; but it that not only elementary but mid and university education found new this time. It was at last fully realiz if England was to survive, in any r in any national sense, the strain immense industrial activities, she mus house in order and look into the structu her home life. The struggle for more life in a grades of education, which first became a notable political fact after the Crimean War, rendered possible the far-reaching educational legislation which between 1868 and 1878 touched every grade of society from the factory child to the university Fellow and threw open the widest educational facilities to women. This movement or wave of advance had achieved its full effect by the time of the South African War. It was during and in the period immediate following that war that we saw the ne great advance. During the period of th war statesmen and administrators were busi at work in reconstructing on an immense sca the machinery and organization of our schoo The far-reaching changes included the abo tion of *cul-de-sac* higher elementary teaching the substitution for innumerable small and ineffective educational authorities of a county and borough system, the elaboration of a highly-organized system of secondary schools, and the creation of one authority, the Board of Education. The close of the war fou the country in possession of machinery w rendered it possible to grapple in some effective degree with the terrible problems disclosed by the recruiting sergeant and the new agencies for social relief.

The problem of childhood was definitely attacked about the year 1899, when Sir William Robson's Act raised the age for children in factories and workshops to twelv years. This provision was made effective by the Factory and Workshop Act of 1901, which in many cases made it impossible for a child to be a "full-timer" under fourteen years. I. A LESSON OF EMPIRE.

". . . to build within the mind of man
The Empire that abides."

This is to prove a war of liberation, if the aim to which the best thought and conscience of Europe aspires is to be of any avail. So far as it is possible for clear truth and justice to emerge from such a period of shock and struggle, of deep anxiety and horror, we hope and must insistently demand that the result may show a wide discrediting of the whole principle of national dominance without the consent of the *dominium*, and may leave the way open for the liberation of the peoples, not only from each other's menace, but from their own past selves.

We can expect no millennium when the sore and exhausted combatants come first to patch up a settlement; but we must demand such a settlement as will make possible the further development of a true comity of liberated nations. The settlement will be in the hands of the present adult public and its spokesmen. The further development will be for the rising generation to evolve; and the teachers of to-day will be largely responsible for the Europe of to-morrow. They are training a generation not only "for the wise maintenance of the

for their kind. The whole trend of the rising scale of life is towards the finding of a *modus vivendi* and of an escape from the recurring vicious circle of aggression, defence and counter-aggression; life rises in proportion to its power of becoming more and more free for the constructive struggle to use its environment to the best advantage. Specialized aggressive types are exfoliated, and in due time shrivel off; while specialized defensive types (such as the mollusc, and later in biological history, the crustacean) make of their shells a permanent check upon further advance in the scale of being. Progressive life has to find out a more excellent way. This is a rather abstract instance of a point of view which may be applied; but the details of its application, dependent as they will be upon the region of the subject which is being covered, will occur readily to the mind of the teacher.

It should not be thought that these necessarily terse and generalized suggestions of method imply a treatment that is possible only with advanced classes; the task of simplification for children—even for quite young children—is by no means insuperable. The writer of this knows by experience that the reduction of the great issues raised by this war to their simplest human terms is an exercise well repaid by the keen interest and intelligence it evokes from a junior class; and well repaid, also, by the touchstone it supplies for distinguishing the true metal. What one can tell to children of national hopes, and not be ashamed, is ... people can best trust among its aims ...rations.

TEACHING PATRIOTISM.

..., then, are children to be taught about the war, not merely what facts, but what principles, so that they may form a right judgment upon it and upon all other wars in which their country may be engaged? The principle is the important thing. Get that right and the teaching will be right. Get that wrong and the teacher, however patriotic he may feel, will be poisoning the minds of his pupils. It is not his duty, as a teacher, to communicate to them his own natural moods—the anger against the Germans which we must all feel ... times, the instinctive hatred of enemy for ...emy, the instinctive pride in our own ...tories, which every boy feels in the victories his own school over another. These things ... not need teaching, they come naturally; ...d the teacher who teaches them is wasting his own time or doing worse. Yet there is a patriotism that can be taught and ought to be taught, a patriotism that leads to duty, not to boasting or hatred; and a teacher can have a clear idea of this patriotism in his mind and can present it to his pupils so that they will be able to distinguish it from the patriotism which may help to ruin their country even through their own heroic deeds.

The patriotism which is sane and modest, and not the less passionate for that, is of the same nature as the love which we have for our parents. It is, in fact, a natural affection; and we owe it, and the duty it imposes upon us, to our country as to our parents. It is our duty to defend our country when it is threatened, as it is our duty to protect our parents from want. But just as we know our parents are imperfect human beings, so we ought to know that our country consists of imperfect human beings. Both may do wrong, and we are not then to maintain that they do right because they are our parents or our country. And, as no sensible or well-bred man would go about boasting that his parents surpassed all other parents, so we ought not to boast thus of our country. It is mere vulgar egotism to believe that your country must be the finest in the world because it is yours. That cannot be true of every country, and who are you to judge among them all and give the prize to ... own? Patriotism is the desire to make ... country, not the belief that it is, the ... country in the world. Pure, unselfish ... does not insist upon excellence in its ...; and the more egotism there is in love ...ss love there is in it. Those who are ... to fight and die for England now are ...ng because she is their mother, not because ...ey believe that she is the finest country in ...e world. If that were their reason, every ...n of clear judgment and detachment would ...e his patriotism or be shaken in it. For ..., at best, a very doubtful question whether ...gland is the finest country in all respects; ... if teachers are to tell their pupils that ...is, they will have to take a great many ... out

...ays being told now that the ...love their country to be in all wise and good to start with, it is sure to do many things that are foolish and wicked. Its duty is to try to be wise and good; and the duty of every member of it is to contribute as much wisdom and goodness as he can to the whole, not to assume that his country is a perfect abstraction which needs from him merely what little encouragement his boasting and flattery can give it. That is what children need to be taught about patriotism, so that we may not blindly hate our enemies and in doing so fall as blindly into their worst errors.

III. FRENCH SCHOOLMASTERS TO-DAY.

Thirty thousand teachers have been enrolled in the active fighting forces of France. Of this number 2,057 fell in the first year of war. Nearly 8,000 have been wounded or taken prisoner. Seven hundred have been mentioned in dispatches, 45 have been decorated with the "Legion of Honour," 52 with the "Médaille Militaire," nine with the "Order of St. George." This in brief is a year's achievement of French school teachers at the front. All ranks and grades are herein represented; and it is significant that nearly every one of them answering the call to arms elected to join the troops in the field rather than to remain in the rear occupied with administrative duties.

Quite as brilliant is the record of those teachers, overtaken by the tide of war, who for over a year have remained at their posts in the districts still held by the invader. Though no statistics are compiled, it is known that many have been shot by the enemy in endeavouring to protect the interests of France; others have been removed as hostages to Germany, while still others have been killed while performing their humble duties. When, at the approach of the enemy, all civil authorities have evacuated a town, the French school teacher is expected to remain to safeguard the civil population. To him falls the duty of negotiating with the German military authorities, of bargaining with them in regard to proper payment for goods requisitioned and of performing all the functions of administrator, at the same time of keeping up the courage and high sense of patriotic discipline among the stricken inhabitants—and even, if possible, holding classes as usual.

Behind the firing line the tasks of the teachers who for reasons of age or infirmity are not mobilized are almost as arduous. At the outbreak of the war the schoolhouse in the country districts at once became the rallying centre of the community. It is the school teacher who twice daily receives the official *communiqués*; and in small, out-of-the-way places, where newspapers are rare, he copies them in his own handwriting, to be distributed in the district More often he reads them aloud to the assembled villagers, comments on the military operations, and keeps the community intelligently informed about the course of the war. He reads and writes the letters for the illiterate, receives notices of the deaths of relatives of the people of his district killed in action, arranges the forwarding of packages to the front and to prisoners of war. It was under the direction of the school teachers of France that before the end of the winter campaign of last year over 500,000 woollen mufflers, pairs of socks, mittens, &c., were made and forwarded to the troops in the field. Under their initiative many school houses have been turned into "garderies" (play-rooms), where the smaller children of the community are kept while their mothers and elder sisters are at work in the field or factory. These children, whose ages range from ten months to six years, are cared for from early morning until nightfall. They are given three good meals, and are often provided with clothing collected by the teachers. The work receives no subvention from the State, and is supported entirely by funds which the school teacher is able to collect. They further instituted the "Noël du soldat," to provide Christmas presents for the troops in the field, a penny from each child bringing over £20,000; while the teachers themselves all over France agreed to give at least 2 per cent. of their monthly salary for Red Cross and similar purposes.

Notwithstanding the fact that nearly half the teaching staff of France was called to the colours in the first days of the war, and that many of the school houses and over half the more important school buildings in the chief cities of the country were requisitioned by the military authorities for hospital purposes, the schools have been able to carry on their work. A call for volunteer instructors met with surprising results. In one school a Judge gives the Latin lessons. In another a prefect has taken charge of the courses in German, a dentist teaches natural science,

broader issues of the war, and th... patience in hours of defeat an... greater fortitude until the final ...

IV. WHAT GERMAN CHILD... ARE TAUGHT.

(FROM A CORRESPONDENT IN GERMANY.)

"War and courage have accomplished greater things than love for one's fellowmen." Nietzsche's phrase, which had great influence on the thinkers of the modern Germany, is to-day being handed down to the coming generation with a fresh and immediate significance. War glorified, the one ultimate and vital aim of life—this is the lesson that millions of German schoolboys are daily listening to; this is the text of lectures delivered from numberless platforms and pulpits. "War is the great educator." "Without war the world would wallow in materialism." "Peace is a dream, not even a lovely dream."

These are a few ideas that German teachers are putting in the minds of their pupils. In the schoolrooms throughout the Empire to-day the true meaning of the Great War is being interpreted according to this point of view. Pupils are being taught that this war had to come sooner or later. Germany, it is argued, has developed so rapidly during the past fifty years through the might of German arms, German industry and German intelligence that she was destined to be surrounded by a circle of enemies jealous of her growing power. German children are being told that fifty years ago Germany began to assert herself by the conquest of Schleswig-Holstein (that old German State) in 1864. This beginning of the struggle for German unity was continued in 1866, and the first stage completed in 1870 by the creation of the German Empire under the hegemony of Prussia. Even in those days England looked askance on the growing power of Germany. It is being instilled into the minds of young Germany that the hatred of neighbouring States grew apace with the increase of German naval, military and industrial power. Germany did everything to keep the peace of the world, but was attacked on all frontiers, and is now fighting a defensive war for the outraged honour of the Fatherland.

These ideas, current in Germany at large, are being ground into the minds of the next generation with all the thoroughness of the German method by her leading educators. The German schoolboy is being taught by his elders that the peoples of all other nations—not Allied—are cowardly liars and slanderers, and that Germany alone stands for truth and righteousness and relies on the strength of German arms to vindicate German virtues and ideals. Everything foreign must go. Nowhere has this "anti-foreign" rage been more virulently in evidence than in the class-room. The "Verdeutschungsbewegung" (Germanizing movement) has gone to such limits that many German pedagogues even declare that it is a sign of slavish weakness on the part of Germans to learn to speak foreign tongues, to act, to think like English or French men. "A German must shave his head in order to remain a German when living abroad, so rapidly does he assimilate the customs and manners of other peoples," a well-known German remarked to me with much bitterness. But the Germans will see to it, so they declare, that their children shall not in the future be the slaves of any foreign race.

National unity, according to the German dogma, can be maintained only by the awakening of a feeling of national pride in the hearts of every young child. German schools have become schools of patriotism, where duty to the State, abnegation and sacrifice of the individual will to the need of the State are exalted above all other virtues. The German youth is being taught that the State's right and duty is to control not merely the actions, but even the thoughts of her subjects. The individual shall cease to exist, and in his place rises the mighty "Germania," the product of a united people. "We are not on earth to be happy, but to fulfil our obligations"; Bismarck's words are given a new significance. The German instructor is teaching his classes that the Germans are fighting like heroes against Händler, as warriors against mercenaries, as a people in arms, whom foreigners are wont to call slaves of a militarist regime, against the slaves of Mammon (England), of empty love of prowess (France) and of the knout (Russia).

Doctrines such as these, impressed on the mind of youth, cannot fail to breed a spirit of malice and hatred towards Germany's many enemies of to-day, which will not only endure but will hinder all plans of permanent peace. In no country has the Government

I. A LESSON OF EMPIRE.

". . . to build within the mind of man
The Empire that abides."

This is to prove a war of liberation, if the aim to which the best thought and conscience of Europe aspires is to be of any avail. So far as it is possible for clear truth and justice to emerge from such a period of shock and struggle, of deep anxiety and horror, we hope and must insistently demand that the result may show a wide discrediting of the whole principle of national dominance without the consent of the *dominium*, and may leave the way open for the liberation of the peoples, not only from each other's menace, but from their own past selves.

We can expect no millennium when the sore and exhausted combatants come first to patch up a settlement; but we m demand such a settlement as will ma possible the further development of a tr comity of liberated nations. The settleme will be in the hands of the present adu public and its spokesmen. The furth development will be for the rising generation to evolve; and the teachers of to-day wil be largely responsible for the Europe of to-morrow. They are training a generation not only "for the wise maintenance of th

for their kind. The whole trend of the rising scale of life is towards the finding of a *modus vivendi* and of an escape from the recurring vicious circle of aggression, defence and counter-aggression; life rises in proportion to its power of becoming more and more free for the constructive struggle to use its environment to the best advantage. Specialized aggressive types are exfoliated, and in due time shrivel off; while specialized defensive types (such as the mollusc, and later in biological history, the crustacean) make of their shells a permanent check upon further advance in the scale of being. Progressive life has to find out a more excellent way. This is a rather abstract instance of a point of view which may be applied; but the details of its application, dependent as they will be upon the region of the subject which is being covered, will occur readily to the mind of the teacher.

It should not be thought that these necessarily terse and generalized suggestions of method imply a treatment that is possible only with advanced classes; the task of simplification for children—even for quite young children—is by no means insuperable. The writer of this knows by experience that the reduction of the great issues raised by this war to their simplest human terms is an exercise well repaid by the keen interest and intelligence it evokes from a junior class; and well repaid, also, by the touchstone it supplies for distinguishing the true metal. What one can tell to children of national hopes, and not be ashamed, is ... people ca... best trust among its aims ...urations.

TEACHING PATRIOTISM.

..., then, are children to be taught about the war, not merely what facts, but what principles, so that they may form a right judgment upon it and upon all other wars in which their country may be engaged? The principle is the important thing. Get that right and the teaching will be right. Get that wrong and the teacher, however patriotic he may feel, will be poisoning the minds of his pupils. It is not his duty, as a teacher, to communicate to them his own natural moods—the anger against the German which we must all feel ... times, the instinctive hatred of enemy for ...emy, the instinctive pride in our own ...ctories, which every boy feels in the victories his own school over another. These things ... not need teaching, they come naturally; ...d the teacher who teaches them is wasting his own time or doing worse. Yet there is a patriotism that can be taught and ought to be taught, a patriotism that leads to duty, not to boasting or hatred; and a teacher can have a clear idea of this patriotism in his mind and can present it to his pupils so that they will be able to distinguish it from the patriotism which may help to ruin their country even through their own heroic deeds.

The patriotism which is sane and modest, and not the less passionate for that, is of the same nature as the love which we have for our parents. It is, in fact, a natural affection; and we owe it, and the duty it imposes upon us, to our country as to our parents. It is our duty to defend our country when it ... threatened, as it is our duty to protect ...ur parents from want. But just as we know our parents are imperfect human beings, so we ought to know that our country consists of imperfect human beings. Both may do wrong, and we are not then to maintain that they do right because they are our parents or our country. And, as no sensible or well-bred man would go about boasting that his parents surpassed all other parents, so we ought not to boast thus of our country. It is mere vulgar egotism to believe that your country must be the finest in the world because it is yours. That cannot be true of every country, and who are you to judge among them all and give the prize to ... own? Patriotism is the desire to make ... country, not the belief that it is, the country in the world. Pure, unselfish ... does not insist upon excellence in its ...t; and the more egotism there is in love ...ess love there is in it. Those who are ...y to fight and die for England now are ...ady because she is their mother, not because ...ey believe that she is the finest country in ...e world. If that were their reason, every ...n of clear judgment and detachment would ...e his patriotism or be shaken in it. For ..., at least, a very doubtful question whether ...gland is the finest country in all respects; ...d if teachers are to tell their pupils that ...is, they will have to take a great many ...ne... ...ed.

...ays being told now that the ...ieve their country to be in all ...nest country in the world. They ...nate religious patriotism which ...m to self-sacrifice and heroism, ...hat crimes and follies! Therefore needs to make it clear, to ...hat patriotism is not religion ...e substitute for it. It is not ...m

...ribute as much wisdom and goodness as he can to the whole, not to assume that his country is a perfect abstraction which needs from him merely what little encouragement his boasting and flattery can give it. That is what children need to be taught about patriotism, so that we may not blindly hate our enemies and in doing so fall as blindly into their worst errors.

III. FRENCH SCHOOLMASTERS TO-DAY.

Thirty thousand teachers have been enrolled in the active fighting forces of France. Of this number 2,057 fell in the first year of war. Nearly 8,000 have been wounded or taken prisoner. Seven hundred have been mentioned in dispatches, 45 have been decorated with the "Legion of Honour," 52 with the "Médaille Militaire," nine with the "Order of St. George." This in brief is a year's achievement of French school teachers at the front. All ranks and grades are herein represented; and it is significant that nearly every one of them answering the call to arms elected to join the troops in the field rather than to remain in the rear occupied with administrative duties.

Quite as brilliant is the record of those teachers, overtaken by the tide of war, who for over a year have remained at their posts in the districts still held by the invader. Though no statistics are compiled, it is known that many have been shot by the enemy in endeavouring to protect the interests of France; others have been removed as hostages to Germany, while still others have been killed while performing their humble duties. When, at the approach of the enemy, all civil authorities have evacuated a town, the French school teacher is expected to remain to safeguard the civil population. To him falls the duty of negotiating with the German military authorities, of bargaining with them in regard to proper payment for goods requisitioned and of performing all the functions of administrator, at the same time of keeping up the courage and high sense of patriotic discipline among the stricken inhabitants—and even, if possible, holding classes as usual.

Behind the firing line the tasks of the teachers who for reasons of age or infirmity are not mobilized are almost as arduous. At the outbreak of the war the schoolhouse in the country districts at once became the rallying centre of the community. It is the school teacher who twice daily receives the official *communiqués*; and in small, out-of-the-way places, where newspapers are rare, he copies them in his own handwriting, to be distributed in the district. More often he reads them aloud to the assembled villagers, comments on the military operations, and keeps the community intelligently informed about the course of the war. He reads and writes the letters for the illiterate, receives notices of the deaths of relatives of the people of his district killed in action, arranges the forwarding of packages to the front and to prisoners of war. It was under the direction of the school teachers of France that before the end of the winter campaign of last year over 500,000 woollen mufflers, pairs of socks, mittens, &c., were made and forwarded to the troops in the field. Under their initiative many school houses have been turned into "garderies" (play-rooms), where the smaller children of the community are kept while their mothers and elder sisters are at work in the field or factory. These children, whose ages range from ten months to six years, are cared for from early morning until nightfall. They are given three good meals, and are often provided with clothing collected by the teachers. The work receives no subvention from the State, and is supported entirely by funds which the school teacher is able to collect. They further instituted the "Noël du soldat," to provide Christmas presents for the troops in the field, a penny from each child bringing over £20,000; while the teachers themselves all over France agreed to give at least 2 per cent. of their monthly salary for Red Cross and similar purposes.

Notwithstanding the fact that nearly half the teaching staff of France was called to the colours in the first days of the war, and that many of the school houses and over half the more important school buildings in the chief cities of the country were requisitioned by the military authorities for hospital purposes, the schools have been able to carry on their work. A call for volunteer instructors met with surprising results. In one school a Judge gives the Latin lessons. In another a prefect has taken charge of the courses in German, a dentist teaches natural science, and an artist, an hotel-keeper, a chemist, and a book-keeper have joined the teaching staffs. Competent substitutes were everywhere found to carry on the work of the absent instructors, so that with the opening of the new school year conditions were again nearly normal, as the military authori-

IV. WHAT GERMAN CHILD... ARE TAUGHT.

(FROM A CORRESPONDENT IN GERMANY.)

"War and courage have accomplished greater things than love for one's fellowmen." Nietzsche's phrase, which had great influence on the thinkers of the modern Germany, is to-day being handed down to the coming generation with a fresh and immediate significance. War glorified, the one ultimate and vital aim of life—this is the lesson that millions of German schoolboys are daily listening to; this is the text of lectures delivered from numberless platforms and pulpits. "War is the great educator." "Without war the world would wallow in materialism." "Peace is a dream, not even a lovely dream."

These are a few ideas that German teachers are putting in the minds of their pupils. In the schoolrooms throughout the Empire to-day the true meaning of the Great War is being interpreted according to this point of view. Pupils are being taught that this war had to come sooner or later. Germany, it is argued, has developed so rapidly during the past fifty years through the might of German arms, German industry and German intelligence that she was destined to be surrounded by a circle of enemies jealous of her growing power. German children are being told that fifty years ago Germany began to assert herself by the conquest of Schleswig-Holstein (that old German State) in 1864. This beginning of the struggle for German unity was continued in 1866, and the first stage completed in 1870 by the creation of the German Empire under the hegemony of Prussia. Even in those days England looked askance on the growing power of Germany. It is being instilled into the minds of young Germany that the hatred of neighbouring States grew apace with the increase of German naval, military and industrial power. Germany did everything to keep the peace of the world, but was attacked on all frontiers, and is now fighting a defensive war for the outraged honour of the Fatherland.

These ideas, current in Germany at large, are being ground into the minds of the next generation with all the thoroughness of the German method by her leading educators. The German schoolboy is being taught by his elders that the peoples of all other nations—not Allied—are cowardly liars and slanderers, and that Germany alone stands for truth and righteousness and relies on the strength of German arms to vindicate German virtues and ideals. Everything foreign must go. Nowhere has this "anti-foreign" rage been more virulently in evidence than in the class-room. The "Verdeutschungsbewegung" (Germanizing movement) has gone to such limits that many German pedagogues even declare that it is a sign of slavish weakness on the part of Germans to learn to speak foreign tongues, to act, to think like English or French men. "A German must shave his head in order to remain a German when living abroad, so rapidly does he assimilate the customs and manners of other peoples," a well-known German remarked to me with much bitterness. But the Germans will see to it, so they declare, that their children shall not in the future be the slaves of any foreign race.

National unity, according to the German dogma, can be maintained only by the awakening of a feeling of national pride in the hearts of every young child. German schools have become schools of patriotism, where duty to the State, abnegation and sacrifice of the individual will to the need of the State are exalted above all other virtues. The German youth is being taught that the State's right and duty is to control not merely the actions, but even the thoughts of her subjects. The individual shall cease to exist, and in his place rises the mighty "Germania," the product of a united people. "We are not on earth to be happy, but to fulfil our obligations"; Bismarck's words are given a new significance. The German instructor is teaching his classes that the Germans are fighting like heroes against Händler, as warriors against mercenaries, as a people in arms, whom foreigners are wont to call slaves of a militarist regime, against the slaves of Mammon (England), of empty love of prowess (France) and of the knout (Russia).

Doctrines such as these, impressed on the mind of youth, cannot fail to breed a spirit of malice and hatred towards Germany's many enemies of to-day, which will not only endure but will hinder all plans of permanent peace. In no country has the Government more direct control over education than in Germany. In no country are academic influences so subservient to political programmes. And it would appear to be the aim of the German authorities to create a spirit of uncompromising Chauvinism in the hearts of the coming generation.

WOMEN'S WORK NOW AND TO-MORROW.

THE NEW EFFICIENCY.

Sitting in council at their recent conference in London with "Women's Share in Reconstruction after the War" as their general subject, the National Union of Women Workers inevitably discussed the education of to-morrow as it regards girls. It was probably inevitable also that they should separate with a rather disappointing sense of vagueness in the conclusions reached. Our knowledge of the future is itself too vague to make definite planning seem anything but futile. Yet some aspects of the future emerge clearly enough to make preliminary thought possible.

For "Acquired Inefficiency," as one speaker aptly phrased it, there will be no room in a time when far more women will enter the labour market, some to maintain their crippled menfolk, many to relieve the strain on men by maintaining themselves. Many of these will come from classes where work for the women has not been the normal condition. Other women will have to retire from their temporary occupation of men's professions to that sphere of home duties which they may have ceased to regard as worthy of their developed powers. Whether these will raise the status of the houseworker by abolishing rule of thumb in the kitchen and sewing-room, and bringing brain power to bear on a worthy reorganization of the domestic crafts, remains to be seen. It is at least certain that the nation is awakening to its need of the most adequately developed citizens, ready "both in body and soul," to use the Church's phrase, for their lifework; and others besides educationists are asking for efficiency in women charged with the rearing, feeding, clothing, and moral training of the children.

That suggestions for educational improvement should be contradictory is not therefore surprising, though the want of unanimity in a body of women specially qualified and experienced threatens a long delay in solving pressing questions. Thus one speaker could plead for the abolition "for ever and ever" of "fine sewing" as a subject of education for girls, while another following could insist that ability to make every necessary garment for herself and her children should be regarded as an essential acquisition in every social class; a third could urge that specialized training in the manufacture of ready-mades should enable the whole community to clothe itself by the professional labour of a few. To the minds of many women, no doubt, this last seems a consummation devoutly to be wished, with the addition that cookery should also follow this course—as laundry work has so largely done—and become a specialized craft exercise in universally-providing kitchens with public dining-rooms attached. In the minds of these extreme reformers it is but one step more to the State nursery, so warmly advocated by Mrs. Gilman and others in America, where the varied influences of mother and home shall be replaced by artificially ideal conditions and the Trained Educator.

Into such Utopias, however, the National Union of Women Workers were too practical to wander. Training for life as it seems likely to be is the pressing question. On one point they were clear. Adaptability is for a woman a more valuable quality than even that intuition of which we are somewhat weary of hearing the praises. A man's profession is apt to be largely determined by early-known conditions and opportunities, whereas marriage may in a moment plunge a woman into undreamt-of circumstances and surroundings. Her whole happiness and efficiency will depend upon her ability to adapt herself to them. Or some family cataclysm may throw her on her own resources; and the world as we know it is strewn with the jetsam of lives wrecked because education had failed to form a woman capable of doing or of learning to do any one thing well enough to earn money by it.

A true note was struck by the speaker who asserted the necessity for an educational foundation on which it would be possible to build a super-structure of technical or higher literary knowledge. Her own experience as head of a school of languages was that girls of 16 were apt to come to her ignorant of the Charybdis of the unawakened intelligence. If this is their condition, girls from poor homes will continue to crowd into those unskilled trades which give a better starting wage, but lead to neither professional skill nor domestic competence.

But, secondly, there is the daughter of the upper artisan and lower middle-class, whose opportunities range from the upper-grade elementary school, through the small private school of varying cost with its tendency to genteel accomplishments (the modern substitutes for velvet-painting and the use of the globes) to the high school with its generally solid fare and Pisgah-glimpses of wider plains of knowledge. For girls of this fast-rising proletariat one need seems to be asserting its importance, that of more mathematical training to counteract that want of accuracy which in the "men's professions" so fast opening to them is everywhere pronounced their weak point. In banking, commerce, dispensing, or legal or inspectorial work "intuition" cannot replace accuracy in noting and stating facts and dealing with figures. Some serious study of good literature is the best source of correct writing of English.

Too early specialization is no doubt dangerous. But though a woman's working life, unless cut short by marriage, may not be necessarily shorter than a man's, her prime is sooner reached and passed; and the years of adolescence when a boy can face severe study are for her a time when overstrain may be fatal. A lengthy training, such as is needed, for instance, in medicine, cannot be left till too late; and probably by 14 the school studies should at least be influenced by the intended future. The doctors who are now frankly expressing their wish for more women colleagues will do well to so mould public opinion that long years need not be wasted in wearing down parental opposition; and a girl's frank determination to respond to the need for women in our Colonies should be met by an education that will fit her for the task.

Collectively, the conclusions of the Women Workers' discussion points to the crystallization of many demands into the appeal for a solid foundation in the education of girls of all grades, whether their ambition is to

> Get leave to work
> In this world, 'tis the best you get at all,

or whether, like the little girl who was asked her intended profession, their answer is, "Oh, mother! couldn't I be just a woman?"

should separate with a rather disappointing sense of vagueness in the conclusions reached. Our knowledge of the future is itself too vague to make definite planning seem anything but futile. Yet some aspects of the future emerge clearly enough to make preliminary thought possible.

For "Acquired Inefficiency," as one speaker aptly phrased it, there will be no room in a time when far more women will enter the labour market, some to maintain their crippled menfolk, many to relieve the strain on men by maintaining themselves. Many of these will come from classes where work for the women has not been the normal condition. Other women will have to retire from their temporary occupation of men's professions to that sphere of home duties which they may have ceased to regard as worthy of their developed powers. Whether these will raise the status of the houseworker by abolishing rule of thumb in the kitchen and sewing-room, and bringing brain power to bear on a worthy reorganization of the domestic crafts, remains to be seen. Into such Utopias, however, the National Union of Women Workers were too practical to wander. Training for life as it seems likely to be is the pressing question. On one point they were clear. Adaptability is for a woman a more valuable quality than even that intuition of which we are somewhat weary of hearing the praises. A man's profession is apt to be largely determined by early-known conditions and opportunities, whereas marriage may in a moment plunge a woman into undreamt-of circumstances and surroundings. Her whole happiness and efficiency will depend upon her ability to adapt herself to them. Or some family cataclysm may throw her on her own resources; and the world as we know it is strewn with the jetsam of lives wrecked because education had failed to form a woman capable of doing or of learning to do any one thing well enough to earn money by it.

A true note was struck by the speaker who asserted the necessity for an educational foundation on which it would be possible to build a super-structure of technical or higher literary knowledge. Her own experience as head of a school of languages was that girls of 16 were apt to come to her ignorant of the difference between a noun and a verb. If at the moment her audience were disposed to be amused rather than impressed, this feeling could not withstand Lady Sydenham's later plea for more study of the languages of India. We are slowly coming to see that truly Imperial service may be rendered by the woman who goes to India—whether as medical missionary or as mere mem-sahib—with a knowledge of native tongues or ability to learn quickly and accurately.

For the girl of the so-called working class, whose way is through the elementary school, marr age has been merely a matter of selection; but, if potential husbands should prove less plentiful, a number of new occupations will be open to her. Many of these, hitherto practised by men, will make a heavier demand on brain as well as on body. Girl tram-conductors, for instance, are surprised by the discovery not only that their bodily energy is taxed, but that the rapid and accurate arithmetic required involves unaccustomed mental effort. Parents will naturally lean to the obscurantist view that botany and brush-drawing "don't do 'em not a bit o' good" when the urgent need for obtaining and keeping a good post is for a rapid and accurate use of simple arithmetic with adequate writing and spelling. But over against the Scylla of wider smattering lies the

its importance, that of more mathematical training to counteract that want of accuracy which in the "men's professions" so fast opening to them is everywhere pronounced their weak point. In banking, commerce, dispensing, or legal or inspectorial work "intuition" cannot replace accuracy in noting and stating facts and dealing with figures. Some serious study of good literature is the best source of correct writing of English.

Too early specialization is no doubt dangerous. But though a woman's working life, unless cut short by marriage, may not be necessarily shorter than a man's, her prime is sooner reached and passed; and the years of adolescence when a boy can face severe study are for her a time when overstrain may be fatal. or whether, like the little girl who was asked her intended profession, their answer is, "Oh, mother! couldn't I be just a woman?"

THE TIMES

EDUCATIONAL SUPPLEMENT,
FRIDAY, *January* 14, 1916.

A Necessary Revolution.

If we are to face the future with any confidence after this exhausting war, we must face it as an educated people. We shall not be able to afford to waste the efficiency of a single English child. On all sides we hear the cry, though we see little enough of the practice, for economy. Now economy means one or both of two things—less expense, greater production. It is said by materialistic economists that lack of capital will render greater productiveness impossible. They forget the only capital that has permanent significance—the men and women of the nation. Our national business is to eliminate waste in human beings and to make each human being capable of realizing to the full his or her potential capacity for creative work, whether such work be material or moral or spiritual. Those ends can only be reached by the best training of childhood in the homes and in the schools. Something, of course, can be done among adults; but in the aggregate it is, comparatively speaking, very little. The bulk of humanity is made or marred in youth. Now there is no more appalling fact in our national economy than the waste of that supreme natural product—the child. We do not refer particularly to the waste of infant life, for that is merely one of many by-products of ignorance. We refer to the waste of efficiency among the children who survive. Consider the children of the people, how they live, after the experience of half a century of compulsory primary education. There are nearly half a million children between the ages of twelve and fourteen years

education on all the chil... of eleven years in all the the country. To do this we financially less expensive than present system; the existing schools would be divided into two departments, the preparatory department up to the age of eleven, the secondary department for all children above that age. The money now spent on scholarships and bursaries would be applied exclusively for purposes of higher training and education.

The distinction between what are known as higher elementary and secondary teaching respectively is the vital matter to appreciate. Elementary teaching cannot give an outfit for life. It is in its nature preparatory; and when it ceases to be preparatory it merely supplies uncorrelated knowledge and an education leading nowhither. On the other hand, secondary teaching has as its goal the power of reasoning about acquired knowledge and thus securing self-realization. The primary ideal is the heaping up of knowledge as an external property or possession; the secondary ideal is the assimilation of knowledge as part of the personality. The latter ideal gives an outfit for life, a wise, thoughtful, and productive people; the former gives us what we have got—a nation with 2,000,000 children running to waste.

We have no desire to criticize in any ungenerous spirit the National Union of Teachers. The work that it has done since its inception as the National Union of Elementary Teachers soon after the passing of the Elementary Education Act, 1870, has been in many—indeed, in most—respects worthy of high admiration. It has protected wisely and well the status and the financial interests of the elementary teacher. It has striven for nearly half a century to get all that can be got out of the elementary system; and has certainly had the interests of the children and of the nation as much at heart as the interests of the teachers. It has striven in comparatively recent years to bring within its fold the secondary system as a development of the elementary system; and, under the wise guidance of Sir James Yoxall, its permanent official, it has year by year taken a broader outlook of national educational necessities and has largely gone back to the fine idealism of its earliest days.

Nevertheless we do not think that the general attitude or policy of the National Union of Teachers has in the past been a wise one. In its origin it was an association of elementary teachers; and what we have called the primary ideal has always inspired it. This ideal had, we are convinced, for many years the indirect effect, which has not yet wholly passed away, of restricting the profession of an elementary teacher to persons who had been educated in the elementary schools; and thus it tended to emphasize those very class distinctions in education which it is the goal of all educational thinkers to abolish. The Union believed, and apparently still believes, that national education is best based on a system of primary teaching, and that the edifice of national education must be raised on that basis. The Secondary Schools Committee of the Union was ready to welcome the secondary school certificate authorized by the Board of Education because it "would give the secondary school free scope for developing its own proper work independently of university requirements on the foundation of elementary school training." That assumes that an elementary school training is the foundation of a national system; it assumes that the "proper work" of a secondary school is independent of "university requirements."

We should like to see the Union boldly adopt the policy of secondary education for all. It would at once link up with indissoluble bonds the schools of the people with the training colleges and the universities. It would substitute for the harmful policy of the educational ladder a system which

of a single English child. On all sides we hear the cry, though we see little enough of the practice, for economy. Now economy means one or both of two things—less expense, greater production. It is said by materialistic economists that lack of capital will render greater productiveness impossible. They forget the only capital that has permanent significance—the men and women of the nation. Our national business is to eliminate waste in human beings and to make each human being capable of realizing to the full his or her potential capacity for creative work, whether such work be material or moral or spiritual. Those ends can only be reached by the best training of childhood in the homes and in the schools. Something, of course, can be done among adults; but in the aggregate it is, comparatively speaking, very little. The bulk of humanity is made or marred in youth. Now there is no more appalling fact in our national economy than the waste of that supreme natural product—the child. We do not refer particularly to the waste of infant life, for that is merely one of many by-products of ignorance. We refer to the waste of efficiency among the children who survive. Consider the children of the people, how they live, after the experience of half a century of compulsory primary education. There are nearly half a million children between the ages of twelve and fourteen years

when it ceases to be preparatory it merely supplies uncorrelated knowledge and an education leading nowhither. On the other hand, secondary teaching has as its goal the power of reasoning about acquired knowledge and thus securing self-realization. The primary ideal is the heaping up of knowledge as an external property or possession; the secondary ideal is the assimilation of knowledge as part of the personality. The latter ideal gives an outfit for life, a wise, thoughtful, and productive people; the former gives us what we have got—a nation with 2,000,000 children running to waste.

We have no desire to criticize in any ungenerous spirit the National Union of Teachers. The work that it has done since its inception as the National Union of Elementary Teachers soon after the passing of the Elementary Education Act, 1870, has been in many—indeed, in most—respects worthy of high admiration. It has protected wisely and well the status and the financial interests of the elementary teacher. It has striven for nearly half a century to get all that can be got out of the elementary system; and has certainly had the interests of the children and of the nation as much at heart as the interests of the teachers. It has striven in comparatively recent years to bring within its fold the secondary system as a development of the elementary system; and, under the wise guidance of Sir James Yoxall, its permanent official, it has year by year taken a broader outlook of national educational necessities and has largely gone back to the fine idealism of its earliest days.

Nevertheless we do not think that the general attitude or policy of the National Union of Teachers has in the past been a wise one. In its origin it was an association of elementary teachers; and what we have called the primary ideal has always inspired it. This ideal had, we are convinced, for many years the indirect effect, which has not yet wholly passed away, of restricting the profession of an elementary teacher to persons who had been educated in the elementary schools; and thus it tended to emphasize those very class distinctions in education which it is the goal of all educational thinkers to abolish. The Union believed, and apparently still believes, that national education is best based on a system of primary teaching, and that the edifice of national education must be raised on that basis. The Secondary Schools Committee of the Union was ready to welcome the secondary school certificate authorized by the Board of Education because it "would give the secondary school free scope for developing its own proper work independently of university requirements on the foundation of elementary school training." That assumes that an elementary school training is the foundation of a national system; it assumes that the "proper work" of a secondary school is independent of "university requirements."

We should like to see the Union boldly adopt the policy of secondary education for all. It would at once link up with indissoluble bonds the schools of the people with the training colleges and the universities. It would substitute for the harmful policy of the educational ladder a system which would give to the entire community equal chances of progress in an infinite number of directions suited to an infinite number of types of mind and capacity. The ladder makes for class distinctions; secondary education for all means a truly educated democracy. That Sir James Yoxall himself sympathizes with this ideal is clear enough; for at the British Association meeting at Birmingham on September 12, 1913, he declared that "fifty years hence everybody would be educated up to the secondary school level and the number of university graduates would be increased ten times." But why should England wait fifty years for what she needs and can have to-day? If the National Union of Teachers will take its opportunity, will boldly demand secondary trained teachers for all school standards containing children of eleven years and upwards, will willingly receive for this purpose (in the present scarcity of men teachers) women who possess the necessary qualifications, the revolution will be accomplished. The compulsory school age will be raised to fifteen; cheap child labour will cease, and an outfit for life will be in the grasp of every child. That is an economy which England needs.

THE WAR AND THE WOMEN.

III.—WOMAN AS PEACEMAKER.

By ISRAEL ZANGWILL.

Happily, other women have appeared, not so content as the Pankhursts "to play the sedulous ape" to man, or to be dominated by his outlook. The women who met at The Hague in an international congress that embraced both English women and German women, had anticipated Romain Rolland's appeal to women to cease to be "men's shadows. "The women who do not fight have no right to goad on the fight," said the distinguished French women who addressed a greeting to the congress. And they laid down "the fundamental principle of feminism" as "the wish to create, while destroying war, a better and juster humanity." Just because they had no political voice in any of the belligerent countries, it was for them now to say what the men who were fighting could not say, and to preserve the spirit of international fraternity. And so this congress of women, from a dozen nations, under the presidency of Jane Addams, protested unanimously against "the madness and horror of war," believing with Queen Elinor in "King John":

> This might have been prevented and made whole
> By very easy arguments of love,
> Which now the manage of two kingdoms must
> With fearful bloody issue arbitrate.

The congress protested too against the assumption that women were protected in the war, and adjured "the Governments of the world" to put an end to it. Nor was their protest to be platonic. Under the inspiration of the practical and elaborately worked out project by Miss Julia Wales, of Wisconsin University, entitled "Continuous Mediation Without Armistice," it was resolved to try to create a conference of neutral nations for this purpose, also "to invite suggestions for settlement from each of the belligerent nations," and in any case to submit simultaneously to all of them "reasonable proposals as a basis of peace.' Women would, in fact, try to mediate between their males, as one tries to disentangle dogs. Nay, more, the women have actually gone out from this congress—like Queen's Messengers—and have been received by kings, premiers and presidents. The scheme of "continuous mediation" has been adopted likewise by the Quakers, and is said to be regarded by some Governments as "the sanest plan yet suggested." For climax, the congress resolved that an international meeting of women shall be held in the same town and at the same time as the Congress of Powers that is to frame the terms of the peace settlement after the war, for the purpose of presenting practical proposals to this conference. Women will be "men's shadows," but in what a novel sense! Side by side with the portentous and pontifical male congress which has always hitherto done the carving of the nations, and never failed to make a hash of it, will sit—like sober peahens beside their peacocks—a body of women interpreting national dignity and sovereignty and all the grandiose vocabulary of the male in terms of human life.

The Peahen's Point of View.

"We women judge war differently from men," said Dr. Aletta Jacobs, the Dutch initiatress of the Peace Congress. "Men consider in the first place the economic results, the extension of power and so forth. But what is material loss to us women in comparison to the number of fathers, husbands, brothers and sons who march out to war never to return? We women consider above all the damage to the race resulting from war and the grief and the pain and the misery it entails." That woman should thus revise what Thackeray called "the devil's code of honour" is not surprising, for she has actually borne in pain and reared in sick anxiety the body it is proposed to mutilate. "Unruly" as Shakespeare's Duchess of York, she cries to her lord:

> Hadst thou groaned for him
> As I have done, thoud'st be more pitiful.

I do not forget the Spartan mother who bade her son return with his shield or on it. But that mother had had no chance of developing an outlook of her own. Sparta was not so much a State as a barrack; every mother's son, unless he had been killed off as too sickly for a soldier, was taken from her at the age of seven to be stupefied by drill. She could only please her master by exaggerated echoes of his "Laconic" wisdom. To-day even in the Sparta of Prussia women have courted martyrdom by their protests against the war. And the wisdom of even the male peace-maker is no longer to go unquestioned, for as we have seen woman has resolved to shadow the Peace Congress and send it suggestions. There is a certain high comedy in the situation because everything will probably have been cut-and-dried beforehand by secret treaty, as it was at the Congress of Berlin. But what a

thrown into the world's eyes by politicians and poets. She will see Rozinante, not as the war-horse clothed in thunder, but as the lean starveling hack of reality, and Dulcinea, in whose honour the battle is joined, as the frowsy hoyden she is. There are indeed a few men who can see through the dust almost as clearly as women. "Only the other day," complains the "Times" of July 17, "a member of Parliament was talking about the money that would be wanted for housing after the war, and evidence is always cropping up to show that social reform still fills the minds of politicians and officials as the real business before them. The war is only an episode in their lives." Degenerate Britons! How—as Roosevelt witheringly puts it—shall milk-and-water match blood-and-iron? Unfortunately, Miss Margaret Scott tells us that without a quart of milk a day a sturdy soldier cannot be reared; and it would even seem as if "social reform" is as necessary to safeguard the population as trenches and field-guns.

One of the few genuine "war-profits" has been the attention drawn to the cradle as the real "cradle of liberty." A meeting at the Guildhall, presided over by the Lord Mayor, for the reduction of the wastage of child-life, took on for the first time the true guise of a "great patriotic meeting." The war, though war-wages and allowances have nourished the mothers as never before, has also taken many from the nursery, or exposed them—in the first rapture of handling money without even the necessity of feeding their lords—to the temptation of drink: they have taken man's place in the tap-room, as everywhere else. Hence even politicians have begun to see the need of looking after our first future line of defence—our infantry.

After the War.

Historians tell us that the Crusades, designed to win the tomb of Christ, promoted commercial intercourse between East and West. Germany, setting out to assert the male ideal, has given an immense jog to the feminine. But the price would have staggered the optimism of Pangloss. Ho-ti, whose house must be burnt down before he could taste crackling, roasted his pig infinitely cheaper. The loss of legions of young men will increase the number of spinsters, who will clamour with increasing outspokenness for a revised sex ethic. The entry of women into so many occupations will produce female blacklegs and gravely agitate the trade unions, already torn between the alternative of admitting women, with "equal pay for equal work," or seeing themselves undercut by cheaper but not always less efficient—and sometimes even more efficient—female labour.

The servant problem will be aggravated; the girls who have tasted the higher wages and urban freedom of the munition factories will not lightly return to domestic service, especially in the country house.

There will be friction all along the line at those points which women have not yet stormed—and these embrace in England the whole of the legal profession, the higher walks of the Civil Service and even of medicine, not to mention Parliament and Government. The end of the war will bring not peace but sex strife added to the inevitable economic discontents. For the social landscape cannot be transformed for women without changing man's situation too. When the valleys are exalted, the hills are apt to subside. By an odd coincidence the female chapter of the "Times'" "History of the War" winds up with a picture of "A Woman Making a Doll's House." That was, it appears, and not only from Ibsen, an exclusively male occupation. What sinister symbolism lurks in this climax? Is the man to be henceforward the pampered puppet?

[illegible] Under the inspiration of the practical and elaborately worked out project by Miss Julia Wales, of Wisconsin University, entitled "Continuous Mediation Without Armistice," it was resolved to try to create a conference of neutral nations for this purpose, also "to invite suggestions for settlement from each of the belligerent nations," and in any case to submit simultaneously to all of them "reasonable proposals as a basis of peace.' Women would, in fact, try to mediate between their males, as one tries to disentangle dogs. Nay, more, the women have actually gone out from this congress—like Queen's Messengers—and have been received by kings, premiers and presidents. The scheme of "continuous mediation" has been adopted likewise by the Quakers, and is said to be regarded by some Governments as "the sanest plan yet suggested." For climax, the congress resolved that an international meeting of women shall be held in the same town and at the same time as the Congress of Powers that is to frame the terms of the peace settlement after the war, for the purpose of presenting practical proposals to this conference. Women will be "men's shadows," but in what a novel sense! Side by side with the portentous and pontifical male congress which has always hitherto done the carving of the nations, and never failed to make a hash of it, will sit—like sober peahens beside their peacocks—a body of women interpreting national dignity and sovereignty and all the grandiose vocabulary of the male in terms of human life.

The Peahen's Point of View.

"We women judge war differently from men," said Dr. Aletta Jacobs, the Dutch initiatress of the Peace Congress. "Men consider in the first place the economic results, the extension of power and so forth. But what is material loss to us women in comparison to the number of fathers, husbands, brothers and sons who march out to war never to return? We women consider above all the damage to the race resulting from war and the grief and the pain and the misery it entails." That woman should thus revise what Thackeray called "the devil's code of honour" is not surprising, for she has actually borne in pain and reared in sick anxiety the body it is proposed to mutilate. "Unruly" as Shakespeare's Duchess of York, she cries to her lord:

> Hadst thou groaned for him
> As I have done, thou'd'st be more pitiful.

I do not forget the Spartan mother who bade her son return with his shield or on it. But that mother had had no chance of developing an outlook of her own. Sparta was not so much a State as a barrack; every mother's son, unless he had been killed off as too sickly for a soldier, was taken from her at the age of seven to be stupefied by drill. She could only please her master by exaggerated echoes of his "Laconic" wisdom. To-day even in the Sparta of Prussia women have courted martyrdom by their protests against the war. And the wisdom of even the male peace-maker is no longer to go unquestioned, for as we have seen woman has resolved to shadow the Peace Congress and send it suggestions. There is a certain high comedy in the situation because everything will probably have been cut-and-dried beforehand by secret treaty, as it was at the Congress of Berlin. But what a stride forward in the position of woman since 1878 when Beaconsfield and Bismarck remodelled Europe with results that are before us! It is she who aspires to save civilisation in the collapse of the politicians, and religion in the break-down of the bishops. Not every pious lady has been making shells on Sunday, and Christianity never had a nobler and more eloquent apostle than Miss Maude Royden, touring heathen Britain in a van, or Miss Cavell, laying down her life with the immortal sentence, "Patriotism is not enough." The "imperishable story of her latest hours," declared the Premier to the Commons, "has taught the bravest of us the supreme lesson of courage." "Yes, sir," he added emphatically, "and in the United Kingdom and throughout the Dominions of the Crown there are thousands of such women, and a year ago we did not know it." What a confession! For seven years thousands of women had been martyrising themselves for the cause of female freedom, and the Prime Minister and Parliament did not know such women existed! No wonder the seventh centenary of Magna Charta—entirely ignored by Englishmen—was celebrated this year only by the Women's Freedom League.

Woman as Sancho Panza.

Thus there is solid ground for confidence that the enfranchisement of women will not end in the addition of ten million pseudo-males to the electorate. What Mr. Roosevelt—in his gentle voice—calls the shrieking sisterhood, will not merely echo the bawling brotherhood. Much more likely is it that the pseudo-chivalry of the male with all its glittering mediæval lumber, will be swept away by female common sense as remorselessly as his military plumes and laces have been shorn away by the shears of necessity. Woman will play the Sancho Panza to the demented Don Quixote, with his babble of "battles, enchantments, adventures, extravagances, combats and challenges," and where he saw two mighty armies with pomp and pageantry of "arms, colours, devices and mottoes" she will see only the two flocks of sheep that were really there, obscured by the cloud o' dust the dumb herds driven to slaughter and lost in the dust

[illegible] between East and West. Germany, setting out to assert the male ideal, has given an immense jog to the feminine. But the price would have staggered the optimism of Pangloss. Ho-ti, whose house must be burnt down before he could taste crackling, roasted his pig infinitely cheaper. The loss of legions of young men will increase the number of spinsters, who will clamour with increasing outspokenness for a revised sex ethic. The entry of women into so many occupations will produce female blacklegs and gravely agitate the trade unions, already torn between the alternative of admitting women, with "equal pay for equal work," or seeing themselves undercut by cheaper but not always less efficient—and sometimes even more efficient—female labour.

The servant problem will be aggravated; the girls who have tasted the higher wages and urban freedom of the munition factories will not lightly return to domestic service, especially in the country house.

There will be friction all along the line at those points which women have not yet stormed—and these embrace in England the whole of the legal profession, the higher walks of the Civil Service and even of medicine, not to mention Parliament and Government. The end of the war will bring not peace but sex strife added to the inevitable economic discontents. For the social landscape cannot be transformed for women without changing man's situation too. When the valleys are exalted, the hills are apt to subside. By an odd coincidence the female chapter of the "Times'" "History of the War" winds up with a picture of "A Woman Making a Doll's House." That was, it appears, and not only from Ibsen, an exclusively male occupation. What sinister symbolism lurks in this climax? Is the man to be henceforward the pampered puppet?

Daily Mail 17-1-16 656/73 65

THE WOMEN ARE SPLENDID.

What the heroic women of the North and South [United States] did during that great conflict [the American Civil War] the women of Great Britain are doing to-day. They are showing the same high and courageous spirit, the same subordination of their personal griefs to the national cause, the same cheerful relinquishment of luxuries. It is a United Britain that confronts the enemy in France. It is a united womanhood, united in spirit, in labour, in faith, and high moral courage, that looks east across the Channel to that land beyond the horizon "somewhere in France" where the Empire is fighting for life.—Extract from "An American Woman at the Front," by Mary Roberts Rinehart.

Woman's part in the war; not the tender nursing part—that was expected by all; but the great share she is taking in what was once man's work is one of the great surprises.

There is just a touch of wounded vanity about the thousands of men who have to admit to-day that, unknown to themselves, they have been performing tasks which are now proved to have been women's work. Across the Channel, in France, women have always successfully managed large businesses. There is a large number of cases in point: Mme. Pommery, whose champagne sparkles around the world; Mme. Duval, who organised the popular restaurants that were the forerunners of so many in London; Mme. Paquin, who succeeded her husband in the great modiste business; Mme. Curie, who discovered radium. Women play a prominent part in French politics, French business, French science, French agriculture, and in French affairs generally. But this war is changing the lives of British women.

Throughout the English-speaking world we have always prided ourselves on sheltering our womenkind. We have not, for example, cared to see them working in the fields and at the heavier forms of manual labour. There has been a great deal of self-deception about it, because, after all, women have performed heavy tasks in factories for a century or more. And we must not forget our old friends the chainmakers of Cradley Heath.

Again, from the days of Florence Nightingale the noble work of nursing our sick and carrying on the service of our hospitals has been to an increasing extent in the hands of women. In no field have they displayed a higher competence, a more sublime devotion; and few indeed are they who have not at some time or other in their lives incurred a tremendous debt to the British hospital nurse. Again, here and there before the war, gifted women, such as Elizabeth Fry and Octavia Hill, showed the way in social reform among us, and lately women have shone in journalism and in municipal work.

Yet despite these very striking exceptions the war has already proved that woman has not hitherto been given her opportunity in most parts of the Empire. For some years her cause was obscured by the hysteria of the Suffragettes. To-day it begins to look as though the votes-for-women demonstrations were but manifestations of the tremendous pent-up energy of more than half the nation.

Women have taken to every kind of war work with a rapidity and adaptability that have certainly not been shown by all the ruling sex. It has been openly admitted that in many munition factories women, in their eagerness to defeat the enemy, are producing a greater output of energy each day than men working in the same shops.

Women have successfully initiated themselves into new kinds of war work which had hitherto been regarded as coming only within man's sphere. Sometimes, however, woman, in the excess of her zeal, is doing work she ought not to be permitted to do in the interest of the race and the nation. Delicately bred women should not be allowed to push tradesmen's heavy tricycles or undertake the duties of grooms and ostlers. But there are still wide fields of opportunity for them in most of the indoor and many of the outdoor occupations.

These vocations will remain open in those dim and distant days, known as "After the war," when no self-respecting male will again be seen matching ribbons behind counters, typewriting, standing behind aldermanic chairs, or playing the piano at kinema theatres. The men who have been bomb-throwing will have no appetite for the hundred-and-one gentle and essentially feminine pursuits by which they have hitherto earned their living.

Every woman who is releasing a man from his work is helping in the war. And—to do them justice—women, with their characteristic intuition, saw that fact instantly. Every woman so engaged is showing the world the real capacity of her sex for an infinite number of new kinds of labour, and is also helping the country to progress towards a much-desired goal: the more equal distribution of money among the people.

Before the war, in dreary, manless suburbs and provincial towns, thousands of nice girls, whose families thought it beneath their dignity that they should work, preferred the boresome existence of keeping up appearances on small dress allowances to an active participation in daily life. Since the war these young women have entered into the battle of industrial work with joyousness and, though the absence of the best of the land in the war zone is unhappily delaying the marriage to which every patriotic woman looks forward, they have the great satisfaction of knowing that, whether they be women doctors, women dentists, women clerks, women ticket collectors, or engaged in any other profession, they are helping the great cause of Freedom.

It is largely due to woman's hatred of injustice that Sir John Simon's "slackers" and "shirkers" have been put to rout. Women's quick brains are not easily fooled by the quibbles of lawyer politicians. With the exception of a few of the members of professedly pro-pacifist families, with whom the war is a mere political incident, women have rallied unanimously to the cause of Compulsion.

It is largely due to woman's hatred of injustice that Sir John Simon's "slackers" and "shirkers" have been put to rout. Women's quick brains are not easily fooled by the quibbles of lawyer politicians. With the exception of a few of the members of professedly pro-pacifist families, with whom the war is a mere political incident, women have rallied unanimously to the cause of Compulsion.

Their influence on recruiting has been immense. When the forthcoming and long-overdue Economy Campaign begins they will be found the most effective workers in the task of solving the Money Question, which is every whit as important as the Soldier Question. For, though women may not have man's capacity of earning, they are far better savers. We look with confidence to them to help to reduce the inordinately swollen war bill of five million pounds a day.

WOMEN IN FACTORIES.

FROM LORD SYDENHAM.

To the Editor of *The Daily Mail.*

Sir,—At a time when so many appeals are made to the public for assistance in work—most of which is excellent and all of which is good—I am reluctant to add to the number. There is, however, one great need which is not sufficiently realised.

The steady influx of women into factories of war material throughout the United Kingdom, and not into factories alone, but into other spheres of labour, is a most remarkable feature in our national life, creating new conditions and new demands.

To these brave women, whose courage and endurance are powerfully helping us in the present crisis, we owe more than expressions of gratitude.

I believe that all that is possible is being done to provide for the comfort of our troops in the field: but the unfulfilled needs of the millions of women who are toiling under difficult and often trying circumstances are growing daily more urgent. The Y.W.C.A. are earnestly struggling with a task which at times seems overwhelming, and the National Committee painfully realise that their work is inadequate.

From all parts of England we are receiving appeals for opening up temperance canteens, where substantial hot meals as well as light refreshments are served, rest rooms, and hostels, which are necessary for the comfort and the guardianship of the working girls and women, the majority of whom are from 15 to 25 years of age. If the need of men munition workers' huts where rest is possible and food provided is great, as it certainly is, there can be no doubt that the needs of our girls is greater.

The Y.W.C.A. is about to make an appeal for £25,000 to enable them to meet these needs in the various industrial centres, from which pressing letters have been received.

Her Majesty the Queen has already sent a message of sympathy and has given a generous donation; the Duchess of Sutherland is the president of the appeal.

The nation is beginning to realise the great extent to which the industries of our country depend, in this time of grave emergency, on the patriotic work of women. I plead for funds to enable us to meet the pressing needs of these women, who are contributing their full share towards the triumph of our national cause.

SYDENHAM, Treasurer,
Young Women's Christian Association.
26, George-street, Hanover-square, W.

WOMEN IN KHAKI.

WAR WORKERS' MARCH.

Women war workers assembled in London yesterday on the Embankment to march to a meeting at the Queen's Hall.

Lookers-on felt sorry for the Sphinx that she was seated too far away on the Embankment to see war-time woman of the twentieth century. At last she might have been moved to some emotion. A few rifles and a Maxim or two, and the procession might have passed for a demonstration of Amazons

"Form fours!" "Halt!" "Eyes right!" shouted a woman officer in a fine parade-ground voice. Junior officers, complete in khaki skirts, puttees, slouch hats, Sam Browne belts, and with rattan canes, strode along the ranks and gave orders. Stiff and stern stood the ranks of the Green Cross, first-aid detachments, nurses, women police, women signallers, women's volunteer reserve, war hospital supply units, women gardeners, and representatives of women who have taken up men's work in war time. Women munition workers were to have marched too, but they sent a message that they were too tired, having worked all night.

Just before the procession started an ununiformed woman did an heroic thing. She passed along the pavement leisurely, in front of the stern ranks, with a big fat Pekingese under her arm. There were a few youths with gently open mouths and pendulous cigarettes. One of them tried to be amused at the women war workers. A little woman in black in the crowd rapped out pertinent remarks that sent him meditating away.

PICTURESQUE ARRAY.

Then the bands struck up—one of them of the ever-ready Boy Scouts. The procession was half an hour late—a triumphant touch of femininity. Khaki uniforms, grey uniforms, blue uniforms, snow-white nursing uniforms, brightened the dull streets.

There were martial-looking grey motor-cars, driven by martial-looking women. There were a horse van with its woman driver, a motor-van with its woman driver, and a group of women workers in picturesque blue overalls. The little Boy Scouts looked almost girlish in all the stern array.

Then the crowds gave the women war workers the cheer they so much deserve.

WOMEN AFTER THE WAR

Lady Randolph Churchill's Optimistic Views.

PROVING THEIR VALUE.

The *New York Times* publishes an interview with Lady Randolph Churchill on women's part in the war, in which Lady Randolph claims that with very few exceptions the women of the Allied countries have thrown themselves into it almost as earnestly as have the men.

LADY RANDOLPH CHURCHILL.

As an example of what women can do, she points out that in Governmental activities of other than a clerical kind women are making superb records. One woman, because of sheer ability, has been given general charge of all the motor-cars connected with the great arsenal at Woolwich. "If these things are not answers to the men who argued in the House of Commons that women are not fit for serious productive work, then what could be?" she asks.

Will Get The Vote.

It is her opinion that after the war women will be given the vote without much opposition, and dozens of men who in the past opposed agree with her.

As a matter of fact, she goes on, women have proved themselves to be so competent that out of this very competence a problem has arisen. Many men, when released from military service, will find the pre-war "jobs" very ably filled by women.

One detail of this admission of women's fitness for men's positions has been the fact that they have given greater satisfaction than men, because they do not drink.

Men Will Be Ousted.

The returning man, therefore, will be puzzled by his status. He will have to be very good indeed if he displaces the woman in his former work, and will have to be a sober man. It will raise the standard of British labour splendidly, and put many men out of the towns upon the land, is Lady Randolph's conclusion on this point.

But No Sex Rivalry.

As to sex rivalry, "There are those who cynically look forward to a sex war as a natural result of all these influences, but I am not so pessimistic. I believe that matters will readjust themselves upon a new and better basis," is her view.

Portsmouth Times 5/2/16

The Queen 1.7.16 656 65

Portsmouth Women's War Work.

Their Many Activities.

"Portsmouth and the War: Activities of Women Workers" is the title of an interesting and beautifully illustrated article from the pen of Ethel C. Hargrove, F.R.G.S., in the current number of "The Ladies' Field." Describing first the activities of Miss Agnes Weston, the writer recalls the fact that she has worked among the sailors since 1871. "In 1915 she and her helpers found their labours more arduous than ever before owing to the thousands of men who pass through Portsmouth on their way to the various fronts. At the Royal Sailors' Rest the halls have been converted into club rooms . . . and moving pictures and a cinema show form a special feature in the entertainments." Prisoners of war receive many parcels, and sailors' wives are not forgotten, for they meet weekly at The Rest, which, now the size of a huge barracks, does not lose its characteristic of being a home away from home.

The Soldiers' Institute, High-street, the writer says, is now a branch of the Young Men's Christian Association, and at the outset of the war it was generously thrown open to any branch of the Service. It has since been the billeting centre of local battalions, besides being much used for lectures and working parties. Soldiers staying a day or two in Portsmouth make it their headquarters, and its representatives visit military hospitals and outlying barracks and forts with supplies of writing paper and literature. Miss Robinson, now considerably over 80 years of age, now lives in the New Forest; nevertheless, she recently published a book dealing with her past work for the soldiers

It is interesting to recall that the Portsmouth Dockyard Munition Workers' Canteen was started last May by "Mrs. Edwards, with Lady Lawrence as president, Lady Meux and Mrs. Waymouth (wife of the Admiral) vice-presidents, and a local committee (hon. treasurer Miss Breton; hon. secretary, Miss Reader-Lack). It is worked on the same lines as the Woolwich Arsenal Canteen by nearly ninety ladies, twelve being on for each shift. Carts are wheeled to two different places in the Dockyard twice a day, for twelve o'clock lunch and five o'clock tea. About a thousand men are fed daily, and no food is allowed to exceed 2d. a plate. The ladies wear navy blue overalls, and meet every morning at eleven o'clock, working from the base kitchen in the Dockyard. Mrs. Arnold-Forster pursues her special role at the Reading Room of the Almshouses, Highbury-street (kindly lent by the Vicar of Portsmouth). She collects woollen comforts and clothing for many regiments, and in response to many urgent private appeals from the front has despatched over 100,000 sandbags." Mrs. Massey and Miss Hellard are mentioned among the large band of assistants.

Mrs. Wyllie, Tower House, Point, we are told, interests herself chiefly in hospitals in France. During the past year she has crossed the Channel eight times, taking with her 25½ tons of clothing and drugs for the soldiers. Mrs. Wyllie is now at home after taking 10½ tons of comforts to a temporary hospital at Foix. Mr. Wyllie, recently home from a cruise with the Grand Fleet, which he hopes to rejoin shortly, is very hard at work on a picture of a thrilling incident experienced by Captain Tennent of the Royal Flying Corps, and his own son over Messines. His energy is as unbounded as his wife's. He is Cyclist Commander of the Portsmouth Training Corps and Assistant Commissioner of the 1st Portsmouth Sea Scouts. He lectures at intervals on "Light and Shade from a Height" to young observers of the Royal Flying Corps, and has been flying to assure himself of the correctness of his wonderful air pictures.

The writer informs us that there are "thirty five post women employed in all parts of Portsmouth, undertaking two or three deliveries daily (and on duty at 6 a.m.). A certain share of Sunday and indoor work is done by them, and twelve do ordinary clerk's work at the General and Pension Post Offices. More will shortly be required for sorting to release men for service. The post women are free after 8 p.m.; they wear badges and mackintosh skirts and capes with hoods, which can be turned up over their heads. The General Manager of the Portsmouth Corporation Tramways has received 720 applications from ladies for positions of conductor, out of which number 104 have been taken on; 84 of these are at present in regular service, 14 have left for various reasons, and six are still learning. The numbers will be augmented as occasion arises through men joining up, and the applicants are selected from those who are single, out of employment, and widows. They give every satisfaction, and like the work very much.

"Mrs. Slade-Baker and her helpers, Mrs. Ford and Miss Davies, have been indefatigable since the commencement of the war. They began by collecting comforts in a small way, Mrs. Slade-Baker's drawing room serving as store room. Her appeals met with so much support that she has now a depot at the Soldiers' Institute, where she receives anything from a bed to a thermometer.

"Mrs. A. W. Jones, sister of Brigadier General Sir John, C.B., holds weekly working parties at Gun House, and is occupied in collecting comforts and money to purchase them with, for twelve Royal Garrison Artillery Siege Batteries.

"Mrs. Townsend, of Clyna House, Southsea, is secretary of the Portsmouth branch of the organisation for collecting news of the wounded and missing. Forms are given to the

LOW SALARIES AND HIGH PRICES.

By MRS MARGARET HEITLAND.

WE ARE ALL RATHER INCONSISTENT in the way we view prices. The war has carried our inconsistency further and made it more apparent. At moments when we hear of high prices we are tense and irritable. Another halfpenny a pound for bacon throws us into darkest gloom, a halfpenny off the pound makes us joyful for a whole day. There comes a great sale for a war charity. The object is excellent, but we have not the least idea about the thrifty administration of the charitable society's expenditure. We hope that the organisers of the undertaking are as careful about halfpence as we are in our domestic housekeeping. But we do not know. The idea appeals to us; the details being unknown we cannot criticise them. So we give to the sale something that we valued or we buy at it something we did not want. And we return home obliged to be more careful than ever about such things as food and wages and tips.

We are not quite irrational when we are lavish on isolated occasions but niggardly about daily expenditure. For the spasmodic outbursts of spending may be controlled at our pleasure. But start a daily practice, and you will be compelled by many persons (notably by your servants) to continue it. I am always trying to find a reason for my own and other people's conduct. But the reason why a man does not higgle about a few pounds when he buys a car and does higgle when he engages a clerk is not a reason that is immediately clear. It reveals itself gradually as being the fear that in the case of the clerk a precedent will be set which will govern the terms made with all future clerks. The purchase of the car, on the other hand, is a single transaction and resembles a capital investment. This consideration, also comes into the matter, and I think it is an important one. When a man buys a car he pays for the labour as well as the materials which have been needed for its production. But he does not pay out the wages himself. They may be high, they may be low. He has no responsibility for over or under-payment. Therefore the purchaser of some expensive thing reflects with pride on the costly labour which exerted itself on the making of the article he has acquired. Unfortunately he rarely feels a similar satisfaction in paying very high wages or salaries himself. Doubts haunt him that he has allowed himself to be "done," and he questions whether he might not have made a better bargain—better, of course, for himself.

If I seem to have followed a rather long course of ideas, I have perhaps suggested some reasons for the opposition which salaried women encounter when they try to get the rates of their payment raised. Women who are doing professional or clerical work for small remuneration, naturally perceive that they are not to-day obtaining the real equivalent of the same payment two years ago. Their landlady makes them pay more for their lodgings; their tradesmen demand more for food; the bills for fuel are much heavier. Yet to themselves no more money is offered; and quite possibly a rise is refused when asked for.

Many women workers, indeed, are not only kept at pre-war rates of payment, but are half expected to give up fairly remunerative work and to take some less well-paid employment in order to remedy the shortage of hands in certain industries. It used to be explained that the inferior payment given to women was the direct result of some unalterable law of supply and demand. Women's labour was too plentiful and must take what it could get. But now when no labour is plentiful, women are expected deliberately to cheapen their terms. From the highest motives of patriotism many of them do so—which seems to indicate that the unalterable law of supply and demand can be modified on occasion. Whenever they are making this sacrifice directly to the nation as a whole, their position approximates that of the soldier, the sailor, or the airman; and they are giving what is beyond price. But this applies chiefly to actual war employments of the non-productive or non-profit-making kinds. When profit-making comes in, as it does in most permanent industries and even in war industries when they are conducted by private firms and not by the Government itself, the employment in question is not comparable with the work of the men in the Services. Women, therefore, have a good claim to ask for a rise in payment which shall correspond partly not wholly (because we must all share the sufferings of our country) with the rise in the cost of living.

The present state of things is peculiarly hard in the case of non-resident workers. Women who have to provide their own board and lodging, when they are not getting higher wages than they did in peace time, are really getting much lower pay. To say that out of every ten shillings they are practically losing three, is, I suppose, no over-statement of present values. A woman, therefore, who received £2 a week before the war ought now to be paid £2. 12s. if she is to find herself in the same position as formerly. Even if some sacrifice is entailed upon her she might well claim from £2. 8s. to £2. 10s.

We are all, however, under the influence of fixed ideas with regard to salaries. The prices of what are called "commodities" are incessantly moving, though often only by pence and halfpence, and to these oscillations we are thoroughly accustomed. The "round sum" affects salaries and stipends, and affects them to their detriment

We think of a certain type of person in a certain class of occupation who is worth (or said to be worth) 25s. a week; of another worth 40s.; another at £100 a year, £300 a year, £500 a year, or whatever the figure may be. We [illegible] these persons with their salary labels upon them. We can scarcely imagine the labels changing. We are accustomed to intermediate wriggling amounts, such as 38s. 6d. as the war equivalent of [illegible] 40s. [illegible] of earlier days. Yet so many fixed ideas and established habits have been destroyed by the war that it does not appear to be impossible that the [illegible]

Lawrence as president, Lady Meux and Mrs. Waymouth (wife of the Admiral) vice-presidents, and a local committee (hon. treasurer Miss Breton; hon. secretary, Miss Reader-Lack). It is worked on the same lines as the Woolwich Arsenal Canteen by nearly ninety ladies, twelve being on for each shift. Carts are wheeled to two different places in the Dockyard twice a day, for twelve o'clock lunch and five o'clock tea. About a thousand men are fed daily, and no food is allowed to exceed 2d. a plate. The ladies wear navy blue overalls, and meet every morning at eleven o'clock, working from the base kitchen in the Dockyard. Mrs. Arnold-Forster pursues her special role at the Reading Room of the Almshouses, Highbury-street (kindly lent by the Vicar of Portsmouth). She collects woollen comforts and clothing for many regiments, and in response to many urgent private appeals from the front has despatched over 100,000 sandbags." Mrs. Massey and Miss Hellard are mentioned among the large band of assistants.

Mrs. Wyllie, Tower House, Point, we are told, interests herself chiefly in hospitals in France. During the past year she has crossed the Channel eight times, taking with her 25½ tons of clothing and drugs for the soldiers. Mrs. Wyllie is now at home after taking 10½ tons of comforts to a temporary hospital at Foix. Mr. Wyllie, recently home from a cruise with the Grand Fleet, which he hopes to rejoin shortly, is very hard at work on a picture of a thrilling incident experienced by Captain Tennent of the Royal Flying Corps, and his own son over Messines. His energy is as unbounded as his wife's. He is Cyclist Commander of the Portsmouth Training Corps and Assistant Commissioner of the 1st Portsmouth Sea Scouts. He lectures at intervals on "Light and Shade from a Height" to young observers of the Royal Flying Corps, and has been flying to assure himself of the correctness of his wonderful air pictures.

The writer informs us that there are "thirty five post women employed in all parts of Portsmouth, undertaking two or three deliveries daily (and on duty at 6 a.m.). A certain share of Sunday and indoor work is done by them, and twelve do ordinary clerk's work at the General and Pension Post Offices. More will shortly be required for sorting to release men for service. The post women are free after 8 p.m.; they wear badges and mackintosh skirts and capes with hoods, which can be turned up over their heads. The General Manager of the Portsmouth Corporation Tramways has received 720 applications from ladies for positions of conductor, out of which number 104 have been taken on; 84 of these are at present in regular service, 14 have left for various reasons, and six are still learning. Her appeals met with so much support that she has now a depot at the Soldiers' Institute, where she receives anything from a bed to a thermometer.

"Mrs. A. W. Jones, sister of Brigadier Genl. St. John, C.B., holds weekly working parties at Gun House, and is occupied in collecting comforts and money to purchase them with, for twelve Royal Garrison Artillery Siege Batteries.

"Mrs. Townsend, of Glynn House, Southsea, is secretary of the Portsmouth branch of the organisation for collecting news of the wounded and missing. Passes are given to the ladies working in Portsmouth, and they wear badges. One week they sent 80 reports up to headquarters."

"Space fails to detail at length," adds the writer, "the efforts made by the Hon. Mrs. Lowry, wife of the Vicar of St. Bartholomew's, Southsea. Her weekly gatherings for wives and mothers of soldiers and sailors have proved a godsend to many, and the summer garden parties were much appreciated. Like work has been done by Miss Blewett and friends for sailors' relations living at Milford. Music and addresses are given, while the women knit socks, etc., for soldiers and sailors. Mrs. Bradford, wife of Admiral Bradford, inaugurated this work last year. The women are visited frequently and kept in touch with by the ladies who help them with their pensions, separation orders, or any other difficulties. All classes are drawn together, and the old adage applies, 'One touch of nature makes the whole world kin.'"

high, they may be low. He has no responsibility for over or under-payment. Therefore the purchaser of some expensive thing reflects with pride on the costly labour which exerted itself on the making of the article he has acquired. Unfortunately he rarely feels a similar satisfaction in paying very high wages or salaries himself. Doubts haunt him that he has allowed himself to be "done," and he questions whether he might not have made a better bargain—better, of course, for himself.

If I seem to have followed a rather long course of ideas, I have perhaps suggested some reasons for the opposition which salaried women encounter when they try to get the rates of their payment raised. We think of a certain type of person in a certain class of occupation who is worth (or said to be worth) 25s. a week; of another worth 30s.; another at £100 a year, £200 a year, £300 a year, or whatever the figure may be. We almost see these persons with their salary labels upon them. We can scarcely imagine the labels changing. We are unaccustomed to intermediate, niggling amounts, such (for instance) as 32s. 6d. as the war equivalent of 25s., or 39s. for the 30s. of earlier days. Yet so many fixed ideas and old established habits have been destroyed by the war that it does not appear to be impossible that the salaries of trained women workers should be brought into some sort of correspondence with the conditions of the time.

Eastern Evening News
Friday. Feb 26 - 1916.

Quite the most picturesque and interesting item in yesterday's war news was that which recorded the disembarkation at Havre of a corps of a thousand English suffragettes to take over service as signallers, telephonists, telegraphists, and automobile drivers. The corps is a carefully selected one of highly skilled and competent women for the duties they have undertaken; and their arrival means the release from these duties of an equal number of fighting men for fighting service. A good many hard things have been said about militancy as it used to find expression; but this new expression of the militant spirit in the national cause is splendid. The women, by all accounts, had a magnificent reception from the British and French soldiers and the general populace on landing. Not only at the front, but in this country, there are a great many necessary services in which women could very efficiently take the place of men who are kept out of the fighting line by being tied to these services. We still go on recruiting for the Army on the entirely false assumption that the organisation of an army is the organisation of a fighting force only. As a matter of fact, there are all sorts of necessary services which are just as much part of the complete organisation of an army as is the actual fighting service; and there is no reason at all why enlistment on army lines for all these necessary services should not be carried on in such a way as to give the full status of national service to those engaged in such services. We have begun dimly to recognise that by giving service badges to the workers in arsenals and in munition factories. If ever we adopt the principle in its entirety of co-ordinated organisation of all necessary war time services as branches of the national Army, there will be room for many women's battalions in such an organisation.

Apart from this special work at the front for which the suffragettes have volunteered, the work of women since the outbreak of war has been such as should earn the grateful thanks of the nation. In the hospitals in particular the nursing staffs have been wonderful; and what our sick and wounded owe to their skill and gentleness no words can express. And in many other ways, the war time services given by women have helped magnificently. Here in Norwich, we owe the organisation of that most admirable training of women in the new toy-making industry to our militant suffragettes; and one might quote from all over the country similar services. Nothing could more wonderfully illustrate the way in which the old rancours and controversies which occupied us a year ago have been wiped out in this time of national unity in face of a great peril; and when we emerge from this war it will be into a new atmosphere in which the memory of our unity and of the service given in the day of national trouble will dissolve a good many of the old antagonisms.

Morning Post 8.6.16.

WOMEN AND THE WAR.

When the "Daily Mail" suggests that out of the "twenty-two" much-tried gentlemen who control our destinies, eleven should be replaced by "practical ladies," we may well take it that the hour of woman suffrage is at hand. That the way to it should lead through a war in which women can take no combative part, and should be pointed by the most energetic of war-advocates, is not quite such a paradox as it looks. A modern war is no affair of selected armies of males. It is the embattlement of national forces, in the field and behind the field. The direction of these activities falls naturally to the ablest and best-equipped members of the warring communities. The war could not have been carried on for a twelvemonth without the co-operation of women.

But the foundations for this work of energy and skill were laid not in war but in peace. Anyone who has taken part in our public life during the last twenty years knows the kind of contribution that women have made to it, and foresaw its obvious fruit. All the modern British parties—Liberal, Conservative, Socialist, Labor—have been largely officered and administered by women. Some of the best detailed work in local government and in factory inspection stands to their credit. They have not entered a single profession in which they have not succeeded. If we are to fix their special contribution to politics and social work, we should say that they brought to the task more industry than men, more love of detail, a more intimate and affectionate view of life, and that their power to grasp its wider principles and forms of action will probably expand in proportion as it secures larger fields for exercising it. The same qualities have appeared in the workshops; raising new standards of industry, adaptability, and cleanliness. During the last few months workshops have been built or remodelled with a special view to the wants of the women workers. The ground has been captured, till probably every observer of life but the editor of the "Spectator" is aware of the change.

For our part, we never saw any reason for restricting the entry of women into public life to the polling-booths. You cannot make electors of women and refuse their right to election; or open the door of the School Committee and shut out that which leads to the House of Commons and to the Grand Committee of Parliament which we call the Cabinet. The country might not choose to put a woman at the head of the Navy or the Army; but we do not believe it would hesitate to entrust her with the Local Government Board or the Education Department. All this is a matter of time and evolution; but if the war and its consequences are rightly understood, the time is rapidly approaching when the State will be based on the co-operation of the whole community. Where, indeed, is the anti-suffrage case? It is in ruins. The physical force argument has broken down in the hour when it seemed to be carrying all before it. The idea of women as essentially non-workers, even as parasites on the State, is destroyed. The entry of women into the workshops has revolutionized trade unionism and made reconstruction inevitable. The man's standard of work has been replaced by the man-and-woman standard, a change at once perilous and promising. All is open to revision; the women will have instantly to choose the part they will play, for they will be in a position for terms both from the employers and from their workpeople. The activities of women will be equally vital to the healing processes that will be set up for the rebuilding of the shattered health of great masses of the men and the re-invigorating of the educational

WOMEN'S WAR ORGANISATIONS.

TO THE EDITOR OF THE MORNING POST.

Sir,—I shall be grateful if you will be so kind as to permit me to make known to the women of the United Kingdom that a movement has been inaugurated with the object of co-ordinating and giving expression to their opinion on matters of grave importance relating to the process of this terrible war. A meeting of representatives of Women's Organisations was held on the 5th instant, when it was unanimously decided that vigorous organised effort, in which women of all classes and of all schools of thought could participate, should be undertaken in presenting their views upon certain phases of war policy to his Majesty's Ministers and to the people of the Empire. The programme of activity to which it was decided women should energetically devote themselves with as little delay as possible is as follows:

(1) That the crime against humanity and International Law which has been perpetrated by the German military authorities in the treatment of British prisoners of war should be brought home in all its terrible significance to our people, and should from the women's point of view be communicated to all Women's Organisations in neutral countries.

(2) That the influence of the women of Great Britain should be brought to bear with all the force possible upon the members of both Houses of Parliament to insist on the full and unqualified use of British Sea Power in tightening the blockade of Germany and thus shortening the war.

(3) That Women's Organisations and women generally should give serious thought to the grave economic problems which are bound to arise at the close of the war, and with the object of safeguarding the interests of British industries and the wage-earning power of our population should impress upon his Majesty's Ministers the necessity of the exclusion of all enemy influence in our economic life.

In order to give effect to this programme (which it is felt will appeal to every woman in the Empire), a conference of representative delegates from women's societies of all kinds, which will be addressed by a prominent Imperial statesman, is being arranged at an early date. Following the conference, public meetings will be held in London and in the larger provincial towns with the object of emphasising the importance of these questions as they appeal to women. The Committee will be glad to receive the support of women everywhere, and all communications addressed to the Hon. Secretaries, at 8, Beaufort-gardens, S.W., will be welcomed, and every practical suggestion carefully considered.—Yours, &c.,

OLIVE BURNHAM,
Chairman of Provisional Committee.

37, Grosvenor-square, June 7.

of the best detailed work in local government and in factory inspection stands to their credit. They have not entered a single profession in which they have not succeeded. If we are to fix their special contribution to politics and social work, we should say that they brought to the task more industry than men, more love of detail, a more intimate and affectionate view of life, and that their power to grasp its wider principles and forms of action will probably expand in proportion as it secures larger fields for exercising it. The same qualities have appeared in the workshops; raising new standards of industry, adaptability, and cleanliness. During the last few months workshops have been built or remodelled with a special view to the wants of the women workers. The ground has been captured, till probably every observer of life but the editor of the "Spectator" is aware of the change.

For our part, we never saw any reason for restricting the entry of women into public life to the polling-booths. You cannot make electors of women and refuse their right to election; or open the door of the School Committee and shut out that which leads to the House of Commons and to the Grand Committee of Parliament which we call the Cabinet. The country might not choose to put a woman at the head of the Navy or the Army; but we do not believe it would hesitate to entrust her with the Local Government Board or the Education Department. All this is a matter of time and evolution; but if the war and its consequences are rightly understood, the time is rapidly approaching when the State will be based on the co-operation of the whole community. Where, indeed, is the anti-suffrage case? It is in ruins. The physical force argument has broken down in the hour when it seemed to be carrying all before it. The idea of women as essentially non-workers, even as parasites on the State, is destroyed. The entry of women into the workshops has revolutionized trade unionism and made reconstruction inevitable. The man's standard of work has been replaced by the man-and-woman standard, a change at once perilous and promising. All is open to revision; the women will have instantly to choose the part they will play, for they will be in a position for terms both from the employers and from their workpeople. The activities of women will be equally vital to the healing processes that will be set up for the rebuilding of the shattered health of great masses of the men and the re-invigorating of the educational forces on which the very life of England depends. But the greatest reaction of all will be against war itself. There, indeed, the coming of women into politics will be a symbol of the higher forms of life which will arise out of the coarseness and futility of physical conflict. Nothing will content the shaken world till it can build up a strong fortification of law and feeling against the arch-enemy that laid low its predecessor. Into this society the statesmanship of women will come with clean hands and fresh minds. Their grievance against war will be great, the instinctive abhorrence which the woman-soul must feel for its waste and enfeeblement ought to be the strongest current in the after-war State, and their resolve to do away with it will bring to the exhausted or despairing mind of man the moral reinforcement it will need.

of British industries and the wage-earning power of our population should impress upon his Majesty's Ministers the necessity of the exclusion of all enemy influence in our economic life.

In order to give effect to this programme (which it is felt will appeal to every woman in the Empire), a conference of representative delegates from women's societies of all kinds, which will be addressed by a prominent Imperial statesman, is being arranged at an early date. Following the conference, public meetings will be held in London and in the larger provincial towns with the object of emphasising the importance of these questions as they appeal to women. WOMEN AT WORK.

SOME MINOR WAR INDUSTRIES.

(FROM A CORRESPONDENT.)

Within a mile radius in the East-end of London, in unpretentious buildings with no soaring chimneys or roaring engines, I have lately watched girls and women in hundreds turning out articles of war in thousands.

Here is a courtyard lined with bales of flannelette, and on the far side the two-storeyed building is full of girls making gas helmets. There are 150 girls, and each makes 100 helmets a week. They sit at machines, guiding the material under needles that go on clicking, clicking at a furious rate, impelled by invisible electric power. It seemed odd that these bell-shaped pieces of flannelette could be helmets of any kind; but from something which a foreman showed me I could guess their efficacy against one particular form of German brutality. And each helmet takes only four minutes to make.

In the lower room I saw 70 thicknesses of flannelette, which, being first marked through perforated paper in wavy lines, were turned by a single application of an electric cutter into 280 helmets. Upstairs the seaming process was equally quick. Machines in row upon row keep whirring for 9½ hours a day, and no wonder that girls of 15 are earning 23s. a week and older girls as much as £3.

STATIONERY TAGS.

My next visit was to a queer little industry. From vast masses of flannelette I passed to bits of green string and snippets of tin. This is where the Government's stationery tags are made. Fifty little girls were punching round tags and flat tags. Tin, cut by a lathe to uniform sizes, falls into a groove in the machine, and the girls clamp tin and string together by jerking forward an iron pulley, once for each end of a tag. The machines work so quickly that a child can curve 15,000 tags a day.

Elsewhere what was once a shop is now a factory for the machining of khaki-coloured bandoliers. Here 80 girls were turning out 60,000 bandoliers a week, and some of them are earning as much as 10s. a day. Each strand is outlined with five pouches for cartridges, and machinists were busy sewing these up.

So far I had seen what is commonly considered "light" work, suitable for women and girls. My fourth visit showed what women can achieve in replacing men at heavy manual labour. The scene was a factory where shirts are made for Serbians and for British soldiers. Owing to the war, women are doing all the work here. They act as overseers, as packers, as haulers, as dispatchers, and as chauffeuses. Here were canvas-covered packages measuring some 3ft. by 4ft.; and I learned that three women can stitch these "parcels" at the rate of 100 an hour. But the stitching is by no means all. When the packages are ready, women hoist them into a car, and a woman drives them off to the War Office.

A less cheering sight met me at yet another factory. Here were soldiers' kit-bags in hundreds lying piled in a corner of the building. Why were they lying there, useless? Because the contract for the cords had been placed in Ireland, and rebellion in Ireland meant (among many other things) that these cords were delayed in delivery. The episode set me thinking on the intimate connexion of war and industry, and on the many questions of to-day and to-morrow with which the things I had seen were closely linked.

Belfast Letter
20-3-16.

656
656/7

I went to a meeting in connection with women war workers on Wednesday. It was held in the ballroom of Viscountess Hambleden's house in Grosvenor Place. She is a daughter of the late Earl of Arran, and a sister of the Marchioness of Salisbury and of the Countess of Airlie. Miss Mary M'Arthur was to have spoken, but was prevented by an important engagement. Among those present were Lady Cowdray, in the chair; the Countess of Crawford, whose husband is serving in France as Corporal Crawford, R.A.M.C.; the Countess of Albemarle, whose husband and sons are serving; Lady Wantage, whose late husband founded the British Red Cross Society, or was at least the principal instigator of its being founded; Lady Llangattock, whose fine son, the late Honourable Charles Rolls, was a pioneer of aviation, and lost his life at his task; the Dowager Countess of Clanwilliam, whose husband was a distinguished sailor, who went to his grave with a bit of lead of an enemy of Britain in his arm, and whose sons and sons-in-law are fighting; Lady Winifred Renshaw, whose brother, the Earl of Leitrim, and whose husband are helping, were all present and were deeply interested to hear about the munition workers. They now receive, while learning their job, £1 a week. When they can do it, they are paid by the piece at the same rates as men. Also, 15s a week has been secured for them for waiting wage; that is, when they have to spend hours at a factory and cannot work because the material is not to hand, or for other causes. These terms have been obtained for them by vigilant women committees, who now desire to reduce the twelve hour shifts at night for women, to secure for them one day's rest in seven, and to provide canteens for all factories, and means of transport to and from their work. Some times the factories are in the middle of fields, and the workers have to trudge perhaps a mile, often two, to reach them. This adds very greatly to the fatigue. There is no doubt that these things will be accomplished because my sex is proving itself excellent at organisation, vigilance, and accomplishment.

EMERGENCY AND EFFICIENCY.

THE WOMEN WORKERS.

The word "Emergency" aptly describes the various committees and corps which a pressing necessity has called into being. It is Emergency—special service to meet a dire event—which discovers the Efficient, and acts as a touchstone of character, proving the worth of women who have reached such a much higher level of efficiency in the years which have elapsed since the Boer War. Mistakes were then made which no one wants repeated: work was wasted for want of organisation, and women feel that this shall not be said of their work for the "War of the scrap of paper," as Mr. Ballard, of Woodstock, has called it. To-day, England is full of capable women, any one of whom could manage and control committees or sub-committees in almost any department of life, and it is just this general efficiency which may prove a stumbling-block in the way of organisers who, all over England, are working hard to put method into zealous endeavours. Organisation is another of the gifts given to many women, who need but the opportunity to show their understanding of the value of a structural whole. Need for action was once supposed to be man's prerogative, but to-day, women, who have always felt it as much as men, but with less opportunity for expressing it, have many more ways open to them than of yore. Think of the space that divides the English girl of last week who cut her hair short, disguised herself as a French aviator, and flew off blissfully to help where she might, and the gentle Georgian ladies who sat at home and sewed, with tears dropping on to the work because no other way was open to them. Feeling must be translated into action as soon as possible, and that is why the very day which saw war declared, saw, too, instant action on the part of many women in the way that for the moment was easiest—at once to make things for soldiers who would be going to the front. Then followed working parties, committees, and sub-committees, and last of all has come the wide organisation which is to draw all together under one head. It should be possible to unite all the making of garments needed for the sick and wounded, all those for men at the front and for families in distress, under one central control. It is at this very point that the emergency of the hour will act as a touchstone of character. To sink a strong individuality for the sake of efficient general organisation, to give up preferences to keep rigidly to the supplying of the wants of others as conveyed to us by the control rather than to supply what we ourselves think is needed, to be good fielders in far away corners of the field—these are things which college-trained women do as a matter of course, but which are not so easy to those who have not learned to co-operate when young. This loyal acceptance of a lead is what is asked of women to-day if work is to be rightly organised, and there is to be neither over-lapping nor waste. Quite so it sounds, very many women to-day can do everything well but new, and it is a fact that much needlework has had to be unpicked and put right by good needlewomen ere it could be of service. This latest organisation really an extension of Queen Mary's Needle

it could be of service. This latest organisation —really an extension of Queen Mary's Needlework Guild—covers all these difficulties, first by providing garments already cut out, each supplemented with clear directions as to how to proceed, and next by a gentle, but firm test of workmanship. The tiny sampler, so unassuming that it looks like a torn fragment of shirt, will prove a veritable terror to the inefficient worker. Handling it, one sees that all the stitches which a well made shirt requires are gathered here for the undoing of the careless. A tiny seam run and felled, a little bunch of beautifully even gathers, a strong and level buttonhole, two inches of herring-bone stitching, and a button well and firmly fixed—these are the tests to be passed for the future by fresh workers in the cause.

This Oxford Branch of Queen Mary's Needlework Guild has been formed at the request of the Citizens' Emergency Committee, but it has not at present become part of the County Organisation. If every private working party would sink its private leadership and register itself on the Guild roll, in how short a time would this organisation become effective. Everyone who can sew enrolled, everyone buying their materials at the central depot all pulling together, is it too much to wish that this should be the aim of every woman in Oxford at the moment? Single voluntary workers are free to go and buy materials and return the finished garment to the central office. There could be no overlapping if everybody registered at the Town Hall in this way, and no waste of time. The branch has obtained particulars as to what is wanted from the Third General Hospital and from various centres in London, so that it is in touch with the varying needs. One week things for the front may be urgently called for, another week garments for refugees or destitute, and so on. People can always hear at the centre what is most needed. Here again comes the call to unselfishness. So many women who have relatives at the front may want to work only for men at the front, but emergency calls them to do other work if it is more needed at the moment. It is a great relief to know that there is an organisation through which one may hear from month to month or week to week the immediate needs, a method which will save endless confusion and some waste.

It is a busy scene in the Assembly Room at the Town Hall, where the depot for work has been opened. In her heart of hearts every woman loves "keeping shop"—all little girls love playing at it—and behind the long counter where the cut out articles are spread voluntary saleswomen help you to decide and to buy wisely; they also answer the endless questions addressed to them with unfailing courtesy, and point out the difficulties or the simplicities of the patterns. Pinned on the blackboard is the following list of prices (the things are cut out ready to sew):—

	s.	d.
Men's flannel shirts	4	0
Men's flannelette night-shirts	2	3
Flannel bed-jacket	4	0
"Helpless" shirts	3	8
Hot Water Bottle Cover		3

I do not know it is was because the last item on the list was the easiest to make or the cheapest to buy, but certain it is that within two hours of the opening of the depot on Tuesday every cover had been carried off and orders left for more. The cover is just a great bag, into which a man might really comfortably thrust his feet supposing he had not a hot water bottle. Then there are wools and needles sold for knitting, with clear directions how to use them. I need hardly say that nothing is gained on the transactions. The material is bought at cost price, it is cut out free of charge by expert cutters, and the whole of the organising staff give their services. The Emergency Committee reserves the right, if it becomes necesary, to give employment to relieve distress, to put the needlework in the hands of paid workers instead of voluntary workers.

I have been sent a notice of another organisation, to be called the "Women's Emergency Corps," which held its first public meeting this week in London, with the Duchess of Marlborough in the chair. The central idea of this new organisation is especially to find employment for the middle class worker, and work for the voluntary helper. Its objects, five in number, are, it seems to me, in many cases covered by existing societies.

(1.) The organisation of women's voluntary service to meet the national crisis.

(2.) The formation of a central register of efficient workers, classified into groups.

(3.) The co-operation of existing women's societies.

(4.) To safeguard the paid labour market by controlling volunteer energies; to provide a clearing house for the mass of service offered by women and to utilise it to the best advantage.

(5.) To inaugurate branches in different districts to work under the central organisation.

The Emergency Corps especially invite offers from women who are efficient in medicine, sick-nursing, and dispensing: in creche work, care of mothers, and feeding school children; in cooking, catering and commissariat; in languages; social relief work; riding, driving and care of a horse; driving a motor-car or cycle, and understanding running repairs; in cycling for distribution purposes. This is a comprehensive list, and testifies once more, if testimony were wanted, to the many ways in which efficient women may now energise their sympathies.

The Star

LONDON, WEDNESDAY, MARCH 22, 1916.

WOMEN FROM CANADA.

Big Party Lands at Liverpool To-day.

(From Our Own Correspondent.)

LIVERPOOL, Wednesday.

There were pathetic scenes on the landing stage, when a large party of Canadian women and children, whose husbands and fathers are in the fighting line, landed. They have crossed the Atlantic to be near should their loved ones be wounded.

Not all the women, however, were in this relatively happy position, for not a few were war widows, who, unable to make a living in Canada, have come to England in the hope they may find employment in munition works or in some of the many other markets for labour opened up to women.

Glasgow Evening Times
3.4.16.

WOMEN AND THE WAR.

BY MADAME BUTTERFLY.

President G.U.W.W.

As President of the Glasgow Union of Women Workers, Miss Marion Blackie occupied the chair at the annual meeting of the Union in the Y.W.C.A. Hall, Bath Street, the other day. Miss Blackie's interests in the social work of the city art manifold and it may be remembered that she was instrumental, early in the war, in having the Women's Consultative Bureau established in Glasgow. Innumerable are the excellent schemes conducted under the auspices of—and initiated by—the G.U.W.W. Miss Blackie is also president of the Women's Friendly Society of Scotland.

May Twentieth—and Don't Forget It.

Miss Moir, secretary of the Ladies Auxiliary of the Y.M.C.A., is one of the prime movers in the scheme for an All-Over-Scotland Flag Day on May 20th when it is hoped by this popular means to raise a goodly sum for the splendid work carried on by the Y.M.C.A. in the way of providing for soldiers the Recreation Huts which are so great a boon to our fighting men. Already over 300 towns have definitely arranged to take part in the Flag Day and Miss Moir will be glad to give any information to any ladies willing to assist in any part of the country. Experience has proved what a great deal of money can be raised not only in large towns but even in the smallest villages and country districts, by means of Flag Days: and surely this one should prove especially popular.

Ladies and the Y.M.C.A. Huts.

Speaking to the members of the Glasgow Union of Women Workers last week, Miss Moir gave some exceedingly interesting details of the work done among the soldiers by the Ladies' Auxiliary of the Y.M.C.A., and in the course of her remarks she caused much amusement by giving away the recipe for the "Y.M.C.A. Pudding"—a delicacy much appreciated by the Tommies. Bread-and-butter pudding, it seems, was not a favourite with the men who patronised the canteens; and so somebody (she must, I imagine, have had boys to cater for at home!) hit on the plan of making a simple bread-and-butter pudding and adding a few currants and some sauce and calling it "Y.M.C.A. Pudding." And now it is first favourite with lots of the fighting men! And yet we are asked, "What's in a name?" A good deal apparently.

Penny Cookery Demonstrations.

The success of the cooking demonstrations already given under the auspices of the Glasgow Patriotic Food League has made the promoters decide to hold various other demonstrations in different parts of the city. The series which is at present going on has been arranged with a view of suiting the working women in various districts. There are five centres—Maryhill Burgh Hall, Greenhead Hall, Bridgeton, Govan Masonic Hall, Tollcross (Fullerton Hall), and the Ross Memorial Hall, Cowcaddens. The lectures are given two days a week in each hall, and for the modest sum of one penny women have the privilege not merely of attending the demonstration but also of enjoying a cup of tea when it is over. On the invitations are printed the tempting words—"Come and see how to make one shilling do the work of two." That is what most of us would be only too pleased to learn in these days.

656/8

WOMEN IN A HURRY.

By ONE OF THEM.

Women have always been in a hurry. Eve was in a hurry to eat the apple; if she had waited long enough Adam would not have been able to resist it.

As soon as women see anything they want they are in a hurry to get it. That is why women have not achieved so much as men. They have been too much in a hurry.

Women are the hustlers of creation. They have been

In a hurry to get married.
In a hurry to get divorced.
In a hurry for their husbands to get rich.
In a hurry to be better off than their neighbours.
In a hurry to marry off their daughters.
In a hurry to be like men.

The only thing they have not been in a hurry about is getting their sons married.

The way they walk tells you what they are. They have never considered the pace which they can comfortably keep up. They begin in a hurry and gradually slow down. Like the hare and the tortoise, man and woman run the race of life Women will never win so long as they continue in a hurry. That fact is pathetically patent just now. Women are too much in a hurry to notice the chances they are missing. With feverish haste they got to work for the country at the beginning of the war. How many women have broken down since? With feverish haste they took the first job that offered—however unsuited they were to it. They could not bear to let people think for a moment that they were not doing their bit. Thus ladies in comfortable circumstances went miles to do the scrubbing working women were praying for.

They hurried across the Channel in such numbers to give their aid that the commandant at Boulogne issued the order, "Clear the women out!"

They were in a hurry to get into uniform even though khaki was scarce and the war was delayed on their account. They were in such a hurry to be like men that a section of them have earned the title "It."

Likewise, they were in a hurry to get sugar, even to fetching it in perambulators and taxi-cabs.

* * * * *

All that did not matter greatly. It is now, when their hurrying threatens to land them at the bottom of the hill, that another woman who has hurried all her life would call a halt. Women are passing by the chances of their lives.

Why have women always, or nearly always, come short of the glory of man? Because they have not been trained for their work. They married in ignorance, brought up children without experience, set their boys loose in a den of lions, and allowed their girls to go out into the world unprepared for life. The spectacle of the middle-aged woman to-day who is hopelessly unemployable is one of the most pitiful of the war. She is the product of her mother in a hurry. And the younger women are following in the same reckless haste. Experienced hands are stretched out on all sides to hold them back. "Wait and train," wise voices say.

The women who have been in business for years would save their sisters from a false start. They hurried in themselves. They hurried all the time. They were in a hurry to give of their energy; they kept nothing back; they gave of their reserves. The marvellous output of the woman worker to-day is a subject of wonder. It is nothing new; she has always done it. She has always lived at concert pitch and then cracked suddenly. Men save themselves in the spirit of "he who fights and runs away will live to fight another day." Just now woman's hurry helps the country, and it is well. But it is only wanted in certain departments.

And it is the wrong women who are hurrying. Let the leisured women hustle; it will do them good. It is their great chance of healthy, honest work. But all the women hurrying will surely end in disaster. Ask the women's leaders what they most dread to-day, and they will tell you, "After the war"—the day of reckoning for all the haste of the hurrying women. The cataclysm of women's unemployment could be prevented if the women who must earn a living after the war would prepare themselves now to do so. But they are in too much of a hurry. Societies of every description are holding out opportunities of training. Schools are even waiting for their fees till money is earned. Doors are open on every side, but they pass them by, all hurrying down the blind alleys.

Girls in a hurry, think who will be wanted after the war! It will not be the women conductors—all honour to them! It will not be the women engine drivers, who [illegible]

themselves now to do so. But women are in too much of a hurry. Societies of every description are holding out opportunities of training. Schools are even waiting for their fees till money is earned. Doors are open on every side, but they pass them by, all hurrying down the blind alleys.

Girls in a hurry, think who will be wanted after the war! It will not be the women omnibus conductors—all honour to them! It will not be the women engine cleaners, coke heavers, ticket inspectors, street cleaners, dock labourers, and the rest. The women workers who may look for a future are:

Welfare workers.	Doctors.
Dental mechanics.	Chemists.
Carpenters.	Shop assistants.
Police women.	Fruit-growers.
Business women.	Domestic science teachers.
School attendance officers.	

Welfare work has developed like a flower in the sun during the war. It will remain. Girls' club leaders and factory welfare workers will all be wanted. Women have proved their worth in police work. The Women's Service Bureau had lately 128 vacancies for dental mechanics, but only seven trained women to fill them. The woman carpenter has been wanted ever since the first home was built. So convinced of the opportunities for girls in business is one school headmistress that she sent for the fathers of her girls who are in business and suggested that they should teach their daughters. The woman doctor is for ever established, especially in municipal work. The higher the branches the chemist climbs the more sought after will she be. The male shop assistants are not expected to come back. Once having done without fruit imports, we can go on doing without them if the women will; and with the sweep back to domesticity the domestic science teacher will have her hands full.

* * * * *

It is only a little list, but—and however irritating this is to the beginner, it is true—there is "always room at the top" of any industry. Let the women become thoroughly skilled in the work they fancy, and then there will be no after-war fear for them.

But—women are in too much of a hurry. They do not pause to consider that:

> The heights by great men won and kept
> Were not attained by sudden flight,
> But they while their companions slept
> Were toiling upward in the night.

The women toil—oh, yes! but it is in a blind alley.

On Lamp Day £7,000 was gathered by the Women's Service for training women; several societies are making grants or loans for training or maintenance to suitable candidates; county councils are giving short commercial courses; training is being given free on the land, and the Board of Trade Employment Department points to training given by firms and technical schools in various parts of the country in wool spinning and weaving, hosiery, lacemaking, bootmaking, aeroplane work, welding and engineering, tracing, fancy leather work, optical trades, breadmaking and confectionery, grocery, and toymaking; as switchboard attendants at electric power stations, as chemists and poultry farmers.

The women—be they young and strong and willing to look around—can take their choice, and without paying their money in most cases, but—they are in too much of a hurry. A short training with the experience which any woman can get to-day is equal to a long peace course.

But only when they have arrived at the ends of their blind alleys will the women

War Work by Grimsby

WOMEN.

Mayoress's Representative Sub-Committee.

AN INTERESTING REPORT.

Miss Morris, the hon. sec. of the Mayoress's Representative Sub-Committee, reports:—

During the last three months this committee has continued to carry on the various schemes inaugurated last year. The Home Help scheme continues to provide work for women who otherwise would have to have assistance from the Relief Fund. Six home helps have been employed during this period, two of whom have been in our service since the organisation started its work, the others have been employed by us through the Labour Exchange.

Our helps have worked in 14 homes. In 12 cases the mother was ill. One case has been an old man bed-ridden and living alone, another child was dying and the mother had been removed to the County Asylum. One mother died of consumption and Bright's disease.

The homes in which our helps were employed were, with two exceptions, very poor, and in one case only the mother has been able to pay for the help, the full wages being paid.

Mrs. Eason last year, as Mayoress, was instrumental in arranging for the knitting which the fishermen's widows and wives of fishermen interned are still doing.

Miss Newnham, of the Fishermen's Institute, Riby-square, informs me that for the three months of this year the women have made 197 pairs of sea boot stockings, 162 pairs of socks and 26 jerseys. Last year they made 477 pairs of sea boot stockings, 35 pairs of socks and 26 jerseys, making a total for the 15 months' work of 674 sea boot stockings, 347 pairs of socks and 26 jerseys. Also the women have knitted 100 pairs of sea boot stockings part of a private order, for the Admiralty. Mrs. Smith and Mrs. H. L. Taylor have kindly undertaken the charge of issuing, receiving and paying for the work, thus relieving Miss Newnham of much of the detail, for which help she is deeply grateful as her time is so fully occupied just now.

The wages paid have been considerably over £100, and have proved a great boon to the women. All this expense is provided for by the Minesweepers' Fund.

The attendance at the Mothers' and Babies' Welcome has varied greatly during the last three months, chiefly owing to the extremely cold and wet weather. Dr. Simpson has been unable to allow Nurse Chase to continue her work at the Welcomes owing to the epidemic of measles and the extra demands on her time due to the stress of work and shortage of nurses. Her work has been undertaken by the ladies of the committee.

In the clothes department there has been nothing like the demand there was last year for clothes. The mothers seem much better able to supply the greater part of the children's garments, and only require them supplementing occasionally. The mothers themselves repeatedly ask for dress skirts and underclothing old or new. Any person having any of these garments to spare if they would kindly send a postcard to Mrs. Howe, Lyndale, Abbey Park-road, who undertakes the management of this department, she would be pleased to send round for such parcels.

During the last three months Mrs. Howe has supplied 39 women and 223 garments, whilst during the months of January, February and March of 1915 145 women were supplied with 525 garments, thus showing a considerable decrease this year.

The dinners, which some of the mothers still require, are provided, as before, at the Eagle Restaurant and the cafe at the Liberal Club. The number have considerably decreased, twenty-three women only having dinners at present.

The Patrol Committee have found it necessary to bring their work to a close for the present, owing to the scarcity of workers and the darkness of the streets, which makes the work almost impossible.

The Girls' Club, Albert-street, and the Central Market Girls' Club are still in a flourishing condition, the other clubs having fallen through, owing to the lack of girls.

Although many of the girls have left Grimsby to find work in other towns the attendance at the clubs continues satisfactory. The average attendance being about forty and thirty respectively.

Social work forms a great feature of both clubs, but the forms of instruction such as cooking, sewing, and addresses on character and conduct are introduced monthly.

Every first Tuesday a social is held to which the girls are allowed to bring their soldier and sailor friends. Refreshments have been served and collections taken. The girls with the help of the men providing the entertainment which have been greatly enjoyed.

Mrs. Jack Barker and her lady helpers are now busy teaching all the clubs the war masque, "The Nation's Honour," written for the League of Honour—to be given on May 4th.

It is hoped during the Summer to take or have lent a cottage in the country to which girls can go for a week at a time. By this means it is hoped the girls will not only gain in health but will have imparted to them practical demonstrations in hygiene and domestic economy which they also badly need.

Owing to lack of finance at the Central Market Girls' Club (the girls only pay 1d. per week), three of the old members have undertaken and carried out the cleaning of rooms, fire lighting, etc.

Under the Presidency of the Mayoress, the first of our street collections took place on March 4th, "Snowdrop Day." This collection was on behalf of two old established charities, the Invalid and Soup Kitchen, and the Home of Help for Girls. Needless to say, the Mayoress and her committee were delighted with the generous response of the Grimsby public, the sum of no less than £247 being taken, thereby raising these charities out of debt and leaving a surplus to continue their good works.

The Grimsby War Hospital Supply Depot still continues in its most useful and necessary work in supplying the Red Cross Hospitals abroad with requisites for the wounded soldiers. The articles sent consist of sheets, operation gowns, pyjamas, slippers, bandages, swabs, arm splints, fracture pillows, waistcoats, socks, handkerchiefs, and pneumonia jackets. Letters of thanks have been received from the M. Ranowe, President of the French Red Cross, the L. Lazard, secretary of the Belgium Red Cross, and three of our town's doctors, viz., Drs. Pratt, Duncan and Glenny.

Owing to the subscriptions not being sufficient to supply the necessary materials required, an American tea was held in the Town Hall, on February 5th, under the presidency of Lady Bennett, the financial success resulting in £96 after all expenses were paid. Other affairs of smaller attractions have been organised by various workers, such as the matinee held at the Palace, arranged by Miss Ida Johnson and Miss Pettitt, in aid of the Hospital and the Depot, and various ward whist drives all help to keep the workers supplied with material thereby showing the workers which average thirty-three per day, that although every woman cannot spare the time to come and work, yet she is willing to do her little bit in other ways. Already fifteen of our workers have qualified for the War Office Voluntary Workers' Badge—and we hope many more will do so shortly.

During January, February and March 5,696 articles were made and despatched from the Depot. The number of articles despatched since the opening of the Depot is about 11,000.

The committee have been investigating the question of wages earned by women and girls in the town. The average wage of girls employed in shops is deplorable, and it is to be hoped that the competition for female labour will have the effect of raising the standard of wages paid to girls in shops. At present it is impossible for a girl to support herself on the few shillings she receives after she has learnt her trade and spent two or three years in the business she is pursuing.

Munition work is better paid, and accurate information was gained from the Munition and Light Castings Company, Limited, Granville-street, as to the payment of its female employees. The manager had submitted the pay sheet for inspection to this committee, and it was found that the average wage per week was 14s. 10. The girls began at 9s. a week, but as soon as they had learnt their work they were able to earn from 15s. to £1 2s. a week, according to their efficiency. They work in shifts of eight hours each with an interval in the middle of about twenty minutes for refreshment.

Domestic service, with all its supposed and real drawbacks, is as well paid as any untrained female labour, and is as favourable to the health of girls as many of the newer vocations.

There is no real demand in this neighbourhood for women on the land, though they are doing very well in some of the home counties.

There still exists a need for further substitution of women for men in some industries, and a local Advisory Committee is being formed to deal with the question of women's war employment.

EDITH MORRIS, hon. secretary.

Evening News 20.4.16.

WAR EASTER.

Women Workers Content To Carry On.

The Easter rush to the seaside began early to-day, and the holiday traffic produced typical war-time scenes at most stations—male passengers shouldering their own trunks and women carrying bags and suit cases in the absence of an adequate supply of porters.

The London Brighton and South Coast Railway report that traffic exceeds that of the past two years. Eastbourne, Brighton, and Hastings trips are exceedingly popular, and hotels and boarding-houses will be very full over the week-end.

Margate, Ramsgate, Broadstairs, and Southend are also attracting many visitors, the mayoral appeals having proved effective.

Thames boatmen are anxious about the weather. And the recent rains have kept the stream high. A special service of motor char-a-bancs has been arranged at Maidenhead, running from Cookham to Reading and onwards.

Many women are having their first Easter at war work, but they don't complain about it. Here is what some of them told *The Evening News*:—

TICKET COLLECTOR: "I don't mind working. We ought not to have holidays while the men are in the trenches. *They* don't get Easter Monday."

'BUS CONDUCTOR: "This work is one long holiday. I'd just as soon be on as off, and it's nicer when all the people are out."

Milk-girls will be up early delivering as usual, and the postwoman has one round to go. The latter is, however, paid a special rate for Good Friday, and for every hour worked on Easter Monday she has 1½ hours holiday given on another day.

Nottingham Evening Post 22.4.16.

OUR LETTER BAG.

WOMEN AND THE WAR.

Sir,—It is with amusement, tinged perhaps with sadness, that one notices the new recruiting advertisement traversing the Exchange. "Will not our women help us?" Yes, they will, and have done since August 4th. They have not waited until the ninth month of war, when recruiting committees and Board of Trade alike suddenly deign to attach considerable importance to their words and deeds, but by sacrifices of love and work and money they have been doing what they can for many a day.—I am, sir, &c.,

PORTIA.

Railway & Leith 15-4-15.

'AY CLERK April 15th, 1915

THE EMPLOYMENT OF WOMEN

The other day I was reading an article by a writer who lamented the wholesale entrance of women into industry chiefly on the ground that this tended to lower rates of wages, and to keep men out of employment. One has to admit regretfully that the objection has truth behind it, but surely the argument is not against the employment of women, but only against the *exploitation* of women. If a woman needs work, it is as bad for her to be unemployed as it is for a man.

Now, whether we hold with the advancement of women or not, there is the fact to be faced that we already have seven millions of women in the British Isles engaged in paid occupations. How could such an army of workers be dispossessed of the position they hold in the life of the nation? Many of them—the majority—work because they must live.

But, we do find that there are many educated girls whose parents can manage to pay for a few years' serious training for them, but cannot afford to keep them at home. These girls find a veritable salvation in outside employment. It is evident then that women have definitely "Gone out into the world." The next step is that they must make up their minds to do it in greater numbers than ever. For an obvious reason. This war has robbed and will rob our country of thousands of young men who would have married, and been the main support of as many young women. Others might have kept a home going for their sisters perhaps. (We will omit the widows for the present because some sort of provision is made for them).

So that from now onwards there will of necessity be a greater influx of women into the labour market, where their position is by no means an enviable one [illegible]

The Globe April 14-1916.

"WOMEN SHIRKERS."

Sir,—Under this heading you published on Friday last a quotation from Mr. H. E. Morgan's "Great Deeds of the Great War," which, in my opinion, would give to the world a wrong impression of Englishwomen. Among all those I have met, and among my numerous acquaintances, I have not yet found one of the type portrayed as the majority by Mr. Morgan. It is nonsense to state that the majority of our women are still frivolous, indifferent, and apparently unaware that there is any war at all! The frivolity he writes of is simply pluck, presenting a cheerful aspect to the world—a splendid national characteristic.

There may be some slackers, but the majority are very wide awake, and doing real good work. Take two examples only: there are numbers giving up their time and linguistic talents to work at Aldwych for the Refugees' Committee, a most excellent and well-organised institution; there are also whole communities doing very earnest work among the wives of soldiers and sailors, organising clubs for men, providing entertainments for them, &c., which is by no means "playing at helping," I can assure you. Again, there is much work being done quietly in the background by many women, of which no one will ever hear.

It is worth consideration, with reference to Mr. H. E. Morgan's comparisons between French and English women, that in France every fighting man is called out, which makes it essential for women to replace them. Should the same conditions arise in England our women will prove themselves ready, but at present there are plenty of men, who, through being over age, or physically unfit for service, are filling the posts vacated by those who have enlisted.

Mr. Morgan's remarks are probably written with the best of intentions, but permit me to suggest that they are a little unjust.—Yours faithfully,

CICELY WEDGWOOD.

WOMEN WHO WANT TO HELP THE NATION.

Why Should They Not Serve On Juries?

A CHANCE TO RELIEVE THE MEN.

Why should not juries be composed of women? This question is being asked in these days, when fewer men are available for this branch of public service.

You say women have too many trials already? But they are fond of judging men—and their neighbours.

We were often asked, in the far-off days of suffragist controversy, to picture a Mrs. Speaker and a Mrs. Lord Chancellor. But the latest proposal to have women on juries is really seriously meant, and is not meeting with ridicule.

Women are taking a keener interest in daily events. Since the war broke out thousands of women who never read newspapers before have become keen students, not only of the events of the war, but of the happenings in our own home life.

When a woman is really pleased she does not conceal her satisfaction. For instance, a great many women have written to the *Illustrated Sunday Herald* to say how delighted they are with the paper. They like the *Herald* because it is the paper that deals with subjects in which women as well as men are interested, because it gives the best gossip, the completest news service and the finest pictures.

Many women have written to say that they have insisted that their husbands must get the *Sunday Herald* every week. It comes on the day when they get a little time to themselves, and it gives them just the reading they want.

The *Sunday Herald* has been tried by a jury of men and women, and the verdict is: "We must have the *Sunday Herald* every Sunday."

33,000 WOMEN VOLUNTEERS.

6,000 Ready To Help In The Armament Factories.

Up to the end of March 33,000 women had registered themselves for war service. Mr. Runciman held a deputation of women at the Board of Trade last night.

Of these, there have volunteered:—

6,000 to work in armament factories.
1,000 in clothing factories.
1,000 in dairy work.

a 22.4.15. Morning Post

OUR LETTER BAG.

WOMEN AND THE WAR.

Sir,—It is with amusement, tinged perhaps with sadness, that one notices the new recruiting advertisement traversing the Exchange. "Will not our women help us?" Yes, they will, and have done since August 4th. They have not waited until the ninth month of war, when recruiting committees and Board of Trade alike suddenly deign to attach considerable importance to their words and deeds, but by sacrifices of love and work and money they have been doing what they can for many a day.—I am, sir, &c.,

PORTIA.

THE EMPLOYMENT OF WOMEN

The other day I was reading an article by a writer who lamented the wholesale entrance of women into industry chiefly on the ground that this tended to lower rates of wages, and to keep men out of employment. One has to admit regretfully that the objection has truth behind it, but surely the argument is not against the employment of women, but only against the *exploitation* of women. If a woman needs work, it is as bad for her to be unemployed as it is for a man.

Now, whether we hold with the advancement of women or not, there is the fact to be faced that we already have seven millions of women in the British Isles engaged in paid occupations. How could such an army of workers be dispossessed of the position they hold in the life of the nation? Many of them—the majority—work because they must live.

But, we do find that there are many educated girls whose parents can manage to pay for a few years' serious training for them, but cannot afford to keep them at home. These girls find a veritable salvation in outside employment. It is evident then that women have definitely "Gone out into the world." The next step is that they must make up their minds to do it in greater numbers than ever. For an obvious reason. This war has robbed and will rob our country of thousands of young men who would have married, and been the main support of as many young women. Others might have kept a home going for their sisters perhaps. (We will omit the widows for the present because some sort of provision is made for them).

So that from now onwards there will of necessity be a greater influx of women into the labour market, where their position is by no means an enviable one now. The average wage of the manual woman worker is 10/10½d. per week, which barely suffices for necessities. And in all occupations the tendency is for women to have the lower paid and mechanical work, while men fill the responsible, better paid posts.

Add to this the fact that there is already much unemployment among women owing to the War, and you will easily see that a crisis is at hand which needs prompt and energetic handling. It is no use to expect the men who are supposed to administer the State—or other men either—to do much for us. They will wait till the disaster is upon us before they stir. What we need is an awakening amongst women to the seriousness of the situation. We want to persuade them that they have a real importance for the nation, whether it is their lot to be wives and mothers or not. That joy may be found in work, provided we work with a definite aim and with the prospect of so much recompense as will afford us opportunities of living a fairly full and interesting life.

It is the old, old story of co-operation and united effort and purpose. But we seem to take so long to learn the lesson, and it is speedy action which is needed. How if the Government were to appoint a commission of able and experienced women (we have a number of them) to undertake the organisation and direction of women's work, and give it powers to establish centres of training, make grants of money where needed, supervise conditions of work, and regulate wages? Dare we hope for so much?

MELISSA.

plenty of men, who, through being over age, or physically unfit for service, are filling the posts vacated by those who have enlisted.

WOMEN WHO WANT TO HELP THE NATION.

Why Should They Not Serve On Juries?

A CHANCE TO RELIEVE THE MEN.

Why should not juries be composed of women? This question is being asked in these days, when fewer men are available for this branch of public service.

You say women have too many trials already? But they are fond of judging men—and their neighbours.

We were often asked, in the far-off days of suffragist controversy, to picture a Mrs. Speaker and a Mrs. Lord Chancellor But the latest proposal to have women on juries is really seriously meant, and is not meeting with ridicule.

Women are taking a keener interest in daily events. Since the war broke out thousands of women who never read newspapers before have become keen students, not only of the events of the war, but of the happenings in our own home life.

When a woman is really pleased she does not conceal her satisfaction For instance, a great many women have written to the *Illustrated Sunday Herald* to say how delighted they are with the paper. They like the *Herald* because it is the paper that deals with subjects in which women as well as men are interested, because it gives the best gossip, the completest news service and the finest pictures.

Many women have written to say that they have insisted that their husbands must get the *Sunday Herald* every week. It comes on the day when they get a little time to themselves, and it gives them just the reading they want.

The *Sunday Herald* has been tried by a jury of men and women, and the verdict is: "We must have the *Sunday Herald* every Sunday."

33,000 WOMEN VOLUNTEERS.

6,000 Ready To Help In The Armament Factories.

Up to the end of March 33,000 women had registered themselves for war service, Mr. Runciman told a deputation of women at the Board of Trade last night.

Of these, there have volunteered:—

6,000 to work in armament factories.
4,000 in clothing factories.
1,700 in dairy work.
500 as gardeners.
2,000 for other agricultural work.
1,100 as shop assistants.
500 as leather workers.
5,000 as clerical or commercial assistants.

Mr. Runciman added that in the Board of Trade offices 600 women were now employed.

Yorkshire Post
11-11-16.

The Queen, who takes a keen interest in the position of the woman war worker, is Patroness of the National Council of Women, of Great Britain and Ireland. This body, which is a representative organisation of leading women, has summoned a remarkable conference to take place in London to-morrow to discuss questions arising out of new employments for women, the effect of the new work on the health and morals of the workers, the wages now earned, and the future wage-earning capacity and the future home life of the nation. In order that the discussion of these matters may be as frank as possible, the proceedings, which are under the chairmanship of Mrs. Creighton, will be strictly private. All the speakers will have practical first-hand knowledge of the matters under review. Miss Deane, who is the senior agricultural organiser of the Board of Trade, will deal with women on the land; the Hon. Gabrielle Borthwick, who has her own automobile workshop, with women as omnibus and tram conductors and taxi cab drivers; Miss Constance Smith, one of H.M. Factory Inspectors, with women clerks who are replacing men; Mrs. Parker, Lord Kitchener's sister, with railway women: Miss Sanday, organising officer for women's work at the London Labour Exchanges, will discuss openings for women as cooks and clerks in the military hospitals. Miss Lowndes, of the Women's Service Department of the London Suffrage Society, is to speak on what women are doing in skilled mechanical work. Many other new openings will be dealt with, the intention being to make the discussion as comprehensive as may be.

Daily Mail - 29.5.16

A PROBLEM.

NO WOMEN FOR WOMEN'S WORK.

"They don't seem satisfied unless they're making something that explodes."

So said an employer who finds it difficult to get women workers. He is doing Government work, but it does not "explode."

Munitions have caught woman's imagination, and she would work till she dropped at them—if she were allowed.

As a matter of fact, she would be content with any *man's* work; what she scorns is woman's work in war-time. She feels that there is nothing "patriotic" in doing what she has always done. Taking a man's place in a man's trade she knows that she is definitely helping on the war.

There is consequently a very serious shortage of women's labour in a large number of women's trades, chiefly in textiles and clothing.

The Board of Trade Employment Department is not concerned about the scarcity of domestic servants, laundresses, or even waitresses. An official tells unmoved of a class of forty one-time servant girls who now number but one maid among them. These are luxury trades and we can do without them, we are told, till the war is over.

In the meantime the country's industries must be kept going—by women. If not, our export trade will suffer and debt will be the result. In 1914 £103,000,000 came into the country for cotton sent out; £31,250,000 for wool, and £14,500,000 for clothing. What happens when we cannot even make for ourselves has been already seen. At the beginning of the war, when the boot trade was fully occupied with Government work, the leather for all the civilian boots had to come from America. Yet in most districts there is a long waiting list of women for munition work, while in one at least women refused other work because they were waiting for a shell factory to open. In one town it was even suggested that the Labour Exchange was exceeding its duty in urging women to remain at their own trades.

Daily Mail 29.5.16

65

There has already been a loss to the country through skilled women in numbers leaving the job they can do better than anyone else to learn how to make munitions. There are plenty of women in the country who have never done anything at all who can learn the men's work. It is a mistake to think that most of the women of England are now employed. According to a Board of Trade official, the number of new women working makes the total of women's labour only the same as if the women who normally marry and leave had not left and the usual number of young girls had come into the trade.

Women's labour is being worked uneconomically because of women's "patriotism." The Lancashire farmers say that they cannot get workers for the land because they are going to the mills; the mill-owners complain that the women are leaving them for munition works. The country's work is more or less in the hands of learners because women will not "stick to their jobs." The following are the trades for which women workers cannot be found and those in which there is little difficulty:—

Women's Work Which Women Will Not Do.	Men's Work Which Women Will Do.
Jute.	Distilling.
Cotton.	Saw-milling.
Silk.	Chemicals for Textiles
Wool.	Grain Milling.
Cardboard Boxes.	Heavy Chemicals.
Linen.	Soap, Colours.
Hosiery.	Brewing.
Stationery.	Wood Boxes.
Hemp and Other Textiles.	Gas Works.
Dressmaking.	Furniture.
Hat, Cap, Gloves.	Sugar Refining.
Other Dress.	Dairy Produce and Other Food.
Lace.	Aerated Water.
Shirtmaking.	Publication of Newspapers.
Brushmaking.	
Laundries.	

The other day in the intense heat the omnibus conductress complained that the girls could not get their summer uniforms because of the labour difficulty. The women who scorn the clothing trade did not think of that piece of war work they were missing. Cotton is used for aeroplane sails, hemp for rope, and 70 per cent. of the brushes made are taken by the Army. But, unfortunately for the country, none of these things "explodes."

Of course the matter has only to be brought home to the women for this wastage of skill to cease. Women are only too eager to serve the country anywhere and anyhow.

* * * * *

The immediate trouble is being met by the Board of Trade in two ways. In order to get unskilled workers for the textile and clothing trades a recruiting campaign has been instituted in other districts. The local advisory committee for women's war employment arranges the transfer and finds the lodgings for the girls. Posters asking for accommodation are now up in the districts where workers are wanted, and the committee visits the homes offered in every case. It has already been arranged for 1,000 women learners to come to Huddersfield and the Colne Valley to work for the woollen manufacturers. They have been recruited from such districts as Grimsby.

Where skilled workers are absolutely necessary to the carrying on of an industry a canvass is being undertaken of married women who formerly worked in the mills. This is happening in several Lancashire towns. The hope of getting a number of workers in this way is good, for it is estimated that in July 1914 for all industrial occupations combined there were 1,246,000 women between the ages of 20 and 45 with previous experience of some particular trade who were not then employed in it. The shifts, where possible, are being arranged to meet the convenience of married women.

All a woman has to ask herself to-day is, "Am I doing useful work?" If she can answer "Yes!"—whether it "explodes" or not—it is patriotic.

WOMEN IN INDUSTRY.

When the Greek historian went to Egypt he was astonished to find that men and women had reversed roles and that each was doing all manner of things which were considered impossible in Greece. What would be his astonishment if he could witness woman's activity at this moment, for the war has upset many preconceived notions about women, much as Egypt upset Herodotus? A score of months ago wildest scorn would have fallen to anyone who suggested that women would soon be busy in the myriad branches of industry where now she is a welcome and accepted fact; and that, given the chance, she would grasp it and, as our American cousins say, "make good." When the history of the war comes to be written, written with that authority which Time alone gives, not the least interesting chapter will be that telling how the women, irrespective of class, of England, offered their services and by their adaptability and capacity upset many cherished beliefs, leaving a lasting impression on the public mind. So much so that everyone is beginning to ask what will be the permanent effect of these new developments and whether it is likely that the industrial position and social status of women will ever again return to their pre-war condition. Discussing the subjects of the industrial employment of women in the current "Round Table," a writer says that probably there is no problem in the whole realm of public discussion on which there is greater need for clear and dispassionate thinking, and to this few will take exception. The outstanding point of the whole question is that of wages. "Ought women to be paid the same as men for the same work, and approximately the same for approximately similar work, like the Lancashire weavers? Or ought they to be paid a living wage at only half a man's rate for similar work, like the senior Lady Inspector of Factories? Or ought they to be paid less than a living wage, like the women workers in sweated industries and the women typists in Government offices?"

Unhesitatingly we say, as we have said since first the question came before us, she must receive equal pay for equal work. Unfortunately, women who look to their wages for the wherewithal to live have as a competitor the "pocket-money wage-earner," that is, a class who, living at home, work merely to get more money to spend on dress or pleasure. This class of wage-earner is the greatest evil with which the regular woman wage-earner has to contend, encouraging certain employers of women to become parasitic upon the good wages of the fathers of its girl employes, just as in the case of "crack" regiments the State itself has become parasitic upon the private incomes of the British aristocracy and gentry.

In receiving a deputation anent the same vexed question, Mr. Samuel (then Postmaster-General) took exception to "equal pay for equal work," which he described as a phrase in itself very plausible but one that he had always regarded as quite unsound. "The right phrase, I think," he told the deputation, "in this connection is 'Equal standard of comfort for people doing equal work.' If you pay a single woman the same wage as you pay a family man, you are giving her a much higher standard of comfort than you are giving him." Mr. Samuel claimed to have "thought very often on this subject," but he did not seem to have realised that this principle of graduating pay according to domestic circumstances must inevitably cause hardship to girls who receive no support from home and, if applied to men, would result in putting a premium on the employment of bachelors and so penalising marriage. Without question women have a lower standard of comfort than men, but this is often by the force of circumstances rather than by chance. "Might not women do more work and better if they learnt to eat more?" remarked Mr. Sidney Webb many years ago in a paper on "Women's wages."

And we, in spite of what Mr. Samuel and others may think, we cling to our belief in "equal pay for equal work." If by this some women may get "paying rich," better that

SINGLE WOMEN FIRST.

WORTHY OF THEIR PLACE.

By EDITH HENRIETTA FOWLER (the Hon. Mrs. Robert Hamilton).

Surely everything that there is to say has been already said on the subject of single men first? That is true, but have we said, or thought, anything about what that means when applied to the women of the nation, and of whom it is equally true?

Single women first. First in what? Their married sisters have always rustled out of the room in advance of them, taking due precedence, and, at the bottom of their feminine hearts, have always slightly and quite kindly despised those who have not been called to the holy state of matrimony. But the great war, which has turned everything upside down, which has changed our values, torn up our conventions, and scrapped our traditions, has also issued the astounding assertion—single women first.

We are getting accustomed to these convulsions of opinion; we know now that the young people, whom a little while ago we condescendingly patted on the head and advised to wait until they were older and wiser, are to-day the most important people in the Empire by reason of that youth; and that if England had the choice between a whole House of Commons full of respected and respectable members of Parliament and a battalion of fighting lads, she would choose the latter.

We have learned that the markets for scholarships and talents and art are closed, and that those boys of ours who were to do great things with their school and university scholarships, their examinations and degrees, have been called to do the greatest thing of all with their youth and health and high-heartedness, and have stood—or fallen—on the merits of their young manhood alone. We have also seen the levelling of those class distinctions which used to be so sharp, so subtle, and so silly; and pride of race or family has been melted in the worthier pride of country and of Empire. We have been taught to give according to another standard than that of the charity subscription list or the weekly alms bag—the standard of how much is possible, not of how little is passable. So the great kaleidoscope is turning, and we look and wonder less, each time the colours change.

* * * * *

"Single women first." They have played second fiddle for so long, but the tune, with other things, has changed. The "call" to womanhood which has sounded down the centuries from the beginning of time was to wifehood and motherhood, and those to whom it did not come felt slighted and unwanted and sore. And then a new movement began to throb in the world of womanhood, and new powers were developed and new pathways trodden, but whither no one clearly saw. The women were ready, but there seemed no opportunity; then they grew tired of waiting and began to snatch.

Now snatching is neither an effective nor a becoming action, and it often gets hold of the wrong things. There was no need to snatch. The great opportunity was at hand, for which the preparation had been all unknowingly made, and when war was declared, who had time to think, much less trouble, about the vote? And to-day—this long to-day which dawned on August 4, 1914, and seems still far from evening time when it shall be light—the call is not to the wives and mothers: it is to the single women first.

They can hardly realise that they are now the important women at this supreme moment of the nation's need. They have listened so long to silence that they cannot catch the cadence of the call and understand that the music of being wanted is wholly for them. In their humility, created by disappointment quietly borne, dulness uncomplainingly lived through, self-denial simply practised, they think that all they can surely do is just to help. No! the single women are the pioneers, the makers, and the doers of that wonderful work without which England's sufferings would indeed be unto death; and it is the married who can only come in limited numbers and give a bit of help. How good it is for this great and noble army of single women, who have all to give and are giving all so ungrudgingly, to know that at last the call has come to them! And how good, too, for the married ones to have to stand on one side and do their quiet, unexciting work at home, in the same spirit of humdrum humility and patience which has been already perfected in their single sisters!

* * * * *

It is wonderful to see the streams of girls of all classes answering to the call—almost as wonderful as to see the boys facing death with a smile. Again the qualifications for service are all changed. If the women are single, unbound by pressing ties, then it does not matter how unskilled they are, for training is ready

stanning point of the whole question is that of wages. "Ought women to be paid the same as men for the same work, and approximately the same for approximately similar work, like the Lancashire weavers? Or ought they to be paid a living wage at only half a man's rate for similar work, like the senior Lady Inspector of Factories? Or ought they to be paid less than a living wage, like the women workers in sweated industries and the women typists in Government offices?"

Unhesitatingly we say, as we have said since first the question came before us, she must receive equal pay for equal work. Unfortunately, women who look to their wages for the wherewithal to live have as a competitor the "pocket-money wage-earner," that is, a class who, living at home, work merely to get more money to spend on dress or pleasure. This class of wage-earner is the greatest evil with which the regular woman wage-earner has to contend, encouraging certain employers of women to become parasitic upon the good wages of the fathers of its girl employes, just as in the case of "crack" regiments the State itself has become parasitic upon the private incomes of the British aristocracy and gentry.

In receiving a deputation anent the same vexed question, Mr. Samuel (then Postmaster-General) took exception to "equal pay for equal work," which he described as a phrase in itself very plausible but one that he had always regarded as quite unsound. "The right phrase, I think," he told the deputation, "in this connection is 'Equal standard of comfort for people doing equal work.' If you pay a single woman the same wage as you pay a family man, you are giving her a much higher standard of comfort than you are giving him." Mr. Samuel claimed to have "thought very often on this subject," but he did not seem to have realised that this principle of graduating pay according to domestic circumstances must inevitably cause hardship to girls who receive no support from home and, if applied to men, would result in putting a premium on the employment of bachelors and so penalising marriage. Without question women have a lower standard of comfort than men, but this is often by the force of circumstances rather than by chance. "Might not women do more work and better if they learnt to eat more?" remarked Mr. Sidney Webb many years ago in a paper on "Women's wages."

And so, in spite of what Mr. Samuel and others may think, we cling to our belief in "equal pay for equal work." If by this some women may get "passing rich," better that such should happen than to avoid it a thousand others get hardly sufficient to exist much more to live. The Bible affords authority for claiming that the labourer is worthy of his hire, and we cannot remember that any rider is inserted differentiating between the sex of the labourer.

their examinations and degrees, have been called to do the greatest thing of all with their youth and health and high-heartedness, and have stood —or fallen—on the merits of their young manhood alone. We have also seen the levelling of those class distinctions which used to be so sharp, so subtle, and so silly; and pride of race or family has been melted in the worthier pride of country and of Empire. We have been taught to give according to another standard than that of the charity subscription list or the weekly alms bag—the standard of how much is possible, not of how little is passable. So the great kaleidoscope is turning, and we look and wonder less, each time the colours change.

* * * * *

"Single women first." They have played second fiddle for so long, but the tune, with other things, has changed. The "call" to womanhood which has sounded down the centuries from the beginning of time was to wifehood and motherhood, and those to whom it did not come felt slighted and unwanted and sore. And then a new movement began to throb in the world of womanhood, and new powers were developed and new pathways trodden, but whither no one clearly saw. The women were ready, but there seemed no opportunity; then they grew tired of waiting and began to snatch.

Now snatching is neither an effective nor a becoming action, and it often gets hold of the wrong things. There was no need to snatch. The great opportunity was at hand, for which the preparation had been all unknowingly made, and when war was declared, who had time to think, much less trouble, about the vote? And to-day—this long to-day which dawned on August 4, 1914, and seems still far from evening time when it shall be light—the call is not to the wives and mothers: it is to the single women first.

They can hardly realise that they are now the important women at this supreme moment of the nation's need. They have listened so long to silence that they cannot catch the cadence of the call and understand that the music of being wanted is wholly for them. In their humility, created by disappointment quietly borne, dulness uncomplainingly lived through, self-denial simply practised, they think that all they can surely do is just to help. No! the single women are the pioneers, the makers, and the doers of that wonderful work without which England's sufferings would indeed be unto death; and it is the married who can only come in limited numbers and give a bit of help. * * * * *

It is wonderful to see the streams of girls of all classes answering to the call—almost as wonderful as to see the boys facing death with a smile. Again the qualifications for service are all changed. If the women are single, unbound by pressing ties, then it does not matter how unskilled they are—for training is ready and time is waiting. It is only for the married woman, whose arms are full, that there is no room. The very thing which seemed to be woman's disability is now her patent of nobility in the aristocracy of work.

She can enter into the dignity of making things—that drawing near of man to his Creator, and in His likeness and image sharing the work of creation, wherein the highest glory of labour lies. She can enter into the divinely touched ministry of serving, and instead of being restricted to the narrow confines of her own dwelling, where effort is dimmed with the tarnish of selfishness, can help to make and hold up the domestic life of a nation whose strength is born in the beauty of home. She can fulfil the ideal of woman's destiny in a sick and suffering world, by comforting the dying and succouring the wounded and healing the sick. And no history of the war will ever record all that the nurses and sisters have done for our soldiers—except the one which shall be written in Heaven.

So let us honour the single women as worthy of the first place. By and by, when the khaki is worn out, and the fields of France smile again in harvest sunshine; when the sailor lads can ride the sea in safety, and little children sleep unthreatened by murder from the air—then the world will want her good wives and mothers more than ever, and they must be ready for that time. But in the meanwhile let us married ones gladly and graciously take a back seat, rejoicing with our sisters that their chance has come at last, and in the world's bitter need who shall say that theirs is not as great a chance as ours?

English Woman

A WILL AND NO WAY.

WHEN women first offered their services to the country upon the outbreak of the War, the reply they received, from Cabinet Ministers downwards, was that they would first have to set to work to remove a good deal of prejudice against their being employed in what was generally termed War work.

These words were not exactly encouraging or calculated to deepen enthusiasm, but it was a statement of undoubted fact. The task which presented itself was no new one for women. The question for them was how could this prejudice, in so far as it was reasonable, be removed? Obviously the first thing to do was to prove that women were capable of doing the work, but as the doors of opportunity for demonstrating their ability were in so many places closed to them they found themselves in a vicious circle.

Experienced women ventured to point out to the authorities the need that existed for preparing women for the duties which they foresaw would devolve on them by the withdrawal of large numbers of men from civil occupations and recommended that adequate provision should be made for training women in trades and occupations largely or wholly carried on by men. The suggestion was set aside and nothing was done. True, a grant was made by the Government towards the expenses of a procession of women designed to demonstrate their willingness to do munition work. As an advertisement this procession was effective, particularly at a time when munitions were urgently required, yet one cannot but regret that the Government did not employ money to greater and more solid advantage to the country by establishing training centres for women during the early months of the War.

A WILL AND NO WAY

As the pressure of necessity began to make itself felt a call was made in March, 1915, to women to register themselves voluntarily for War service. Before this date, as early as September, 1914, several women's organizations had already opened registers.

There was a prompt response; the women came forward in large numbers to fill the registration papers provided by the Government. The tabulation of these returns, however, was most imperfect, but apparently out of the 78,946 names enrolled only 1,816 were called upon to serve.

What ought to have been a successful and well-planned movement in the direction of employing women turned out a disappointing failure, chiefly through lack of organization and a complete inability on the part of the authorities to realise the gravity of the impending changes in the industrial world.

After the lapse of some months women were once more called upon to register, this time under a penalty it they refused to do so.

The Registration Act seemed to give promise of more energetic and practical steps being taken to ensure women's services. It was hoped, to quote the words of a writer in the THE ENGLISHWOMAN, 'that the compilation of tabular statements would not be the end-all of Registration.'* Unfortunately those who were profoundly sceptical of any good resulting from the Registration Act, and regarded it as 'a hollow form' and nothing more, were quite justified in their conclusions.†

After further loss of precious time, which ought to

* 'The Registration Act and Women,' by W. E. Dowding, THE ENGLISHWOMAN, September, 1915.

† The statement circulated by Mr. Runciman, on March 18th, furnishes additional confirmation of the belief that the women's register has not been used, even if it was intended to be of use.

'Use has been made of the National Register in order to send an invitation to enrol as War Munitions Volunteers to all workmen registered in all skilled occupations specially needed for munitions works . . . The supply of women willing to undertake munitions work has hitherto been equal to the demand, and it has not so far proved necessary to utilise the National Register in this connection.'

have been employed in organizing women, there were signs that prejudice was yielding before the increasing pressure of necessity, and here and there women were able to establish their claim to do useful work. The effect of their work on the public mind was one of amazement. Employers were surprised that women could translate the spirit of zeal and patriotism which animated them into valuable work for the maintenance of the efficiency of our troops in the field. The columns of the Press resounded with praise—the work women could do was proclaimed as a great discovery. The general verdict was, 'The women are splendid.'

At the present time, though the achievements of women are generally acknowledged, there is a tendency to complain that they are not doing enough, and we are asked to believe that their 'voluntary effort is no longer adequate'; moreover, that there is 'a sort of conscientious objection' while in some quarters the cry of 'compulsion for women' has been raised. If past evidence is not sufficient to prove that these complaints are unfounded, what indications, it may be asked, are there now of any 'sort of' objection on the part of women to do their share in the nation's work?

A well-known authority on women's industrial questions (Miss Mary Macarthur) writing in the *Daily Chronicle* last month, said there was no scarcity of women to do work of national necessity, except in certain skilled trades. 'As a matter of fact,' she informed her readers, 'there are more women on the live registers of the Labour Exchanges than there were at the same period last year,' also 'that quite a number of competent women have the greatest difficulty in finding suitable employment.'

The Head Mistresses' Association report that their register of clerical workers shows no great demand for women clerks, and they are calling attention by circulars to banks, insurance offices and railways that suitable women are in need of employment. The Women's Service Bureau reports that the number of applicants

656/87

for work has doubled since last Christmas and is steadily increasing.

Lord Lansdowne called attention to the fact that there were 1,600,000 women returned as experienced in industry, and the question naturally arises: If these women are needed, why are they unemployed?

Women have never been inclined to over-estimate the value of their work, neither do they pretend that they can in every case be a complete substitute for men; but it may with justice be claimed for them that wherever opportunity was afforded they have, on the whole, accomplished their tasks successfully. They have acted on the advice given them, and have sought to remove prejudices: the prejudice of the employer, who had what he euphemistically described as 'a feeling against taking on women in his works'; the prejudice of the foreman, who objects to women because he cannot swear at them as he can at the men; the prejudice of the workman, against women taking on what he considers is 'no woman's job.' Instances of these unreasonable prejudices have been shown by one Agricultural Labourers' Union, which passed a resolution against the employment of women on the land, and by the dockers of Liverpool, who declined to work with women, although they were given the same work and the same wages as the men. We must not, however, fail to note there are numerous cases where employers and workmen have given a cordial, and even enthusiastic, welcome to the new workers, and treated them with every consideration.

The Government are now face to face with the same problem, which women were asked, perhaps rather lightheartedly, to solve, and its solution becomes increasingly urgent if reports are true of plant lying idle and industries flagging.

Whatever may be the outcome of the Government's deliberations with regard to the number of men required for the Army, it is clear that every week will bring greater claims on the activity and ingenuity of women, and even at this late hour it cannot be superfluous to

656/88

urge that extended facilities should be improvised as rapidly as possible for the training of women.

Prejudice, as we have seen, yields to necessity alone, and, though it is to be feared that some time may elapse before it is driven from its final entrenchments with regard to women's labour, there can be no doubt that the overthrow of this giant obstacle to progress will be one of the greatest triumphs we may look to achieve.

EDITH PALLISER.

A CHILD'S WORLD

(1) THE PRIMROSE.

AS I was walking one windy day,
I found a primrose gay,
In the woods it was growing
And the wind it was blowing,
In among the high trees darted
Little sparrows so light-hearted.
The primrose looked at me
Till I wished I was she,
Little primrose sweet.

She is prettier than those gaudy flowers
That grow in sunny garden bowers;
Nobody cares for you,
But I love you.
You are very very wild,
And I am a child
That loves all flowers
That grow in wind and showers,
Little primrose sweet.

Women's Interests at Sheffield.

Sheffield, of all places, with its vast munition works, certainly needs a Women's Interests Committee. Thousands of women in this area, as elsewhere, are flocking into the works, and everywhere replacing men in shops, banks, offices, and trams. Their interests are, moreover, especially difficult to protect, for there is no tradition, or practically none, of skilled women's work here, and the general level of women's wages is extremely low—lower, indeed, according to the Medical Officer of Health than in almost any town of this size and importance. Before the war, many girls were working for 5s. and 6s. a week; and the above tradition of the town seems to make it difficult for industrial women to be paid a good wage.

Some few years ago, however, a Women's Organisation Committee had been formed, and had done unobtrusive but invaluable work by rousing the girls in the silver and cutlery and other trades to some sense of their conditions, and by organising them into unions. It had, moreover, a special campaign during the summer of 1915 among the munition workers. Consequently, when the Sheffield Branch of the N.U.W.S.S. came to consider the question of what it could do to help Women's Interests, they decided that the Organisation Committee, already in the field, and in touch with labour conditions, could do far better work than any other body. An arrangement was made by which the National Union should be represented on the Organisation Committee, for which the N.U. organiser should still work. This has only been in going order for a few months, but already good work is being done. A Women's Interests Section of the Organising Committee (henceforth to be known as the Women's Organising and Interests Committee) has been formed, and on it are represented a number of organisations which are in touch with industrial conditions or women's interests—for instance, the Health Society, the University Fabian Society, the Freedom League, and others. A strong nucleus was formed from the Organisation Committee, the officials of which are, of course, ex-officio members of the Interests Section, while the President is the President of the N.U. Branch (one of the members representing the N.U. on the Organising Committee), and the Secretary is an N.U. organiser.

A most successful Conference was held early in May under the Committee's auspices. The first resolution :—

> "No woman shall work in any trade at less than the recognised Trade Union and district rate of wages, when employed on work hitherto done by men. Where a recognised Trade Union or district rate does not exist the wages should not be less than £1 for a week of 48 hours,"

was proposed by Mrs. Annot Robinson, and seconded by Mrs. Barton. There was a very full and eager discussion.

It was clear that the men unionists were alive to the dangers of women's low wages, not only to themselves, but to the race, and were ready to help the women to better conditions. Some of those familiar with Sheffield felt that the general attitude of the men to the women—and, indeed, of the women to the men—was far more friendly and comrade-like than it had been in the past, and that the absence of sex-antagonism and the healthy relationships of fellow-workers was most marked. The resolution was carried with one dissentient, who, as a pacifist, wanted to register a formal protest against the employment of women in munitions.

The second resolution, which dealt with the industrial dislocation after the war and the need for some provision for unemployment benefit for women during that period, was less well discussed. There was obviously a strong dislike of its terms among the Socialists, and though the women on the whole were in favour of it, the men were many of them against, and it was lost. The subject will, however, form admirable matter for another conference, and it was quite obvious from the discussion that the average man has not yet realised its urgency, and, indeed, that many of them have not got beyond—"We must have the women in during the war, but as soon as it is over, we'll turn them out!"

It would be difficult to overrate the educational experience of such a meeting. The platform speakers were all women (as it happened they were also all members of the National Union of Women's Suffrage Societies), and this in itself is unusual in Sheffield. The Conference was widely representative. There were present fourteen delegates from seven Trades and Labour Councils (Sheffield and surrounding districts), 100 delegates from fifty-four Trade Unions, two Independent Labour Party delegates, eleven from six Suffrage Societies, eleven from seven women's Adult Schools, seventeen from nine Co-operative Women's Guilds, and many others—nearly 200 in all. Nothing but good can come from the friendly meeting of so many men and women to discuss problems of urgent importance to them both, and everyone felt that the Conference was an auspicious opening for the Interests Section of the Organising and Interests Committee.

---

high rate of wages and by the feeling that they were thus taking an active share in the war. But they have now entered many other trades, in which with remarkable adaptability they have taken up work hitherto performed by men. Miss Anderson, the principal lady inspector, enlarges on this point. There is in progress, she says, a breaking up of old superstitions as regards division of labour, and many a bubble has been pricked as to what constitutes skilled work. In the meantime, expansion of women's employment has led to a new appreciation of the closely intertwined relationship between industrial output as to quality and quantity, and the well-being of the industrial worker. Why, she asks, has the manufacture of munitions of war on a terrible scale led at last to systematic introduction of hygenic methods that factory inspectors have advocated for many years, such as supervision of women by women in factories provision of means of personal cleanliness, proper meal and rest rooms, and qualified nurses. Probably it is in part due to a recognition that wages alone cannot adequately reward those who served the State in time of need, but it also points to an awakening to the dependence of efficient output on the welfare of the human agent. This important effect of war on factory environment is, in the opinion of Sir Arthur Whitelegge, likely to be felt and to spread long after the war has ended, and to lead to a permanent improvement in factory life.

---

The report of the Chief Inspector of Factories, issued to-night, deals among other things with the extent to which the shortage of male labour has been made good by he introduction of women. At first women found employment chiefly in munition works, being attracted by the high rate of wages and by the feeling that they were thus taking an active share in the war. But they have now entered many other trades, in which with remarkable adaptability they have taken up work hitherto performed by men. Miss Anderson, the principal lady inspector, enlarges on this point. There is in progress, she says, a breaking up of old superstitions as regards division of labour, and many a bubble has been pricked as to what constitutes skilled work. In the meantime, expansion of women's employment has led to a new appreciation of the closely intertwined relationship between industrial output as to quality and quantity, and the well-being of the industrial worker. Why, she asks, has the manufacture of munitions of war on a terrible scale led at last to systematic introduction of hygenic methods that factory inspectors have advocated for many years, such as supervision of women by women in factories provision of means of personal cleanliness, proper meal and rest rooms, and qualified nurses. Women's War Abroad.

Margaret Bondfield.

BY refusing to grant passports to Margaret Bondfield to allow her to proceed to America as the accredited representative of British Labour, the Government has not only insulted one of the most capable women in the movement, but has also grossly insulted organised Labour. The statement that passports were withheld because of the dangers attending a voyage to America is beside the point. Our comrade was willing to face the risk, and no one else had the least right to interfere. The Government itself has given its whole case away by allowing Mrs. Pankhurst [illegible] to travel. We do not object to this lady or anyone else visiting America, but we do think that if Labour is to retain any shred of self-respect [illegible] that its own delegates shall be given the same facilities as are granted to those who oppose its policy. American Labour is entitled to know at first hand what British Labour stands for, and neither the Foreign Office, Admiralty, or Mr. Havelock Wilson should be allowed to prevent this. British Labour must choose, and choose now, whether it will tamely submit to the dictation of a single Union or Government dictation. In this connection, let us say, we want freedom of travel for all, and therefore regret that the Swedish Government has seen fit to expel Captain Tupper from Sweden. If this sort of thing goes on nothing but ill-will must prevail everywhere. International Labour must come together and re-establish cordial relationships. Governments and vested interests alone can gain by these terrible divisions.

LABOUR'S RIGHT TO PASSPORTS.

Bakers' Protest Against Action of Government.

Daily News.
13.8.18

Why was a passport refused to Miss Margaret Bondfield and granted to Mrs. Pankhurst, "who had no claim to represent organised Labour"? This question was [illegible] at the Bakers' Conference yesterday.

Mr. [illegible] moved that the conference protest against the refusal of the Government to grant passports to various Labour leaders to proceed to Switzerland, [illegible] as a calculated insult to organised Labour, and calling for the withdrawal of the embargo.

Referring to Miss Bondfield and Mrs. Pankhurst, "Everybody knows," he said, "what Mrs. Pankhurst is saying in the supposed interests of Labour."

Mr. [illegible] (Manchester): What do they [illegible] go to Switzerland for? [illegible] German [illegible]

[illegible] world safe for [illegible] Bondfield, "we must [illegible] following [illegible] to meet [illegible] organised Labour.

The President declared that democracy claimed a right to send their men to meet fellow representatives of Labour. "Pass this resolution," he said, "and show what you think of this wretched Government that does not know how to rule and doesn't know how to make peace." The resolution was carried with four dissentients.

Sunday Chronicle
25-6-16

"I DO not know when the war will end, but it will end suddenly." So said Lord Derby the other afternoon, and so think a great many people.

That a sudden end will surprise few people is evident, I think, from a pathetic if comic event of a week ago. Some of the most populous streets in a great city were gay with flags and vibrant with joyous song. A newspaper had announced on its placard "Surrender of Germans and Austrians," meaning thereby no more than the Russian capture of a few thousand of the enemy. But the people of this particular district, being sweet innocents, immediately jumped to the conclusion that the Kaiser had kow-towed to Fate, and the Austrian Emperor had thrown up the sponge. So they sang and danced throughout the night while the war went on all over Central Europe. The news justified the bill, but alas, the bill did not justify the peace rejoicings.

But some morning we may suddenly wake up to a world freed from barbed wire entanglements, a world in which the boom of guns will be silent and the flashing bayonet sheathed. Then there will be rejoicings, sincere and tragic to behold, and, unless we are very careful, *there will be chaos.*

War's Great Changes.

It is said, and truly, that we were not prepared for war on such a gigantic scale as this. But we were prepared for war of some sort.

We had sufficient men to help to stem the German rush through Belgium. We had sufficient ships and money to keep inviolate our shores. So, suddenly though the war came, it did not catch us napping, or if we were indeed asleep we were at least secure in our slumbers.

We were, I assert, better prepared for war than we are prepared for peace if it came between dusk to-day and to-morrow's dawn.

July, 1916, cannot be turned into July, 1914, by a stroke of a diplomatic pen. The clock can be put forward an hour, but it cannot be put back two years.

The upheaval has been too great. A hundred things less tangible but more important than the towers of Ypres have tottered in the interval. A score of things older than Rheims cathedral have been knocked out of recognition.

Trade union rules, the place of woman, the status of doctors, the freedom of labour, the freedom of capital, the size of newspapers, the remuneration of boys and girls, the value of sanitation, the hours of licensed premises, and many another thing have been changed by the war as surely as the configuration of Hill 60 has been changed.

These changes have been made, we must bear in mind, not in response to a normal stimulus. They have been forced upon us by an abnormal need. And the moment the abnormal need is satisfied, as it will be the moment peace is declared, or fighting ends, the ship of State will be very much as a large steamer would be if suddenly the seas ran dry.

The Unemployed Armies.

Now a sudden peace, uncomfortable though some of its manifestations will be unless we prepare to meet its emergencies as carefully as the Navy was prepared for The Day, will come as a huge relief. We shall feel secure. No more of our kith and kin will be called upon to suffer the agony of war. But both those who have fought and those who have stayed at home will suffer inconvenience and hardship.

There is little likelihood of a sudden wholesale demobilisation of the armies, but there will inevitably and properly be a sudden cessation of the wholesale manufacture of shells, for the copper and steel and chemicals used in manufacturing the

In less death will be wanted for other haps a million men will be released from the army, and probably as many munition workers as such will be paid off. What is to become of this enormous army of unemployed?

There are, of course, schemes afoot for dealing with the problems. The Salvation Army will emigrate a few widows and children, the Government is considering the question of settling soldiers as small holders on the land. But these will be

productive efficiency, the least possible social suffering, and with the greatest possible chance of re-developing industry not only up to its 1914 standard, but high[illegible] still.

Heroic Measures Wanted.

It will be a time for the operation of heroic measures just as to-day is a time for heroic men. It will be a time of test, too, for it will show how much of the unity and drawing together of class and class is real and how much sham.

Now to my mind, one aspect of the problem is fairly easy of solution, assuming goodwill on the part of all. The workers during the last twenty months as a class have worked inordinately long hours. The employers as a class have made inordinate profits. It is not good for the nation nor for the industries that workers should work excessive hours. Nor is it good for the nation that capital should make excessive profits unless it is prepared to use them wisely and not squander them in "riotous living."

If, as soon as peace is declared, the Government, either by Act of Parliament or Order in Council, announced a maximum working day much good would follow.

Take the coal miners for instances. Roughly, a third of the miners of the country are in the army. When the war ends those who are alive and fit will want through their bread and butter needs to return to the mines. The simple method will be to reduce the working hours so that the returning labour can be absorbed. The miners have already an eight-hour day. Their hours could be still further reduced without loss to the community, assuming that sufficient new men were employed coal getting to make up for the shorter hours of labour.

Problems of Women's Labour.

The legal hours of labour would perhaps vary from industry to industry, care being taken that the hours should not be so short that capital would be deprived of a *fair* return or labour of a living wage. This, it seems to me, can in reason be asked of British capital if it is to be protected against Germanic competition in the home market and in the markets of the Allies.

I do not suggest this fixing of minima hours as anything more than a peace emergency measure.

Similarly, I suggest that in the engineering industry all married women whose husbands are working should be replaced by the engineers who return from the war. It is pretty conclusively proven now that woman has a place in industry; but she has no right in industry at the expense of the men who have been fighting for, among other things, her security from outrage and dishonour.

One thing is sure: there will be great discontent if craftsmen and artisans who have served their time to a trade and have given it up to serve their country come back and find that in the meanwhile they have been permanently sacked for the sake of cheaper women labour.

I see no insurmountable difficulty in the way of Parliament during the next few weeks making it obligatory on employers to restore to their positions men who left them for the Army. All employers may not like it, but why should not Parliament compel the worst to do what the best have done voluntarily? That they should do so is one of the lessons of conscription.

No Ructions at Home.

The limitation of the hours of labour, the elimination of married women labour, and the restoration of craftsmen to their occupations will go far to find places for returning troops and enable them to keep their homes together in peace as they were kept together in war.

They are not perfect measures I admit, but that consideration of them should

Moreover, the Government should not immediately relax such control of capital as it has obtained during the last two years. It should in the coming period of transition from construction for destruction's sake to construction for its own sake, keep a firm hand on capital and not allow it to be squandered in wild-cat schemes or unnecessary industries either at home or abroad.

I am perfectly aware that the invest-

"I do not know when the war will end, but it will end suddenly." So said Lord Derby the other afternoon, and so think a great many people.

That a sudden end will surprise few people is evident, I think, from a pathetic if comic event of a week ago. In the death will be wanted for other haps a million men will be released from the army, and probably as many munition workers as such will be paid off. What is to become of this enormous army of unemployed?

There are, of course, schemes afoot for dealing with the problems. The Salvation Army will emigrate a few widows and children, the Government is considering the question of settling soldiers as small holders on the land. But these will be mere drops of oil on the ocean of distress and destitution. Alone they will not prevent the country being plunged from its greatest height of apparent prosperity to the Nadir of "nothing doing."

Organisation on the part of capital and labour, preferably acting together, is what is wanted—*and wanted now*. The sacrifices that the fighters have made for the country during the war must be matched (so far as the lesser opportunity permits) by the sacrifices non-combatants make during the darkest days of peace.

The problem will be to put back into industry the men who left it for war, with the least possible loss of national and productive efficiency, the least possible social suffering, and with the greatest possible chance of re-developing industry not only up to its 1914 standard, but higher still.

Heroic Measures Wanted.

It will be a time for the operation of heroic measures just as to-day is a time for heroic men. It will be a time of test, too, for it will show how much of the unity and drawing together of class and class is real and how much sham.

Now to my mind, one aspect of the problem is fairly easy of solution, assuming goodwill on the part of all. The workers during the last twenty months as a class have worked inordinately long hours. The employers as a class have made inordinate profits. It is not good for the nation nor for the industries that workers should work excessive hours. Nor is it good for the nation that capital should make excessive profits unless it is prepared to use them wisely and not squander them in "riotous living."

If, as soon as peace is declared, the Government, either by Act of Parliament or Order in Council, announced a maximum working day much good would follow.

Take the coal miners for instances. Roughly, a third of the miners of the country are in the army. When the war ends those who are alive and fit will want through their bread and butter needs to return to the mines. The simple method will be to reduce the working hours so that the returning labour can be absorbed. The miners have already an eight-hour day. Their hours could be still further reduced without loss to the community, assuming that sufficient new men were employed coal getting to make up for the shorter hours of labour.

Problems of Women's Labour.

The legal hours of labour would perhaps vary from industry to industry, care being taken that the hours should not be so short that capital would be deprived of a *fair* return or labour of a living wage. This, it seems to me, can in reason be asked of British capital if it is to be protected against Germanic competition in the home market and in the markets of the Allies.

I do not suggest this fixing of minima hours as anything more than a peace emergency measure.

Similarly, I suggest that in the engineering industry all married women whose husbands are working should be replaced by the engineers who return from the war. It is pretty conclusively proven now that woman has a place in industry; but she has no right in industry at the expense of the men who have been fighting for, among other things, her security from outrage and dishonour.

One thing is sure: there will be great discontent if craftsmen and artisans who have served their time to a trade and have given it up to serve their country come back and find that in the meanwhile they have been permanently sacked for the sake of cheaper women labour.

I see no insurmountable difficulty in the way of Parliament during the next few weeks making it obligatory on employers to restore to their positions men who left them for the Army. All employers may not like it, but why should not Parliament compel the worst to do what the best have done voluntarily? That they should do so is one of the lessons of conscription.

No Ructions at Home.

The limitation of the hours of labour, the elimination of married women labour, and the restoration of craftsmen to their occupations will go far to find places for returning troops and enable them to keep their homes together in peace as they were kept together in war.

They are not perfect measures I admit, but that consideration of them should

Moreover, the Government should not immediately relax such control of capital as it has obtained during the last two years. It should in the coming period of transition from construction for destruction's sake to construction for its own sake, keep a firm hand on capital, and not allow it to be squandered in wild-cat schemes or unnecessary industries either at home or abroad.

I am perfectly aware that the investment of British capital abroad means in the main the export of British commodities to foreign countries which are paid for by imports.

But many of those imports are things we can well do without. Moreover, some of the capital invested abroad goes in wages to foreign labour. We shall want work and wages for British labour, and to obtain the maximum amount of both capital may have to make up its mind to submit to a discipline as severe as that which labour now endures. The day of *laissez-faire* has gone by. If it has not done so, then peace abroad will mean ructions at home.

Women fruit-farmers in Hertfordshire.

PLEASANT; PROFITABLE; PATRIOTIC: ON A FRUIT-FARM AT LETCHMORE HEATH, NEAR ST. ALBANS.

A large land-owner in Hertfordshire, Mr. Phillimore, has converted many acres of his property into a typical fruit-farm, and, what is specially typical of these war-days, only girls are employed on the land. They live a thoroughly healthy and pleasant life in tne open air; do their work well; and have their meals in huts. Our first photograph shows some of them planting acres of ground with fruit-trees, and looking healthy and happy in their new work and unconventional dress. No. 2 shows one of the girls putting on her puttees for a comrade; and in No. 3 we see some girls bringing in material for cuttings to be made in their huts. The experiment has been made with girls largely drawn from East London, and has proved very satisfactory.—[*Photos. by Photopress.*]

which it will be seen that there is no place for the dilettante worker in the ranks of the land army.

. . . . .

As a witty cartoonist recently pointed out, "Marian, Marian, utilitarian," is the exact antithesis of "Mary, Mary, quite contrary," of other days, whom she has entirely or almost entirely superseded. She is an outcome of the war, though her services are not necessarily restricted to its duration; and, as befits the stern necessity that called her into being, she is animated with a severely business-like spirit. You see her on the land in her "war" dress of breeches and gaiters, which, strangely enough, becomes her just as well as the more conventional skirt of peace time. She deals with soils and turnips and cattle-food mixtures with the same skill that she used to lavish on wood-carving or golf, and her work, like that of her munition-making sister, is of infinite value to the country. Her job is not in any sense a "soft" one. To get up at four and work steadily at hoeing, picking, pitching, planting, and packing, or any other farm-work for ten hours a day and sleep on a straw mattress in a barn at the end of it, is no light feat for women accustomed to the ordinary comforts of well-run homes—for the land army is by no means recruited solely from the industrial classes. College graduates, women of leisure, daughters of professional men, women who have given up lucrative employment at their country's call, are amongst those who have thrown aside the frock of peace for the brown drabbet overalls of war. Some of them have volunteered for the holiday season, others until the declaration of peace; to not a few the work offers a prospect of a comfortable livelihood derived from new potatoes and cabbages and cucumbers all in a row, long after the need for munitions has ceased to exist.

A NEW USE FOR A GOLF CLUB HOUSE: QUEEN MARY'S NEEDLEWORKERS, AT WOLDINGHAM.

Members of that most excellent society, "Queen Mary's Needlework Guild," have done invaluable work for the wounded, and our photograph shows a number of them busily engaged in the Golf Club House at Woldingham making swabs, bandages, dressings, and garments for our wounded in the various war hospitals.—[*Photo. by Underwood and Underwood.*]

. . .

Experts are always telling us that England must grow more food, and "Marian" is now held in such esteem in official circles that the Board of Agriculture has been emphasising the need for her permanent presence in the ranks of the land-worker. A good deal of the valuable work she has already done would have been impossible had it not been for the initiative and energy of the National Political Reform League, who organised the National Land Council as soon as it became apparent that there would be a call for women's services in this direction. Patriotic landowners made a generous response to the request that they should admit women to work on their farms in order that later on they might be fit to replace Hodge at the harrow.

CLAUDINE CLEVE.

"'I'M GOING A-MILKING, SIR,' SHE SAID": DAIRY-FARMING BEING TAUGHT AT AN ESSEX SCHOOL.

Women's work on the land has passed into an accepted fact brought about by the war. The Essex Women's War Agricultural Association, of which Lady Petre, of Thorndon Hall, Brentwood, is president, is doing useful work in this direction. Our picture shows a class of boys and girls assembled for their first lesson in milking a cow, which stands patiently enough with an air of sleepy superciliousness which is not without its amusing side. The work, however, is very practical and useful in the present shortage of labour.—[*Photo. by Alfieri.*]

A PICTURESQUE OLD CUSTOM AT ST. IVES: THE "OLD HUNDREDTH" AT THE JOHN KNILL OBELISK.

More than a hundred years ago one John Knill, a prominent citizen of St. Ives, left a sum of money to perpetuate his memory by the erection of an obelisk and the distribution of sums of money every five years. The ceremony was carried out again last week, children and aged widows dancing round the memorial and singing, to the playing of a fiddler. Various sums of £5 and £10 were distributed, and the "Old Hundredth" was sung, as shown in our photograph. It is interesting to notice that the coat of arms on the obelisk bears a lion rampant, as does the coat of arms of the Sir John Knill of to-day, who was Lord Mayor of London in 1901-2; but the Lord Mayor's coat of arms has also the fasces, token of authority. [Photo. by C.N.]

which it will be seen that there is no place for the dilettante worker in the ranks of the land army.

WOMEN AND THE WAR.

THOUGH women have been working on the land ever since Eve first learnt what was really meant by "division of labour," it took a European war and a whole lot of "high-explosive" speeches about scarcity of food and the necessity of preserving our export trade in edible commodities, before the British farmer could be brought to realise that the employment of female labour on his farm would not immediately set him on the path that leads to ruin. But then farmers are a conservative class; a class, moreover, who have brought grumbling to the level of a fine art; so that perhaps it is not to be wondered at that when the cry of women for the land was first raised they were amongst its most bitter opponents. Even now, though a great many of them are quite ready to enlist the services of women, there are not a few who hint darkly at reduced turnip supplies or an inferior crop of mangel-wurzels as though it were directly due to their presence; and it only needs a little encouragement for them to attribute the poor plum prospect to the same cause.

. . . .

The late President of the Board of Agriculture said some time ago that turnips were as important as shells. The country, however, was rather slow to realise that women could be as useful in helping to grow the one as they had proved themselves capable of making the other. The popular notion of women in relation to work on the land prevalent before August 1914 seems to have been limited to a dairymaid in the flowered print and sun-bonnet of a bygone time, or a girl weeding an immaculate garden path. Of course, there were women farmers and nursery gardeners before the war, as well as those who kept poultry and bred stock. But they were exceptions, and if the truth were told, regarded as rather eccentric specimens of their sex. The woman farm-labourer, versed in the rudiments of general farm-work, was practically unknown.

THE DAY OF THE WOMAN DOCTOR: AN M.D. IN HER UNIFORM.

Not so long ago the woman doctor was, as it were, fighting for recognition, but the war has brought the value, and need, of her services equally to the front. Forty qualified ladies have been chosen for regular service in Army hospitals. It is the first time women have been thus requisitioned. The uniform chosen for them is practical but not unfeminine—except in the very desirable detail that it is well supplied with pockets!—[*Photo. by Photopress.*]

. . . .

But many prejudices have been laid aside during the last twenty months or so, and there has now sprung up in the country a corps of land Amazons armed with hoe and rake, and scythe and pruning-knife, ready to go where duty and the farmer calls, and their usefulness is not by any means limited to waging war on dock and nettle, "or doing a little weeding," or keeping flower-beds tidy. The land army is out for "business" in the strictest sense of the word, and there are few branches of farming or horticulture, ploughing not excepted, in which it is not ready to lend a hand. Some of its members are employed in the care of live stock, others have shown that the manipulation of the plough and the harrow are not beyond the capacity of an intelligent, though female, human being. Market-gardening has claimed others: the number of lady expert pea and bean pickers, fruit-grafters, and vegetable-packers is growing more numerous every day. Others, again, devote their energies to rearing poultry, or the money-making goat, or occupy themselves in the multifarious duties connected with dairy-farming; from all of

THE NEW BURDENS OF EVE.

WOMAN'S PLACE IN THE WORLD OF WORK.

By A MERE MAN.

Recently a friend of mine endeavoured to crystallise the changes which war has brought into the world of women by saying that Mars had found the women engaged upon destruction, and had set them to labour at production as a cure for idleness and discontent. Of course, he had in mind the Suffragist furies of pre-war days, and, being obsessed by their indiscretions, his summing up of the situation was naturally biassed and unfair.

But when it is recognised that some hundreds of thousands of women who never did men's work before are now replacing the sterner sex in various occupations, it will be understood that we are passing through an economic revolution which will have effect not merely for "the duration of the war." The circumstances now in operation will not end immediately with the conclusion of peace. The demand for workers—producers, that is to say—will be greater in the years after the war than perhaps ever before in our history. We shall be saddled by a stupendous burden of debt which can only be wiped out by the creation of new wealth—that is to say, production; and our producers will be sadly reduced by death, incapacity through wounds, and emigration, which will certainly proceed upon a vast scale after the war is over.

In the new conditions that will obtain after that happy day when the sword is laid aside, we shall be unable to keep in idleness anyone who can be employed upon useful work, so many—perhaps most—of the women who have recently come into the labour market will be able to keep their new occupations, or, if they so wish it, resign them in favour of others of their sex.

The more obvious employment for women such as clerical and shop appointments have already been widely discussed; but the variety of occupations open has recently been disclosed by Miss Robinson, the secretary of the Women's Service Bureau, in an interview with a London journalist.

MANY OPENINGS AVAILABLE.

"Women," said Miss Robinson, "have become bakers and confectioners, boot and shoe makers, workers on care committees, buyers and travellers, grocers, dental mechanics, munition supervisors, farmers, bankers, and have entered a hundred other different employments. As care committee workers well-educated women get from £2 to £4 a week. On the land, though the training does not take long—about three months,—the pay is small. For dairy work it is from fifteen to twenty-five shillings a week.

"Dental mechanics," Miss Robinson said, "is very suitable work for women, and the trade is in a position in which it is badly in need of workers. The training lasts from one to two years, and costs from £50 to £100. The opening that is presented is very suitable for a woman who wants to keep herself, because she can earn afterwards from £1 to £5 a week."

In the industrial types of employment for women, Miss Robinson mentioned the grocery, in which after six weeks' training a girl can earn from 18s. to 25s.

"Motor driving," she said, "is a very much over-vaunted opening, because, although the training takes only four weeks, it is not easy to find anyone to employ a woman without more experience. Some women are training as motor mechanics. They have to have aptitude and experience for the work, as well as training.

"Many young women are learning acetylene welding for aircraft. They have to join together two pieces of metal so that they shall never come apart.

"Good men welders are so scarce that they are worth their weight in gold. For this work we want girls from eighteen to twenty-five, who have had a secondary-school education. As soon as they are qualified they start with a pay of 8d. an hour, and rise to 1s. 3d., working eight or twelve hours a day.

THE WOMAN OF FORTY.

"There will be openings in optical work very shortly, and, we hope, in all branches of scientific-instrument making, which was almost entirely in the hands of Germany. The watch and clock making industry will also, it is hoped, come into this country and afford other openings for women shortly.

"The sad part is the enormous number of women of forty and upwards who want work. Practically all young girls have a good future before them, and if only they can be induced to undertake some form of training their [illegible]

turned adrift, but we are trying to make every woman who wants to earn her living look ahead and take up work which is permanent. And the women who have gone into the labour market to earn a living will stay there, whatever anyone says."

In many occupations where women were employed before the war their services are being used more freely, the case of the Local Government offices being a notable instance. Many women are now being retained as Rate Collectors, Relieving Officers, and even as Medical Officers of Health. The employment of women as business secretaries is also being widely extended, and even so conservative and anti-feminist a body as the Barristers' Benevolent Association have followed this example.

BETTER SALARIES.

Women are starting at much better salaries, partly because they are taking on more responsible duties, but, to a great extent, on account of the better equipment they bring to their tasks. A woman who takes up the career of secretarial work commences with 30s. per week, at least, non-resident; more frequently her rate of payment is £2 2s. On the other hand, foreign correspondents can command £3, in many instances £3 10s. is quoted, and quite recently a woman was appointed to a good position at £6 a week. It is impossible to lay down any hard-and-fast rules, because so much depends on the individual, and upon the responsibilities she is fitted to undertake.

Banks were amongst the first to employ women in clerical work, and openings are increasing in the direction of organising and secretarial duties. Members of Parliament have always looked with favour upon women in this capacity, and they are now employed in Government offices, by solicitors, and by City men. One of the recent openings was in Lloyd's insurance office. At one time it was difficult for a woman even to enter the doors of that organisation; now fifty women are employed in various departments.

A question naturally arises as to the special talents that qualify a woman for such well-paid positions. They are for the educated women, many of them having had a university training. A degree, however, is not always a proof of capacity for the particular requirements of the employer who demands efficiency. Capacity for organising is rare, and when it is cultivated it never fails to command consideration in this special direction. Shorthand is essential, but the power of jotting down notes at high pressure cannot be looked upon as much more than a side issue. The woman who holds a good post must possess initiative, and experts declare that this is not so easily found as might be supposed. Accuracy, a good memory, the appearance and conduct of a well-bred woman, always are taken into account.

THE VALUE OF LANGUAGES.

Languages are recognised, French being, of course, one of the most important; Spanish is frequently required, and there is a coming demand for Russian. It is a fallacy to suppose that German can be neglected or ruled out of court. Those who look ahead are learning German or extending the knowledge they already possess. According to an expert, the period following the war will bring with it the need of women who can read German easily, for much will have to be done in the way of correspondence.

The employment of women in agriculture is a question which is engaging much earnest attention at present, and it must certainly be confessed that preparing the gentler sex to take the place of Hodge and Giles does not appear possible as a makeshift expedient. No doubt there is a great deal of useful work upon the farm which could be performed by women, but they cannot expect to oust man from his primary occupation. On the other hand, however, they might do much in developing fruit and poultry farming.

One result which we may hope for from the increasing employment of women is an improvement in the conditions of industrial life. In France we hear of the most remarkable developments in the factories. On this subject a correspondent of a London evening journal writes:

"Every new factory opened offers some improved features, but we shall shortly, in all probability, see the French arrangements under this heading equal to the best in factories—in Germany. Without going into details of the technical machinery demanded to guard against accidents and against the dangers of disease from breathing in dust, etc., a list of which has been submitted to the Ministry of Public Works for examination and

demand for workers—producers, that is to say—will be greater in the years after the war than perhaps ever before in our history. We shall be saddled by a stupendous burden of debt which can only be wiped out by the creation of new wealth—that is to say, production; and our producers will be sadly reduced by death, incapacity through wounds, and emigration, which will certainly proceed upon a vast scale after the war is over.

In the new conditions that will obtain after that happy day when the sword is laid aside, we shall be unable to keep in idleness anyone who can be employed upon useful work, so many—perhaps most—of the women who have recently come into the labour market will be able to keep their new occupations, or, if they so wish it, resign them in favour of others of their sex.

The more obvious employment for women such as clerical and shop appointments have already been widely discussed; but the variety of occupations open has recently been disclosed by Miss Robinson, the secretary of the Women's Service Bureau, in an interview with a London journalist.

MANY OPENINGS AVAILABLE.

"Women," said Miss Robinson, "have become bakers and confectioners, boot and shoe makers, workers on care committees, buyers and travellers, grocers, dental mechanics, munition supervisors, farmers, bankers, and have entered a hundred other different employments. THE WOMAN OF FORTY.

"There will be openings in optical work very shortly, and, we hope, in all branches of scientific-instrument making, which was almost entirely in the hands of Germany. The watch and clock making industry will also, it is hoped, come into this country and afford other openings for women shortly.

"The sad part is the enormous number of women of forty and upwards who want work. Practically all young girls have a good future before them, and if only they can be induced to undertake some form of training their future is assured."

But the race is not always to the young. The tendency of the times is to encourage and appreciate the efforts of the older and more experienced woman. At a conference held recently at Sunderland House the question of finding employment for elderly women, both trained and untrained, was discussed. Women from thirty-six to forty years of age, and even over forty, have had opportunities of training for clerical work in banks.

As to the problem that must arise after the war, Miss Robinson considers that if a woman is suitably placed this problem will solve itself to a great extent. "Of course," she said, "if they are doing purely war work, they will be responsible duties, but, to a great extent, on account of the better equipment they bring to their tasks. A woman who takes up the career of secretarial work commences with 30s. per week, at least, non-resident; more frequently her rate of payment is £2 2s. On the other hand, foreign correspondents can command £3, in many instances £3 10s. is quoted, and quite recently a woman was appointed to a good position at £6 a week. THE VALUE OF LANGUAGES.

Languages are recognised, French being, of course, one of the most important; Spanish is frequently required, and there is a coming demand for Russian. It is a fallacy to suppose that German can be neglected or ruled out of court. Those who look ahead are learning German or extending the knowledge they already possess. According to an expert, the period following the war will bring with it the need of women who can read German easily, for much will have to be done in the way of correspondence.

The employment of women in agriculture is a question which is engaging much earnest attention at present, and it must certainly be confessed that preparing the gentler sex to take the place of Hodge and Giles does not appear possible as a makeshift expedient. No doubt there is a great deal of useful work upon the farm which could be performed by women, but they cannot expect to oust man from his primary occupation. On the other hand, however, they might do much in developing fruit and poultry farming.

One result which we may hope for from the increasing employment of women is an improvement in the conditions of industrial life. In France we hear of the most remarkable developments in the factories. On this subject a correspondent of a London evening journal writes:

"Every new factory opened offers some improved features, but we shall shortly, in all probability, see the French arrangements under this heading equal to the best in factories—in Germany. Without going into details of the technical machinery demanded to guard against accidents and against the dangers of disease from breathing in dust, etc.—a list of which has been submitted to the Ministry of Public Works for examination and acceptance—a sanitary novelty is the washstands with abundance of running water, and well-organised bathrooms which are to be supplied in every factory where certain toxic products are handled, and their free and lavish use will be made compulsory."

Two other clauses in the new code of rules that is under discussion and consideration now are equally interesting. One is that women shall be paid at the same rate as men when doing men's work. The second demands for every industrial centre the establishment of public nurseries, where mothers can leave their young children as they go to work, and know they will be properly looked after through the long day.

THE DIRT WORK.

Women's New Tasks in the Future.

By A SPINSTER.

A GREAT deal of weary nonsense has been talked and written recently about the suitability, or unsuitability, of certain forms of manual labour for the supposed fragile female form.

The sight of a muscular spinster of thirty-nine selling tram tickets or inspecting the gas meter arouses the most chivalrous concern for the future generation in the breasts of many worthy persons, who remain quite unmoved by the more familiar spectacle of their own obviously pregnant charwoman scrubbing the stairs or carrying up the coals.

It is always novelty that startles us; through all the ages women have done their fair share of the hard and dirty work of the world, and generally they have done it gratuitously, or for a most miserable wage; it is only when they step forward to fill the comparatively well-paid posts left vacant by our men in khaki that we feel ourselves in the presence of a really disturbing phenomenon.

Assuredly, if hard physical toil on the part of the mother were one half as fatal to the child as we are now invited to believe it is, the human race would have petered out a long time ago. Kitchener's army is made up of the sons of women habitually accustomed to daily labour which would leave our chivalrous journalists limp a... exhausted at the end of the first half hour.

Even the simplest forms of housework entail a degree of bodily exertion which the average business man does not encounter in his office; perhaps this is one reason why women are, upon the whole, so well able to tackle more formidable tasks when the need arises.

All the existing statistics upon the subject of infantile mortality and its relation to women's work are singularly incomplete, and must be so until they also make allowance for the varying incidence of venereal disease in different classes of the community and in different localities.

It would seem, however, that when both parents are healthy the mother may, if she likes, be a tight-rope dancer or a motor mechanic, and her babies will still have a better chance than they would if she led a life of complete leisure and married a man whose physical soundness was under suspicion.

It is in that direction, and not in the direction of the munition factory or the engineering shop, that the greatest peril for the younger generation lies. Moreover, in these times of high prices, the children are likely to get more good from the money their mother brings into the home than they will get harm from her daily absence at work.

For all that, we may welcome this new theoretical anxiety for the working woman's welfare as a hopeful sign of the times, and may look forward to the day when theory is at last converted into practice.

For in practice chivalry is apt to wear rather thin when an employer is confronted with a mass of unorganised, ignorant, and docile female labour. Quite apart from any question of her sex or her capacity for child-bearing, it is not good for a woman—it would not be good for a man—to work excessively long hours in an ill-ventilated building for a wage which only allows her to support herself upon a diet of bread and tea.

Yet such real practical proposals for the good of the race as an increase in the number of female factory inspectors meet with scant attention. It does not matter much if Lady Vere de Vere is spending her spare time driving a motor lorry instead of playing bridge; it does matter very much indeed if little Jenny Jones is being bundled out of school at the age of thirteen to add five shillings a week to the family income by carrying heavy grocer's baskets or toiling in the cotton mill.

If an underpaid, underfed, anæmic general servant trebles her wages by becoming a window cleaner or a railway porter, it is a distinct gain to the nation; her work will be no harder, and her physique will improve. But we are used to the sight of the general servant, and all the tragedy she stands for; we are not used to the sight of the female window cleaner or porter, so at once a little squeak of protest goes up on behalf of the general servant's extremely problematical offspring.

Given anything like fair conditions, and the more exercise and occupation a woman gets the healthier she will be; but there was a great deal of bitter truth in a cartoon published some time ago by a well-known suffrage paper, wherein a man was depicted sitting complacently at a three-course dinner, and observing, with a jerk of his fork towards his female competitor lunching modestly on a bun and milk: "Say she's able to do my work, do you? Ridiculous!"

WOMEN AND THE WAR.

December 16.

Sir,—In your issue of November 28, W. M. Cheshire, taking as his text a phrase used in a recent letter in your columns on Women's Suffrage, asks the following question:—"As practical people we ask, can it be a blessing or a benefit to the State that women, whose domestic and maternal duties and responsibilities are so all-important and all-engrossing, are to be distracted by politics and party warfare?" In our Scotch fashion of reply, we might ask another question—"Is it a blessing and benefit to the State that men, whose professional, commercial, and industrial affairs are so all-important and all-engrossing, are to be distracted by politics and party warfare?" For it must not be forgotten that an argument analogous to that suggested by W. M. Cheshire was put forward solemnly at one time as a valid reason for attempting to deny Parliamentary privileges to the male citizens of great rising industrial towns. Is W. M. Cheshire prepared to believe that such enfranchisement has been a curse and a disadvantage? In any case the engrossing nature of women's special duties in the past has not prevented them from forming millions of the workers of the country—about 3½ millions in industry before the war, 4 millions since the war—all bringing their contribution to the State, all liable to the pains and penalties of workers without their privileges, and subject to legislation over which they, unlike their fellow-workers, have no control. And to the millions of women in industry must be added the army of women "engrossed" in their homes, subject to legislation on the most intimate domestic matters, but unable, owing to their political disabilities, to voice their opinion on the affairs belonging to their own particular sphere.

But W. M. Cheshire, even if he were convinced as "a practical person" that it would be for the good of the community that men and women should together contribute their service to the State, and should together make the laws by which all alike are governed, finds elsewhere an argument that sweeps such a conviction away. He takes his stand on "the bottom rock fact that the women of Great Britain outnumber the men by about 1,500,000, which makes the whole claim absurd as far as practical politics are concerned." Obviously he is haunted with the fear that, should adult suffrage become law, and should the number of qualified adult women be found to exceed the number of qualified adult men (quite hypothetical conditions), the women would certainly combine to out-vote the men. It may be a comfort to such as W. M. Cheshire to know that there are as many varied opinions amongst women as amongst men, and as men have never shown themselves unanimous on any one point, similarly, the bogey of womankind unanimous on any political matter may safely be dismissed as theory reduced ad absurdum, and a piece of "practical" nonsense.—I am, etc.,

WOMEN AND THE FUTURE.

ADDRESS BY MISS MAUDE ROYDEN IN BRADFORD.

Mrs. Percy Lund (president) presided yesterday at a meeting of members of the Bradford branch of the Yorkshire Women's Guild of Christian Service, held at the Greenfield Congregational Church, Manningham. In an address on "Women and Problems of the Future," Miss Maude Royden (London) remarked that her sex had never been thought so much of as after two and a-half years' war, and everyone had been amazed at the extent of women's power and the extent to which the country was indebted to women. Generally speaking, the men had shown very little opposition to their entrance into highly skilled and laborious work, the only point contested being when women proposed to share the pulpit. (Laughter.) The problems which women had to face, and the country had to face, upon the conclusion of the present European struggle had been enormously changed by the fact that the nation was dependent upon them, and gave them opportunities of service such as they had never dreamt of getting before. It seemed to her that now, while the war was still continuing, it was the duty of women to consider how far they were going along that path when the terms of peace had been signed, and what exactly was to be their contribution to the country and the civilisation of the future. The very fact that they had gone into the professions and industries in such large numbers was going to make its own difficulties, and she was anxious that they should give a considerable amount of time not to deciding where they could serve their country, but on what lines they could give their service best.

CONDITION OF HOMES.

Women were not exactly like men, and if they came to the civilisation of the future only doing the things men had done and thinking along the lines men thought along, they might bring something to the solution of the problem, but in her opinion not one-half what they might bring if they realised that their gift to civilisation ought to be different, something that added to the richness and the variety of civilisation, and not merely a repetition of what the men had previously accomplished. Women must work out the ideas on which they were going forward. Nine-tenths of the lives of men and women were in common as human beings, but there was one part which was different, and if women ignored it they did not bring the value of that difference to the wealth and variety of civilisation; something would be lacking which men could not give, but which women could supply.

...possible to bring children up not only healthy in body, but virtuous and beautiful in mind.

Sometimes when she heard girls denounced for their loose behaviour in war time she thought to herself a child should be brought up with such sense of the sacredness of its own body that that kind of loose, degrading levity was rendered impossible; but if one's eyes were turned to the homes in which some of those girls were brought up one realised that fineness of feeling, delicacy, and modesty which was a great asset ... self-respect had been made practically impossible to them through the very conditions under which they had been reared.

counter in his office; perhaps this is one reason why women are, upon the whole, so well able to tackle more formidable tasks when the need arises.

All the existing statistics upon the subject of infantile mortality and its relation to women's work are singularly incomplete, and must be so until they also make allowance for the varying incidence of venereal disease in different classes of the community and in different localities.

It would seem, however, that when both parents are healthy the mother may, if she likes, be a tight-rope dancer or a motor mechanic, and her babies will still have a better chance than they would if she led a life of complete leisure and married a man whose physical soundness was under suspicion.

It is in that direction, and not in the direction of the munition factory or the engineering shop, that the greatest peril for the younger generation lies. Moreover, in these times of high prices, the children are likely to get more good from the money their mother brings into the home than they will get harm from her daily absence at work.

For all that, we may welcome this new theoretical anxiety for the working woman's welfare as a hopeful sign of the times, and may look forward to the day when theory is at last converted into practice.

For in practice chivalry is apt to wear rather thin when an employer is confronted with a mass of unorganised, ignorant, and docile female labour. Quite apart from any question of her sex or her capacity for child-bearing, it is not good for a woman—it would not be good for a man—to work excessively long hours in an ill-ventilated building for a wage which only allows her to support herself upon a diet of bread and tea.

Yet such real practical proposals for the good of the race as an increase in the number of female factory inspectors meet with scant attention. It does not matter much if Lady Vere de Vere is spending her spare time driving a motor lorry instead of playing bridge; it does matter very much indeed if little Jenny Jones is being bundled out of school at the age of thirteen to add five shillings a week to the family income by carrying heavy grocer's baskets or toiling in the cotton mill.

If an underpaid, underfed, anæmic general servant trebles her wages by becoming a window cleaner or a railway porter, it is a distinct gain to the nation; her work will be no harder, and her physique will improve. But we are used to the sight of the general servant, and all the tragedy she stands for; we are not used to the sight of the female window cleaner or porter, so at once a little squeak of protest goes up on behalf of the general servant's extremely problematical offspring.

Given anything like fair conditions, and the more exercise and occupation a woman gets the healthier she will be; but there was a great deal of bitter truth in a cartoon published some time ago by a well-known suffrage paper, wherein a man was depicted sitting complacently at a three-course dinner, and observing, with a jerk of his fork towards his female competitor lunching modestly on a bun and milk: "Say she's able to do my work, do you? Ridiculous!"

[illegible] Great Britain outnumber the men by about 1,500,000, which makes the whole claim absurd as far as practical politics are concerned." Obviously he is haunted with the fear that, should adult suffrage become law, and should the number of qualified adult women be found to exceed the number of qualified adult men (quite hypothetical conditions), the women would certainly combine to out-vote the men. It may be a comfort to such as W. M. Cheshire to know that there are as many varied opinions amongst women as amongst men, and as men have never shown themselves unanimous on any one point, similarly, the bogey of womankind unanimous on any political matter may safely be dismissed as theory reduced ad absurdum, and a piece of "practical" nonsense.—I am, etc.,

were soon at work on the seat of the [illegible] being drawn from the mill dam. A [illegible] was also despatched to the Central Station, and the fire engine and escape Chief Officer Scott and Superintendent afterwards arrived on the scene.

By that time, however, the flames h[illegible] good hold of the building, and the ef[illegible] brigade were directed towards confining the one building. This contained the shop, the yarn drying room, the willey ments, and the storage room in the u[illegible] Fortunately they were successful in th[illegible]

Mrs. Percy Lund [illegible] at a meeting of men [illegible] of the Yorkshire Women's Unions [illegible] vice, held at the Greenfield Congregational Church, Manningham. In an address on "Women and Problems of the Future," Miss Maude Royden (London) remarked that her sex had never been thought so much of as after two and a-half years' war, and everyone had been amazed at the extent of women's power and the extent to which the country was indebted to women. Generally speaking, the men had shown very little opposition to their entrance into highly skilled and laborious work, the only point contested being when women proposed to share the pulpit. (Laughter.) The problems which women had to face, and the country had to face, upon the conclusion of the present European struggle had been enormously changed by the fact that the nation was dependent upon them, and gave them opportunities of service such as they had never dreamt of getting before. It seemed to her that now, while the war was still continuing, it was the duty of women to consider how far they were going along that path when the terms of peace had been signed, and what exactly was to be their contribution to the country and the civilisation of the future. The very fact that they had gone into the professions and industries in such large numbers was going to make its own difficulties, and she was anxious that they should give a considerable amount of time not to deciding where they could serve their country, but on what lines they could give their service best.

CONDITION OF HOMES.

Women were not exactly like men, and if they came to the civilisation of the future only doing the things men had done and thinking along the lines men thought along, they might bring something to the solution of the problem, but in her opinion not one-half what they might bring if they realised that their gift to civilisation ought to be different, something that added to the richness and the variety of civilisation, and not merely a repetition of what the men had previously accomplished. Women must work out the ideas on which they were going forward. Nine-tenths of the lives of men and women were in common as human beings, but there was one part which was different, and if women ignored it they did not bring the value of that difference to the wealth and variety of civilisation; something would be lacking which men could not give, but which women could supply.

She herself had lately been carrying on a good deal of her own housework, and how any working woman could get through the home duties and be present in that church on Sunday remained to her an impenetrable mystery. She could not help feeling that it was not only their stupidity, but partly the stupidity of the architecture of the houses, and the implements devised to do the work. Possibly it was a fact that some homes were being neglected because the Government had determined that the women should go into munition factories where their labour was required. Women did not like to see that neglect, but they also did not like to give up their independence.

A DEMAND BY MOTHERS.

How, therefore, could they face the problem? They would have to be trusted that they did not want to neglect their homes, and the additional fact must be taken into account that it was a perfectly natural wish to have in some degree an economic interest. The speaker referred to the declining birth-rate, stating that it was a question upon which after the war they would have to be consulted. The supreme duty of a woman was the conservation of human life, and she was convinced the average normal woman desired to have children, and that to deny herself motherhood was a very great loss, but if the country wanted children, and it was within the power of women to give or withhold them, let the mothers demand those conditions under which it

Woman the Professions and war.

656/18 656

THE war, while opening up many avenues of industry for woman, has not as yet earned for her admittance into those professions sedulously preserved for masculine endeavour. Women doctors are no new feature of the faculty; but the increase in their numbers during the last eighteen months has not been very notable, though the records show that a certain proportion of those who had already retired from practice have re-entered the field. Neither—and this is, of course, a more notable point—has the number of female medical students entering the hospitals attained a higher proportion. Women have, of course, flocked to the nursing profession in battalions, and it is a fact worth noting that the standard of efficiency at the hospitals, both military and civil, has in no sense depreciated. Nursing, however, has always belonged to women, and proves nothing. The legal professions still remain closed to feminine enterprise, and this despite the fact that since the war a number of the more intelligent women have taken positions as solicitors' clerks, and in certain cases have represented their chiefs in the county courts and police-courts of London. Though women are at a premium in other departments, the iron law of custom forbids them entry to the trade union of solicitors or barristers, and the shortage of men in both professions has not eased the restrictions.

II.

Women were long ago admitted to the ranks of journalism, but it is a curious and significant thing that the demand for feminine sub-editors and reporters on the daily and weekly Press has not made itself felt. The number of technically trained women able to accept positions on the staff of a paper is not large, but had there been any demand for them it would not have been difficult for those earning their living by contributing articles and sketches to a variety of periodicals and papers to have become efficiently equipped to take the places of those journalists called to the front. Generally speaking, however, the Press as a whole does not take kindly to the idea of a woman-reporter, and a woman news-editor—in England, at all events—is unknown. The reduction in the size of papers and the consequent attempt on the part of newspaper proprietors to run their business with a depleted staff may account in part for the lack of demand for women-journalists. Even making allowance for this, however, there remains the fact that in the profession of journalism woman has made no strides since the war, that the bulk of positions on the staffs of daily or weekly papers are still occupied by men, and that those posts which can be filled by inexperienced individuals are bestowed on young men medically unfit for Army service. Though this is the case in the editorial department, the reverse holds good on the printing and business sides. Women have been employed for some time as monotype operators, but since the war there has been a growing demand for their services. On the distributive side of the Press also women have been employed, and have taken the place not only of clerks but of packers, fulfilling their duties with admirable efficiency.

III.

One of the few professions which have drawn an increasing number of recruits from women since the war is that of Accountancy, though even in this branch of business activity it is only the less important positions which women in any large number have been called on to fill. As bank clerks, stockbrokers' clerks, they have been engaged in hundreds, but though, as I have said, there is a growing demand for women-accountants, it has not yet become appreciable. As with accountants, so with architects and draughtsmen. It takes some years to become a qualified architect, and as a profession, for some strange reason, the building of houses has never appealed to women. Therefore it may be said that as yet there is no opportunity of proving whether or no this particular profession has called forth female recruits. What, however, can be ascertained is that there is little or no demand for woman draughtsmen, and that the number of women designers has hardly, if at all, increased. It would seem as if the demand for women's labour did not extend to the professions, and that, in the absence of a marked demand, the professions still refuse to admit women into their ranks.

IV.

The fact that the professions have not invited feminine co-operation since the campaign restricted the supply of men, seems to me significant of the attitude of society generally towards female labour. Of manual work there has always been a sufficiency for women, who, unfortunately, have worked for wages which pulled down the market rates; and, in commerce as in industry, employers have utilised cheap labour to an astonishing extent. But of the more highly paid positions few indeed were open to women, and what held good in pre-war days holds good now that we are in the throes of the struggle. In all those occupations which do not call for a prolonged and technical training, and do not offer large rewards, the demand for women has been unprecedented; but—and this is the whole point of my argument—the very nature of the demand implies a temporary condition which, once the war is over, will cease to hold good. An effort will undoubtedly be made by the capitalists to retain the services of the woman drawing lower wages than the man whom she replaced, and in certain instances, unhappily, the capitalists will be successful. In the majority of cases, however, things will adjust themselves. The men will return to the offices, workshops and factories, and the women will go back to the place from whence they came. And the war will neither have improved nor have depreciated the economic position of woman. She will have given her services when, at a time of national peril, there was need of her. The war over, she will no longer be required. The workers will gradually drift back into domestic service and the factories where they have long been established, and the middle-class woman will find herself in the same position at the end of hostilities as at the beginning—she will be debarred from most of the professions and until she organises will be compelled to work for lower rates than man.

Refugees and the Servant Problem.

The one thing that mars the welcome London is giving to the Belgian refugees is the belief cherished by many housewives that this migration is going to solve the domestic servant problem and supply them with cheap labour. They besiege all the known shelters and depots with requests for Belgian girls, sometimes saying quite frankly that of course they would not expect to pay as much as for an English maid, or come in the guise of charity to offer board and lodging in return for services, lamenting that this is all the help they can give. Probably few of these mistresses realise that most of the girls are of the peasant class, that they speak only Flemish, and that it would be extremely difficult to direct them in the ways of a strange household. The Committee members nowadays are distracted between a desire to weigh the advantages of the homes offered, to protect the English servant—for there are stories of English girls being dismissed to make way for Belgians,—and to place their refugees comfortably. Many, of course, are now in situations, and they have been glad to put the whole matter into the hands of the Young Women's Christian Association. As an offset to these self-interested offers it may be said that Londoners have also an overwhelming desire to befriend Belgian babies. They picture the shelters filled with motherless infants, and requests pour in by the dozen for "a Belgian baby," age, sex, and appearance specifically stated, "to be sent to above address by return." "They seem to think we keep an unlimited supply of all sorts and sizes," said one secretary, "and are deeply hurt when we have to say there is no baby to send."

BELGIAN RELIEF PROBLEM.

Suggested Work for the Refugees.

USEFUL EXPERIMENT AT HAMMERSMITH.

In previous articles I have appealed for a comprehensive and statesmanlike scheme, financed by the Government, whereby work may be quickly organised for the Belgian refugees.

A most interesting experiment, based on private enterprise, is now proceeding at Hammersmith. The Hampshire House Trust, which for years past has run a working men's club and other social organisations, has under its charge 36 refugees from Liége, Ghent, Malines, Aerschot, and Antwerp. A house, now called Raison Belge, at 9, Upper Mall, Hammersmith, is the headquarters of the colony.

CABINET-MAKING.

It was discovered that among the guests was M. Goossens, of Liége, a cabinet-maker of high skill. He has been brought into touch with Mr. Charles Spooner, F.R.I.B.A., and Mr. Fred Rowntree, who follows the same profession of architect, and is acting as treasurer of the Refugee Housing and Workshops' Committee. Mr. Rowntree's address is 11, Hammersmith-terrace, and he will be happy to furnish full information to anyone who desires to assist in financing the scheme or to start similar schemes elsewhere.

The idea is that a small workshop should be instituted (indeed, it is already "in being"), where M. Goossens shall be a master craftsman, who will train on apprenticeship lines, cabinet makers of the best type.

It is hoped that British and Belgians will work side by side. For the former British orders will be welcome, it being distinctly understood that the furniture is hand, not machine work, and designed on the principles of simplicity and honesty which were taught by Morris and Ruskin. If and when the Belgians return to their own country it is hoped that the model workshop, limited in number of employees, but, of course, on a type for others to be started elsewhere, will continue to be a permanent asset in Hammersmith.

M. Goossens' first task was to make carpenters' benches. They are fine pieces of carpentering, on the Belgian model. He has been comparing British and Belgian tools, and favours some of one country, some of the other. A composite outfit will probably be adopted. This able craftsman has made for his wife an embroidery frame, on which already some beautiful work is approaching completion. Here, again, British and Belgian girls are to be associated in the training to be provided.

TRADE UNION WAGES.

Clothes are being adapted for winter use, and the Belgian women so employed are being paid at trade union rates of wages—the rule throughout the whole scheme. It is hoped that a boot workshop on similar lines may be set going.

In many small towns, like, for instance, Kendal in Westmorland, groups of Belgians are being received as guests. For such communities the experiment at Hammersmith is well worth a careful study. Of course, it only deals with a limited number of refugees. But it represents personal and individual work of the highest educative and moral value. It forestalls any possible weariness in the duties of hospitality, for here is no stagnant kindness, but a living and enthusiastic little movement.

One imagines that the finance of the effort will have to be organised on rather more definite lines than could be arranged during the stress of the last few weeks. But this is a matter in which the public may fully rely on the good sense and strict business methods of the Hampshire House Trust.

The World of Labour.

(*By Our Own Correspondent.*)

The Belgian Refugees.

From the Labour point of view the problem of providing for the Belgians who have found refuge in this country raises serious difficulties. There are probably no fewer than 150,000 people, of all ages and grades, among us, and it is very likely that the number will be enormously increased presently. In Holland there are between a million and a million and a half persons suddenly thrown upon the charity of the neutral people; and it is difficult to resist the argument that the care of these distressed fugitives from the German terror is our responsibility as much as it is our duty to look after those who have crossed to England. Yet the problem of caring for them is a delicate and difficult one. Mr. Herbert Samuel has taken it in hand and has appointed a committee to deal with the case of those who are able to support themselves. It is clearly of the utmost importance that organised Labour should be adequately represented on a committee of this kind, since it is necessary to reconcile the claims of the Belgian refugees with those of our own people thrown out of work by the war. The difficulty is that if Belgians are given work there is less work for British men and women. The trade unions cannot possibly agree, in justice to their own members, to the refugees having the preference for any jobs that are going. Although unemployment is decreasing among men, it is on the increase among women; and no small proportion of the refugees belong to the latter sex. It is a question that affects women as well as men, and it is to be hoped that the Refugees Committee will include a strong representation of women's Labour organisations. The Government might have had in mind when appointing this committee the composition of the Trades Boards committees, which consist of an equal number of employers and employed and a few official representatives.

Relief Work and Wages.

I hear some criticism of the wage rate fixed by the Central Committee on Women's Employment for the workers employed in the various relief work-rooms which have been opened. The rate was fixed at 3d. an hour, for forty hours, or 10s. a week. The critics inside the Labour movement contend that the rate should be more like 5d. an hour, or £1 a week. This is all very well, but those who want the higher rate can scarcely have realised what a relief work-room is: it is the last resort of the unemployed woman. The good type of worker never likes it, though its hours may be short, its pay very little less than what she is accustomed to, the work easy, and the supervision comfortable. She does not like it because she feels that the work is being made for her. The slacker, on the other hand, will settle down in the relief work-room and be very hard to move. But the whole point of a relief work-room is that it shall provide temporary employment until a woman can find a permanent place in industry. While she is temporarily employed it is important that she should not be set to work making things which will compete with the product of other workers in normal employment. If she does, the relief work-room is simply helping to cause unemployment elsewhere; yet it is also important that the worker shall be given work which will increase her skill and improve her chances of getting work when industry again becomes normal.

Threepence an Hour.

For the great mass of unskilled women workers the only wage rate ever fixed is that fixed under the Trades Board Act, and there the rate is 3d. an hour. This standard was fixed for the purpose of raising the trade from the category of sweated industries. It is not meant as a standard of what women workers ought to get in the way of wages in ordinary employment; it is meant as a minimum rate. Those who object to that standard as too low ought to agitate in peace as well as war time for a higher one. If it is too low for relief work-rooms, it is obviously much too low for ordinary work-rooms. But it is manifestly impossible to make the wage rate in relief work-rooms higher than in ordinary employment without causing difficulties among the workers in ordinary trade; they will all want to be employed in relief work-rooms if wages there are higher than they can get elsewhere. It would also cause difficulty among employers, who are none too ready even to accept 3d. an hour as a minimum rate for their women workers. I am told that in some districts there have actually been protests against this rate for relief work-rooms on the ground that it is higher than the women are getting in normal times in the ordinary way, and the organisers of the work-rooms have asked to be allowed to reduce the number of hours worked in order to make the earnings of the women in the relief work-rooms approximate more nearly to the scale obtaining outside.

Cotton Factory Times, October 30th. 1914.

BELGIAN PROBLEMS.

COMMITTEE TO CONSIDER THEIR EMPLOYMENT.

MINERS AND THE UNIONS.

Mr. Herbert Samuel, President of the Local Government Board, has appointed a Departmental Committee to consider and report on questions arising from the reception of Belgian refugees in this country, and particularly what action can properly be taken with a view to finding occupation for the refugees which would not compete with the employment of available British labour.

The committee will consist of Sir Ernest Hatch (chairman), the Right Rev. Monsignor Bidwell, Mr. C. W. Bowerman, M.P., Sir F. Cawley, M.P., Sir T. H. Elliott, Mr. H. Goeling, Mr. A. Henderson, M.P., Miss Susan Lawrence, Mrs. H. Lyttelton, Mr. R. S. Meiklejohn. Mr. H. Pike Pease, M.P., the Earl of Plymouth, Mr. C. F. Roy, Mr. Smillie, Mr. J. Dundas White, M.P., and Mr. Basil Williams.

Mr. H. A. Leggett, of the Local Government Board, will be secretary to the committee, and all communications should be addressed to him at the Local Government Board, Whitehall, London, S.W., where the offices of the committee of representative Belgians in this country nominated by the Belgian Government will be available for consultation by Sir Ernest Hatch's committee.

Mr. J. H. Whitehouse, M.P., and Sir John N. Barran, M.P., have been appointed by the President of the Local Government Board as Commissioners to inspect institutions and other places outside London where Belgian refugees are received.

Appeal to Miners.

The annual conference of the Miners' Federation of Great Britain has been postponed on account of the war, but it was considered advisable to hold an interim conference. Before the conference, which was held at the Westminster Palace Hotel, London, a meeting of the retiring Executive was held on Tuesday morning, and was well attended.

Mr. T. Smillie (president) occupied the chair, and at the close of the meeting made the following statement to the press:—

"A deputation of Belgian trade union officials was introduced by Mr. Tom Shaw, international secretary of the Textile Workers, in order to make an appeal to the miners on behalf of the organised workers of Belgium, who have been placed in entire poverty as a result of the war. After statements by two of the Belgian delegates, the Executive decided to give the question their consideration with the view to a grant being made to the Belgian Trade Union Relief Fund, which has been inaugurated by Mr. Bowerman, M.P., secretary to the Parliamentary Trade Union Congress.

"A long discussion took place on the question of the separation allowance which is being paid to the wives and dependents of men in the army and navy, and strong condemnation was expressed of the inadequacy of the amount presently being paid; and also of the inadequacy of the amount which is being paid to persons in distress through unemployment arising out of the war.

"The Executive agreed to take full reports at the afternoon conference as to the arrangements which have been made in the various districts for the payment of relief in industrial distress caused by the war, and also the sums which are being paid to the dependents of men at the front, with the view to drafting a comprehensive resolution expressing the views of the Miners' Federation on this matter."

Variety in Administration.

Mr. Smillie presided over the afternoon conference, at which the whole of the districts in the Federation area were represented.

The conference received reports of the amounts received by those of the civil population affected by the war, and the composition of the administrative bodies entrusted with the distribution of the funds. The reports revealed a great variety in the composition of the administrative bodies, and a still greater variety in the amounts received by those in need. It was also shown that in some parts of the Federation area the workers at work are having deducted from their earnings (by agreement with their employers) varying sums, some of which is devoted to national and some to local purposes, the latter being augmented by moneys received from other sources.

Several mines in the Federation area have been closed, but those that are working are working satisfactorily.

Relief Recommendations.

At Wednesday's meeting, after a general discussion, resolutions were unanimously carried as follow:—

"That all war relief funds be merged together and taken over by the Government, to be administered by the Government, and that there be a general or uniform scale of relief, modifications or exceptions to be made to suit exceptional districts, the national revenue to be made responsible for raising the necessary funds."

"That we accept the resolution of the War Emergency Workers' National Committee, and demand that the following should be the minimum scale of relief:—

One adult, 12s. 6d.; two adults, 17s. 6d.
One adult and one child, 15s. 6d.
Two adults and one child, 20s.
Two adults and two children, 22s. 6d.
2s. 6d. to be paid for each child.
3s. 6d. to be adopted in London boroughs.

"That the Government be called upon to find employment for all persons thrown out of work

Bristol Times, Oct. 31st. 1914.

ARTISTIC HANDICRAFT.

BELGIUM AND THE ART OF LACEMAKING.

Lace, which dates from the earliest period of civilisation, is associated with all that is picturesque and romantic in history, and the lacemakers have a share in the charm surrounding this very artistic handicraft. Though Homer refers to lace, it was not the kind which we wear to-day (writes I. G. McAllister in The Lady). Ancient specimens which have come to light show that it was made of gold thread, silk, and other materials, and that it more closely resembled netting and embroidery than anything else. Roughly speaking, bobbin lace, made from flax thread similar to what we use, was first invented and worn in Flanders in the early sixteenth century.

Flanders and Northern Italy have been the homes of the lacemakers since mediæval times, and it is interesting to note that the two countries which developed the art of painting also brought the artistic craft of lacemaking to perfection. Whilst Italy produced needlepoint lace, Flanders had the entire honour of introducing the bobbin lace, which for the last five hundred years has been a flourishing industry in many of its towns.

Old Flanders point is the original lace of the country, and it is very beautiful. Many other kinds are copied and adapted from other countries, for Belgium is not only particularly clever at copying specimens, but can produce them cheaper than other countries. For many years point d'Angleterre has been made in Belgium for England and France. Three cities which have been constantly before us of late contributed different kinds of lace. Once beautiful Louvain, now ruined, made black lace, and so did historic Antwerp, whilst Brussels is famous for guipure de Binche.

Brussels lace, point à l'aiguille, and point de Gaze are all fine lace, or needlepoint, a term which means fine lace, and has no reference to the point of a needle. The thread used for these kinds is exquisitely fine. The flax is grown in Brabant, Nicholas, Tournai, and Courtrai. The steeping is done in the River Lys, near Courtrai, the water of which gives better results than other kinds.

A DANGEROUS PRACTICE.

Brussels lace discolours very quickly, so the workers place the flowers in white lead powder, and beat them with their hands to whiten them. This often causes lead-poisoning, and is therefore an extremely dangerous practice, to say nothing of the fact that the lead powder turns the lace black if exposed to sea air or hot rooms. The spinner works against a dark background, to show the thread as it is drawn from the distaff, and the light is so arranged that a single ray only is thrown on the work, which illumines it. The experienced spinner, however, relies more on the feel of the thread as it passes through her fingers, as it is fine enough almost to escape the sight. The thread-spinner naturally receives very high wages, since one pound of lace (in weight) represents £700.

Needlepoint lace differs from bobbin lace in the making. The pattern is first traced upon parchment, and then fastened to a piece of linen. The skeleton of the pattern is next worked in leading lines of thread, and fastened to the parchment by stitches. The rest is filled in with buttonhole stitching, and between are inserted "ties," or "links," and fillings of elaborate stitches. A sharp instrument passed between the parchment and linen releases the lace from its foundations. The finest made of this kind is "rose" or "gros point de Venise."

Valenciennes is a city once belonging to Flanders, in which lace-making abounds. There are two kinds of Valenciennes lace, the old and the new. To produce the former the spinners worked in underground cellars, to induce evenness of tissue by the damp atmosphere. Specimens of it are extremely beautiful, with tulips, carnations, and anemones quite true to Nature. The cost of producing it was enormous, for it took fourteen hours to make an inch and a half, and one year was required to manufacture a pair of ruffles for a man. Modern Valenciennes cannot compare with it, nor is it so elaborate, for a Lille worker can easily make six yards in a day. During the French Revolution the lace-makers fled from Valenciennes, and before long Bruges, Ghent, Courtrai, and Ypres made it extensively.

Each city has a special distinguishing mark to show where the lace was made. Ghent has a square, the meshed bobbins being twisted two and a half times; Bruges a circle, the bobbins twisted three times; Ypres four times, and Courtrai three and a half.

Bruges lace or point de duchesse is bobbin lace of a fine quality. The sprigs made are like Honiton, united by "brides," or "bars ornées"; but it is bolder and better in design, and far more original. Valenciennes lace is carried to great perfection in Bruges. The teaching and producing of lace is still largely in the hands of religious communities, and children are taught in schools at the age of eight, whilst some receive their first lesson

EMPLOYERS & BELGIAN REFUGEES.

DISPLACING ENGLISH LABOUR.

At a meeting of the War Emergency Workers' National Committee, held under the presidency of Mr. Arthur Henderson, M.P., at General-buildings, Aldwych, yesterday, the Press were informed that several instances had been reported to the committee of employers of labour both in London and the provinces taking advantage of the presence of Belgian refugees in this country and offering them situations at lower wages than were normally paid to British workpeople engaged in the same class of work. In one specific case, it was stated, the proprietors of a London hotel had taken on Belgian women refugees as chambermaids, &c., and dismissed the English women previously employed. In another instance a cigar maker was offering to take on Belgian girls at lower rates than he had to pay English girls.

The committee decided to remit all these cases to the Labour representatives on the Government's Belgian Refugees' Committee.

6573

THEIR EMPLOYMENT.

MINERS AND THE UNIONS.

Mr. Herbert Samuel, President of the Local Government Board, has appointed a Departmental Committee to consider and report on questions arising from the reception of Belgian refugees in this country, and particularly what action can properly be taken with a view to finding occupation for the refugees which would not compete with the employment of available British labour.

The committee will consist of Sir Ernest Hatch (chairman), the Right Rev. Monsignor Bidwell, Mr. C. W. Bowerman, M.P., Sir F. Cawley, M.P., Sir T. H. Elliott, Mr. H. Gosling, Mr. A. Henderson, M.P., Miss Susan Lawrence, Mrs. H. Lyttelton, Mr. R. S. Meiklejohn. Mr. H. Pike Pease, M.P., the Earl of Plymouth, Mr. C. F. Roy, Mr. Smillie, Mr. J. Dundas White, M.P., and Mr. Basil Williams.

Mr. H. A. Leggett, of the Local Government Board, will be secretary to the committee, and all communications should be addressed to him at the Local Government Board, Whitehall, London, S.W., where the offices of the committee of representative Belgians in this country nominated by the Belgian Government will be available for consultation by Sir Ernest Hatch's committee.

Mr. J. H. Whitehouse, M.P., and Sir John N. Barran, M.P., have been appointed by the President of the Local Government Board as Commissioners to inspect institutions and other places outside London where Belgian refugees are received.

Appeal to Miners.

The annual conference of the Miners' Federation of Great Britain has been postponed on account of the war, but it was considered advisable to hold an interim conference. Before the conference, which was held at the Westminster Palace Hotel, London, a meeting of the retiring Executive was held on Tuesday morning, and was well attended.

Mr. T. Smillie (president) occupied the chair, and at the close of the meeting made the following statement to the press:—

"A deputation of Belgian trade union officials was introduced by Mr. Tom Shaw, international secretary of the Textile Workers, in order to make an appeal to the miners on behalf of the organised workers of Belgium, who have been placed in entire poverty as a result of the war. After statements by two of the Belgian delegates, the Executive decided to give the question their consideration with the view to a grant being made to the Belgian Trade Union Relief Fund, which has been inaugurated by Mr. Bowerman, M.P., secretary to the Parliamentary Trade Union Congress.

"A long discussion took place on the question of the separation allowance which is being paid to the wives and dependents of men in the army and navy, and strong condemnation was expressed of the inadequacy of the amount presently being paid; and also of the inadequacy of the amount which is being paid to persons in distress through unemployment arising out of the war.

"The Executive agreed to take full reports at the afternoon conference as to the arrangements which have been made in the various districts for the payment of relief in industrial distress caused by the war, and also the sums which are being paid to the dependents of men at the front, with the view to drafting a comprehensive resolution expressing the views of the Miners' Federation on this matter."

Variety in Administration.

Mr. Smillie presided over the afternoon conference, at which the whole of the districts in the Federation area were represented.

The conference received reports of the amounts received by those of the civil population affected by the war, and the composition of the administrative bodies entrusted with the distribution of the funds. The reports revealed a great variety in the composition of the administrative bodies, and a still greater variety in the amounts received by those in need. It was also shown that in some parts of the Federation area the workers at work are having deducted from their earnings (by agreement with their employers) varying sums, some of which is devoted to national and some to local purposes, the latter being augmented by moneys received from other sources.

Several mines in the Federation area have been closed, but those that are working are working satisfactorily.

Relief Recommendations.

At Wednesday's meeting, after a general discussion, resolutions were unanimously carried as follow:—

"That all war relief funds be merged together and taken over by the Government, to be administered by the Government, and that there be a general or uniform scale of relief, modifications or exceptions to be made to suit exceptional districts, the national revenue to be made responsible for raising the necessary funds."

"That we accept the resolution of the War Emergency Workers' National Committee, and demand that the following should be the minimum scale of relief:—

One adult, 12s. 6d.; two adults, 17s. 6d.
One adult and one child, 15s. 6d.
Two adults and one child, 20s.
Two adults and two children, 22s. 6d.
2s. 6d. to be paid for each child.
3s. 6d. to be adopted in London boroughs.

"That the Government be called upon to find employment for all persons thrown out of work through the war."

The conference recommended that Mr. Herbert Smith (Yorkshire) and Mr. W. Brace, M.P. (Wales) be appointed to the War Emergency Workers' National Committee.

BELGIUM AND THE ART OF LACEMAKING.

Lace, which dates from the earliest period of civilisation, is associated with all that is picturesque and romantic in history, and the lacemakers have a share in the charm surrounding this very artistic handicraft. Though Homer refers to lace, it was not the kind which we wear to-day (writes I. G. McAllister in The Lady). Ancient specimens which have come to light show that it was made of gold thread, silk, and other materials, and that it more closely resembled netting and embroidery than anything else. Roughly speaking, bobbin lace, made from flax thread similar to what we use, was first invented and worn in Flanders in the early sixteenth century.

Flanders and Northern Italy have been the homes of the lacemakers since mediæval times, and it is interesting to note that the two countries which developed the art of painting also brought the artistic craft of lacemaking to perfection. Whilst Italy produced needlepoint lace, Flanders had the entire honour of introducing the bobbin lace, which for the last five hundred years has been a flourishing industry in many of its towns.

Old Flanders point is the original lace of the country, and it is very beautiful. Many other kinds are copied and adapted from other countries, for Belgium is not only particularly clever at copying specimens, but can produce them cheaper than other countries. For many years point d'Angleterre has been made in Belgium for England and France. Three cities which have been constantly before us of late contributed different kinds of lace. Once beautiful Louvain, now ruined, made black lace, and so did historic Antwerp, whilst Brussels is famous for guipure de Binche.

Brussels lace, point à l'aiguille, and point de Gaze are all fine lace, or needlepoint, a term which means fine lace, and has no reference to the point of a needle. The thread used for these kinds is exquisitely fine. The flax is grown in Brabant, Nicholas, Tournai, and Courtrai. The steeping is done in the River Lys, near Courtrai, the water of which gives better results than other kinds.

A DANGEROUS PRACTICE.

Brussels lace discolours very quickly, so the workers place the flowers in white lead powder, and beat them with their hands to whiten them. This often causes lead-poisoning, and is therefore an extremely dangerous practice, to say nothing of the fact that the lead powder turns the lace black if exposed to sea air or hot rooms. The spinner works against a dark background, to show the thread as it is drawn from the distaff, and the light is so arranged that a single ray only is thrown on the work, which illumines it. The experienced spinner, however, relies more on the feel of the thread as it passes through her fingers, as it is fine enough almost to escape the sight. The thread-spinner naturally receives very high wages, since one pound of lace (in weight) represents £700.

Needlepoint lace differs from bobbin lace in the making. The pattern is first traced upon parchment, and then fastened to a piece of linen. The skeleton of the pattern is next worked in leading lines of thread, and fastened to the parchment by stitches. The rest is filled in with buttonhole stitching, and between are inserted "ties," or "links," and fillings of elaborate stitches. A sharp instrument passed between the parchment and linen releases the lace from its foundations. The finest made of this kind is "rose" or "gros point de Venise."

Valenciennes is a city once belonging to Flanders, in which lace-making abounds. There are two kinds of Valenciennes lace, the old and the new. To produce the former the spinners worked in underground cellars, to induce evenness of tissue by the damp atmosphere. Specimens of it are extremely beautiful, with tulips, carnations, and anemones quite true to Nature. The cost of producing it was enormous, for it took fourteen hours to make an inch and a half, and one year was required to manufacture a pair of ruffles for a man. Modern Valenciennes cannot compare with it, nor is it so elaborate, for a Lille worker can easily make six yards in a day. During the French Revolution the lace-makers fled from Valenciennes, and before long Bruges, Ghent, Courtrai, and Ypres made it extensively.

Each city has a special distinguishing mark to show where the lace was made. Ghent has a square, the meshed bobbins being twisted two and a half times; Bruges a circle, the bobbins twisted three times; Ypres four times, and Courtrai three and a half.

Bruges lace or point de duchesse is bobbin lace of a fine quality. The sprigs made are like Honiton, united by "brides," or "bars ornées"; but it is bolder and better in design, and far more original. Valenciennes lace is carried to great perfection in Bruges. The teaching and producing of lace is still largely in the hands of religious communities, and children are taught in schools at the age of eight, whilst some receive their first lesson at five.

DISPLACING ENGLISH LABOUR.

At a meeting of the War Emergency Workers' National Committee, held under the presidency of Mr. Arthur Henderson, M.P., at General-buildings, Aldwych, yesterday, the Press were informed that several instances had been reported to the committee of employers of labour both in London and the provinces taking advantage of the presence of Belgian refugees in this country and offering them situations at lower wages than were normally paid to British workpeople engaged in the same class of work. EMPLOYMENT FOR BELGIAN REFUGEE WOMEN.

A NEW EDINBURGH SCHEME.

In order to find employment for Belgian refugee women a scheme has been set on foot by a prominent militant suffragette in Edinburgh whereby Belgian women who have been accustomed to cooking will be asked to give a series of cooking lessons according to the methods of their own country. Under the scheme, which is on the snowball system, a certain number of ladies in each district of the city will form a class, each paying 3d. a a fee, and taking it in turn to lend their kitchens for the purposes of the lessons. In no case will the class consist of less than twelve, and a lesson lasting an hour will be given in two kitchens each day. Where an interpreter is required, the class will have to be larger or the fee raised to 4d. Each lady undertakes to provide at least twelve pupils an dto give the use of her kitchen.

It is pointed out that the scheme does not invalve any great expenditure of time, energy, or money on the part of any individual, and at the same time is not a charity.

Islington Gazette,
December 10th. 1914.

Tinkle-tinkle — Alderman Bridgland reports that his family of Belgian refugees at Tollington-park College is growing apace. He hopes within a few days to be accommodating one hundred persons in the hostel. In order, however, to make the place comfortable, floorcloth is needed for some of the newly-appointed bedrooms. My experience is that in most old houses many tin tacks are left in the flooring. Mr. Blok, the treasurer of the home, has evidently had the same experience, and in a letter to me he pictures one of the Belgian guests jumping suddenly from bed and alighting upon one of these tacks in the dead of night. Well, my friends, we do not want to hear the cries of the wounded in Flemish in Tollington-park. Therefore, if you will send along any little pieces of oilcloth that you can spare we shall be obliged. You may send direct to the home in Tollington-park, or, if you drop a note to Mr. A. F. Hersant, 22, Tollington-place, he will send for your gift. Magnificent Islington! In Islington we are housing and maintaining between 200 and 300 Belgians; we have sent over £3,000 to the Prince of Wales' Fund; over £200 to Queen Mary's Work for Women Fund; we are providing in the workrooms at Canonbury-park for between 200 and 300 women. What do you think of your borough, Mr. Mayor?

Huddersfield Examiner, Nov. 26. 1914.

REPATRIATION OF BELGIANS.

—:o:—

ADDRESS BY MRS. F. D. ACLAND.

REPATRIATION TO BEGIN AT AN EARLY DATE.

Mrs. Francis D. Acland, wife of the Under Secretary for Foreign Affairs, was the principal speaker at the twenty-sixth annual meeting of the Huddersfield Women's Liberal Association, which was held at the Temperance Hall on Wednesday evening. Her subject was "Belgium and its Repatriation." There was a capital attendance, over which Mrs. Glaisyer, the retiring president of the association, presided. Among those present were Lady Raynor, Mrs. Donkersley (the president-elect), Mrs. C. F. Sykes, Mrs. A. L. Sykes, Mrs. Laycock, Mrs. Studdard (hon. secretary), Miss Johnston (treasurer), Miss Marion Johnston, Mr. J. E. Willans, and Mr. A. J. Brook.

Mrs. STUDDARD announced that letters regretting their inability to be present had been received from Mrs. F. K. Sykes, Mr. Arthur Sherwell, M.P. (who could not leave Parliament), and Sir William Raynor. The letter from Sir William Raynor on the subject of local recruiting appears in another column.

A NON-PARTY MEETING.

Mrs. GLAISYER said they had never held their annual meeting in circumstances in the least like those which surrounded them that night. As somebody had said, the old order was being broken up, and a new one was being born. This terrible war had cut across their lives, and both this nation and the different countries of the world would never be the same afterwards as they were before the war. One consequence of the changes which the war had brought about, and one which she thought was not at all an unmixed evil, was that party distinctions were stopped for the present. That association, as well as other political associations in the town, had pledged themselves not to bring forward party propaganda while the war lasted, and they had loyally kept that promise. They were going on with educational meetings in the wards, but those meetings were not of a political character. Many of the women organised work for the benefit of the different relief funds, and any teas or entertainments that were promoted were for the Belgians or the wounded soldiers fund, or objects of that kind. At that annual meeting they were marking their sense of the changed conditions by not having the annual report read, and making the meeting entirely on non-party lines.

MORE HOUSES THAN BELGIANS TO FILL THEM.

Referring to the subject of Mrs. Acland's address, Mrs. Glaisyer said that we in Huddersfield almost found it difficult to realise the terrible times we were living in. We were not reminded of those times by darkened streets, as the people were in London and on the East Coast. Our mills were working full time and overtime, and we seemed altogether so much more prosperous than people in many parts of the country. That, she thought, ought to make us feel more than ever bound in honour to help those people who were not so favoured as ourselves. Surely that ought to make us eager to do everything we could for those who were suffering by the war, and no one appealed to our sympathies more than the brave Belgian nation. (Applause.) There were over 300 Belgians in Huddersfield already, and she hoped we were going to have more. Just at present there were more houses for the Belgians than there were Belgians to fill them. (Applause.) That association thought some time ago that they might raise enough money to take a small house, furnish it, and at any rate provide part of the cost of the support of a Belgian family. So far £25 had been promised, and they had also received promises of furniture and money and gifts to be contributed weekly. So far they had not done anything towards taking a house, because of the uncertainty as to whether people would come to fill it. She thought that before very long we should have to take in more Belgian refugees, so that many more promises were needed, and these should be given to Miss Marion Johnston, of West Parade. They should all look forward to the time when the Belgians would be able to return to their own country, and help to build up a prosperous and happy country again. This, she said, in conclusion, was Mrs. Acland's first visit to Huddersfield, and they welcomed her most warmly. (Applause.)

WOMEN'S WORK IN TIME OF WAR.

Mrs. ACLAND, who was cordially received, spoke of the pleasure it gave her to address Yorkshire audiences, and said that when first received an invitation to address t meeting she was to speak on the subject of women's suffrage, about which she knew that they were very keen, and she was very keen, too. Although they were not talking about that subject now, they were thinking about it, and realising, as she thought the whole nation was realising, what a tremendous amount of work there was for women to do in the time of war. In the old days it was said that the men went out to fight and the women went their own [illegible]

would compensate them for any damage. Belgium pluckily resolved to stand up for honour, to abide by her plighted word, and they knew the terrible things that had fallen upon her in consequence.

WHAT WE OWE TO BELGIUM.

She wondered if we realised how much we owed to the Belgians for what they had done. She (Mrs. Acland) was not a military expert, but those who were were convinced that if the Belgians had not delayed the Germans for a fortnight or three weeks it would have been next to impossible for us to land our forces in France at all, France would have been humbled to her knees, and soon all the great coast line opposite the cliffs of Dover would have been in the hands of the Germans. But we still slept securely in our beds, and though we heard rumours of German raids, she did not think that at present they could do very much damage to us. The Germans, however, would have been very much nearer to us if they had been allowed to march unmolested through Belgium. The German plan was to force France to surrender, to make terms which would include the surrender of the French Fleet to Germany, and with her own and that fleet overcome the British Fleet. Belgium had saved us from that, and had shown that material success and prosperity were not the things that mattered most to her. And even after Liege and many other towns had fallen the Belgians would not own that they were beaten, and they were still fighting magnificently. (Applause.)

TIME FOR RETURN WILL COME SUDDENLY.

The first thought in the heart of the Belgians, next to that of gratitude, was how on earth they were ever going to start again when they returned. And whatever we were doing for them now, it was our business also to begin planning as to how we could help them to get back home. The wife of one of the Belgian Cabinet Ministers, Madame Emile Vandervelde, had started a fund for the repatriation of the Belgian people. She (Mrs. Acland) had been very much encouraged in talking to people about the fund to find how they liked the idea. This was especially the case among the farmers of this country. Each set of people here should, she thought, try to raise money for the repatriation of the corresponding set in Belgium—the townspeople for the townspeople, and so on. Some people said these were early days to think about the Belgians going home. She did not think it was, because we did not know how soon that time would come. Whenever it did come it would probably come suddenly. It did not do to despise the German people or their Army. She believed that the Germans were just as much inspired by patriotic feeling as we were, and that after the war we should be better friends of the Germans than we were now. The Germans had a lot to learn from us, and we had a lot to learn from them in all sorts of ways. At the same time, she thought we had now got the Germans "on toast." The whole idea of the German plan was that it must succeed quickly. It had not done so, and we were still driving them back. (Applause.) She explained that weekly contributions were being made to the repatriation fund, and while it was certain that we should demand a big indemnity from Germany, it was uncertain when it would be paid. Thus it was no use waiting for the Germans; besides, we in this country were not going to allow them to have all the honour of making good the awful devastation they had wrought. The Americans were doing magnificent things for the relief of the Belgians, and were actually saving from real starvation those who were left under German rule in Belgium itself. The callous way in which the Germans were allowing the population of Belgium to starve was simply horrible. Whatever sacrifices we made we should never be in anything like the position of the Belgian people, and it should be a great pleasure to us to help the little country that had done so much for us. (Applause.)

A collection was made for the repatriation fund, and this realised £4 14s. 4d., and in addition £1 was promised.

Lady Raynor, Mrs. C. F. Sykes, Mrs. T. Shires, and Mr. J. E. Willans took part in a short discussion, and the last-named stated that a deputation from the Belgian headquarters in London would visit Huddersfield shortly in order to make arrangements for the employment of the male refugees, and also for the return to the fighting forces of a number of the young fellows.

Mrs. Donkersley moved a vote of thanks to Mrs. Acland and to the ladies who had served tea before the meeting. She returned thanks for the honour which had been done her and the Almondbury Ward in her election as president of the association.

Mrs. W. E. Haigh seconded the resolution, which was passed, and Mrs. Acland replied.

The meeting closed with the singing of the first verse of the National Anthem.

Mr. Blox, the treasurer of the home, has evidently had the same experience, and in a letter to me he pictures one of the Belgian guests jumping suddenly from bed and alighting upon one of these tacks in the dead of night. Well, my friends, we do not want to hear the cries of the wounded in Flemish in Tollington-park. Therefore, if you will send along any little pieces of oilcloth that you can spare we shall be obliged. You may send direct to the home in Tollington-park, or, if you drop a note to Mr. A. F. Hersant, 22, Tollington-place, he will send for your gift. Magnificent Islington! In Islington we are housing and maintaining between 200 and 300 Belgians; we have sent over £3,000 to the Prince of Wales' Fund; over £200 to Queen Mary's Work for Women Fund; we are providing in the workrooms at Canonbury-park for between 200 and 300 women. What do you think of your borough, Mr. Mayor?

unmixed evil, was that party distinctions were stopped for the present. That association, as well as other political associations in the town, had pledged themselves not to bring forward party propaganda while the war lasted, and they had loyally kept that promise. They were going on with educational meetings in the wards, but those meetings were not of a political character. Many of the women organised work for the benefit of the different relief funds, and any teas or entertainments that were promoted were for the Belgians or the wounded soldiers fund, or objects of that kind. At that annual meeting they were marking their sense of the changed conditions by not having the annual report read, and making the meeting entirely on non-party lines.

MORE HOUSES THAN BELGIANS TO FILL THEM.

Referring to the subject of Mrs. Acland's address, Mrs. Glaisyer said that we in Huddersfield almost found it difficult to realise the terrible times we were living in. We were not reminded of those times by darkened streets, as the people were in London and on the East Coast. Our mills were working full time and overtime, and we seemed altogether so much more prosperous than people in many parts of the country. That, she thought, ought to make us feel more than ever bound in honour to help those people who were not so favoured as ourselves. Surely that ought to make us eager to do everything we could for those who were suffering by the war, and no one appealed to our sympathies more than the brave Belgian nation. (Applause.) There were over 300 Belgians in Huddersfield already, and she hoped we were going to have more. Just at present there were more houses for the Belgians than there were Belgians to fill them. (Applause.) That association thought some time ago that they might raise enough money to take a small house, furnish it, and at any rate provide part of the cost of the support of a Belgian family. So far £25 had been promised, and they had also received promises of furniture and money and gifts to be contributed weekly. So far they had not done anything towards taking a house, because of the uncertainty as to whether people would come to fill it. She thought that before very long we should have to take in more Belgian refugees, so that many more promises were needed, and these should be given to Miss Marion Johnston, of West Parade. They should all look forward to the time when the Belgians would be able to return to their own country, and help to build up a prosperous and happy country again. This, she said, in conclusion, was Mrs. Acland's first visit to Huddersfield, and they welcomed her most warmly. (Applause.)

WOMEN'S WORK IN TIME OF WAR.

Mrs. ACLAND, who was cordially received, spoke of the pleasure it gave her to address Yorkshire audiences, and said that when first received an invitation to address t meeting she was to speak on the subject of women's suffrage, about which she knew that they were very keen, and she was very keen, too. Although they were not talking about that subject now, they were thinking about it, and realising, as she thought the whole nation was realising, what a tremendous amount of work there was for women to do in the time of war. In the old days it was said that the men went out to fight and the women wept their eyes out. But now the women, unless there was some great national loss, had no time to waste in weeping their eyes out. And one very good feature of their work was that they had been able to make friends as they had hardly been able to do hitherto with many Conservative women, from whom, through political jealousy, they had been kept apart. It was one of the few pleasures of the war to find how very good those women were to work with, and how they agreed with many of the same things that Liberal women agreed about. She hoped that after the war there would not be so much bitterness in party politics, and not so much of the spirit that if a person did not agree with another he or she must be either a knave or a fool. There was a great deal too much of that on both sides. That afternoon she had visited the Parochial Hall in Huddersfield, and had seen the splendid work and wonderful organisation which the women of Huddersfield had set going. She had not seen anything like it anywhere. She wished every town had such a centre for women's work as Huddersfield had in the Parochial Hall.

BELGIUM'S CHOICE.

After remarking upon the fact that the Belgians were much the same sort of people as ourselves, Mrs. Acland said that up to the present there was no exact plan of getting them back to Belgium, though a fund for repatriation had been started, and she would explain how it arose. First of all, however, she wished to tell her hearers what the Belgians had done for civilisation, and what a wonderful choice it was that they made. Belgium was not in the position of any other small country. It was not only a neutral country, but a neutralised country. It was under a pledge not to take any side in any quarrel between England, France, and Germany, and those countries undertook that if any quarrel arose between them they would not one of them let a single soldier set foot in Belgium. Belgium, therefore, was a perfect little oasis where peace was certain, and they had only a very small army. At the outbreak of war the Germans made the Belgian Government what they called an "honourable proposal." That proposal was that Belgium should adopt an attitude of "friendly neutrality." There was no such thing as "friendly neutrality." It was like talking about two-sided one-sidedness or any other contradiction in terms. The proposal of Germany was that Belgium should allow German troops to pass through Belgium, facilitate their passage in any way they could, and if they would do that Germany would not annex any territory and

veldte, had started a fund for the repatriation of the Belgian people. She (Mrs. Acland) had been very much encouraged in talking to people about the fund to find how they liked the idea. This was especially the case among the farmers of this country. Each set of people here should, she thought, try to raise money for the repatriation of the corresponding set in Belgium—the townspeople for the townspeople, and so on. Some people said these were early days to think about the Belgians going home. She did not think it was, because we did not know how soon that time would come. Whenever it did come it would probably come suddenly. It did not do to despise the German people or their Army. She believed that the Germans were just as much inspired by patriotic feeling as we were, and that after the war we should be better friends of the Germans than we were now. The Germans had a lot to learn from us, and we had a lot to learn from them in all sorts of ways. At the same time, she thought we had now got the Germans "on toast." The whole idea of the German plan was that it must succeed quickly. It had not done so, and we were still driving them back. (Applause.) She explained that weekly contributions were being made to the repatriation fund, and while it was certain that we should demand a big indemnity from Germany, it was uncertain when it would be paid. Thus it was no use waiting for the Germans; besides, we in this country were not going to allow them to have all the honour of making good the awful devastation they had wrought. The Americans were doing magnificent things for the relief of the Belgians, and were actually saving from real starvation those who were left under German rule in Belgium itself. The callous way in which the Germans were allowing the population of Belgium to starve was simply horrible. Whatever sacrifices we made we should never be in anything like the position of the Belgian people, and it should be a great pleasure to us to help the little country that had done so much for us. (Applause.)

A collection was made for the repatriation fund, and this realised £4 14s. 4d., and in addition £1 was promised.

Lady Raynor, Mrs. C. F. Sykes, Mrs. T. Shires, and Mr. J. E. Willans took part in a short discussion, and the last-named stated that a deputation from the Belgian headquarters in London would visit Huddersfield shortly in order to make arrangements for the employment of the male refugees, and also for the return to the fighting forces of a number of the young fellows.

Mrs. Donkersley moved a vote of thanks to Mrs. Acland and to the ladies who had served tea before the meeting. She returned thanks for the honour which had been done her and the Almondbury Ward in her election as president of the association.

Mrs. W. E. Haigh seconded the resolution, which was passed, and Mrs. Acland replied.

The meeting closed with the singing of the first verse of the National Anthem.

The Richmond Herald, December 19th 1914. 657

THE PATRIOTIC ASSOCIATION.

REPORTS OF COMMITTEES.

THE BARNES BELGIAN REFUGEES.

A meeting of the Barnes and Mortlake Patriotic Association was held at the Council House on Wednesday evening. Coun. S. W. Lambert, J.P., presided, and there were also present Miss Attwell, Mrs. Niemeyer, and Miss Wigan, the Revs. Horace Monroe, E. Harrison, and E. B. Larkin, Mr. A. C. Forster Boulton, J.P., Mr. J. Kelsall, J.P., Mr. G. A. Seaward, Couns. Firmston, Hampton, Jones, Medus, and Powell, Messrs. J. E. Anderson, Couchman, Hensman, Lowe, Rollston, and Spark, with the general secretary (Mr. W. T. Goodale), the assistant hon. secretary (Coun. Revis), and the hon. auditor (Mr. Stuckey Clarke).

The report of the Mortlake Red Cross Committee stated that the members of the St. Mary's Guild had supplied 200 garments during the past four months, and that the Edgar Hall Working Party had made a total of 383 garments, while during the past month 1,181 garments had been received by the committee and forwarded to various quarters. The depots would be closed from December 21st to January 4th.

The report of the Barnes Red Cross Committee stated that 1,913 garments had been received since the depot opened, and that £10 4s. 6d. had been received from an entertainment given by Miss Pauline Gilmer.

The report of the Medical Aid Sub-Committee stated that enquiry had been made of them whether they could accommodate 30 convalescent soldiers from Woolwich, but that on offering accommodation in several houses, the authorities considered such accommodation unsuitable. It therefore appeared to the committee that the only plan was to acquire a house or hall for the purpose. The offer of Mr. Batten's house would have been accepted, but it was still occupied by Belgian refugees.

Coun. Hampton submitted the report of the Unemployment Committee, which showed that up to December 10th, 231 men and 55 women had registered, and that of those eight had joined the Army; employment had been found for 122 men and 24 women, leaving 101 men and 31 women on the register. A register for Belgian Refugees had been opened for those who could do work that would not interfere with our own people, but up to the present no names had been registered. The committee had considered a number of cases of persons requiring relief, and found that there were 16 cases due to the war, 10 of which had been relieved. They had expended £15 1s. 4d., and had a balance of £4 18s. 8d. They asked for a further grant of £15.

Mr. Kelsall submitted the report of the Navy and Army Families' Committee, which showed that the total registered were 362, of which 247 were beyond the scope of the Association; 105 were receiving weekly allowances; and 10 were being investigated. The total amount received from the Association was £320, of which £314 18s. 8d. had been expended, leaving a balance of £5 1s. 4d. The amount advanced on loan was £81 18s. 1d., of which £23 10s. had been refunded. The committee required another grant of £100 to meet the expenses for the next four weeks. Regret was expressed that Mrs. Cunningham and Mrs. Edlmann had resigned, whose services had been very much appreciated. The committee, finding that the children of those serving in the Forces would be provided with Christmas gifts, recommended that the wives have an entertainment provided for them.—The Chairman thought a payment of that sort would not be within the scope of their funds. He very much sympathised with the recommendation, but would like to hear the views of the members of the Association. He explained that they had advertised for funds for specific purposes, and reminded them that they had approached the Central Committee of the National Fund with regard to the Belgian Refugees, and were told that the funds could not be used for that purpose.—Mr. Kelsall explained that since the meeting of the committee several members who had supported the recommendation had told him that on further consideration they had come to the conclusion that they had acted prematurely. No one had expressed a desire that the recommendation should be pressed.

The General Secretary reported that with reference to the American ship, an application had been made to him as to the number of children in the district whose fathers were serving at the front; as far as he could ascertain there were about 450 altogether.

Coun. Medus raised the question whether grants could not be made to wives and parents for paying fares to visit husband and sons who had returned wounded from the front.—Mr. Kelsall said the committee had never considered the question, but he understood that Government made an allowance for that purpose where feasible.—Coun. Medus and Miss Attwell mentioned cases which had come under their notice where that had not been done.—In answer to Mr. Seaward, Coun. Medus said the cases he referred to happened about five weeks ago.—Mr. Seaward said he believed an alteration had been made since then, as recently they had had two cases at the Brewery where the Government gave passes for the parents to visit their sons.

The Rev. Horace Monroe asked if it was true that orders had been given to the police for them to make rather unnecessary enquiries about wives of men who had fallen at the front.—Mr. Kelsall was pleased to have the opportunity of making an explanation on that point. They were told in the Press that the women were treated as if they were criminals. He could not say what was done in other parts of England, but with regard to this district and the County of Surrey there was absolutely no foundation for such a statement. Some instructions had been given to the police that was only advanced to the Red Cross Committee, and that whatever the committee collected was paid into the Association.—Mr. Spark thought that a little more might be spent by the Unemployment Committee instead of giving doles of 10s. and 15s. a week. He contended that it was no good giving only sufficient to relieve half the distress.—The Chairman said the Association could not dictate to the committee, and, speaking for himself, said he thought they were doing excellent work. They quite appreciated the position, and however desirable it might be to give a man £1 or 30s. a week, they had to consider what grants the Finance Committee would allow them.—Coun. Hampton said the relief given was in the form of grants in aid, and not to relieve the whole of the distress.—The Chairman thought it would be absurd to give a man losing his situation the full amount of his wages.

In answer to Mr. Kelsall, the Secretary stated that the receipts totalled £2,076 11s.; and that the grants already made amounted to £521, so that after deducting the grants that night there would be about £1,400 in hand.

Mr. Rollston submitted the report of the Recruiting Committee, which stated that a letter had been received from Mr. Richard Burbidge, offering the use of the rifle range in Lonsdale-road at times when it was not required by members of the Harrodians' A.A.A., and on the suggestion of the chairman it was agreed that a letter be written to Mr. Burbidge thanking him for his office.—The Chairman, alluding to the number of men recruited in the district, said there was no means of forming an accurate estimate, as many enlisted in the London area. He estimated that since the recruiting concert about fifty recruits had been enlisted as a result of that effort.

THE BELGIANS IN BARNES.

The next item on the agenda was a motion by the Rev. E. B. Larkin as follows:—"That this Association withdraws its recognition from the Barnes Refugee Committee until such time as the said committee shows full regard for the religious belief of the Belgians in its care." He said he was sorry to bring the matter before them, and explained how the Association had given their sanction to the committee. He considered from what had occurred subsequently it was necessary for him, in self-defence, to make his position clear by putting forward a protest against what had been done by the Association. All he wished was that his name should be withdrawn as one who gave his approval to the committee, and that it should no longer appear on the minutes as giving approval. If that could be done without discussion he was willing that it should be done, so long as he appeared as a protestor against the approval of the Association of the committee.—The Chairman gathered that he would withdraw his resolution, having made a statement that he wished to dissociate himself with the recognition of the Refugee Committee. — Father Larkin could not see his way to consent to the withdrawal of the resolution, as the withdrawal would then appear on the minutes.—The Chairman said that the resolution would fall to the ground if there was no seconder, and after further discussion Coun. Powell formally seconded the motion for the purpose of discussion.—Mr. Goodale said as the general secretary of the Association he moved that they proceed to the next business. It was a religious subject, which he considered ought not to be introduced. The matter had ben dealt with in the Press, and Father Larkin had replied to letters. Therefore he maintained it was not necessary that the Association should make it a subject of debate.—Mr. Anderson thought that the statement made by Father Larkin that he wished his name withdrawn as giving consent to the committee would be sufficient.—Father Larkin said after the statement made by Mr. Goodale, he felt bound to go on with the motion. What had appeared in the newspapers had nothing to do with the motion.—The Chairman thought that he wished it placed on record that he dissociated himself with the Refugee Committee.—Father Larkin contended that would put his position in a false light, and in course of the discussion that followed the question was raised as to the recognition given by the Association.—The Rev. Horace Monroe pointed out that at the request of the Association he had formed the Belgian Refugee Committee for Mortlake, and thought there could be no doubt that the Association had fathered the Belgian Refugees' Committees. He moved as an amendment: "That this Association deeply regrets that any question suggesting want of regard for the religious belief of the Belgian guests at Barnes should have arisen. The Association cordially invites the clergy of the Roman Catholic Church to minister at all times to Belgian members of the Roman Catholic Church at present enjoying their hospitality."—Coun. Medus seconded, and after some discussion the amendment was put, and carried with one dissentient, and became the substantive motion.—Mr. Forster Boulton then moved a further amendment, "That this Association declines to accept the suggestion that the Barnes Belgian Refugees' Committee failed to show due regard for the religious belief of the Belgians in its care." In the first place, he thought that the original motion should never have gone down on the agenda, as it suggested that the members of the committee had acted improperly, and he hoped the amendment would be adopted, to show that the suggestions were entirely unfounded.—Father Larkin said he had had no opportunity of discussing the resolution.—The Chairman explained that the amendment became the substantive motion.—Mr. Seaward appealed to Mr. Forster Boulton to withdraw his amendment.—Father Larkin said he was willing to drop the subject, but Mr. Forster Boulton said he could not withdraw.—Coun. Powell seconded the amendment, and Mr. Forster Boulton, in speaking to it, said he regarded the accusation against the committee as very serious. The suggestion was that the committee had prevented the Belgians from the exercise of freewill in making their children to whatever school they pleased.—Father Larkin said that suggestion had not been knew for a fact that the parents sent their children to the Lonsdale-road School of their own free will.—On the amendment being put, it was lost by four votes to seven, and on the substantive motion being put, it was carried.

Coun. Jones reported that a small committee of ladies at East Sheen were conducting a coffee stall for the troops training in Richmond Park, and he questioned whether the Association would wish it to be run under their auspices. He gave particulars as to the cost, etc., and how it was appreciated by the men.—The Chairman doubted if the Association would do so much as the committee had done, and it was decided to leave it to them to carry on.

A letter was read from Mr. Frank Pike, the hon. secretary of the Barnes and Mortlake Philanthropic Society, pointing out that the society had now no official representative on the Association.—Mr. Hensman said he was no longer secretary of the society, and he had suggested that he should resign his seat on the Association.—The Chairman thought he should retain his seat on the Association, and suggested that a representative of the society should be appointed to the Unemployment Committee.—Coun. Hampton said he should be very glad if two delegates of the society were appointed to fill vacancies on the Unemployment Committee and the Sailors' and Soldiers' Families' Committee as soon as they occurred.

It was agreed that the accounts up to 31st December should be audited and a balance sheet published.

REFUGEES AS MILL-GIRLS.

There is a shortage of hands in the woollen mills of South Lancashire and Belgian refugees are availing themselves of the opportunity to qualify for this employment. Large numbers of female refugees have already been taken into mills, and their more extensive employment is certain. Other Belgian refugees are teaching Lancashire girls their finer art of lace-making, while Belgian miners are entering coalpits to replace colliers who have become soldiers.

6575

Mr. Batten's house would have been accepted, but it was still occupied by Belgian refugees.

Coun. Hampton submitted the report of the Unemployment Committee, which showed that up to December 10th. 231 men and 55 women had registered, and that of those eight had joined the Army; employment had been found for 122 men and 24 women, leaving 101 men and 31 women on the register. A register for Belgian Refugees had been opened for those who could do work that would not interfere with our own people, but up to the present no names had been registered. The committee had considered a number of cases of persons requiring relief, and found that there were 16 cases due to the war, 10 of which had been relieved. They had expended £15 1s. 4d., and had a balance of £4 18s. 8d. They asked for a further grant of £15.

Mr. Kelsall submitted the report of the Navy and Army Families' Committee, which showed that the total registered were 362, of which 247 were beyond the scope of the Association; 105 were receiving weekly allowances; and 10 were being investigated. The total amount received from the Association was £320, of which £314 18s. 8d. had been expended, leaving a balance of £5 1s. 4d. The amount advanced on loan was £81 18s. 1d., of which £23 10s. had been refunded. The committee required another grant of £100 to meet the expenses for the next four weeks. Regret was expressed that Mrs. Cunningham and Mrs. Edlmann had resigned, whose services had been very much appreciated. The committee, finding that the children of those serving in the Forces would be provided with Christmas gifts, recommended that the wives have an entertainment provided for them.—The Chairman thought a payment of that sort would not be within the scope of their funds. He very much sympathised with the recommendation, but would like to hear the views of the members of the Association. He explained that they had advertised for funds for specific purposes, and reminded them that they had approached the Central Committee of the National Fund with regard to the Belgian Refugees, and were told that the funds could not be used for that purpose.—Mr. Kelsall explained that since the meeting of the committee several members who had supported the recommendation had told him that on further consideration they had come to the conclusion that they had acted prematurely. No one had expressed a desire that the recommendation should be pressed.

The General Secretary reported that with reference to the American ship, an application had been made to him as to the number of children in the district whose fathers were serving at the front; as far as he could ascertain there were about 450 altogether.

Coun. Medus raised the question whether grants could not be made to wives and parents for paying fares to visit husband and sons who had returned wounded from the front.—Mr. Kelsall said the committee had never considered the question, but he understood that Government made an allowance for that purpose where feasible.—Coun. Medus and Miss Attwell mentioned cases which had come under their notice where that had not been done.—In answer to Mr. Seaward, Coun. Medus said the cases he referred to happened about five weeks ago.—Mr. Seaward said he believed an alteration had been made since then, as recently they had had two cases at the Brewery where the Government gave passes for the parents to visit their sons.

The Rev. Horace Monroe asked if it was true that orders had been given to the police for them to make rather unnecessary enquiries about wives of men who had fallen at the front.—Mr. Kelsall was pleased to have the opportunity of making an explanation on that point. They were told in the Press that the women were treated as if they were criminals. He could not say what was done in other parts of England, but with regard to that district and the County of Surrey there was absolutely no foundation for such a statement. Some instructions had been given to the police that if unfortunately a woman came into their hands through some offence, such as being found drunk in the street, she should be discharged by the officer after giving her a few words of advice. There was no supervision exercised by the police, and that was the only instruction.—The Chairman: There is no foundation in the statement that the Sailors and Soldiers Families' Committee supply the names of the wives to the police?—Mr. Kelsall: No.

The Rev. Horace Monroe mentioned that a cafe for sailors' and soldiers' wives had been opened in Sheen-lane from 7 to 10 each evening, and asked that Mr. Kelsall, through his committee, might make it known.—By Miss Attwell: Wives resident in Barnes would be made welcome if there was room for them. He explained that Mrs. James Wigan had kindly lent the house, and that the Hon. Mrs. Hood was bearing the expenses of running the cafe.—The question of the payment of the allowances was discussed, and it was agreed that they should only be made on the written authority of those entitled to receive them.

The report of the Work for Women Committee stated that 500 garments had been made, and that the women much appreciated the work. A sale was held at the Council House on December 11th, and that it had been decided to hold another one there on Monday next, the 21st.

The Finance Committee recommended that grants amounting to £159 15s. be made, and Mr. Seaward reported that the receipts from the collections in the elementary schools amounted to £33. (Applause.) He regarded that as a wonderful collection.—Mr. Spark objected to money being spent on the Red Cross work.—The Chairman explained that the money as the said committee shows full regard for the religious belief of the Belgians in its care." He said he was sorry to bring the matter before them, and explained how the Association had given their sanction to the committee. He considered from what had occurred subsequently it was necessary for him, in self-defence, to make his position clear by putting forward a protest against what had been done by the Association. All he wished was that his name should be withdrawn as one who gave his approval to the committee, and that it should no longer appear on the minutes as giving approval. If that could be done without discussion he was willing that it should be done, so long as he appeared as a protestor against the approval of the Association of the committee.—The Chairman gathered that he would withdraw his resolution, having made a statement that he wished to dissociate himself with the recognition of the Refugee Committee. — Father Larkin could not see his way to consent to the withdrawal of the resolution, as the withdrawal would then appear on the minutes.—The Chairman said that the resolution would fall to the ground if there was no seconder, and after further discussion Coun. Powell formally second[ed] the motion for the purpose of discussion.—Coun. Goodale said as the general secretary of the Association he moved that they proceed to the next business. It was a religious subject, which he considered ought not to be introduced. The matter had ben dealt with in the Press, and Father Larkin had replied to letters. Therefore he maintained it was not necessary that the Association should make it a subject of debate.—Mr. Anderson thought that the statement made by Father Larkin that he wished his name withdrawn as giving consent to the committee would be sufficient.—Father Larkin said after the statement made by Mr. Goodale, he felt bound to go on with the motion. What had appeared in the newspapers had nothing to do with the motion.—The Chairman thought that he wished it placed on record that he dissociated himself with the Refugee Committee.—Father Larkin contended that would put his position in a false light, and in course of the discussion that followed the question was raised as to the recognition given by the Association. —The Rev. Horace Monroe pointed out that at the request of the Association he had formed the Belgian Refugee Committee for Mortlake, and thought there could be no doubt that the Association had fathered the Belgian Refugees' Committees. He moved as an amendment: "That this Association deeply regrets that any question suggesting want of regard for the religious belief of the Belgian guests at Barnes should have arisen. The Association cordially invites the clergy of the Roman Catholic Church to minister at all times to Belgian members of the Roman Catholic Church at present enjoying their hospitality."—Coun. Medus seconded, and after some discussion the amendment was put, and carried with one dissentient, and became the substantive motion.—Mr. Forster Boulton then moved a further amendment, "That this Association declines to accept the suggestion that the Barnes Belgian Refugees' Committee failed to show due regard for the religious belief of the Belgians in its care." In the first place, he thought that the original motion should never have gone down on the agenda, as it suggested that the members of the committee had acted improperly, and he hoped the amendment would be adopted, to show that the suggestions were entirely unfounded.—Father Larkin said he had had no opportunity of discussing the resolution.—The Chairman explained that the amendment became the substantive motion.—Mr. Seaward appealed to Mr. Forster Boulton to withdraw his amendment.—Father Larkin said he was willing to drop the subject, but Mr. Forster Boulton said he could not withdraw.—Coun. Powell seconded the amendment, and Mr. Forster Boulton, in speaking to it, said he regarded the accusation against the committee as very serious. The suggestion was that the committee had prevented the Blgians from the exercise of freewill in sending their children to whatever school they pleased.—Father Larkin said that suggestion had not been made that evening, and the Chairman said it had not been made in that room.—Mr. Forster Boulton said that was his difficulty, but contended that he was entitled to bring it forward to negative the resolution. Proceeding, he said if the accusion was true they were abusing thier position, as hosts, in putting pressure upon these people not to send their children to a Roman Catholic school. — Father Larkin repeated that that accusation had not been made that evening, and that he had no intention of bringing it forward.—The Chairman remarked that the matter had been fully dealt with in the public Press, and had been answered, and the public could form their own opinion.—Mr. Forster Boulton then referred to the facts stated in the correspondence, and contended that the Belgians were given absolute freedom in regard to where they should send their children to school, and that the suggestions which had been made were ill-founded.—Father Larkin, in reply, said he had no choice but to answer the arguments brought forward, which he considered were quite beside the mark. He repeated statements made in his letters, and said that explanation had been given to him why children had been sent to a non-Roman Catholic school. He contended that the committee had entirely ignored those who had charge of the Roman Catholic Church in the district, in spite of the fact that the Local Government Board had laid down that refugees were to be sent to districts with the approval of the Roman Catholic Bishop. Explanations might be given of the action of the committee with regard to the refugees at 18, High-street, but he had not been given any, and he could not allow his name to be associated with their action.—Coun. Powell having spoken, Mr. Rolston said he

Employment for Belgians.

Those who are caring for the welfare of our Belgian guests are now concentrating attention on the important problem of finding employment for them in such ways as will avoid the objection of introducing unfair competition with our own workers. Everyone who has been brought into contact with the refugees knows that what they find hardest to bear is the change from lives of activity to enforced idleness. No amount of kindness compensates for that unhappiness. One hears of many schemes aiming at employing Belgians on the kind of work to which they are accustomed. For instance, in connection with the scheme for the rebuilding of the Belgian towns, and the preparations for rearranging the districts on town-planning lines, it is hoped to find work for some of the Belgian architects, surveyors, and so on. The committee which has to do with the employment of Belgians has been approached in the matter. It is intended to invite the fullest co-operation of the Belgian experts, as, of course, Belgium must be rebuilt in accordance with Belgian and not English ideas. From Cambridge there is news of a scheme, worked partly from the School of Agriculture, for employing Belgian gardeners and agriculturists to teach English small holders their methods of intensive horticulture and agriculture, and possibly the Belgian method of chicken-rearing. There may be room here for the employment of Belgian women.

The Hampshire House Scheme.

Then there is the interesting experiment carried on at Hampshire House, Hammersmith, where various kinds of workers are employed in an industrial colony. Two workrooms for Belgian women have been opened, each under a Belgian forewoman. In one, fine embroidery, of a kind which is not produced here, is made; in the other the women are making outfits for the Belgians themselves, in preparation for their return home. Garments are being turned out, and the women are being paid for the work. The workers are fed and lodged in a house in the Mall, where they do their own work and cooking. The men of the families are making Belgian furniture and tool chests to take back with them after the war. The tool chests are beautiful work, and now the men are making embroidery frames for the women's workrooms and other useful things. All the workmen are Belgians. Another development is the opening of special Labour Exchanges for Belgian workmen at Earl's Court and the Alexandra Palace, with the object of controlling the employment of these men and making sure that they are not employed under sweating conditions. Employers who get men from the Exchanges must give an undertaking that they will pay proper wages. Belgian labour will only be utilised where British labour is not available, and Belgians of military age will not be accepted.

Islington Gazette,
Dec. 28th. 1914.

BELGIAN REFUGEES.

THE PROBLEM OF FINDING THEM WORK.

DEPARTMENTAL COMMITTEE'S RECOMMENDATIONS.

The first report of the Departmental Committee appointed by the President of the Local Government Board to consider and report on questions arising in connection with the reception and employment of the Belgian refugees in this country has been issued as a Blue-book. The Committee were appointed on October 27, and consisted of Sir Ernest Hatch (chairman), Mgr. Bidwell, D.D., Mr. C. W. Bowerman, M.P., Sir F. Cawley, M.P., Sir T. H. Elliott, Mr. Harry Gosling, Mr. Arthur Henderson, M.P., Miss Susan Lawrence, Mrs. A. Lyttelton, Mr. R. S. Meiklejohn, Mr. H. Pike Pease, M.P., Lord Plymouth, Mr. C. F. Rey, Mr. R. Smillie, Mr. J. Dundas White, M.P., and Mr. Basil Williams.

The particular question the Committee were instructed to consider was what action could properly be taken with a view to finding occupation for the refugees which would not compete with the employment of available British labour.

From first to last (say the Committee) it has been calculated that about a million refugees—nearly a sixth of the total population—have abandoned Belgian soil; of these Holland received the largest share, some 500,000 or more; a large number, especially from the Ardennes and the southern provinces, fled to France. In England about 110,000 arrived, and arrangements are being made to bring over yet more from Holland to relieve the excessive pressure prevailing there. It is characteristic of our national ways that the duty of attending to the refugees should have been undertaken by voluntary organisations. But, however willing private individuals might be to undertake the national duty of relieving the distress of our Allies, it soon became evident that the task was assuming such gigantic proportions that no voluntary organisation could be expected to cope with it. On September 9, in reply to a question in the House of Commons, Mr. Herbert Samuel offered to the refugees, on behalf of the Government, the hospitality of the British nation.

In one week alone, after the fall of Ostend, 26,000 Belgians were landed at Folkestone. Between September 20 and October 24 35,000, all destitute, were met at the pier, fed, and despatched to London. The arrangements for feeding and housing the refugees in London were delegated by the Local Government Board, under the general supervision of their inspectors, to the Metropolitan Asylums Board. Some conception of the work done will appear from the fact that from September 10 to November 28 45,532 refugees passed through the Government hostels.

The only refugees for whom neither the Government nor the War Refugees Committee were responsible were 6,000 Russian and Polish Jews, who came chiefly from Antwerp. The care of these fugitives was undertaken entirely by their co-religionists, who have found hospitality for a large number in Jewish homes, and are supporting the rest either in Poland Street Workhouse, which has been lent by the Government for the purpose, the Manchester Hotel, or in the Leman Street Shelter.

Offers of Hospitality.

The anxiety of all classes in the United Kingdom to render assistance may be gauged by the fact that offers of hospitality were received for over 100,000 refugees. The larger centres where refugees have been received, while finding hospitality for a certain number in their own area, have also acted to some extent as clearing-houses for adjoining districts. Under this arrangement Glasgow has received 3,092, Sheffield 1,500, Leeds 1,200, Birmingham 2,099, Manchester 1,441, Bradford 400, Exeter 2,000, and other places considerable numbers.

The comparative success of the work is no doubt largely due (the Committee point out) to the character of our guests, of whose conduct there have been hardly any complaints worth mentioning, and who have shown themselves not only brave and patient, but accommodating in circumstances of desolation so grave as to disturb the equanimity of the most tolerant people. But our own people may take credit for the spirit in which a great undertaking has been carried through. Poor and rich alike have vied in showing practical sympathy with our Allies. Trade unions have subscribed to the wants of their fellow-labourers; families, with barely room for themselves, have pinched and squeezed to enable them to give hospitality to the poor Belgians. Instances of this spirit might be multiplied indefinitely.

Safeguarding British Labour.

After pointing out that it was the express desire of the Belgian Government that no employment should be given to any unmarried men between the ages of 18 and 30 (these being required for military service), the Committee say that the two main principles they followed in deciding the conditions on which work for the refugees might properly be found in the ordinary labour market were:

1. That no Belgian labour should be employed until every reasonable effort had been made to find British labour through the agency of the labour exchanges.

2. That no Belgian labour should be employed at rates of wages lower or on conditions less favourable than those generally observed in the district.

Referring to the attitude of the British working classes to the Belgians, the Committee say:—British working men and women might not unnaturally have regarded the influx of foreign refugees with some apprehension, but happily this has not been the case; the sacrifices which the Belgians have made and their terrible suffering have everywhere assured them the friendliest reception, and on all sides their fellow British workmen have been eager to offer them welcome and hospitality.

In a summary of the evidence and information they collected with regard to openings in agriculture, the Committee observe:—In general agriculture there can be no doubt that there is at the present time a shortage of labour, available for Belgians, and that in the early months of the coming year this shortage will increase to a marked extent. In special branches the expenditure of considerable capital would be required, and the number of refugees who could be employed would be comparatively small. The Committee are of opinion that such schemes as sugar beet cultivation, State afforestation, and the reclamation of waste lands are open to objection, and they are consequently not prepared to recommend their adoption.

Up to December 21 607 Belgians, of whom five were women, had been placed in employment through the labour exchanges.

Three Classes of Refugees.

In their conclusions the Committee say the refugees are roughly divisible into three main groups:—

(1) Workers qualified to fill vacancies in industries in which a shortage of British labour exists, such as armament workers, glass blowers, woollen workers, miners, motor mechanics, and agricultural labourers.

(2) Workers qualified for and in need of employment for whom no opportunities in British industries exist, such as tailors, ironmongers, jewellers, milliners, dressmakers, printers, bookbinders, fancy goods makers, and cabinet makers.

(3) Other special classes, mainly of a professional character, such as Government officials, employers, clerks, musicians, teachers, authors, and lawyers.

In respect of the workers in the first group qualified for existing vacancies, a definite shortage of labour, though in some cases only temporary, has been indicated, and it has been established that there are also opportunities for Belgian labour in agriculture, which will increase to a marked extent in the early months of the coming year.

With regard to the workers in the second group, special measures will have to be devised if work is to be provided.

For the third group practically no chance of employment exists.

The Committee submit the following (among other) recommendations in respect of the first two of these three main groups:—

FIRST GROUP.

It is a matter for regret, both in the interests of British labour and of the refugees themselves, that, up to the present time, so few have found employment through the agency of the Labour Exchanges Department, and that considerable numbers have obtained work without the safeguards thereby afforded. The Committee fear that in some instances refugees have been employed on unsatisfactory terms and conditions, and it has been suggested that, with a view to preventing occurrences of this kind, which are greatly to be deplored, measures should be taken to make the employment of Belgians through the agency of the Labour Exchanges compulsory. The Committee are making further investigations into this important matter so as to enable them, if necessary, to make definite recommendations with regard to it.

In the meantime, however, the Committee suggest that the interests both of British and Belgian labour might be protected to an appreciable extent if the following recommendations are adopted:—

(1) That lists of approved vacancies should be sent by the Labour Exchanges Department to the French and Belgian newspapers in circulation in this country, with an intimation that applicants for work should apply to the Labour Exchanges.

(2) That in all Government contracts it should be made a condition of the contract that Belgian labour should only be employed through the agency of the Labour Exchanges.

(3) That the railway companies should not engage Belgians except through the agency of the Labour Exchanges, and that the Board of Trade should be requested to communicate with the railway companies to this effect.

(4) That the Home Office should give instructions to their divisional inspectors of mines to notify to employers that Belgians are not to be employed except through the agency of the Labour Exchanges.

(5) That leaflets should be printed containing the substance of the press notices issued on November 10 by the Board of Trade and Local Government Board with regard to the employment of Belgians through the Labour Exchanges, and should be distributed to all local refugee committees for the guidance of, and communication to, persons offering hospitality to the refugees.

(6) That Government inspectors who are closely in touch with employers of labour should impress upon them the fact that the employment of Belgian refugees, at rates of wages and under conditions other than those prevailing for British labour, is contrary to the regulations laid down by this Committee and approved by the Government.

SECOND GROUP.

The conclusion at which the Committee have arrived is that these refugees should be employed in making clothes, furniture, and other articles for household use, which should be placed at the disposal of the Belgian Government in order to meet the needs of the Belgian people at the close of the war on their return to their own country. The Committee make the following recommendations:—

(1) That a central authority should be constituted to advise and assist local refugee committees in organising schemes for the establishment of workshops for the refugees, and to exercise a general supervision.

Irish Times Jan 1-15

OUR BELGIAN REFUGEES.

NEW INDUSTRIAL PROSPECTS.

GLASS-MAKING IN IRELAND.

If experiments now being carried on by two Belgian scientists in this country bear fruitful results, glass-making may be added to the list of Irish industries. Enormous quantities of the cheaper glass articles, such as lamp chimneys and tumblers, were sent before the war to this country from Austria and Germany, who captured a large part of the glass trade of the Midlands of England. Investigations are now being made into the quality and quantities of material for glass-making available in Ireland, and the hope is entertained that Government assistance will be given towards the establishment of a glass-making industry if experiments warrant further progress.

Among the Belgians now in Ireland is the manager of a large embroidery-making industry, upon which practically the whole population of Lierre was dependent. Something like a thousand girls were employed, before Lierre was demolished by the Germans, in this industry, which consists in the making of all kinds of beads and other trimming and artistic ornaments for ladies' headwear and gowns and theatrical costumes. They earned a good salary at this work, and it is hoped that, with the advice of the manager referred to, and instruction given by Belgian girls, it may be possible to establish it as an industry in this country.

The need of providing occupations for Belgians over here is keenly felt. The refugees themselves are ready to work, and, needless to say, idleness is not good for anyone's *moral*. On the other hand, the Committee who hold the fates of these Belgians in their keeping have to guard against putting them into situations from which they would merely displace local labour, or allowing them to get into the hands of those who would seek to take advantage of the situation of the refugees and obtain their services too cheaply. Nearly a thousand Belgians are now scattered over Ireland. There has been no difficulty in placing agricultural workers, for whom there is a keen demand. In fact, the chief call is for persons who are experienced in work upon the land. Matters, however, are very different in other cases—in those of diamond cutters from Antwerp, for instance, and those of the very numerous shopkeepers. Another difficult class to deal with are fisher folk, of whom large numbers have recently been sent to Ireland. These people express their readiness to turn their hands to anything. They have suffered pitiful experiences in their wanderings from point to point along the coast near to the battlefields, and they arrived in Ireland in a dreadful state. They have been placed in workhouses till they can be provided with proper clothing and "sorted."

Ireland has benefited in the past from instruction gained from refugees, notably from the weavers who settled in Spitalfields and introduced poplin-making; while the huge linen industry owes something to refugees. It may yet be the case that the Belgians will play a similar part in the industrial history of this country.

WORK FOR BELGIAN REFUGEES.

THE NEW COMMISSION.

GOVERNMENT REQUEST FOR FURTHER HOSPITALITY.

Mr. Herbert Samuel, President of the Local Government Board, has appointed the following to be Commissioners to put into execution the recommendations for providing occupation for Belgian refugees, contained in the recently issued report of the Departmental Committee, which has been considering the subject:—

Sir Ernest Hatch, Bt. (Chairman).
Chairman of the Departmental Committee.
Sir T. H. Elliott, K.C.B.
Formerly Secretary of the Board of Agriculture and Fisheries.
His Excellency Baron C. Goffinet.
Envoy Extraordinary and Minister Plenipotentiary of the King of the Belgians, at present on a Government mission in London.
Rt. Hon. Arthur Henderson, M.P.
Chairman of the Parliamentary Labour Party.
Miss Susan Lawrence.
A member of the L.C.C.
Monsieur Charles Lejeune.
President of the International Maritime Committee of Antwerp.
Rt. Hon. the Earl of Lytton.
Rt. Hon. Sir T. Vezey Strong, K.C.V.O.
A former Lord Mayor of London,

with Mr. H. A. Leggett, of the Local Government Board, as secretary.

MR. SAMUEL'S APPEAL.

TO THE EDITOR OF THE TIMES.

Sir,—The sympathy of the British people for the Belgians has shown itself, among other ways, by the widespread offer of hospitality to the refugees. Committees in many of the towns and counties, and individuals throughout the country, have gladly given shelter and maintenance to some scores of thousands of those who have been obliged to abandon homes laid desolate by the German invaders. But the small country of Holland is generously giving refuge to twice as many Belgians as the United Kingdom. The strain upon her resources is not inconsiderable; the difficulty of providing accommodation has been very great. Public opinion here has favoured the transport of refugees from Holland to the better conditions that can be offered in this country, and from four to five thousand a week are now being brought to these shores. Many of these belong to trades in which workmen are in demand, and can be found employment here on terms not open to objection from the point of view of British labour. But many others, belonging to all classes, cannot for the time be self-supporting; and, in addition, there is a growing number of persons already here who, having exhausted the resources which hitherto maintained them, are compelled to look to others for assistance.

I am informed by the War Refugees Committee that almost all the offers of hospitality which have been made to them have now been used. There are already over 4,000 refugees in the Local Government Board's temporary hostels in London, for whom more permanent accommodation is not at present available. Yet there are many localities, not in areas prohibited for the residence of aliens, which may be willing to bear a larger share of the nation's duty to Belgium. The Local Government Board, after consultation with the War Refugees Committee, has undertaken to receive in future offers of hospitality. Such offers should be addressed to the Secretary of the Board at Whitehall; but individuals will best assist the efficiency of the administration if they would transmit their invitations, where possible, through the nearest local Belgian Refugee Committee.

In view of all that these refugees have suffered and of all that Belgium has done for the cause of the Allies, I trust that it is only necessary for the present urgent need to be made known to the country in order to evoke a response adequate to meet the situation.

I am, Sir, yours faithfully,
HERBERT SAMUEL.
Local Government Board, Whitehall, S.W.,
Jan. 7.

THE SCHEME OUTLINED.

REPATRIATION TO BE KEPT IN VIEW.

It will be remembered that in the Report of the Committee (which was fully summarized in *The Times* of December 28) the refugees were described as divided into three main groups, viz:—

1. Those who are qualified to fill vacancies in industries in which a shortage of British labour exists, such as:—Armament makers, glass-blowers, miners, woollen workers, agricultural labourers, and motor mechanics.

2. Those who are qualified for, and in need of employment, but for whom no opportunities in British industries exist, such as:—Tailors, milliners, dressmakers, jewellers, printers, bookbinders, ironmongers, fancy goods makers, carpenters, and cabinet makers.

3. Other special classes mainly of a professional character, such as:—Government officials, employers, clerks, musicians, teachers, authors, and lawyers.

The majority of the refugees in the first of these groups have already found, or will, no doubt, soon find, employment. For those in the third group it is not anticipated that openings can be found to any great extent.

In the case of the refugees comprised in the second group, it must be borne in mind that the Belgian Government desire that the refugees should be sent back to their country as soon as they can return with safety, and, inasmuch as their residence in the United Kingdom will only be temporary, it is essential that any occupation provided for them should also be of a temporary character. The Committee came to the conclusion that useful occupation for this class of worker among the refugees, which would not conflict with British labour, could best be found in making clothes, boots, furniture, and other articles for household use for the sole use of the Belgians themselves.

The Local Refugee Committees in the large industrial centres will be asked, in conjunction with the local authorities, to form employment committees constituted somewhat on the lines of the Old-Age Pension Committees and including in every case representatives of all engaged in the various trades concerned, whether employers, workmen, workwomen, or the refugees themselves. The employment committees will require clerical and other assistance, and it is suggested that the local authorities may be willing to allow some of the members of their staffs to help the employment committees to carry out their work.

The employment committees will be asked to act in conjunction with the local authorities, and, where necessary, to undertake the establishment of workshops, the provision of the necessary machinery, which in many cases will probably be lent to them, and the management and supervision of the work.

Under a scheme of this kind the employment committees would endeavour to collect in one town enough tailors or bootmakers to set up a workshop where clothes or boots can be made; in another town enough cabinetmakers and carpenters for the manufacture of furniture; and, again, bodies of other artisans skilled in the production of other articles for household use.

Workshops of the kind contemplated in the report of the Committee have already been established or are in process of formation in the City of Leeds, in the Borough of Hyde, and in other places. In Hyde a cabinet-making factory has been started on a small scale. The furniture made is being stored for the use of the refugees on their return to Belgium.

NEED OF EMPTY BUILDINGS.

It is believed that there will be no difficulty in securing empty buildings, which can be adapted as workshops, but it is probable that there will not, on all occasions, be sufficient refugees belonging to a particular trade or trades in any one centre, and that a certain amount of redistribution or "reshuffling" will be necessary, but any such redistribution need not seriously disturb the present arrangements for the accommodation of the refugees.

The principal features of the scheme may be summed up as follows:—

1. The various clothes, furniture, and other articles which it is proposed to make are solely for the use of Belgians, and will, therefore, in no way conflict with the interests of British labour.

2. The occupation provided is of a temporary character, and may be terminated at any moment.

3. The work involved does not amount to industrial employment for regular wages, but, while providing a certain remuneration for the labour entailed, is in the nature of [illegible]

of the Midlands of England. Investigations are now being made into the quality and quantities of material for glass-making available in Ireland, and the hope is entertained that Government assistance will be given towards the establishment of a glass-making industry if experiments warrant further progress.

Among the Belgians now in Ireland is the manager of a large embroidery-making industry, upon which practically the whole population of Lierre was dependent. Something like a thousand girls were employed, before Lierre was demolished by the Germans, in this industry, which consists in the making of all kinds of beads and other trimming and artistic ornaments for ladies' headwear and gowns and theatrical costumes. They earned a good salary at this work, and it is hoped that, with the advice of the manager referred to, and instruction given by Belgian girls, it may be possible to establish it as an industry in this country.

The need of providing occupations for Belgians over here is keenly felt. The refugees themselves are ready to work, and, needless to say, idleness is not good for anyone's *moral*. On the other hand, the Committee who hold the fates of these Belgians in their keeping have to guard against putting them into situations from which they would merely displace local labour, or allowing them to get into the hands of those who would seek to take advantage of the situation of the refugees and obtain their services too cheaply. Nearly a thousand Belgians are now scattered over Ireland. There has been no difficulty in placing agricultural workers, for whom there is a keen demand. In fact, the chief call is for persons who are experienced in work upon the land. Matters, however, are very different in other cases—in those of diamond cutters from Antwerp, for instance, and those of the very numerous shopkeepers. Another difficult class to deal with are fisher folk, of whom large numbers have recently been sent to Ireland. These people express their readiness to turn their hands to anything. They have suffered pitiful experiences in their wanderings from point to point along the coast near to the battlefields, and they arrived in Ireland in a dreadful state. They have been placed in workhouses till they can be provided with proper clothing and "sorted."

Ireland has benefited in the past from instruction gained from refugees, notably from the weavers who settled in Spitalfields and introduced poplin-making; while the huge linen industry owes something to refugees. It may yet be the case that the Belgians will play a similar part in the industrial history of this country.

FURTHER HOSPITALITY.

Mr. Herbert Samuel, President of the Local Government Board, has appointed the following to be Commissioners to put into execution the recommendations for providing occupation for Belgian refugees, contained in the recently issued report of the Departmental Committee, which has been considering the subject:—

Sir Ernest Hatch, Bt. (Chairman).
Chairman of the Departmental Committee.
Sir T. H. Elliott, K.C.B.
Formerly Secretary of the Board of Agriculture and Fisheries.
His Excellency Baron C. Goffinet.
Envoy Extraordinary and Minister Plenipotentiary of the King of the Belgians, at present on a Government mission in London.
Rt. Hon. Arthur Henderson, M.P.
Chairman of the Parliamentary Labour Party.
Miss Susan Lawrence.
A member of the L.C.C.
Monsieur Charles Lejeune.
President of the International Maritime Committee of Antwerp.
Rt. Hon. the Earl of Lytton.
Rt. Hon. Sir T. Vezey Strong, K.C.V.O.
A former Lord Mayor of London,

with Mr. H. A. Leggett, of the Local Government Board, as secretary.

MR. SAMUEL'S APPEAL.

TO THE EDITOR OF THE TIMES.

Sir,—The sympathy of the British people for the Belgians has shown itself, among other ways, by the widespread offer of hospitality to the refugees. Committees in many of the towns and counties, and individuals throughout the country, have gladly given shelter and maintenance to some scores of thousands of those who have been obliged to abandon homes laid desolate by the German invaders. But the small country of Holland is generously giving refuge to twice as many Belgians as the United Kingdom. The strain upon her resources is not inconsiderable; the difficulty of providing accommodation has been very great. Public opinion here has favoured the transport of refugees from Holland to the better conditions that can be offered in this country, and from four to five thousand a week are now being brought to these shores. Many of these belong to trades in which workmen are in demand, and can be found employment here on terms not open to objection from the point of view of British labour. But many others, belonging to all classes, cannot for the time be self-supporting; and, in addition, there is a growing number of persons already here who, having exhausted the resources which hitherto maintained them, are compelled to look to others for assistance.

I am informed by the War Refugees Committee that almost all the offers of hospitality which have been made to them have now been used. There are already over 4,000 refugees in the Local Government Board's temporary hostels in London, for whom more permanent accommodation is not at present available. Yet there are many localities, not in areas prohibited for the residence of aliens, which may be willing to bear a larger share of the nation's duty to Belgium. The Local Government Board, after consultation with the War Refugees Committee, has undertaken to receive in future offers of hospitality. Such offers

THE SCHEME OUTLINED.

REPATRIATION TO BE KEPT IN VIEW.

It will be remembered that in the Report of the Committee (which was fully summarized in *The Times* of December 28) the refugees were described as divided into three main groups, viz :—

1. Those who are qualified to fill vacancies in industries in which a shortage of British labour exists, such as:—Armament makers, glass-blowers, miners, woollen workers, agricultural labourers, and motor mechanics.

2. Those who are qualified for, and in need of employment, but for whom no opportunities in British industries exist, such as:—Tailors, milliners, dressmakers, jewellers, printers, bookbinders, ironmongers, fancy goods makers, carpenters, and cabinet makers.

3. Other special classes mainly of a professional character, such as:—Government officials, employers, clerks, musicians, teachers, authors, and lawyers.

The majority of the refugees in the first of these groups have already found, or will, no doubt, soon find, employment. For those in the third group it is not anticipated that openings can be found to any great extent.

In the case of the refugees comprised in the second group, it must be borne in mind that the Belgian Government desire that the refugees should be sent back to their country as soon as they can return with safety, and, inasmuch as their residence in the United Kingdom will only be temporary, it is essential that any occupation provided for them should also be of a temporary character. The Committee came to the conclusion that useful occupation for this class of worker among the refugees, which would not conflict with British labour, could best be found in making clothes, boots, furniture, and other articles for household use for the sole use of the Belgians themselves.

The Local Refugee Committees in the large industrial centres will be asked, in conjunction with the local authorities, to form employment committees constituted somewhat on the lines of the Old-Age Pension Committees and including in every case representatives of all engaged in the various trades concerned, whether employers, workmen, workwomen, or the refugees themselves. The employment committees will be asked to act in conjunction with the local authorities, and, where necessary, to undertake the establishment of workshops, the provision of the necessary machinery, which in many cases will probably be lent to them, and the management and supervision of the work.

Under a scheme of this kind the employment committees would endeavour to collect in one town enough tailors or bootmakers to set up a workshop where clothes or boots can be made; in another town enough cabinetmakers and carpenters for the manufacture of furniture; and, again, bodies of other artisans skilled in the production of other articles for household use.

Workshops of the kind contemplated in the report of the Committee have already been established or are in process of formation in the City of Leeds, in the Borough of Hyde, and in other places. In Hyde a cabinet-making factory has been started on a small scale. The furniture made is being stored for the use of the refugees on their return to Belgium.

NEED OF EMPTY BUILDINGS.

It is believed that there will be no difficulty in securing empty buildings, which can be adapted as workshops, but it is probable that there will not, on all occasions, be sufficient refugees belonging to a particular trade or trades in any one centre, and that a certain amount of redistribution or "reshuffling" will be necessary, but any such redistribution need not seriously disturb the present arrangements for the accommodation of the refugees.

The principal features of the scheme may be summed up as follows:—

1. The various clothes, furniture, and other articles which it is proposed to make are solely for the use of Belgians, and will, therefore, in no way conflict with the interests of British labour.

2. The occupation provided is of a temporary character, and may be terminated at any moment.

3. The work involved does not amount to industrial employment for regular wages, but, while providing a certain remuneration for the labour entailed, is intended solely to find occupation of a useful kind for the refugees while still in receipt of private hospitality.

4. The local interest which has been taken in the welfare of the refugees and the sympathy and help which has been extended to them will continue as before.

All inquiries should be addressed to Mr. H. A. Leggett, the Secretary of the Commission, at Winchester House, St. James's-square, S.W., and should be marked "Inquiry" in the corner of the envelope.

The Queen Jan 9/15. 657.

657/9

BELGIANS AS BREADWINNERS.

THE AFFAIRS OF THE BELGIANS in this country continue, of necessity, to occupy a great deal of attention. There are said to be at least 1400 committees who are helping them, and who, in so doing, are disposing of considerable funds voluntarily given. The Government, through the Local Government Board, is actively at work with all that concerns the immediate reception of refugees at the port of arrival and in London; but it still relies to a considerable extent on the labours of the voluntary War Refugees Committee, without whom, in the first weeks of the Belgian rush for this country, the confusion and trouble would have been overwhelming. "It is characteristic of our national ways," as the Blue Book before us says, "that the duty of attending to the refugees should have been undertaken by voluntary organisations." And it is perhaps equally characteristic that our nation should have looked specially to its women on this occasion to help it out of its difficulties.

It did not so look in vain. The homelessness, the suffering, the tragedy which were expressed in the arrival of the overcrowded boatloads of foreigners appealed instantly to women, and roused them to make every sacrifice of comfort in order to shelter and cheer these strangers.

The Government was taken unawares by the rush of war-driven people; and many of its leading officials now regret that they had not taken measures in time to classify the refugees more thoroughly according to their trades and employments. The Government Belgian Refugees Committee, constituted at the end of October, in the report which it has recently issued, dwells on the need of some kind of "re-shuffling" of the immigrants so as to bring them into touch with their appropriate employers and fields of work.

This report forms a most interesting book, and we recommend officials of Belgian committees to make a point of reading it with care. These committees should at once realise that some of the largest of them, and especially those which are working in big industrial centres, are recommended "to form, in conjunction with the local authorities, employment committees, somewhat on the lines of the Old Age Pensions committees, who should be thoroughly representative in character, and should include, in all cases, employers, representatives of organised labour, and women workers."

This recommendation, it will be noted, is not intended to be utilised by all the committees; and the smaller organisations are advised to act in co-operation with those in the larger centres of work and population.

The Government Committee in this report gives a careful examination of the principal employments in which Belgians are wanted, and of those for which they are suited. The two classes of employments, however (as so often happens) do not tally. Belgian workers could be employed as armament workers, glass blowers, woollen workers, miners, motor mechanics, and agricultural labourers. Probably some Belgians have been found suited for work in each of these categories, especially the last—for many Flemish speaking Belgians and some Walloons are now working on the land. Yet, unluckily, the very occupations for which Belgians are not needed are those in which a great number would like to be enrolled. Thus, the committee is obliged to remind us that there are no opportunities in British industries for tailors, ironmongers, jewellers, milliners, dressmakers, printers, bookbinders, fancy goods makers, and cabinet makers. These happen to be some of the avocations which numerous town-dwelling Belgians follow with great success. Some of them are particularly clever tailors, and the women have much aptitude as dressmakers and milliners. Others are good hairdressers. Flemish woodcarving, too, is renowned. But the Belgians suffer with the home population in finding that there is little present demand for these kinds of work.

To the lace-making handicraft a fillip has been given by some of the leaders in the London dress trades; and the committee states that an official committee of Belgians is about to establish a co-operative society of lace-makers under this latter committee's direct control. For this purpose they ask that all Belgian lace-makers should send their names and addresses to the Belgian Consul-General. This project appears to us to be a hopeful one, as the finest Belgian lace ranks with works of art, and its production ought to be so carefully protected as to keep up the price of the finished article and the scale of payment of the workers.

Some of the most promising chances for the employment of Belgians are in connection with rural industries of various kinds. Afforestation might employ many, and is certainly greatly wanted; and a representative of the Board of Agriculture and Office of Woods indicated to the committee that suitable districts for such work could be found at Capel Curig and Trelleck, in Wales. For this undertaking the Development Fund is available, and the workers would be paid from 14s. to 20s. a week. Opportunities for similar work at wages of from 20s. to 24s. a week have been found in Scotland. Some women, it was said, could also be employed in carrying trees and planting them after the ground had been dug up by men. War conditions and the restricted importation of wood have made the need for tree planting still more urgent. Here, then, we have an opening for employment, profitable both to the nation and its guests. A sugar beet factory in Norfolk likewise has vacancies which some Belgian men might fill.

Since our guests arrived, there has been renewed talk concerning the merits of "intensive" cultivation; and, to look into this matter, a separate committee has been formed. The inclusion of Sir Horace Plunkett, Mr Christopher Turnor, and Mr Nugent Harris upon this board inspires confidence, and we are glad to see that many women are serving, namely, Viscountess St. Cyres, the Hon. Mrs Norman Grosvenor, Lady Lugard, Mary Countess of Lovelace, Mrs Francis Acland, Lady St. Helier, and Mlle. Rossignon, who has been sent over by the Queen of the Belgians to study the agricultural side of the Belgian employment problem. This committee is considering whether co-operative settlements can be established, whether demonstration plots can be organised in connection with agricultural colleges and societies, and whether nurseries can be formed from the stock of which the roads and woodlands of Belgium may be replanted.

The idea of so utilising the labours of Belgians while they are obliged to stay here that they may be able, on leaving, to take back additions to their national plant and stock-in-trade, is one which is very much in the mind of the public. Another notion which is greatly favoured is that of the self sufficing colony, the members of which should make what each of them requires. Both notions (and especially the second), appear to us to be somewhat visionary and awkward in the working; but their attraction is evidently due to their avoidance of the British labour question. It is thought that if people are all working for themselves and each other, they are not annoying a wage-earner by competing with him for his job. But it has also to be remembered that their custom is withdrawn from his wares. Leeds, however, has been attracted by the notion and has started a Belgian workship in which the workers are to make clothes, boots, and furniture "for their own use in this country or for their return to Belgium." We are further told that "In no case would any of the products of their labour be sold." If this project can be so carried out as to give the workers what they want, there is nothing to be done but to spread a knowledge of the scheme. Till then, however, we view it with considerable dubiety, because of its crippling effect on the exchange of services. In the Hampshire House Trust colony the inhabitants are making tool-chests for themselves, clothes, and embroidery. The men are receiving 12s. 6d. a week, the women 3d. per hour, but one embroidress gets 15s. a week. As food, clothing, housing, and medical attendance are provided, the refugees can doubtless save some of the money earned. It appears to us that the Hampshire House scheme must be costly to its committee, because in effect the hosts are making themselves also the employers of the Belgians, and are paying them to do work, such as tool-chest making and embroidery, which does not lessen the expense of their maintenance. So far as the Belgians do their own cooking and housework and make their own garments, they are, of course, contributing valuably towards the cost of their board and lodging; but we cannot convince ourselves of the soundness of projects by which Belgians are to make bulky furniture to carry back some day to their homes or to work at embroidery for a future Belgian market which possibly may not require it.

The problem of Belgian breadwinning is in some aspects fairly simple. Where the foreign employees are wanted, all that the Belgian hospitality committees have to do is to see that, if possible, employer and employee shall meet through the labour exchanges, and that in any case the remuneration is not less than that current for British workpeople. The problem is also fairly easy when it is solved, not in a hurry or in an ambitious, theoretical spirit, but bit by bit and little by little. One man finds a place here and one there, especially when the Belgian himself is energetic and determined to obtain suitable employment. The Government Belgian Refugees Committee has shrunk back dismayed before the difficulties of suggesting work for persons of the professional classes, though here again, when it has worked at the task piecemeal and considered what might be done for doctors, teachers, and others, it has not found the difficulties so unsuperable.

The number of women for whom employment ought to be provided is comparatively small, because the majority of women are already doing their full share of work by ministering to their own families. If they dispense with domestic attendance and do all the cooking, housework, and some of the dressmaking and laundry work for their households, they are certainly fully occupied. They are, moreover, appreciably lessening the cost of their families to the committees who are in charge of them. Some of them, too, are admirably employed in making comforts for Belgian soldiers at the front on the lines of Mrs James Ward's scheme. There remains, however, a proportion of Belgian women who have lived in the manner of upper middle-class people, making considerable demands on the ministrations of others, but doing little of immediate utility themselves. These are somewhat difficult to deal with, and can only be regarded as dependent guests on private hospitality so long as such hospitality lasts. Middle-aged and middle-class men, encumbered with families, and accustomed to highly specialised commercial employments in their native cities are in similar case.

It must be freely recognised that the Belgians are, with the inevitable exceptions, most modest in their demands. They recognise that their hosts have their own war troubles in the shape of diminished incomes and enhanced cost of living; and they themselves make little suffice.

That some of the refugees should gradually render themselves self-supporting is manifest. Private hospitality funds are not of indefinite elastricity, and the resources of some of the smaller committees must be running low. It is not altogether easy to devise a scheme for settling the money-earning matter; but we think the plan adopted for the Belgian Settlement in the Kendal district has a good deal to commend it. This committee starts by paying one shilling weekly to every Belgian man who is not earning money for himself. A man who is earning 8s. a week pays this sum to the committee, who returns him a shilling for pocket money. A man earning between 9s. and 15s. a week, pays the committee 8s. and keeps the balance. If he earns from 15s. to 18s., he retains 8s. and pays the balance to the committee. Women and girls receive 1s. a week likewise. They hand over to the committee all earnings up to 8s. a week; if they earn more they retain the balance beyond this sum. The Kendal committee expects the men and women who earn the higher wages to pay, if possible, for the repairing of their clothes and boots.

This scheme may serve as a suggestion to other committees who will see that it has the advantage of enabling the Belgians to know how much money they ought to earn in order to acquire the right to spend a certain amount as they please. Much as we may condole with the refugees over the terrible sufferings of their exodus from their own country, many of us will feel even more sympathy for them in being compelled to pass weeks and months in inglorious exile.

The Economist,
January 9th. 1915.

had stepped in during the debate on the Defence of the Realm Act to prevent words from being used which might utterly muzzle freedom of discussion. Eventually the new "crimes" were confined to "reports," but in the Regulations issued under the Act we notice a very sinister change of wording. Besides the crime of "spreading reports" individuals may be court-martialled for "making statements." We should like to know who is responsible for this improvement, and whether there is any means of quashing such regulations on the ground that they are *ultra vires*. It is evident, as we have said before, that the Act constitutes a gross infringement of the Magna Charta; but we hope that, just as the floods of the last week have only submerged Runnymede and Magna Charta island for a few days, so the rights and liberties then acquired, and from time to time enlarged, will be very speedily restored by Parliament. A Government which has deliberately gone to war for the liberation of nationalities to whom the Magna Charta is the climax of aspiration cannot afford to go on record as having passed an Act abolishing trial by jury and destroying the freedom of the Press. Lord Crewe's answer to Lord Loreburn on Thursday indicates, we trust, that a very discreditable paragraph in the chapter of war legislation will soon be blotted out.

EMPLOYMENT FOR REFUGEES.

On September 9th, in reply to a question in the House of Commons, the President of the Local Government Board offered to the Belgian refugees the hospitality of the British nation. Up to then the thousands of dispossessed and destitute persons who swarmed over from Belgium had been provided with shelter, food, and clothing through the efforts of voluntary committees, supported by the spontaneous generosity of the public, hard hit though most of them are by the war and the doubled income-tax; and, thanks mainly to their energy and to the goodwill of all classes of the community down to the very poorest, homes of one kind or another had, by December, been provided for some 110,000 refugees. The influx has begun again, for the pressure on Holland, where five or six times this number are being maintained, is growing unbearable; and Belgians are again arriving in England at the rate of from 4,000 to 5,000 a week, as Mr H. Samuel states in a letter of the 7th, in which he appeals for further hospitality. The problem is not merely one of hospitality, however. Idleness was unknown in Belgium. Every visitor to that once prosperous little country will admit the truth of this. Yet the five or six hundred thousand Belgians in Holland and the 110,000 in this country have been condemned to an idleness which is not the lightest part of the discomforts of an industrious people.

In view of this, a Departmental Committee was appointed at the end of October by the President of the Local Government Board to go into the question of providing employment for Belgians. Its first report (Cd. 7750) deserves careful study, for the question bristles with difficulties. The Belgian Government called all single men between 18 and 30 to return to arms, and asked that no employment should be offered them; a reasonable stipulation, even were the age limit considerably higher. As regards the others, the admirable "Handbook of Suggestions and Advice" issued in December to the Belgian refugees in the United Kingdom by the Official Committee of the Belgians impresses on them that it is a point of honour not to be idle, but to be good workers. But "there must be no competition between Belgian and British labour." "The Belgian workman must not undersell"; and he must "obtain work through the official bodies organised for that purpose." This sums up the main conclusion of the Departmental Report, which is, of course, that the supply and demand for Belgian labour must pass through the Labour Ex-

Yorkshire Evg. Post,
Jan: 11th. 1915.

BELGIANS IN YORKSHIRE MILL.

COMPARISON OF CONDITIONS.

TIME ALLOWED FOR A WARM BATH IN BELGIUM.

A "Yorkshire Evening Post" representative has had a chat with a couple of woollen spinners named Levision and Armand Gouvy, who, coming to England as refugees under the ægis of the International Federation of Trade Unions, were housed at Colne for a fortnight before coming to their present quarters at Birstall.

One was a foreman at L'Ile Adam mill in Verviers, and the brother a spinner under him; one was president of the Co-operative Society in the Belgian town, and the other a member of the Committee.

When the Gouvys first visited College Mills, Holmfirth, they were pleased to have an opportunity of comparing work with their "home" conditions. They soon said they could improve on the Heavy Woollen District practice of piecing broken ends in a mulegate. Instead of leaning over the carriage to mend the broken thread, they pieced it on the spindle, with a neatness and celerity that quite tickled the Birstall employees.

"The Evening Post" correspondent questioned the Gouvys about wages, hours, and conditions of labour. An official of the local Textile Workers' Union said the average wage of good spinners in the Heavy Woollen District was about 30s.; say 36 francs. The Belgians said their spinners' wages were about 40 francs.

As against the normal hours in Yorkshire, viz., 6 to 5.30 p.m., with 1½ hours for meals, and 6 to 12 on Saturdays, with a half-hour interval (total hours, 55½), the Belgians start at 8 o'clock on Monday mornings; they work till 6 p.m. daily, Saturday's included, but they have 1½ hours for dinner. Altogether, there is not much difference in the total working hours.

The Saturday half-holiday appeals to the refugees. "Oh, yes," they replied to a question, "we would rather start at 6 on Mondays, and have only one hour at mid-day, if we could have Saturday afternoon at liberty."

Amongst the advantages provided for them are: Ten minutes' grace every dinner-time, for a wash and change of clothes; a large dining-hall, with food at reasonable prices, for those staying in to meals; and 25 minutes granted out of the employers' time, once a week, for the workpeople to have a warm bath.

The reference to change of clothes had more in it than appeared on the surface. The brothers Gouvy were intensely amused to find that local spinners wore a smock at work, whereas in Belgium (as in Lancashire cotton mills) the men doff their out-of-doors attire and wear a set of "working clothes." As compared with Belgian and Yorkshire wages, they opened their eyes on learning that Lancashire cotton spinners could earn £3 a week in modern mills.

changes. Only so can the guiding principles laid down by the Committee be observed :—

That no Belgian labour should be employed until every reasonable effort had been made to find British labour through the agency of the Labour Exchanges.

That no Belgian labour should be employed at rates of wages lower or on conditions less favourable than those generally observed in the district.

The control of employment for refugees has hitherto been rendered extremely difficult because the first arrivals were not registered; those who were destitute were dealt with by voluntary organisations; the others arranged, in the first instance, for themselves. After the fall of Antwerp the fear that German spies might arrive in the guise of refugees caused the issue of orders prohibiting the future reception of Belgians in certain scheduled areas, though those already domiciled were not removed; not till November 18th was the registration of refugees made compulsory. As a result, the most various principles have actually guided local committees in the efforts made to find work; and in some cases the results have been unsatisfactory. Through the Labour Exchanges only 607 Belgians, of whom 5 were women, had been supplied with work; but the opinion of the officials is that a considerable amount of employment is available of a kind free from objections. Mr C. F. Rey, the general manager, stated that "some 15,000 Belgians might, if qualified, be properly absorbed into British industries, particularly in the armament, glass, and woollen trades." Moreover,

In general agriculture there can be no doubt that there is at the present time a shortage of labour, available for Belgians, and that in the early months of the coming year this shortage will increase to a marked extent.

In special branches the expenditure of considerable capital would be required, and the number of refugees who could be employed would be comparatively small. The Committee are of opinion that such schemes as sugar beet cultivation, State afforestation, and the reclamation of waste lands are open to objection, and they are consequently not prepared to recommend their adoption.

On the other hand, although unemployment does not exist to any marked extent in Great Britain as a whole, ordinary trade in many branches has suffered. There is no work to spare in the tailoring, ironmongery, jewellery, printing, bookbinding, furniture, leather, fancy goods, or cotton industries; and no work for women, among whom "the trade depression caused by the war is still greater, and the longer the war continues the more acute it is likely to become." Nor can any hopes of employment be held out to the professional class. Moreover, in general it is true that when hostilities cease unemployment may arise here in an acute form. It is therefore natural that the trade unions, who have raised no objection to the employment of Belgians, provided the trade union regulations are observed in their wages and conditions of employment, should lay stress on the question of replacement, and insist that "in the event of any slackening of trade Belgian employees should make way for British workmen."

The Committee's recommendations do not take us very far, but probably as far as it is safe to go, and we welcome the appointment announced on Friday of a body of Commissioners to put them into operation. Something may be done, they suggest, by Refugee committees in the way of setting up workshops for the manufacture, by Belgians, of goods for future homes, on the plan tried in Leeds; but with the questions of the provision of raw materials, rates of payment, &c., they cannot be said to have grappled at all adequately. That employment on any large or permanent scale should be provided for Belgians is not, indeed, desirable from their point of view, any more than from ours. After all, the refugees must fix their hopes on their country, which, in the eloquent and touching words of the official Handbook, "has never lived so truly as since she has been invaded." It would be a mistake to proceed as if this war might last for ever; for that is an economic as well as a psychological impossibility.

Cotton Factory Times, January 15th. 1915.

OPENINGS FOR BELGIAN COTTON WORKERS.

Inquiries are at present being made as to whether employment can be found for Belgian refugees in the cotton mills of Lancashire. Wherever it is reasonably possible we do not suppose there will be the least objection to finding work for these unfortunate people who for the moment are obliged to be our guests. It is, indeed, only just that they should be given the opportunity of supporting themselves during the time they remain here. Nevertheless, there are points about the subject that it would be well to consider carefully before any definite steps are taken. We do not know to what extent cotton operatives from Belgium have made their way into Lancashire, but whether the number be large or small, the same general principles would have to be considered in dealing with the problem. In the first place, it should be obligatory upon any employer taking such operatives into his mill to pay them the standard trade union wages. There would probably be no difficulty about this. But there is another point about which it is possible some difficulty might arise unless some definite understanding at the outset were arrived at.

It is not enough that such operatives should be paid the trade union rate of wages, but they should also be trade union members. We have heard it stated in certain quarters that a very large percentage of the workers in various trades who have left Belgian territory are non-unionists, whilst most of the trade unionists have remained in their own land. Up to the present we have no definite proof of this, and we incline to the belief that the statement is exaggerated. Circumstances altogether apart from trade unionism have drawn the dividing line between those who have remained at home and those who have been obliged to flee. It is possible that there are non-unionists amongst our visitors. It is, indeed, highly probable that the percentage of such workers will be rather large, seeing that trade organisations have not made the same progress in Belgium as they have done in Lancashire cotton spinning centres. But whether the Belgian workers were trade unionists in their native land or not, they should certainly be required to pay to the trade union here if they are put to work side by side with our own cotton operatives. There is also the question of military age to consider in the case of males. The Allied Governments are doubtless doing their best to regulate this matter, and trying to ensure that the vacancies caused by the enlistment of our young men are not filled by Belgians who should be available for service in their own army.

The whole subject is one of considerable importance to both the employers and operatives in the cotton industry. It appears to be advisable that there should be a consultation on the matter between representatives of the whole of the textile trade unions and the two great employers' associations for the purpose of considering to what extent work can be provided and under what conditions the Belgian operatives should be employed. Any scheme for introducing these operatives into the mills will necessarily require the co-operation of employers and their workpeople if it is to meet with success and work without friction. The County Refugees' Committee would be well advised to take steps for getting the employers' and operatives' representatives to deal with the matter as early as possible.

The Daily Graphic, Dec: 16th 1914.

WORKROOMS FOR BELGIAN REFUGEES:

An interesting experiment which it is hoped may solve the problem presented by the thousands of workless Belgian refugees at present in this country is being conducted at Hammersmith. Two workrooms for women and one for men have been opened by the Hampshire House Refugee Housing and Workshops Committee, and refugees are employed upon work which does not affect the British labour market. Some of the women make a fine embroidery which is not produced in England, and others are replacing their lost wardrobes. the men make Belgian furniture. The refugees have a kitchen of their own. 1. The women at work. 2. In the cabinet-makers' shop. ("Daily Graphic" photographs.)

Textile Mercury, January 23rd. 1915.

The possibility of employment for Belgian refugees in Lancashire cotton mills is engaging the attention of trade-union officials. Mr. Luke Bates, secretary of Blackburn Weavers' Association, holds the strong opinion that before any Belgians are employed they should become members of a trade union; also that they ought not to compete with British labour until all our own people have found work. And if Belgians find the conditions of labour better here than in their own country they may remain after the war is over. There is, however, no shortage of labour for the cotton mills, and Mr. Bates does not think the question need be discussed at present; it would be more appropriate for discussion among woollen workers. The difficulty in the cotton trade is to find work for its own people.

The Textile Mercury, January 23rd. 1915.

The Shortage of Lancashire Piecers: Question of Employing Belgians

The difficulty of securing a full complément of piecers for the cotton industry has been increasing for several years. We have dealt with this threatening shortage from time to time, and discussed the causes underlying it. In some districts there have been attempts of late years to fulfil the demand for piecers by resorting to the old practice of employing girls—a policy that no doubt would have been carried to a greater extent than has been the case had the development of ring-spinning not absorbed a very large amount of female labour. The position at present with regard to the dearth of piecers is more acute than ever, although it has not been felt so acutely as it would have been if the trade had been in a normal condition. When the demand for cotton goods is once more sufficient to provide employment for all mills in Lancashire the shortage of piecers will be a serious matter indeed.

No figures are available to shew how many piecers and spinners have enlisted in the Army since the outbreak of the war; but there is reason to believe that a fair number of piecers have transferred their services to the military authorities, and this has intensified a problem which is becoming more and more pressing in ordinary times. So far as Oldham is concerned, figures of enlistments have been issued by the Oldham and District Operative Spinners' Association, which has a membership of 18,982, including spinners and piecers. The returns for the district shew that 429 spinners and 714 piecers have enlisted or been called up in the reserves. But this can be only an indication of the numbers of piecers who have gone to the Colours, because there will be a large number outside the membership of the Association. Nevertheless, there is a grave lack of piecers now in all parts of Lancashire; as the war continues this will be increased, no doubt, by the withdrawal of further batches of youths and young men from the mills to the barracks. How are we going to replace them when the war is over and the industry returns to a state of prosperity?

It has been suggested more than once of late that cotton workers among Belgian refugees should be employed in Lancashire mills. We believe that an organised effort is likely to be made to find out Belgian young men and women who are familiar with cotton mill work, and gradually provide employment for them, so long as this can be done without directly displacing British operatives. In its latest report the Oldham Trades and Labour Council makes reference to the large number of Belgian workers who have been driven to seek refuge in this country. "These workers," continues the report, "are welcome, and we desire to assist them all we can; but if employers seek to take advantage of their presence by employing them at less than standard rates of wages, then organised labour must protect itself and them." In all probability the necessity of this protection would not arise in connection with the cotton industry, as its strict organisation does not permit of anyone being employed at less than the standard rates.

Belgian Refugees as Cotton Operatives: Wages

It is doubtful whether there are many males among the Belgian refugees who have a practical acquaintance with "mule" cotton spinning. The total number of cotton spinning spindles in Belgium does not exceed 1,500,000, and about 1,000,000 of these are ring spindles, worked, no doubt, entirely by females; in any case, the ordinary cotton piecer has nothing to do with ring-frames. If we estimate the number of piecers in Belgium at two per 1,000 spindles, we should get only about 1,000 piecers in the whole of the country. In all probability a fair proportion of these will have been called into military service; and many will be still in Belgium, and others scattered about Holland, Great Britain, and France. Hence we cannot depend upon replacing much of the shortage of Lancashire piecers by the employment of Belgian piecers, or the employment of Belgian mule spinners as piecers; but, at the same time, it would not be an impossible task to organise other Belgian males with the object of adapting them to the labour of the cotton spinning-room.

The wages of cotton workers of Lancashire would be considered handsome by the textile workers of Belgium. Recent figures issued by our own Board of Trade indicate that those in the Belgian cotton trade, at any rate, are on no higher economic level than Lancashire operatives were a generation ago. A few years ago the earnings of 1,364 selected men over the age of 16 years in connection with cotton-spinning machinery were as follow:—68 earned less than 1s. 2d. a day; 183 from 1s. 2d. to 1s. 7d.; 234 from 1s. 7d. to 2s.; 382 from 2s. to 2s. 5d.; 184 from 2s. 5d. to 2s. 10d.; 87 from 2s. 10d. to 3s. 2d.; 226 over 3s. 2d. The hours per day were 11 and 11½, including Saturday. There have been slight increases since then, and the hours are now 11 per day, or 66 per week. Out of examples taken from 2,926 weavers the greatest number (638) did not earn above 2s. 5d. per day; 610 received from 1s. 7d. to 2s.; 548 from 2s. 5d. to 2s. 10d.; 326 from 2s. 10d. to 3s. 2d.; and 311 over 3s. 2d. per day. Among 2,697 females employed in cotton spinning (that is, females over 16 years of age) the greatest number (917) received only from 1s. 2d. to 1s. 7d. per day; and 752 from 1s. 7d. to 2s.; other figures were:—12 under 10d. per day; 472 under 1s. 2d.; 367 under 2s. 5d. Female weavers' wages were on a similar scale.

In the woollen and worsted manufacturing trades the greatest number of females earned less than 2s. per day; in linen manufacture, also in silk, the greatest number received less than 1s. 7d. per day. Among males (over 16 years of age) in woollen and worsted manufacture the wages varied from less than 1s. 2d. to over 3s. 2d. a day, the greatest number (2,164 out of 9,025) earning over the higher figure; in silk manufacture wages varied from 1s. 2d. to 3s. 2d. per day, the greatest number earning less than 2s. a day; this is the case in respect to linen factories and the manufacture of other fibrous materials. A later return, issued in 1909, gives the number of men who were provided with employment in textile trades through the Public Labour Registries. Of the total number (of men) 19 per cent were engaged at less than 2d. per hour, 43 per cent. from 2d. to 3d. per hour, and 38 per cent. from 3d. to 4d. per hour. Hence, if Belgian textile workers could be utilised to help to make up the existing shortage in the Lancashire cotton industry, the prospect of earning much higher wages than they have been accustomed to would be to them an encouraging factor.

INDUSTRY OF BELGIAN REFUGEES.

AVENUES OF EMPLOYMENT.

MAKING BOXES FOR SHRAPNEL AND MARKET GARDENING.

Sir Ernest Hatch, the chairman of the Government Departmental Committee which has to do with the employment of Belgian refugees in England, is announced to pay a visit to Leeds to-morrow. He will find that although the Employment Committee suffered a serious set-back when the War Office took over the premises at King's Mill, Swinegate, where it was intended to find useful work for the Belgians, much has since been done in other directions.

There are in Leeds at the present time no fewer than 1,584 Belgian refugees, and the committee responsible for their maintenance are now asked to take another hundred. It would be extremely undesirable that those who are able to work should remain dependent on private hospitality.

Leeds has only partially solved the problem of finding work for them. The scheme for the employment of some hundreds of the Belgians was shattered when the King's Mill was commandeered as an army clothing depot. Since then, however, a portion of the mill has been relinquished by the War Office, and installed there are three or four Belgians in a boot-repairing shop, while half-a-dozen others are engaged in carpentry.

That is the beginning of an officially recognised employment scheme which, it is hoped, may grow as opportunities for extension arise. The men employed are being maintained in the homes found for them by the Lord Mayor's Committee, and are also paid a shilling a day, which addition to their maintenance is apparently keenly appreciated by the Belgians themselves. The great majority prefer that they should be in a position to earn the means to enable them to start afresh in Belgium, when the day of their repatriation arrives.

The Employment Committee are making preparations to put about fifty Belgian market gardeners on the land at Killingbeck where they will demonstrate their own system of intensive culture. In another branch of work about a dozen Belgians are employed by a Leeds firm of cabinetmakers upon the making of boxes to carry shrapnel, while many others are employed at the aeroplane works. Nothing has been heard of any of the Belgian lacemakers being engaged at their own trade, but a number of Belgian women are making rugs at the Priestley Hall.

THE RATE OF WAGES.

As a matter of some importance in its effect upon the labour question, the Employment Committee have seen to it that where Belgian labour is employed by private firms, the full Trade Union rate of wages shall be paid. Those rates have been found in some instances to be appreciably greater than the rates at which the Belgians were paid in their own country, which fact may give rise to some uneasiness. The Belgian Government are, of course, anxious that the Belgian refugees shall not become so attached to the soil of England as to be reluctant to leave when the time of repatriation arrives.

For the present the influx continues. There is at the moment a surplus of 7,500 refugees in London above the number that can be satisfactorily housed. These must be distributed in different parts of the country, and Leeds is asked to take at least another hundred. To that end, the Lord Mayor's Committee are, it is understood, about to furnish a number of unfurnished houses, which have been offered free from rent.

Already the committee are maintaining fifty-eight families, at a cost of from £70 to £80 a week. The refugees in Leeds occupy in all 264 houses, and in the great majority of cases the cost of a family's maintenance is borne by private hosts. Those who are not maintained privately receive relief from the committee at the rate of 5s. per week for a man, 4s. for a woman, 3s. for an adult child, and 2s. for each younger child.

REFUGEES AND EMPLOYMENT.

HOW BELGIANS HAVE FARED IN LIVERPOOL.

MANY SOCIAL TRAGEDIES.

Over one hundred and six male Belgian refugees have found employment in the area allocated to the Liverpool Refugee Reception Committee. This area, whose boundaries are so wide as to embrace such places as Windermere, the townships and villages of North Wales and even so far afield as Welshpool, has been most assiduously reaped for vacant situations. There are few of the male refugees who can now be said to be wholly dependent upon charity for support.

So far as is officially known there are at the present time about 1,000 refugees in Liverpool, but of these only 156 are men. To these figures, however, must be added a small number representing those refugees who have come to Liverpool and, having private means, or already holding positions in companies having offices in this country, or having friends upon whom they could rely for support, are not included in the official figures. Still, of the thousand and odd whose cases have been dealt with by the Liverpool Hospitality Committee, the major portion of the male members who can work are now employed. Six of them are incapacitated, however, by old age, and thirty are of the clerk class, and the most difficult to place in positions. The positions of the rest are most varied, many of them in character entirely divorced from those held by the men when in their own country.

Social Changes.

A recital of just a small number of these cases reveals the tragedy of this war. One refugee before he was obliged to flee his country was a harbour master at one of the Belgian ports enjoying a salary that amounted to considerably over a thousand pounds, a steam launch always at his disposal, a man prominent in the civic and social life of the port. He is now a night watchman on board a liner. Another—before the war the head of a large manufacturing house—is now obliged to accept a position of workman in a firm at a wage of 25s a week. An expert Belgian horticulturist is working as a labouring gardener.

Some of the women refugees also have found employment, but, unhappily, the report of several people who have assisted in helping to find them employment is that they do not show any very great inclination to seek positions. But this cannot be said to apply to the men. They are most anxious to obtain work, and according to the testimony of employers very good workmen they make, quick in accommodating themselves to new conditions of labour, intelligent and eager to learn. Dock labourers, labourers in rubber works, soap works, smiths, bakers; in fact, they are following all manner of callings. But the majority of them have found work as labourers. The lads have also secured situations as van lads and errand lads. It is the clerk class that the greatest difficulty is experienced with, for the world of clerkships is already overflooded with applicants for vacant situations, and the clerk is perhaps the least adaptable of all.

Despicable Employers.

Generally the wage which the refugee is receiving is equal to that paid to the men of this country for similar work, but a disposition has been discovered on the part of some employers to take advantage of the refugees' helpless condition and to exploit them. Cases are known where refugees have been engaged to do all manner of work, in fact, to practically carry on the work of a whole department, for the mere pittance of a few shillings a week. In one or two instances the victims are known to be women refugees, although chiefly it has been in the case of youths, where they have been given a man's work to do and only paid the wage of an errand boy. Such cases, however, are few.

It should not be thought these male refugees are shirking their military obligations. Six of them have already returned to the front, and "in the case of the rest," said a member of the Refugee Reception Committee,

the male members who can work are now employed. Six of them are incapacitated, however, by old age, and thirty are of the clerk class, and the most difficult to place in positions. The positions of the rest are most varied, many of them in character entirely divorced from those held by the men when in their own country.

Social Changes.

Some of the women refugees also have found employment, but, unhappily, the report of several people who have assisted in helping to find them employment is that they do not show any very great inclination to seek positions. But this cannot be said to apply to the men. They are most anxious to obtain work, and according to the testimony of employers very good workmen they make, quick in accommodating themselves to new conditions of labour, intelligent and eager to learn. Dock labourers, labourers in rubber works, soap works, smiths, bakers; in fact, they are following all manner of callings. But the majority of them have found work as labourers. The lads have also secured situations as van lads and errand lads. It is the clerk class that the greatest difficulty is experienced with, for the world of clerkships is already overflooded with applicants for vacant situations, and the clerk is perhaps the least adaptable of all.

Despicable Employers.

Generally the wage which the refugee is receiving is equal to that paid to the men of this country for similar work, but a disposition has been discovered on the part of some employers to take advantage of the refugees' helpless condition and to exploit them. Cases are known where refugees have been engaged to do all manner of work, in fact, to practically carry on the work of whole departments for the mere pittance of a few shillings a week. In one or two instances the victims are known to be women refugees, although chiefly it has been in the case of youths, where they have been given a man's work to do and only paid the wage of an errand boy. Such cases, however, are few.

It should not be thought these male refugees are shirking their military obligations. Six of them have already returned to the front, and "in the case of the rest," said a member of the Refugee Reception Committee, "they are either debarred by age, physical incapacity, by pressing family obligations, or other genuine personal reasons." Another point perhaps well to bring forward is that the employment found for these refugees should not be considered permanent and as displacing Englishmen, but simply for the period of the war, after which they will be sent back to their own country.

State of Employment.

The ease with which positions have been found for the refugees is a good indication of the state of employment. "Only yesterday," said a member of the Refugee Committee, "an application came from a certain soap works for thirty labourers."

In addition to the work which has been found for the refugees, a club has been formed in Oxford-street, where the refugees may congregate for social communion, and where tea is served to them each afternoon. Here they may converse together, and read from such Continental papers as can be obtained—for not all of them speak English—of the doings in their own country.

The hon. secretary of this club (Mr. A. D. Galatti) spoke of one difficulty which faced the refugees when they found employment. They were without proper working clothes. The majority of them having fled from their country in a completely destitute state, had only one suit of clothing, so that it had to do for all occasions. It was their best suit as well as their every-day suit, and to begin work in it was to threaten at once its respectability. So "Any old clothes" is now the crying want of the Belgian refugees.

BELGIAN REFUGEES.

PROBLEMS OF WORK AND WAGES.

VISIT OF SIR ERNEST HATCH.

Sir Ernest Hatch, the chairman of the Government Commission for providing occupation for the Belgian refugees, accompanied by Mr. Hugh Fortescue and Mr. H. A. Leggitt (the secretary of the Commission), paid a visit to Manchester yesterday, and had a conference with representatives of the Belgian Refugees Committee. Sir Ernest Hatch made a speech setting out the objects to be aimed at and dangers to be avoided, and giving instances of the establishment of Belgian workshops on lines which promise success.

After considerable discussion the conference agreed that it was desirable to constitute a new Belgians Relief Committee which should be composed largely of members of the Corporation and have the Lord Mayor for its chairman and which should co-opt some members of the existing Belgian Relief Committee along with other suitable persons in and around Manchester, including representatives of organised labour and women workers. The duties of this Committee would include not only the arrangement of hospitality for refugees—a work which the existing Committee has done exceedingly well,—but also the provision of employment either in existing workshops or in workshops to be specially established.

It is understood that the Belgian Refugees Committee will take this suggestion into immediate consideration and make a communication at an early date to the Lord Mayor. If the suggestion is carried out the existing organisation and its funds will be handed over to the new Committee.

We publish the speech made to the conference by Sir Ernest Hatch and also a report upon a visit paid by Sir Ernest to a workshop at Hyde yesterday afternoon.

The Need for Employment.

The Lord Mayor presided over the conference, and, besides the members of the Commission, those present included the Town Clerk, Mr. Councillor Melland (the chairman of the Belgians' Relief Committee), Mr. C. P. Scott, Mr. L. A. Gallé (the Belgian Consul), Mr. E. Crosfield Pearson and Mr. Poynting (the hon. secretaries of the Committee), Mr. Matthewson Watson and Mr. Bythell (the hon. treasurers), and Mr. J. A. Shepheard.

Sir Ernest Hatch, in his speech, said: The hospitality offered by Manchester and its outlying districts has been truly magnificent, and whether in its sympathy or generosity, the welcome which you have given to the refugees is worthy of your high traditions. It is impossible to mention the names of all who have taken part in this splendid work, but I must refer to the devoted labours of Councillor Melland (chairman of the Refugee Committee), Mr. Shepheard, Mr. Pearson and Mr. Poynting (the hon. secretaries to the Committee), Councillor Watson and Mr. Bythell (the hon. treasurers), and M. Gallé (the Belgian Consul).

There are at the present moment in Manchester and the districts around more than 2,000 Belgian refugees, who will probably remain here for many months, possibly for a year, or even longer. These refugees were invited here by the British Government on behalf of the United Kingdom, and they have been assured by the Prime Minister that they could count to the end on our whole-hearted and unfailing support—to the end, that is, not only of the war, but until the time comes when the conditions in Belgium will admit of their repatriation. The pledge has been and is being fulfilled by the whole country.

The King of the Belgians foresaw the danger of deterioration likely to arise from enforced idleness. He was also anxious that his subjects should neither be pauperised nor become a burden on a friendly nation, and expressed the earnest hope that they would be provided with employment.

No Competition with British Labour.

It is, of course, essential that no steps should be taken which could lead to friction between the workpeople of the two countries. It has, therefore, been agreed by the British and Belgian Governments that no Belgian shall be employed in any trade or industry in which British labour is available. Evidence has been taken from various trade unions, and it has been shown that in a considerable number of trades and industries no openings for Belgian workers exist, as, for example, in the cotton industry and the furnishing trade. In other trades, such as building and boot-making, although work was brisk in some sections there was no shortage of British labour in others. Among women workers the depression caused by the war is greater than among men, and the lack of employment for British women is severely felt.

I have mentioned these few instances to prove that care must be taken to ensure that no refugee shall obtain employment to the detriment of British workpeople. In addition, it is essential that, in the employment of Belgians, proper conditions of labour, including the payment of recognised rates of wages, should be observed, and it was for these reasons that it was decided that Belgian labour should be engaged through the medium of the Labour Exchanges. Practically the only industries in which the refugees can be employed to any appreciable extent are agriculture and those which provide munitions of war, woollen materials, and boots for the army; the glass blowing trade, motor works, and surface work at mines. In comparison, therefore, with the total number of refugees there is very limited scope in British industries for supplying them with work.

The Commission's Suggestion.

For the vast majority of refugees some other form of occupation must be devised. It is therefore proposed that workshops shall be established for the making of clothes, furniture and light ironmongery, solely for the use of Belgians, more especially on their return to their own country. The advantages of this scheme are twofold. The goods made will not be for sale in this country, and will not therefore compete with the produce of British labour, and also the refugees will be provided with suitable occupations and will eventually become possessed of the goods that are made.

In distributing the refugees to various centres it was impossible to exercise any discrimination. For some suitable employment may have already been found, but for providing occupation for the remainder, the workshop scheme affords the only possible solution. The Commissioners, therefore, suggest that immediate steps be taken to form an employment committee under the chairmanship of the Lord Mayor, in conjunction with the Corporation of Manchester, which shall be thoroughly representative in character and include, in addition to members of your Local Committee, experts in the particular trades concerned, women workers, and representatives of the refugees themselves.

The Belgian Government will provide the necessary tools and materials, but it will rest with the Employment Committee to obtain the workshops. It will be necessary, as an inducement to the refugees to work, to give them some pecuniary remuneration which, together with the hospitality they receive, will represent the amount of wages payable for similar work in Belgium. The establishment of these workshops may present certain difficulties, but none that cannot be surmounted, and the Commissioners will give all the assistance in their power to this end.

Manchester's Objection.

I understand that a conference here decided that the workshop scheme was not practicable in Manchester. The ideal solution for the problem of providing employment for our Belgian guests is that they should find regular paid employment in British industries when such employment will not conflict with British labour. But there is a large residue who cannot find such employment now, and we must also look ahead and make provision for the time when the present trade activity slackens and when many Belgians now in work will be displaced. For this the only solution is the establishment of workshops where Belgians, men and women, can be occupied.

An Example in Bradford.

I should like to give you an instance of a workshop of this kind which is already in being. I have just visited Bradford, and have been immensely impressed by the arrangements made by the Local Committee there in conjunction with the Corporation. Bradford has about 600 refugees, of whom 213 are employable women and 141 employable men. There are not very many openings in Bradford for absorbing the refugees in British industries, and the Employment Committee has therefore devised special means for providing useful occupation for the men and the women.

This admirable scheme is divided into two main branches, which are complementary to each other. The first branch consists of training men and women in different kinds of work, and for this purpose four training classes have been formed:—

1. Woodwork, for household furniture and domestic requisites.
2. Dressmaking, for the making and renovation of garments.
3. Millinery, for the making and renovation of hats.
4. Boot repairing.

These classes are held two or three afternoons a week, and the teachers are partly British, partly Belgian. They are provided and paid by the Bradford Education Committee, and are recognised by the Board of Education. The Education Committee also provide the necessary equipment, and the raw material is given by the Refugees' Committee. Every refugee who attends the classes receives 1s. a week pocket money. There are six Belgian teachers, who are paid at British rates of pay. The total number of refugees who attend these classes is 100, and in addition a large number attend language classes which are also held in the Institute.

Trades and Rate of Pay.

The second branch of work consists of workshops in the same Institute to which any refugee may come and work at furniture or dress-making, boot-repairing, millinery, or dressmaking. The training classes are the first stage, and the workshops the second. It is, of course, entirely optional for the refugees whether they choose merely to attend the training classes or to follow up the training by passing into the workshops to make goods and articles of practical utility. The workshops are open all day, and the refugees are paid in proportion to the work done, the value being computed by the instructor on the basis of the time which it would have occupied a skilled workman earning the Bradford standard rate of pay. From the amount so earned a sum not exceeding 50 per cent of the value of the work done is deducted for maintenance, 15 per cent is given to the refugee as pocket money—this amount in no case being less than one shilling a week,—while the remainder is banked for the refugee to form a nest egg for his return to Belgium.

I visited the Institute and saw the training classes and the workshops in full swing. There were 14 men engaged in repairing boots and shoes for their fellow-refugees; and I want to draw your special attention to the fact that, although they had received this training in the boot-repairing class, none of them had done work of this kind before, some of them, when in Belgium, being dock labourers. Thirty men and two women were engaged in wood work of various kinds and in toy making, some having been cabinet makers in Belgium, while others, and among them was a schoolmaster and a lawyer, had no previous knowledge whatever of the work. There were forty women and girls busy in making and repairing dresses, clothes, and hats. All were happy and contented and engaged on useful work, and work which does not conflict or compete in any way with British labour. I cannot but think that in this combination of educational opportunity and industrial activity Bradford has solved the problem before us on the right lines.

The Professional Classes.

There remain the refugees of the professional classes. For these very few chances of employment are likely to be found, but there are many societies and associations which, although unable to afford opportunities of actual work, may in many ways be able to relieve the monotony of the refugees' existence. If any such societies exist within your area you may be able to bring them into touch with this class of refugee.

Hyde's Useful Experiment.

The Mayor of Hyde (Mr. Ernest Hatch) visited

diate consideration and make a communication at an early date to the Lord Mayor. If the suggestion is carried out the existing organisation and its funds will be handed over to the new Committee.

We publish the speech made to the conference by Sir Ernest Hatch and also a report upon a visit paid by Sir Ernest to a workshop at Hyde yesterday afternoon.

The Need for Employment.

The Lord Mayor presided over the conference, and, besides the members of the Commission, those present included the Town Clerk, Mr. Councillor Melland (the chairman of the Belgians' Relief Committee), Mr. C. P. Scott, Mr. L. A. Gallé (the Belgian Consul), Mr. E. Crosfield Pearson and Mr. Poynting (the hon. secretaries of the Committee), Mr. Matthewson Watson and Mr. Bythell (the hon. treasurers), and Mr. J. A. Shepheard.

Sir Ernest Hatch, in his speech, said: The hospitality offered by Manchester and its outlying districts has been truly magnificent, and whether in its sympathy or generosity, the welcome which you have given to the refugees is worthy of your high traditions. If any such societies exist within your area you may be able to bring them into touch with this class of refugee.

Hyde's Useful Experiment.

In the afternoon Sir Ernest Hatch visited Hyde to see the Belgian refugees employed in the workshops, which have been established by the Mayor of Hyde and his partners, for cabinet-making and wood work of various kinds. The following account of the visit is supplied by the Commission:—

Early in December the Mayor called together a meeting of the refugees in Hyde, and asked them whether they would not like to co-operate in the making of cabinets, tables, and chairs, which would become their own property at the end of the war. A large number of refugees were anxious to take advantage of this opportunity, and twenty men at once began work in two large rooms, which were lent for the purpose by Messrs. J. and J. Ashton. The circular saws, drills, &c., were all lent, and the tools were given by the Mayor of Hyde and his partners, who also provide the necessary motive power. The timber is supplied from a central fund subscribed locally.

It was peculiarly interesting to observe that, although some of the men at work were carpenters by profession, others represented a number of different vocations, among them being a stoker, a fitter, a compositor, a bicycle repairer, a copper engraver, a dock hand, a turner, and a commercial traveller. All were busily and happily engaged, and some admirable examples of the work which has been done were already stored, among them a perfectly finished chiffonnier, which is being presented by the refugees as a Christmas present to the Mayor's daughter.

The men work from nine till six, under the supervision of a consulting engineer from Hyde. A careful record is kept of the work done, and the goods made will ultimately be distributed to the workers according to the number of hours they have worked. One of the men is a skilled wood carver and turner, but it should be noted that the turner was in his own country a stoker by profession, and before his arrival here he had only an elementary knowledge of turning work. The picture presented in this small hive of industry was singularly attractive. The refugees, instead of eating out their hearts in idleness, were happily engaged in useful occupation, and the scheme devised by the Mayor and his partners shows that, however miscellaneous may be the vocations represented by a group of refugees, opportunities can be made for providing them with occupation which is useful to them as well as being a genuine pleasure. As one of the refugees himself said to Sir Ernest Hatch, "This is making a race of carpenters for Belgium." The greatest credit is due to the Mayor of Hyde for having initiated this admirable work.

The Sheffield Telegraph,
Sept. 24th 1914.

YORKSHIRE WEAVERS AT HIGH PRESSURE.

Trade in Batley at present is brisk, orders are plentiful, and employment is assured for some time to come. Womenfolk especially are in rare glee. "Ah'm bahn to addle sum brass," one weaver said to a friend as they hurried back to their work one morning after an unusually short breakfast interval. Now that the holiday season is over, the Batley women operatives are prepared to give their undivided attention to their looms, and "to addle sum brass."

In several mills the employees have been told that, if they care to start before 6 a.m.—fancy starting before 6 o'clock!—they may do so, and, if they care to take their meals whilst their looms or machines are running, they may do so, and if they wish to work overtime they may do so. Soldiers want cloth and blankets and the sooner they get them the better. No time is being lost. As the manufacturers of Batley and district turn out the goods there are men in khaki with motor lorries ready to "load up" and take the stuff by road.

Heavy cloth which has been cut up into blanket lengths is being taken with all possible speed on military motors to certain points on the coast, and shipped from there to France. Within three days of the blankets leaving the factories many of them will be in the trenches. There is no need to impress upon the textile workers of the Heavy Woollen district the necessity of "quick deliveries." The news that our soldiers —many of them Batley and Dewsbury factory lads—are fighting in water waist deep has touched the heart of every mill-worker, and cloth and blankets are being made at a speed that establishes new records.

LEEDS CLOTHING OPERATIVES' GRIEVANCES.

A mass meeting of the members of the Leeds Branch of the Amalgamated Union of Clothiers' Operatives was held at the Trades Hall last night, to discuss certain grievances which have arisen in connection with Government contract work which has come to Leeds. The difficulty arises out of the payment made to operatives by manufacturers who are engaged upon Government work, and at last night's meeting it was decided to adhere to the conditions laid down by the agreement which was arrived at some 18 months ago by employers and employees in the Leeds clothing trade. This agreement provides for a minimum piece rate of 4d. per hour for females over 18 years of age, 8½d. for cutters, and 8½d. for pressers. The local secretary, Mr. H. E. Withey, was instructed to write to the Leeds Wholesale Clothiers' Association, acquainting them of the decision of the meeting. It is stated that in one or two cases reduced wages are being paid, and these, it is understood, will be referred to the Conciliation Committee set up under the agreement.

The Yorkshire Post,
Sept. 29th 1914.

BUSY MILLS IN THE COLNE VALLEY.

At a meeting of the Colne Valley Education Committee at Slaithwaite last night, the Clerk (Mr. E. T. Woodhead), reported that 309 meals had been served last week to 69 school children, which was a considerable decrease from previous weeks. Mrs. Josiah Lockwood asked who were carrying out the by-laws regarding children trading in the streets and working overtime in the mills. She hoped the attendance officers were alive to the by-laws, because the children should be protected as much as possible. They might be overworked. It was also stated that evening school pupils were working overtime on Government orders, and the Chairman (Mr. John Whiteley) said the Factory Inspectors would no doubt be very quiescent at present. It was stated that some of the mills in the Valley were working all day on Saturday, and others on Sunday. The point raised by Mrs. Lockwood will be considered by the sectional committees.

CLOTHING THE NEW ARMY.

Thousands of women are now busily engaged making Service uniforms for the 500,000 recruits. [Clarke and Hyde.

Birmingham Post,
Oct. 10th. 1914.

Walsall Trade Boom.

WALSALL, Friday.—Walsall is just now in the thick of a trade boom which may fairly be said to have reached an unprecedented pitch. Practically every trade is engaged at high pressure on Government work. The workpeople have every reason to be satisfied with the present position. It is true they are working long hours—most factories start at 6 or 7 a.m. and do not stop until 9 p.m.—but they are able to earn big wages. Riding saddle makers known in the trade as brown saddlers can earn anything up to £10 a week on military work, whilst harness makers and bridle cutters can make their £3 or £4, and even women can reckon on as much as 35s. a week as stitchers. Manufacturers complain they are unable to execute colonial and other orders at the enhanced rates, and in some instances acceptances have had to be cancelled. The opinion is expressed that this will mean a diversion of the trade elsewhere—probably to the United States—and that its recovery later will be difficult. The fancy leather goods trade was adversely affected by the war at the start, but has recently improved greatly, and now a very fair volume of business is being done. The hardware manufacturers who supply the metal parts for the military equipment are extremely busy. In spite of the many thousands of workpeople engaged in the various industries complaint is made that the supply of labour is totally inadequate, particularly in the leather trade in many branches, and manufacturers have had to refuse large orders.

Yorkshire Observer,
October 21st 1914.

658.

THE BUSY TIME IN THE HEAVY WOOLLEN DISTRICT.

WEAVERS AND THEIR WAGES.

At the annual meeting of the Dewsbury, Batley and District Trades and Labour Council last night at Dewsbury, the secretary (Mr. Ben Turner), who is the Labour Mayor of Batley, submitted a report in which he stated that the textile trades of the Heavy Woollen District were quiet from October, 1913, until the end of August last, when Government orders came thick and fast.

Old stocks of cloth, blankets, rags, shoddy, &c., had been sold at very good prices, and out of the rush big sums of money had been made by many of the employers. It was true the workpeople had plenty of overtime, both male and female, as the law was flagrantly broken in September and only brought into emergency line in October, after many suggestions for attention from those concerned. Some thousands of women and young persons had worked fourteen hours a day, which meant their being away from their homes over that time, and sometimes the women had landed home ready to drop, so exhausting had been the time spent at the mill, while in very many cases the earnings had been woefully poor. Some firms had paid women overtime rates, some had not. It was not a proper thing to have women and young persons working so long, as it destroyed the physique of prospective motherhood, and in the long run was not worth the trouble from a business point of view. There had been a frenzied spirit abroad with many employers, but they were toning down a bit and the district would become normal in due course. It was to be hoped that those who were now making fabulous sums of money by buying, selling, and dealing in war goods would send the extra profits to the relief funds, so that unluckier districts might benefit. Workpeople should not waste any overtime money they received. All workers on full time should give something each week to the relief funds, and continue to set a good example to the well-to-do, some of whom as yet were lacking in effective support of the local funds. Some employers had made as much extra profit in a week as they had given to the relief funds, and one or two of the very wealthiest had not given a penny to the funds.

The Trades Council and other labour bodies had pressed very hard for the soldiers and sailors to be paid a full journeyman's wage, so that they and theirs might be free from financial hardship while doing State duty. The outcry had been partly successful, and a woman whose husband had a small wage but a large family was financially better off now than previously, but a woman whose husband had a wage of 30s. a week and a small family was worse off than before. The country ought to insist that the wives, mothers, fathers, and dependents of soldiers and sailors should be pensioned if their loved one was killed, and all disabled men who returned from the service, whether wounded by battle or disabled by illness, should be pensioned for services rendered.

If the State would learn the lesson of co-operation there could be a State co-operation applying to all the country. They had dispensed with the railway directors and made a joint committee of managers the controllers of the railways. They had made sugar a State-controlled supply, and they threatened to do so with food. If the State was wise, when peace came it would develop State supplies still further and make public utilities public properties. It had been shown that in an emergency private enterprise failed, and where it did not fail it robbed the public. The workers should learn the full lesson of the day's trials.

Mr. Tom Myers (Dewsbury) complained that weavers in the Heavy Woollen District were working overtime for no more than their ordinary wages, and that owing to the materials used having to be treated with water many of the operatives were wet to the skin. He remarked that weavers in one Batley mill were making eighty yards of cloth for 9s 5d., which seemed to him to be a lot of work for small pay.

Mr. Ben Turner replied that the wetting of materials was a regrettable feature, but it had existed as long as he had known anything about weaving. Our soldiers and sailors had to be clothed, and some sacrifices must be made by all. The real complaint was against profit being made out of the patriotism of the workers without the sacrifice being general. As to the payment for weaving, Mr. Turner said the operatives who received 9s. 5d. for eighty yards were in a gold mine, the general rate being from 6s. to 8s. It was only through lack of organisation that weavers' wages were so low.

After some further discussion the report was unanimously adopted.

A resolution was passed urging the Government to provide from the National Exchequer payment of £1 per week for the widow of every soldier or sailor killed in the war or for the dependent mother, and a similar sum for the dependents of those engaged in fighting and for the men permanently maimed.

The following officers were elected: President, Mr. F. Oates; secretary, Mr. Ben Turner, vice-pro dent, Mr. P. Ward; treasurer, Mr. T. Hoskin; assistant secretary, Mr. H. Wood.

Batley Reporter, October 24th. 1914. 658/3

WAR AND TRADE PROFITS.

OVERTIME FOR WOMEN.

MAYOR OF BATLEY & THE WAR FUNDS.

WEALTHY PEOPLE WHO GIVE NOTHING.

THE WORKERS' LESSON.

The annual meeting of the Dewsbury, Batley and District Trades and Labour Council was held on Tuesday, at Dewsbury, the president (Mr. F. Oates) occupying the chair.

The SECRETARY (Councillor Ben Turner, Mayor of Batley), submitted a lengthy report reviewing the various features of the year's work. He said the only branches of unions known of and not affiliated to the Trades Council were the A.S.E. and Boiler Makers' branches, and it was hoped they would rejoin the Council at an early date. The textile trades of the Heavy Woollen District were quiet from October, 1913, until the end of August last, when Government orders came thick and fast.

Old stocks of cloth, blankets, rags, shoddy, etc., had been sold at very good prices, and out of the rush big sums of money had been made by many of the employers. It was true the workpeople had plenty of overtime, both male and female, as the law was flagrantly broken in September, and only brought into emergency line in October, after many suggestions for attention from those concerned. Some thousands of women and young persons had worked fourteen hours a day, which meant their being away from their homes over that time, and sometimes the women had landed home ready to drop, so exhausting had been the time spent at the mill, while in very many cases the earnings had been woefully poor. Some firms had paid women overtime rates, some had not. It was not a proper thing to have women and young persons working so long, as it destroyed the physique of prospective motherhood, and in the long run was not worth the trouble from a business point of view. There had been a frenzied spirit abroad with many employers, but they were toning down a bit, and the district would become normal in due course. It was to be hoped that those who were now making fabulous sums of money by buying, selling, and dealing in war goods, would send the extra profits to the relief funds, so that unluckier districts might benefit. Workpeople should not waste any overtime money they received. All workers on full time should give something each week to the relief funds, and continue to set a good example to the well-to-do, some of whom as yet were lacking in effective support of the local funds. Some employers had made as much extra profit in a week as they had given to the relief funds, and one or two of the very wealthiest had not given a penny to the funds.

The Trades Council and other labour bodies had pressed very hard for the soldiers and sailors to be paid a full journeyman's wage, so that they and theirs might be free from financial hardship while doing State duty. The outcry had been partly successful, and a woman whose husband had a small wage but a large family was financially better off now than previously, but a woman whose husband had a wage of 30s. a week and a small family was worse off than before. The country ought to insist that the wives, mothers, fathers, and dependents of soldiers and sailors should be pensioned if their loved one was killed, and all disabled men who returned from the service, whether wounded by battle or disabled by illness, should be pensioned for services rendered.

If the State would learn the lesson of co-operation there could be a State co-operation applying to all the country. They had dispensed with the railway directors and made a joint committee of managers the controllers of the railways. They had made sugar a State-controlled supply, and they threatened to do so with food. If the State was wise, when peace came it would develop State supplies still further and make public utilities public properties. It had been shown that in an emergency private enterprise failed, and where it did not fail it robbed the public. The workers should learn the full lesson of the day's trials. Trades organisation had developed considerably during the past twelve months, and every union had increased its membership. Compared with twenty-three years ago the Trades Union membership of the Trades Council was 8,000, as against 1,000.

The PRESIDENT moved the adoption of the report.

Mr. S. JACKS seconded the motion.

Councillor TOM MYERS said he was informed in various parts of the district that weavers in the Heavy Woollen District were working overtime for no more than their ordinary wages, and that owing to the materials used having to be treated with water many of the operatives were wet to the skin. He was told that weavers in one Batley mill were making eighty yards of khaki cloth for 9s. 5d., which seemed to him to be a lot of work for small pay.

The SECRETARY observed that the wetting of materials was a regrettable feature, but it had existed as long as he had known anything about weaving. Our soldiers and sailors had to be clothed, and some sacrifices must be made by all. The real complaint was against profit being made out of the patriotism of the workers without the sacrifice being general. As to the payment for weaving, Councillor Turner said the operatives who received 9s. 5d. for eighty yards were in a gold mine, the general rate being from 6s. to 8s. It was only through lack of organisation that weavers' wages were so low.

Other delegates commented upon the evil of girls of 13 and 14 years of age having to work at nights. Also in some cases, it was said, girls were leaving their homes at 5-15 a.m. and returning at 8-45 p.m.

The SECRETARY replied that very many communications had been made by the Textile Union officials to manufacturers with reference to a great many things that they considered required altering, and some of them had been altered.

The resolution was passed, as also was the balance-sheet, which showed that the Council commenced with a debit balance of £15 2s. 0½d., and ended the year with only 19s. 8½d. due to the treasurer.

The following officers were re-elected:—President, Mr. F. Oates; vice-president, Mr. P. Ward; treasurer, Mr. T. Horkin; secretary, Mr. B. Turner; assistant secretary, Mr. H. Wood; auditor, Mr. J. Richardson; and the following were appointed the Executive Committee:—Messrs. Frank Kirbyson, J. Halstead, T. Myers, J. Senior, W. Moss, G. Saville, H. Schofield, J. Robinson (plumbers), and S. Jacks.

The SECRETARY reported receipt of applications from the Dewsbury branch of the British Socialist Party and the I.L.P. to become affiliated with the Council.

Mr. H. WOOD: I move that the consideration of the matter be suspended for five years.

The SECRETARY said the only way in which they could deal with the matter in the event of anyone desiring to admit those bodies to the Council would be to move that the rules of the Council be altered to admit the bodies named. Such bodies had been received into the Council successfully at Halifax and Huddersfield, but the principle had been fought against in many other towns. If they had an L.R.C., as they used to have, he thought it would be improper to admit the B.S.P. and the I.L.P. to the Trades Council. There was an L.R.C. at Thornhill and one at Batley, but not at Dewsbury. He came with instructions from the Textile Union to say that if the rules of the Council were altered in order to admit the bodies named there must be no person sent to the Trades Council who was not a member of his own trades union.

Mr. WAILES moved that the rules of the Council be altered to admit the affiliation of the branches named, on condition that the delegates sent to the Council were members of their own trades unions.

Mr. J. RICHARDSON seconded the motion, and Councillors MYERS and HALSTEAD supported it.

Mr. T. HORKIN strongly opposed the resolution on the grounds that the Council was a non-political body.

The PRESIDENT supported the resolution, and it was carried by a large majority.

The PRESIDENT moved that the delegates of the Council pledge themselves to support the candidature of Councillor J. Halstead for the Thornhill South Ward of Dewsbury.

Mr. JOHN SYKES said that when he thought how Councillor Halstead had been back-bitten by Liberals and Tories and blacklegs, Inghamites, Peelites, and men who professed to be Christians, he was pained. He believed that Councillor Halstead was a Christian and a saint, and that he was not a Sunday saint and and a Monday devil, but he was a seven-days-a-week saint. (Hear, hear.)

Mr. K. OLDROYD referred to the letter in the "Reporter" last Saturday, signed "A Liberal," and to the statement in the letter that "after the meeting in the Parochial Hall, addressed by Mr. E. T. Ingham, there was written in chalk behind where the colliers sat 'to h—— with the war'." Also in that letter it was stated that Mr. Cleveland, the caretaker, had to rub the writing off. He (Mr. Oldroyd) was told by Mr. Robert Cleveland that that was a direct falsehood. There never had been writing on the wall.

Councillor MYERS said the workers at Thornhill were not alarmed. They were more pleased than otherwise at the prospect of a fight.

The resolution was carried.

Councillor MYERS moved a resolution urging the Government to provide from the National Exchequer £1 a week for every widow or mother of soldiers or sailors who were killed in the war, and £1 a week for every wife of a soldier or sailor engaged in fighting, and for the men permanently injured.

This was carried.

The SECRETARY proposed that a hearty welcome be given to the Belgian refugees to Dewsbury, Batley and Birstall, and hoped that peace might soon be restored so that the refugees might find new homes in their beloved country. He observed that if any attempt were made to employ the refugees too soon or too cheaply it would require the courageous attention of all trades unionists in the district.

The resolution was passed.

The Star, Oct. 26th. 1914. 6058.

TAILORING BOOM.

Big Demand for Labour to Make the Soldiers' Clothes.

"In August our factory was standing idle for a fortnight. To-day we are working there at full pressure.

"We are opening this week a new factory which will employ 400 hands, and as soon as that is running we shall open another."

That was the explanation afforded to a "Star" man to-day of the biggest demand for employees in the tailoring trade which has been made for many years. It is an epitome of what war means in the contract tailoring trade.

Hundreds Respond.

Nearly four hundred hands were required. Yet, for all the demand for workers which the clothing of Kitchener's Army involves, there was a crowd of hundreds of men and women in response to the advertisement at the new factory of the City Woollen Company in New North-road.

Mr. Morris Feather, one of the proprietors of the company, told a "Star" man that the offer of weekly wages and constant employment had attracted very many applicants.

3,500 Coats a Week.

"The Government," he said, "are not binding us down to the keenly competitive prices which prevail at normal times, and so we are able to get away from the piece-work system, and pay a substantial weekly wage and promise constant employment.

"We expect to turn out from here 3,500 khaki greatcoats per week, independent of the work that—by a relaxation of the usual clause in Army Contracts which forbids sub-letting—we shall give out from here to be done outside."

The new factory has been equipped in less than a fortnight.

One hundred tailoresses, 50 tailors and baisters, 50 pressers, and 80 machiners, besides other workers, were engaged to-day.

Cotton Factory Times, Oct. 30th. 1914.

REFUSAL TO WORK DOUBLE SHIFTS.

A letter from the manager of a spinning company not a hundred miles from Wigan has been going the rounds of the papers. The writer of it is evidently of opinion that he should only need to tell his spinners that he has secured a Government order, and they should at once agree to the machinery being worked with absolute disregard to all previous agreements as to working hours. In this case, he states that he had secured an order for yarns for the Army, and the only way in which he could get it out soon enough was to work the machinery in two shifts, day and night. On applying to the Spinners' Association for permission to do this he was met with refusal. He appears to think there is something wrong with their patriotism, and suggests they are also blind to their own interests, as men would have been taken off the funds. In calling the attention of the world in general to what he calls this strange attitude of the operatives, it does not seem to have occurred to him that there might be another side to the question. For instance, why should any firm seek to monopolise so much of the Government work as to require to run a mill night and day? There are other firms in Lancashire who would be only too glad to share such an order. There is not the slightest necessity for anyone in the cotton trade at the present time to work overtime or to work double shifts. Live and let live should be the motto.

Cotton Factory Times, Nov. 6th. 1914.

Asking and Insisting.

DISTINCTION WITHOUT A DIFFERENCE AT SABDEN.

Our Sabden correspondent writes:—Overtime and nightwork continues at one firm here, and although a few of the weavers are being kept in full employment many of them are on the unemployed list owing to waiting for warps. There is much murmuring among the unemployed at the fact that one section of the weavers is being kept in full work while others are being kept idle. It is hard to see how any blame can be attached either to the employers or operatives on this account, as the cotton cloth orders can only be executed on a certain class of looms of more than ordinary widths, and naturally those weavers employed on them previous to the war are now in fortunate rather than favourite positions.

But some of the weavers are beginning to realise that some concessions as regards weaving prices over standard rates ought to be conceded by employers who encourage this overtime and night work. When employers are approached they invariably and politely say that they do not insist nor even endeavour to force their hands to work under these conditions. No, but they ask them to do it, which amounts to the same thing. The weavers say that in many other trades the workers are paid more than union rates, and something over list prices would only be on the same lines.

Cotton Factory Times, Nov. 20th. 1914.

Considerable pressure is being experienced in many of the textile districts of the West Riding of Yorkshire, which are engaged in the manufacture of clothing for the troops. So great is the demand for khaki cloth that the present plant and staffs are unable to cope with it in the ordinary working hours. Not only is the wastage at the front enormous, but the demand for the ever-growing army at home is practically unlimited. Under the circumstances, overtime and double shifts are being worked, and the proposal has been made that workpeople should be transferred from the cotton areas. At the first glance this would appear to be feasible and practicable, as the cotton trade is certainly in a very depressed condition, but there are certain factors which entirely alter the situation. In the first place, the cotton trade has experienced some amount of revival. In the second place, hundreds, if not thousands, of the male operatives have joined the army. Thirdly, comparatively few mills are entirely closed. Further, the kind of work offered is very different from that which most of the operatives of Lancashire are accustomed to, so that there is little hope of any tangible result from the suggested migration of cotton operatives from Lancashire to Yorkshire.

658/4

658.

Evening News, Nov. 19th. 1914.

BEHIND THE SCENES OF THE GREAT WAR.

ALL-NIGHT WORK IN FACTORY TOWNS.

BRITISH TRADE "BOOM."

By far the greater part of the money raised for the purpose of this war—I should say at least four-fifths—will be expended in this country.—Mr. Lloyd George, in his War Budget speech.

The war has brought to most of our great manufacturing towns a period of unexampled prosperity.

Armament and clothing firms are, of course, employing their utmost resources; but besides these there are innumerable other items which go to make up the equipment of our fighting forces on land and sea, the demand for which has swelled the trade "boom."

The Evening News has made inquiries in the chief manufacturing centres with a view to ascertaining the extent of the "boom." Below are mentioned some of the towns affected, and the articles which they are producing:—

SHEFFIELD.	**MANCHESTER.**
Armaments, cutlery and razors for the Army and Navy.	*Armaments, motor chassis, and miscellaneous machinery for war purposes.*
BIRMINGHAM.	**LEICESTER.**
Rifles, ammunition, motor cycles, motor lorries, aeroplane engines, leather goods.	*Army boots, hosiery, optical instruments, shell cases.*
BRISTOL.	**NOTTINGHAM.**
Army clothing and boots.	*Hosiery and underwear for the Services.*

In Sheffield such firms as Vickers, Ltd., Hadfields, John Brown and Co., Cammell, Laird and Co., and Thos. Firth and Sons are working day and night turning out armaments and munitions of war. The demands of the Government are enormous, and all the men are working overtime.

NO UNEMPLOYMENT.

Not only are the armament firms fully employed, but almost without exception the great engineering establishments in the city and district are very busy, many of the being engaged on work required for war purposes.

Cutlery and razor manufacturers are inundated with orders which will take many months to complete. The difficulty is to find sufficient workmen. Such branches of the Sheffield trade as silver and electro-plate have, of course, experienced a slump as far as the artistic wares they manufacture are concerned. Most of the manufacturers, however, have adapted themselves to the changed conditions, and are now making thousands of electro-plate and Britannia metal spoons and forks for the Army and Navy, besides nickel caps for shells. There is practically no unemployment in the city.

Birmingham has rarely been busier than she is at the moment. The B.S.A. Company are working night and day on Service rifles and, in addition, have had orders for motor-cycles. Branches are also working at abnormal pressure, and have an unlimited order for cartridges, shells, and other implements of war.

In the tinplate industry there is a shortage of men, for the various hollow-ware firms are turning out great quantities of mess tins, petrol cans, and similar articles. The Wolseley Company are making aeroplane engines, and all the firms who can turn out heavy motor or other lorries have more work than they can do.

The leather firms have never been so deluged with orders. They cannot cope with them, while the military and naval ornament firms cannot turn out their products fast enough to satisfy their customers.

DEMAND FOR STRING.

Dozens of firms are making shell and cartridge cases who never made them before. The call for barbed wire and even string and brown paper is altogether unprecedented.

Despite the cloud over the cotton trade, which was not primarily due to war and is happily passing, Manchester, too, is enjoying great prosperity.

The largest engineering centre in the country, with 35,000 engineers in and about the city, it has a smaller percentage of unemployed than in normal times. Not only are the great armament works of Messrs. Armstrong, Whitworth's working at high pressure, but a great deal of machinery and other subsidiary work for both military and naval purposes is being given out to outside firms.

Local motor works are busy turning out hundreds of chassis for the British and Allied Governments. In the aniline dyeing industry new plants are being installed to cope with the demand, and experiments are being made with new by-products.

There is growing confidence in the cotton trade, and Indian and China demands have shown healthier signs every day since the destruction of the Emden.

Tyneside armament firms are working day and night shifts, but still have more work than they can get men for.

TOO MANY ORDERS.

Two of Leicester's staple trades, the spinning and hosiery industries, are enjoying such a "boom" in trade as they have never known previously.

Spinning mills and hosiery factories are working overtime, several others continuously day and night, and even then they are unable to keep pace with Government orders, while it is very difficult for ordinary traders to get supplies.

The trade boom is partly the reason why Leicester's recruiting figures are comparatively small, every man in the trade is wanted for hosiery work.

A big firm of optical instrument makers has received orders for several thousand pairs of field glasses, and one or two engineering firms are making shell cases. Boot firms are busy making Army boots.

Nottingham hosiery and underwear manufacturers have large orders from the War Office. Some of the blouse manufacturers are making shirts for soldiers, and are exceptionally busy.

IRELAND'S SHARE.

Clothing and boot industries in Bristol and district are busy with orders from the British and French Governments. One manufacturer has had to take an extra factory. At the docks, which are municipally owned, there is unusual activity, for not only is Avonmouth being used largely for Army purposes, but the import trade has been increased owing to cargoes of sugar and other commodities meant for Continental ports being diverted there. The tobacco and cocoa industries are also working full time.

A steady improvement is reported from the South Wales coalfields.

Ireland is also getting a share of war "boom." In the shipbuilding, boot-making, tailoring, and certain branches of the textile trades, Belfast and the north of Ireland are benefiting considerably by the war. Shipyards are working to their utmost capacity, and several large textile firms have obtained special Board of Trade permits for workgirls to work overtime.

Liverpool Weekly Post, November 14th. 1914. (058)

Where the Khaki Comes From.

How Tommy Atkins Gets His Fighting Dress.

YORKSHIRE MILLS WORKING DAY AND NIGHT.

THE UNCOMPLAINING ATTITUDE OF HARD-WORKED WOMEN.

(Special to the "Weekly Post.")

Whilst Lancashire is struggling in a morass of bad trade, the textile areas of Yorkshire do not know what to do or which way to turn to meet the pressure of the War Office for the clothing of Tommy Atkins. War brings misfortune rather than fortune to the cotton industry. On the other hand, it usually produces a golden harvest among the woollen manufacturers of Yorkshire. One regrets the cause, with all its terrible consequences in suffering and death, but it is true enough that the West Riding of Yorkshire adds materially to its economic wealth when war breaks out either in Europe or elsewhere. Many people in the textile districts of Yorkshire still talk about the remarkable spell of prosperity that swept through the country during the Franco-German war of 1870-71. There was great rivalry between the two belligerent nations about securing clothing for their troops from the mills and the warehouses of West Riding. Fortunes! Why in many cases fortunes were made in a week. In fact, I was told by the Mayor of one of the heavy woollen towns, the other day, that in several cases

MEN MADE FORTUNES

out of the day's transactions. The fact of the matter is, there is no place in the world can make garments for soldiers so satisfactorily as can be done in the Yorkshire textile towns.

It was, however, during the South African war of 1899-1902 that Yorkshire became the most famous khaki-manufacturing area in existence. A year of two later it clothed the little Jap soldiers in khaki for the Russo-Japanese war. Since then there has not been much call for this peculiar dust-coloured cloth, except to comply with the usual contracts of the British War Office. But when Europe was thrown into a blood-red maelstrom of fire and sword by the military wantonness of a mad Kaiser, Yorkshire began to wonder if it would be able to cope with the demands which it knew would be brought upon it. When the declaration of war came like a thunderclap, the mills of the great woollen-weaving valleys were in a state of depression. But within a week every available operative and every piece of machinery were requisitioned to deal with the unprecedented orders from the War Office for khaki suiting, heavy overcoats, and warm blankets. Agents from the Government paid a rapid visit to the centres of the woollen and worsted industry, and bought up every scrap of cloth they could come across. Warehouses were actually emptied of the stocks that were considered useless and almost valueless, stocks that had been held up for years and were altogether out of fashion. Any kind of woollen material that would serve the temporary object of clothing was purchased at standard prices, and despatched to Government tailors to be made up into tunics, trousers, overcoats, or sleeping rugs, &c. Ah, the merchants and manufacturers turned over many a nice bright penny in the deal.

But the War Office representatives not only scraped up every piece of cloth and every blanket they could get, but they

LEFT HUGE CONTRACTS BEHIND.

To be going on with, orders were distributed for 1,500,000 blankets, 1,500,000 service tunics, over 1,000,000 trousers, 500,000 overcoats, and 150,000 pantaloons. I say that was to be going on with. And in addition to the demand from our own Government, the French Government had given out orders. The fact was the mills adapted to the class of work needed had more than they could do. This strenuous condition will last till the end of February, providing no further requests for khaki comes in. When I was going the rounds of these towns this week I was shown an application from the Russian Government wanting a quotation for 500,000 soldiers' suits but everybody was too busy to take it up.

And that is the state of the factory towns in the wide industrial valleys where they weave khaki for Tommy Atkins. Mills are running day and night, both for spinning and weaving. They are working twenty-four hours to the day in two shifts—from six to six o'clock in each case. Everybody seems over head and ears in work; masters, men, managers, merchants have a worried look. For once Yorkshire has no time to talk. The demand for khaki is so pressing that the regulations of the Factory Act have been set at one side regarding women; every manufacturer weaving khaki, or spinner spinning yarn for khaki, is granted the permission of the Home Office to work females, who are above sixteen years of age, overtime. Hence men are working all night and women from 6 a.m. to 8 p.m., and until 4 p.m. on Saturdays.

Now this manufacture of khaki is not carried on in all the weaving centres of Yorkshire; all the machinery is not adapted to it. It is spun and woven in what is known as the heavy woollen district, which covers a wide tract of land lying between Huddersfield, Halifax, Wakefield, and Leeds. Going from Lancashire it begins at Huddersfield, and stretches on and on till the farthermost end of the extensive Colne Valley is reached; it includes the manufacturing centres in and around Huddersfield; it takes in Dewsbury, Batley, Ossett, Birstall, Mirfield; it includes Yeadon, Morley, Eccleshill, Idle, Farsley, Pudsey, and a number of places round about Leeds. Here the yarn is spun, and the cloth is woven. Great quantities of it are made up into clothing in Leeds, where there are 50,000 workers in this trade; other quantities are made up in London and Manchester. Besides khaki, Yorkshire is busy manufacturing the blue serge to be temporarily worn by Kitchener's Army till the khaki is ready. The Co-operative Wholesale Society alone are transforming this cloth into 400,000 suits at their tailoring factories in Leeds and Manchester.

There may be many people interested to know

WHAT KHAKI IS.

The word "khaki" does not in its original form refer to the actual cloth. It is an Indian word (khak) for mud, and in manufacture it is a dye of a brown or sandy shade. It was first worn by soldiers because it does not show the effects of dirt as much as other dyes, and, at a distance, it makes a less conspicuous mark for the guns and rifles of the enemy. However, we use the term now to denote both the dye and the cloth itself; so that khaki is an ordinary woollen serge dyed in dusty shades.

I will not go into the technical character, but simply say that it is made from a worsted warp and weft of wool. Worsted, of course, is wool which undergoes a process of combing to give it a finer and stronger appearance than wool which does not receive this treatment. However, before being spun, the wool is dyed in the shades which compose the khaki. The wool is dyed separately in green olive, yellow olive, white, and lavender. It is by the blending of these that the khaki shade is obtained. Once having been blended by an ingenious mechanical process, the wool is then prepared for spinning and weaving. It is subsequently submitted to processes to take all the shrinking out of it. A gloss is put on to it in the finishing mills around Bradford before it is sent to the tailoring department.

I see that a statement has been made in some publications that owing to the pressure of the Government in demanding quick consignments of khaki, too much attention is not being given to its perfection. That is not true. The War Office is not running any risks of that kind. Lord Kitchener is as particular about the efficiency of the khaki as he is about the sound organisation and the training of the men who have to wear it. Manufacturers know only too well that it must be in every way equal to the samples or it is promptly rejected by the Government inspectors. It is a serge that is made mostly from New Zealand wool mixed with superior quality of fleece drawn largely from Lincolnshire. The raw material for the ordinary soldier has to be of the best medium quality; when finished the cloth must stand.

A BREAKING STRAIN

of 430lb. across the warp, and 400lb. across the weft; when tested by this poundage it must stretch 3½ inches across the warp and 2½ inches across the weft without breaking in any single thread. It has to be in strict accordance with other regulations, such as weight per yard and threads per inch in warp and weft. Government inspectors are frequently calling at the mills to see that the specifications are being religiously adhered to. As one manager said to me: "Eh, by gum, lad, it's no use tryin' to get anny cloth through what's not up to t' mark; if theau does theau'll get copped. Yon Kitchener fairly has his eyes oppen to everythin'" Yet I am assured that Kitchener's organisation is too much for anybody inclined to try any sharp practices. And quite right, too.

However, Yorkshire people are certainly doing their utmost to turn out the khaki as quickly and efficiently as possible. They take it as part of their duty to the nation to do their very best. I found in most of the towns that the greatest strain falls upon the women. You see, the men work in two shifts from day to day. Those in the day time work from 6 a.m. to 6 p.m., and those in the night from 6 p.m. to 6 a.m. But the women labour from 6 a.m. to 8 p.m. Except in Huddersfield, the weavers are all females. The looms are broad and heavy; as compared with cotton weaving, where a female works four looms, the female khaki weaver can only take charge of one loom each. It is a ponderous machine. The weaving of khaki is also more trying to the eyes and the limbs than is ordinary cloth; and added to that, the work has to be perfectly done. The consequence is that many women are feeling the strain. But they are sticking heroically to the task, in spite of the fact that, owing to the greater difficulty of weaving khaki, they cannot earn the same wages from it as from other cloth when working the same number of hours. But, as one sturdy Yorkshire lass said to me, "I's no use complainin', an' it's no use givin' up. We'st get through some road or other. An' what's eawr task compared to them lads in t' trenches deawn yon in Belgium an' France?" And she spoke to me about

THE WEST RIDING TROOPS

that were cut up at Mons—250 of them left out of 1,256 who entered a charge against overwhelming numbers of the Germans. "Aye," she observed, "some of them lads lived abeawt here. But I mun goo back to my loom neaw. It's hard work, but I durn't think as anny Yorkshire wenches'll complain so lung as them what's to feight is wantin' clooas!"

And she went back into the weaving-shed. She was saying something to me as she opened the door of the workroom, but the roar of the looms drowned her voice.

I found the same strenuousness of labour in the blanket mills of Dewsbury, Mirfield, and Earlsheaton. I saw it also in the clothing mills of Leeds and in mills weavng heavy coatings in Batley and other places. It was difficult to get anybody to speak to me for more than a few minutes. "Eh," they would say, "we'n no time for talkin'; we'st have them Government chaps on t' top on us if we dunnot get on wi' eawr work!"

But there are difficulties in the way. In consideration of the demand there is a shortage of machinery, a shortage of operatives, and a shortage of khaki dyes. Practically 90 per cent. of the dyes have been obtained from Germany. This importation has now ceased, and the textile chemists of Yorkshire are puzzling their heads to produce these shades, or find a substitute for them. There is also another difficulty; that is a probable shortage of raw material. "Rings" of raw wool merchants, I am told, are taking advantage of this. And I want to ask if this is so—is it fair or patriotic that whilst everybody else is doing his or her best to see that Tommy Atkins is well and truly clothed, manipulators should be allowed to inflate prices? Is this not a matter in which the Government should interfere? The class of wool from which khaki is made is now from 30 to 35 and 40 per cent. higher than it was when the war commenced. And for any further khaki that the Government may want—as they will want it—they will have to pay at least 30 per cent. more than they are paying for orders now being completed. There is a strong feeling in Yorkshire that these manipulators of the markets, whose patriotism is mainly confined to the pocket, should be stringently dealt with by the Government. For the present the manufacturers and workpeople are so busy that they have not the time to bother with the question. Where they cannot get raw wool khaki is being made out of the peculiar medley of rags and old clothes usually manufactured into new cloth at Dewsbury and Batley. But this does not mean that khaki constructed out of cast-off coats and trousers is inferior to khaki made from ordinary raw wool; in fact, it may be superior, if made from the best of rags that may once have formed the clothing of the aristocracy.

Where the Khaki Comes From.

How Tommy Atkins Gets His Fighting Dress.

YORKSHIRE MILLS WORKING DAY AND NIGHT.

THE UNCOMPLAINING ATTITUDE OF HARD-WORKED WOMEN.

(Special to the "Weekly Post.")

Whilst Lancashire is struggling in a morass of bad trade, the textile areas of Yorkshire do not know what to do or which way to turn to meet the pressure of the War Office for the clothing of Tommy Atkins. War brings misfortune rather than fortune to the cotton industry. On the other hand, it usually produces a golden harvest among the woollen manufacturers of Yorkshire. One regrets the cause, with all its terrible consequences in suffering and death, but it is true enough that the West Riding of Yorkshire adds materially to its economic wealth when war breaks out either in Europe or elsewhere. Many people in the textile districts of Yorkshire still talk about the remarkable spell of prosperity that swept through the country during the Franco-German war of 1870-71. There was great rivalry between the two belligerent nations about securing clothing for their troops from the mills and the warehouses of West Riding. Fortunes! Why in many cases fortunes were made in a week. In fact, I was told by the Mayor of one of the heavy woollen towns, the other day, that in several cases

MEN MADE FORTUNES

out of the day's transactions. The fact of the matter is, there is no place in the world can make garments for soldiers so satisfactorily as can be done in the Yorkshire textile towns.

It was, however, during the South African war of 1899-1902 that Yorkshire became the most famous khaki-manufacturing area in existence. A year of two later it clothed the little Jap soldiers in khaki for the Russo-Japanese war. Since then there has not been much call for this peculiar dust-coloured cloth, except to comply with the usual contracts of the British War Office. But when Europe was thrown into a blood-red maelstrom of fire and sword by the military wantonness of a mad Kaiser, Yorkshire began to wonder if it would be able to cope with the demands which it knew would be brought upon it. When the declaration of war came like a thunderclap, the mills of the great woollen-weaving valleys were in a state of depression. But within a week every available operative and every piece of machinery were requisitioned to deal with the unprecedented orders from the War Office for khaki suiting, heavy overcoats, and warm blankets. Agents from the Government paid a rapid visit to the centres of the woollen and worsted industry, and bought up every scrap of cloth they could come across. Warehouses were actually emptied of the stocks that were considered useless and almost valueless, stocks that had been held up for years and were altogether out of fashion. Any kind of woollen material that would serve the temporary object of clothing was purchased at standard prices, and despatched to Government tailors to be made up into tunics, trousers, overcoats, or sleeping rugs, &c. Ah, the merchants and manufacturers turned over many a nice bright penny in the deal.

But the War Office representatives not only scraped up every piece of cloth and every blanket they could get, but they

LEFT HUGE CONTRACTS BEHIND.

To be going on with, orders were distributed for 1,500,000 blankets, 1,500,000 service tunics, over 1,000,000 trousers, 500,000 overcoats, and 150,000 pantaloons. I say that was to be going on with. And in addition to the demand from our own Government, the French Government had given out orders. The fact was the mills adapted to the class of work needed had more than they could do. This strenuous condition will last till the end of February, providing no further requests for khaki comes in. When I was going the rounds of these towns this week I was shown an application from the Russian Government wanting a quotation for 500,000 soldiers' suits but everybody was too busy to take it up.

And that is the state of the factory towns in the wide industrial valleys where they weave khaki for Tommy Atkins. Mills are running day and night, both for spinning and weaving. They are working twenty-four hours to the day in two shifts—from six to six o'clock in each case. Everybody seems over head and ears in work; masters, men, managers, merchants have a worried look. For once Yorkshire has no time to talk. The demand for khaki is so pressing that the regulations of the Factory Act have been set at one side regarding women; every manufacturer weaving khaki, or spinner spinning yarn for khaki, is granted the permission of the Home Office to work females, who are above sixteen years of age, overtime. Hence men are working all night and women from 6 a.m. to 8 p.m., and until 4 p.m. on Saturdays.

Now this manufacture of khaki is not carried on in all the weaving centres of Yorkshire; all the machinery is not adapted to it. It is spun and woven in what is known as the heavy woollen district, which covers a wide tract of land lying between Huddersfield, Halifax, Wakefield, and Leeds. Going from Lancashire it begins at Huddersfield, and stretches on and on till the farthermost end of the extensive Colne Valley is reached; it includes the manufacturing centres in and around Huddersfield; it takes in Dewsbury, Batley, Ossett, Birstall, Mirfield; it includes Yeadon, Morley, Eccleshill, Idle, Farsley, Pudsey, and a number of places round about Leeds. Here the yarn is spun, and the cloth is woven. Great quantities of it are made up into clothing in Leeds, where there are 50,000 workers in this trade; other quantities are made up in London and Manchester. Besides khaki, Yorkshire is busy manufacturing the blue serge to be temporarily worn by Kitchener's Army till the khaki is ready. The Co-operative Wholesale Society alone are transforming this cloth into 400,000 suits at their tailoring factories in Leeds and Manchester.

There may be many people interested to know

WHAT KHAKI IS.

The word "khaki" does not in its original form refer to the actual cloth. It is an Indian word (khak) for mud, and in manufacture it is a dye of a brown or sandy shade. It was first worn by soldiers because it does not show the effects of dirt as much as other dyes, and, at a distance, it makes a less conspicuous mark for the guns and rifles of the enemy. However, we use the term now to denote both the dye and the cloth itself; so that khaki is an ordinary woollen serge dyed in dusty shades.

I will not go into the technical character, but simply say that it is made from a worsted warp and weft of wool. Worsted, of course, is wool which undergoes a process of combing to give it a finer and stronger appearance than wool which does not receive this treatment. However, before being spun, the wool is dyed in the shades which compose the khaki. The wool is dyed separately in green olive, yellow olive, white, and lavender. It is by the blending of these that the khaki shade is obtained. Once having been blended by an ingenious mechanical process, the wool is then prepared for spinning and weaving. It is subsequently submitted to processes to take all the shrinking out of it. A gloss is put on to it in the finishing mills around Bradford before it is sent to the tailoring department.

I see that a statement has been made in some publications that owing to the pressure of the Government in demanding quick consignments of khaki, too much attention is not being given to its perfection. That is not true. The War Office is not running any risks of that kind. Lord Kitchener is as particular about the efficiency of the khaki as he is about the sound organisation and the training of the men who have to wear it. Manufacturers know only too well that it must be in every way equal to the samples or it is promptly rejected by the Government inspectors. It is a serge that is made mostly from New Zealand wool mixed with superior quality of fleece drawn largely from Lincolnshire. The raw material for the ordinary soldier has to be of the best medium quality; when finished the cloth must stand.

A BREAKING STRAIN

of 430lb. across the warp, and 400lb. across the weft; when tested by this poundage it must stretch 3¼ inches across the warp and 2½ inches across the weft without breaking in any single thread. It has to be in strict accordance with other regulations, such as weight per yard and threads per inch in warp and weft. Government inspectors are frequently calling at the mills to see that the specifications are being religiously adhered to. As one manager said to me: "Eh, by gum, lad, it's no use tryin' to get anny cloth through what's not up to t' mark; if theau does theau'll get copped. Yon Kitchener fairly has his eyes oppen to everythin'" Yet I am assured that Kitchener's organisation is too much for anybody inclined to try any sharp practices. And quite right, too.

However, Yorkshire people are certainly doing their utmost to turn out the khaki as quickly and efficiently as possible. They take it as part of their duty to the nation to do their very best. I found in most of the towns that the greatest strain falls upon the women. You see, the men work in two shifts from day to day. Those in the day-time work from 6 a.m. to 6 p.m., and those in the night from 6 p.m. to 6 a.m. But the women labour from 6 a.m. to 8 p.m. Except in Huddersfield, the weavers are all females. The looms are broad and heavy; as compared with cotton weaving, where a female works four looms, the female khaki weaver can only take charge of one loom each. It is a ponderous machine. The weaving of khaki is also more trying to the eyes and the limbs than is ordinary cloth; and added to that, the work has to be perfectly done. The consequence is that many women are feeling the strain. But they are sticking heroically to the task, in spite of the fact that, owing to the greater difficulty of weaving khaki, they cannot earn the same wages from it as from other cloth when working the same number of hours. But, as one sturdy Yorkshire lass said to me, "I'a no use complainin', an' it's no use givin' up. We'st get through some road or other. An' what's eawr task compared to them lads in t' trenches deawn yon in Belgium an' France?" And she spoke to me about

THE WEST RIDING TROOPS

that were cut up at Mons—250 of them left out of 1,256 who entered a charge against overwhelming numbers of the Germans. "Aye," she observed, "some of them lads lived abeawt here. But I mun goo back to my loom neaw. It's hard work, but I durn't think as anny Yorkshire wenches'll complain so lung as them what's to feight is wantin' clooas!"

And she went back into the weaving-shed. She was saying something to me as she opened the door of the workroom, but the roar of the looms drowned her voice.

I found the same strenuousness of labour in the blanket mills of Dewsbury, Mirfield, and Earlescastle. I saw it also in the clothing mills of Leeds and in mills weavng heavy coatings in Batley and other places. It was difficult to get anybody to speak to me for more than a few minutes. "Eh," they would say, "we'n no time for talkin'; we'st have them Government chaps on t' top on us if we dunnot get on wi' eawr work!"

But there are difficulties in the way. In consideration of the demand there is a shortage of machinery, a shortage of operatives, and a shortage of khaki dyes. Practically 90 per cent. of the dyes have been obtained from Germany. This importation has now ceased, and the textile chemists of Yorkshire are puzzling their heads to produce these shades, or find a substitute for them. There is also another difficulty; that is a probable shortage of raw material. "Rings" of raw wool merchants, I am told, are taking advantage of this. And I want to ask if this is so—is it fair or patriotic that whilst everybody else is doing his or her best to see that Tommy Atkins is well and truly clothed, manipulators should be allowed to inflate prices? Is this not a matter in which the Government should interfere? The class of wool from which khaki is made is now from 30 to 35 and 40 per cent. higher than it was when the war commenced. And for any further khaki that the Government may want—as they will want it—they will have to pay at least 30 per cent. more than they are paying for orders now being completed. There is a strong feeling in Yorkshire that these manipulators of the markets, whose patriotism is mainly confined to the pocket, should be stringently dealt with by the Government. For the present the manufacturers and workpeople are so busy that they have not the time to bother with the question. Where they cannot get raw wool khaki is being made out of the peculiar medley of rags and old clothes usually manufactured into new cloth at Dewsbury and Batley. But this does not mean that khaki constructed out of cast-off coats and trousers is inferior to khaki made from ordinary raw wool; in fact, it may be superior, if made from the best of rags that may once have formed the clothing of the aristocracy.

Yorkshire Observer, November 16th. 1914.

URGENT CALL FOR KHAKI CLOTH.

INCREASED OUTPUT WANTED

LORD KITCHENER PREPARED TO TAKE DRASTIC MEASURES.

The Board of Trade are making inquiries among manufacturers of khaki in the West Riding with regard to the possibility of their being able to increase their output in order to meet more expeditiously the urgent requirements of the War Office. Manufacturers are being asked to answer the following questions:

(1) What kinds of Army cloth can you produce?.

(2) What is your present weekly output, and how far is this for War Office contracts?

(3) To produce this output are all machines working day and night?

(4) If they are not working day and night, what would be the total weekly output obtained by working them day and night, and what additional labour would be required for this purpose? The additional labour should be defined as exactly as possible.

(5) What increase in plant and machinery is possible?

(6) If such increase were made, what would be the estimated total output and the additional labour required?

At least one manufacturer has been given to understand by a Government official that Lord Kitchener is seriously concerned about the supply of Army cloth, and is prepared to go to the length of placing under direct military control any mills capable of producing it in which it is found that the whole of the available machinery is not being used for that purpose. Where shortage of labour is a bar to increased output it has been suggested to manufacturers that they should seek to procure hands from Lancashire, where employment in the cotton trade is slack.

Inquiries made in Bradford show that as far as woollen manufacturers are concerned—and it is to these alone that the Board of Trade's questions have been addressed so far—every possible effort is being made to maximise production, and it is difficult to know what more can be done. The only practicable suggestion that a manufacturer consulted was able to make was more night work, and in a district where night work is not usual a sufficient number of workpeople able and willing to undertake it cannot be found. As to whether operatives for the night turn could be recruited in Lancashire our informant was doubtful. In any case, he pointed out that the importation of any considerable number of workers from other districts was out of the question because of the impossibility of housing them.

VIEWS IN THE HEAVY WOOLLEN DISTRICT.

MILLS WORKING AT HIGH PRESSURE

Inquiries made of several Army cloth manufacturers in the Heavy Woollen District have elicited the information that the Board of Trade's questionaire had not come to hand when the offices at the mills were closed on Saturday. That questions such as those enumerated were being made with respect to War Office requirements, however, would not occasion any surprise. During last week many of the woollen mills in Dewsbury, Batley, and neighbouring towns were visited on behalf of the War Office by Mr. Howard Priestman, a well-known textile expert, who made a careful investigation of the progress which is being made with the contracts which have been placed. Particulars were obtained as to the dates on which orders were given, the number of yards to be produced, the dates on which delivery was due, and the dates on which orders have been or probably will be executed. Some of the leading trade union officials were interviewed also by a Government representative on Friday, and it is evident that the authorities earnestly desire to see the production of winter clothing for the British and allied forces accelerated. At the same time there is no necessity in the case of the Heavy Woollen District for any such drastic action as the commandeering of mills.

It is an indisputable fact that in and around Dewsbury and Batley the mills which have the necessary equipment for the production of Army cloths are being worked, with very few exceptions, at the highest possible pressure, and manufacturers and trade union officials are in complete agreement as to the severity of the strain which is being endured by the operatives and supervisors. The manager of a Batley mill at which large quantities of khaki cloth are being made stated, in the course of an interview, that the dire necessity for warm clothing and the impossibility of meeting it promptly and fully were a constant nightmare to him, his principals, and the workpeople. There is no doubt that this case is typical, and that at the great majority of the factories no effort is being spared to secure the highest possible output. Moreover, as more than once stated in these columns, the contracts were so sub-divided from the start that in addition to work being given to every mill at which Army cloth could be produced there have been numerous instances in which manufacturers have adapted their machinery to the unaccustomed demands of the present moment.

Spinners are working night and day, or for very long hours short of those limits, to keep the looms running. Obviously the production of cloth is regulated by the production of yarns, and it is in the spinning department that manufacturers have experienced their chief difficulties. Large quantities of yarn have been purchased to supplement that which can be spun at the cloth mills, and non-delivery by the spinners at the times specified has been one cause of delay in the delivery of cloth. A few spinners have accepted larger orders than they can complete in the period named in their contracts, but as they are producing up to their full capacity nothing could be gained by the Government taking over the control of their mills. Another obstacle in the way of the production of khaki cloths was that of dyeing by the standard methods, but great relief has been given by the relaxations made by the Director of Army Contracts.

IMPORTING LANCASHIRE WEAVERS.

In reply to questions as to the extent of the production of Army cloth and the possibility of it being increased in the Heavy Woollen, Colne Valley, and Leeds districts, the Mayor of Batley (Mr. Ben Turner), who is the secretary of the General Union of Textile Workers, informed an "Observer" representative yesterday that, generally speaking, the mills are being run up to full pressure. He added, however, that there were some Yorkshire woollen mills which, for some reason or other, were not fully employed. According to Labour Exchange information, he said, a large mill at Leeds had thirty looms idle last week, during which period there were also many looms standing at a co-operative manufactory in his own district, a mill at Huddersfield was running short time, and another in that town was very slack. He expressed the belief that where these conditions existed they were due to lack of suitable machinery more than to shortage of labour, but he thought that after everything was taken into consideration there was a possibility of increased orders for khaki cloth being placed and executed in the districts to which he had referred.

With respect to the suggestion that workpeople should be imported from Lancashire, Mr. Turner said there was no trade unionist objection to that course being taken, but he pointed out that Lancashire weavers would probably require higher wages than were current in the Heavy Woollen District. He went on to say that it was a bad economic arrangement to split up families of workers who were in a comfortable position because of the aggregate earnings of the members of a household. Moreover, there would be great difficulty in finding lodgings for any large number of imported workpeople, while to house families would be impossible until additional dwellings (of which there is a local shortage) were erected.

NIGHT WORK FOR WOMEN.

Dealing with the same question a manufacturer stated that there was not much scarcity of weavers in the Heavy Woollen District. He agreed that there were arguments in favour of importing women to do a reasonable amount of night work. That would relieve the heavy overtime upon which many women were engaged, the present hours of work for weavers being as a general rule from 6 a.m. to 7.30 p.m. He, too, recognised the difficulty of housing or lodging the immigrants. He explained the difference between the wages of Lancashire and Yorkshire weavers by stating that the former could mind from four to six cotton looms, whereas the latter could only look after one woollen loom owing to the bobbins containing so much less yarn and having to be changed more frequently. It was probable, he added, that after paying for board and lodgings and meeting travelling expenses, &c., Lancashire operatives working in the Heavy Woollen District would not have a very substantial amount to send home.

As to the lack of clothing for the troops, he said there was a desire to refrain from criticising any action of the Government when suddenly faced with the great crisis which arose at the beginning of August. Still there was no doubt that in the early stages of the war there was considerable hesitation shown by the authorities in placing orders for Army cloth and blankets. While our own Government were negotiating terms the French Government stepped in and arranged some very large contracts. It was, of course, necessary for the prosecution of the war that the French as well as the British troops should be clothed, and the fact that France acted with such promptitude had to be taken into consideration.

The Bradford Argus, Nov: 18th. 1914.

Women's Working Hours in Mills.

TO THE EDITOR OF THE BRADFORD DAILY ARGUS

SIR,—We are loud in our praises of the young men who are fighting our battles. They are heroes all. But where are the praises of the young women and girls who are working such long hours in some mills? It is a fact that a large number of mills in Bradford have announced (no doubt with Government permission) that until further notice the factory will continue running until 7.45 p.m. or 8 p.m. as the case may be. This means that hundreds of young women and even girls are having to work twelve hours a day at dreary monotonous toil; toil which is hard, and which already taxes their strength to the utmost.

This increase in the working hours is a great mistake. It has been demonstrated that in mills where the eight-hour day has been adopted the output is practically the same as in those where the ten-hour day prevails. The reason is, of course, that when a person has constantly to work too long the work throughout all the day suffers. So, in this case, time will probably show that the output on a twelve-hour day is not ultimately appreciably greater than that of a ten-hour day. Working such hours, the young women are bound to be jaded; they are bound to flag; they cannot possibly do justice to their work.

Some people will say, no doubt, that these young women ought to be glad of plenty of work at this time. They are glad of work, and I sincerely think there are no better and no more willing workers in all the world than the women working in our mills. But there are limits to human endurance, and too much work is as bad as too little.—Yours, etc.,

CITIZEN.

11th November, 1914.

Yorkshire Post, Nov: 28th. 1914.

WOOLLENS IN THE WEST RIDING.

THE woollen factories in all parts of the West Riding are still overwhelmed with Government orders, and it will be several months before the contracts are completed.

The chief difficulty in the way is that of the shortage of labour.

The visit of Sir George Askwith and Mr. Mitchell to various factories of the Riding is understood to have had special reference to the question of overcoming the labour difficulty, and if, by the importation of labour from the Lancashire mills, the Labour Exchanges can be utilised, a double service will be rendered to employers and employed alike.

In some parts of the Riding, Leeds included, machinery has not been fully employed, notwithstanding the plenitude of orders, and yet in some factories, according to the Trade Councils, women have suffered by standing all day from 5.30 in the morning to 8.30 at night, all this owing to the uneven distribution of work.

The Trade Councils are advocating the employment of Belgian refugees or fellow-workers from Lancashire at standard rates of wages, and by the adoption of that course a double purpose would be served.

Morley, Ossett, and the surrounding parts have in the past week been equally busy with Leeds.

Dyers have plenty of work, and raw materials remain dear.

Trade in bulk overseas is very small, work being concentrated on Army contracts.

Yorkshire Post, Dec: 2nd. 1914.

CLOTHING FACTORIES BUSY AT HEBDEN BRIDGE.

Most of the clothing factories of Hebden Bridge are at present working overtime and turning out thousands of suits weekly for the Army and Navy, but still the call comes for more. Some hard things have been said about the slow recruiting in the district, but the plea is made that the services of the clothing makers are needed at home. The recruiting officials know this, and do not press those who are actively employed to join the colours. Several firms are extending their works and machinery, and female labour is being introduced into the town from Burnley, Todmorden, and other places. Still the Government officials are not satisfied with the output, and they have threatened to take control of the factories with a view to stopping ordinary work, unless the output of Army clothing is increased. They suggest that at least two-thirds of the machines should be put entirely on Government work.

Daily Citizen, Nov: 24th. 1914. 658/7

ARMY CONTRACTS MISMANAGED.

UNDUE PROFITS THAT ARE MADE.

"SCAMPED" BUILDING OF CAMP HUTS.

War contracts are being investigated by the Workers' War Emergency Committee with results which are calculated to astonish public opinion.

The question of the huts for men of Kitchener's Army was the subject of the committee's meeting at the House of Commons yesterday, when a very grave report, presented by a well-known Trade Union representative, who attended, and was closely examined as to its accuracy, was unanimously adopted. Mr. Arthur Henderson, M.P., presided over the meeting.

The report, which had previously been before the Government Contracts Sub-committee, is in the following terms:—

"There are approximately 20 camps in the British Isles, and at each camp there are from 250 to 400 huts, each accommodating or sheltering 30 men. The huts are 60ft. by 20ft. by 7ft. 6in. to the eaves. The soldiers' huts are not lined inside, and the flooring is laid on the bare joists, no felt being used. There is a door at each end and three windows on each side. There are no partitions of any kind—simply a great bare building with one stove in the centre.

"The men sleep 4in. off the floor in little box beds. When the flooring dries planty of fresh cold ugh the joints. The sides and ts are simply weather-boarded, to work its way through. The he huts let in both the sunshine

he camps the water lies on the before it soaks through the soil dry. When the hut contracts was understood that they would ructed, and were estimated for prices ranging from £139 to his latter figure.

t the troops should be housed ntractors decided to dispense nstruction put into such work, morticing or tenoning, or hous- truts, and braces, they simply check' or 'tosh'-nailed all amping and rushing of work is h the amount of necessary work- cut down to a very great ex- r the work remain at the figure e craftsmanship, the difference the pockets of these contractors. ntractors rushed up huts at a our of £10 to £12 per hut; the from the cost clerk's book and hree of their foremen, who also the cost of erecting each hut. These men are prepared to give evidence if called upon.

"In my opinion, the huts should be handed over to the Government with 25 per cent. discount allowed off; even then a handsome profit would be made by the contractors. If the war lasts until next winter the huts built now will not be fit for housing soldiers.

BETTER HUTS FOR OFFICERS

"With the officers' huts it is very different. They are well lined inside and rooms are partitioned off, with felt under the flooring, and, I understand, linoleum over the flooring. Instead of felt roofing they have corrugated iron, which prevents the rain getting in.

"This work has been so distributed that the House of Commons Fair Wages Clause has been forgotten and the officials of the Amalgamated Society of Carpenters and Joiners have had an enormous amount of labour in investigating cases of sweating. Subletting has been exercised to such an extent that it is difficult to know in many cases who is really doing the work."

Appended to the report is an estimate of the cost of erecting one hut, allowing for the increased price of materials, which works out at £85 10s. The actual cost of labour is estimated at not more than £14, making a gross total of £99 10s. The prices charged to the War Office for complete huts, it is stated, range from £139 to £150.

The committee, which considered this report, is fully representative of Labour, Socialist, and Co-operative organisations. It included the following members: Messrs. H. Gosling and C. W. Bowerman, M.P., representing the Parliamentary Committee of the Trade Union Congress; Messrs. W. C. Anderson and A. Henderson, M.P., of the Labour Party executive; Messrs. Ben Cooper, Ben Tillett, and W. A. Appleton, of the General Federation of Trade Unions; Mr. Robert Smillie, president of the Miners' Federation of Great Britain; Mr. Robert Williams, Transport Workers' Federation; Miss Mary Macarthur, Women's Trade Union League; Mr. Duncan Gilchrist and Mr. Matthew Hall,

Cotton Factory Times, 658. November 27th. 1914.

IS OVERTIME JUSTIFIABLE?

658

WHEN THE ANSWER IS IN THE AFFIRMATIVE,

AND WHEN IT ISN'T.

By RUPERT.

The working of overtime in the textile trades in order to cope with the demands of the military authorities, and the inability of the woollen section to produce fast enough to satisfy them, is a problem that is exercising the minds of those responsible to a very marked degree. The justification of overtime under ordinary conditions is very much disputed by the operatives in most trades, but the necessity of the country at present constitutes a weighty reason for its adoption, at least, so far as the woollen trade is concerned.

As a principle overtime is opposed to the tenets and beliefs of trade unionism, and strong opposition is ordinarily and rightly offered to any attempt to introduce it into trades where it is not customary. It is not at all hard to understand the difficulties which now beset the woollen trade in the extraordinary position created by the war. On the one hand there is the Government pressing for delivery of clothing to meet the needs of our army and the armies of our Allies—a demand which it would be extremely difficult to keep pace with if no other factor complicated the situation; but when, on the other hand, we take into account the activity of the recruiting sergeant, we may form some idea of the position in which the woollen trade now finds itself. Efforts are being made to atract labour from kindred industries which are not so hard pressed for production, but the inducements offered have not been of a sufficiently attractive character to meet with much success.

Overtime working under the circumstances in which the woollen trade now finds itself is a perfectly justifiable proceeding, and we venture to say that no British trade unionist will be disposed to quarrel with it. The average trade unionist realises that the safety of the country is a deciding factor in this case, and the voice of criticism is therefore hushed.

Patriotic Workers.

Notwithstanding the fact that the strain upon the workers is described as being almost unbearable in the trades which are working under pressure, there is no suggestion of steps being taken to reduce the strain in any way which would reduce the efficiency of the army, but every operative is doing his or her best to meet the situation, and incidentally providing a fine example of patriotism which is worthy of emulation all round. The only way in which the strain can be eased is to get more workers, and this is not an easy matter. Overtime in the woollen trade is not unknown at ordinary times, and in this respect it differs considerably from the practice obtaining in the manufacture of cotton, and this fact probably is accountable for its powers of expansion as regards production being more limited than otherwise would have been the case.

The cotton trade on the contrary has been very hard hit by the war, its production generally not being of such a nature as to be in great request for military purposes. Nevertheless, in certain cases, orders have ben received with rather stringent conditions in the way of a time limit for delivery. Some of these firms being wishful to retain the order in their own hands have desired to be allowed to work overtime—a desire with which the operatives have not had much sympathy. The conditions as between the woollen firms and these latter are, of course, totally at variance. In the cotton trade there were scores of firms idle, to which some share of the order could very easily have been diverted, thus sharing out the wages accruing amongst a much larger number of operatives. In the adoption of such an unsympathetic attitude the workers and their organisations were acting not only in the workers' interest, but in the interests of the whole country. Where large numbers of workers are short of employment it is surely to the good of all that overtime should be discouraged, and the work distributed amongst as great a number of operatives as possible.

A Fundamental Principle.

This principle is one of the fundamentals of trade unionism, and I venture to say that it will command the respect of all clear headed thinkers. The very fact that in the woollen trade overtime is being worked to an unheard of extent proves that in a national emergency trades unionists are prepared to forswear their principles for the time being, and work loyally and wholeheartedly with

CLOTHING FACTORIES BUSY AT HEBDEN BRIDGE.

Most of the clothing factories of Hebden Bridge are at present working overtime and turning out thousands of suits weekly for the Army and Navy, but still the call comes for more. Some hard things have been said about the slow recruiting in the district, but the plea is made that the services of the clothing makers are needed at home. The recruiting officials know this, and do not press those who are actively employed to join the colours. Several firms are extending their works and machinery, and female labour is being introduced into the town from Burnley, Todmorden, and other places. Still the Government officials are not satisfied with the output, and they have threatened to take control of the factories with a view to stopping ordinary work, unless the output of Army clothing is increased. They suggest that at least two-thirds of the machines should be put entirely on Government work.

air comes up through the joints. The sides and the ends of the huts are simply weather-boarded, allowing the wind to work its way through. The roofs of many of the huts let in both the sunshine and the rain.

HURRIED WORK

"At many of the camps the water lies on the ground for days before it soaks through the soil and drains itself dry. When the hut contracts were given out it was understood that they would be properly constructed, and were estimated for accordingly, the prices ranging from £139 to £150, some over this latter figure.

"In order that the troops should be housed quickly, some contractors decided to dispense with the usual construction put into such work, and instead of any morticing or tenoning, or housing in of rails, struts, and braces, they simply square-cut and 'cheek' or 'tosh'-nailed all framing. This scamping and rushing of work is general. Although the amount of necessary workmanship has been cut down to a very great extent, the prices for the work remain at the figure quoted for genuine craftsmanship, the difference in cost going into the pockets of these contractors.

"A firm of contractors rushed up huts at a total cost for labour of £10 to £12 per hut; the figures are taken from the cost clerk's book and were given by three of their foremen, who also kept a record of the cost of erecting each hut. These men are prepared to give evidence if called upon.

"In my opinion, the huts should be handed over to the Government with 25 per cent. discount allowed off; even then a handsome profit would be made by the contractors. If the war lasts until next winter the huts built now will not be fit for housing soldiers.

BETTER HUTS FOR OFFICERS

"With the officers' huts it is very different. They are well lined inside and rooms are partitioned off, with felt under the flooring, and, I understand, linoleum over the flooring. Instead of felt roofing they have corrugated iron, which prevents the rain getting in.

"This work has been so distributed that the House of Commons Fair Wages Clause has been forgotten and the officials of the Amalgamated Society of Carpenters and Joiners have had an enormous amount of labour in investigating cases of sweating. Subletting has been exercised to such an extent that it is difficult to know in many cases who is really doing the work."

Appended to the report is an estimate of the cost of erecting one hut, allowing for the increased price of materials, which works out at £85 10s. The actual cost of labour is estimated at not more than £14, making a gross total of £99 10s. The prices charged to the War Office for complete huts, it is stated, range from £139 to £150.

The committee, which considered this report, is fully representative of Labour, Socialist, and Co-operative organisations. It included the following members: Messrs. H. Gosling and C. W. Bowerman, M.P., representing the Parliamentary Committee of the Trade Union Congress; Messrs. W. C. Anderson and A. Henderson, M.P., of the Labour Party executive; Messrs. Ben Cooper, Ben Tillett, and W. A. Appleton, of the General Federation of Trade Unions; Mr. Robert Smillie, president of the Miners' Federation of Great Britain; Mr. Robert Williams, Transport Workers' Federation; Miss Mary Macarthur, Women's Trade Union League; Dr. Marion Phillips and Miss Margaret Bondfield; Mr. H. M. Hyndman, British Socialist Party; and Mr. and Mrs. Sidney Webb and Mr. W. S. Sanders, Fabian Society.

army and the armies of our Allies—a demand which it would be extremely difficult to keep pace with if no other factor complicated the situation; but when, on the other hand, we take into account the activity of the recruiting sergeant, we may form some idea of the position in which the woollen trade now finds itself. Overtime in the woollen trade is not unknown at ordinary times, and in this respect it differs considerably from the practice obtaining in the manufacture of cotton, and this fact probably is accountable for its powers of expansion as regards production being more limited than otherwise would have been the case.

The cotton trade on the contrary has been very hard hit by the war, its production generally not being of such a nature as to be in great request for military purposes. Nevertheless, in certain cases, orders have ben received with rather stringent conditions in the way of a time limit for delivery. Some of these firms being wishful to retain the order in their own hands have desired to be allowed to work overtime—a desire with which the operatives have not had much sympathy. The conditions as between the woollen firms and these latter are, of course, totally at variance. In the cotton trade there were scores of firms idle, to which some share of the order could very easily have been diverted, thus sharing out the wages accruing amongst a much larger number of operatives. In the adoption of such an unsympathetic attitude the workers and their organisations were acting not only in the workers' interest, but in the interests of the whole country. Where large numbers of workers are short of employment it is surely to the good of all that overtime should be discouraged, and the work distributed amongst as great a number of operatives as possible.

A Fundamental Principle.

This principle is one of the fundamentals of trade unionism, and I venture to say that it will command the respect of all clear-headed thinkers. The very fact that in the woollen trade overtime is being worked to an unheard of extent proves that in a national emergency trades unionists are prepared to forswear their principles for the time being, and work loyally and wholeheartedly with the powers that be to attain success. When the whole of the machinery in any trade is required to work overtime under these conditions nothing will be said or any obstacle placed in the way. Overtime for the sake of conveniencing any particular firm when there are numerous other concerns willing and able to take similar work, is something that will require very strong arguments in its favour if the operatives are to be convinced that such a course is either good for themselves or for the community.

One of the most remarkable things about this was is the manner in which matters which previously would have been opposed with all our strength and vigour are now being accepted for the time being as constituting the duty of all lovers of their country, albeit things may be utterly opposite to the spirit and practice of organisations and individuals in peace time.

With such a spirit ahead the authorities may look forward with confidence to their requirements being met if it is humanly possible for workers by loyal co-operation to meet them. With this in view it would be well if the operatives were taken into the confidence of the authorities a little more when they are required to diverge from the settled policy of ordinary times, for all employers are not angels, any more than any other class, and it might be that some of the less scrupulous would not hesitate to take advantage of and quote as precedents actions which were solely due to the extraordinary circumstances in which we are now placed.

OVERWORKED GIRLS

A paltry fine of £5, or in default thirteen days, was imposed last week in the case of a glass factory owner, summoned at West Ham Police Court by the Home Office for five infractions of the Factories and Workshops Act. It was stated by the Home Office inspector that the defendants had employed girls of between fourteen and fifteen years of age *on some occasions as long as sixteen hours continuously and during the night.*

For the defence it was urged that the firm was engaged on Government work, and it was thought the infractions of the Act might have been overlooked there *as was done in other factories.* (See report in *Morning Advertiser* of November 25.)

OVERTIME FOR GOVERNMENT ORDERS.

Overtime working in the cotton trade has been strenuously resisted by the operatives ever since the trade unions put them in the position of being able to have some voice in the fixing of their terms of employment. A few months ago we should have said that the ancient custom was as dead as the dodo, and later on we hope again to be able to speak with the same amount of assurance. Present times, however, are very exceptional times, and though the trade is in such an unsatisfactory state generally there are to be found a number of mills where it has become necessary to run the machinery more than the usual hours prescribed in the Factory Acts for women and cihldren, in order to turn out a sufficient quantity of material per week. The circumstances under which trade union operatives have been allowed by their various associations to work overtime are, as is well known, those in which firms are engaged in the production of materials necessary for the clothing and equipment of the vast numbers of soldiers that it has been necessary to mobilise so suddenly owing to this country being involved in a gigantic war.

Technically speaking, there was, of course, nothing to prevent adult males from working overtime, since the Factory Acts deal only with the hours that may be worked by women and young persons, but the strength of the cotton trade unions has always made it possible for the adult males to take for themselves what the law has given to women and children. Hence the hours prescribed for protected operatives have become recognised as the regular hours for the trade, and it is only by an alteration of the working time of women and children that these hours can be changed. The Government has, however, the power to suspend the regulations as to the working hours of women and young persons whenever in the interests of the Crown it may become necessary to do so, and to issue orders as to the number of extra hours that such operatives may be employed. This is what is happening at the present time. A number of firms have undertaken the production of the materials required by the Government, and orders have been issued that permit these firms to work overtime within certain prescribed limits; and in many cases the operatives have fallen in with the arrangements made, not because they believe in overtime, but rather from patriotic motives. There is at present some question as to whether some of the overtime that is being done might not have been avoided by a wider distribution of the Government orders. The question is a reasonable one to put, for if it can be shown that there are looms or spindles stopped that coul dproduce the class of work required, there ought to be no overtime until every available loom and spindle has been put on.

Some controversy has arisen on this point out of the attitude taken up by the Operative Spinners' Amalgamation. Up to the present this association has consistently declined to allow any of its members to work overtime, and contended sufficient spindles were available to do all the Government work that was required. In the spinning this has been proved to be correct, and the issue is now narrowed down to the question of doubling or twining. A number of firms are desirous of working overtime in the making of coarse two-fold yarns for Government requirements. The operative twiners, who are members of the Amalgamation, state that there are employers who have spindles standing idle either whole or part time that might be put on the work. On the other hand, it is contended by those responsible for the placing of the orders that their attempts to find additional spindle-

Overtime in the Fancy Leather Trade.

At a meeting of the Birmingham Chamber of Commerce, it was reported that complaint had been made to the Chamber that manufacturers of fancy leather goods who had set apart a portion of their factories solely for War Office work were at the instance of the War Office, working overtime for that purpose, but that on making application for permits to do so in connection with their Christmas trade in ladies' bags and other similar fancy leather and skin articles, such permits were refused. The secretary, therefore, with the approval of the committee, communicated with the Home Office on the subject, and also had an interview with the Deputy Chief Inspector of Factories, with the result that a concession has been made under the provision of the Factory and Workshop Act, 1901, whereby two hours' overtime on three days per week will be permitted to such manufacturers until Christmas.

Yorkshire Observer,
December 7th. 1914.

OVERTIME IN WEST RIDING FACTORIES.

VIEWS OF KEIGHLEY TRADERS.

At a meeting of the Council of the Keighley Chamber of Commerce last night the question of trading with the enemy was discussed. Mr. H. S. Clough (president), who was in the chair, read a letter from the British Engineers' Association requesting the support of the chamber for their suggested scheme of placing financial supervisors over limited companies a certain percentage of whose capital is held by alien enemies.

Mr. Crabtree asked who were alien enemies. Could he, for instance, deal with a German firm established in Bradford?

Mr. Clough said that for the purpose of trading the fact that a man was a German did not make him an enemy. It was a question of where the firm was domiciled.

Mr. Shem Paget said that if Mr. Crabtree supplied goods to a firm with a German name he was not responsible for what that firm did with the goods.

Mr. Clough said of course the responsibility rested with the latter firm. If they traded with the enemy they would be strictly dealt with.

It was decided to support the suggested scheme of the association.

A communication from the Board of Trade was read asking for the co-operation of the chamber in carrying out the conditions upon which a relaxation of the wool embargo is promised. It was decided to offer assistance as requested to arrange for the issue of the necessary certificates for local firms, and to render help in the export of such wool as the Board of Trade allow.

A resolution passed by the Birmingham Chamber of Commerce asking that the Government should compensate merchants for loss sustained by the confiscation by the enemy of goods shipped before the outbreak of war was read. The Chamber invited the support of the Keighley Chamber for their resolution.

Mr. Clough remarked that the Birmingham merchants themselves admitted the difficulty of carrying out their proposals, and he suggested that the resolution should lie on the table.

This course was adopted.

Mr. H. S. Clough, Mr. W. W. Vint, Mr. Alex Keighley, and Mr. Ferdinand Binns were appointed as representatives of the Chamber to attend the conference to be held in Leeds to-day between His Majesty's Inspectors of Factories and spinners and manufacturers of the West Riding to consider matters in relation to the renewal of the Emergency Overtime Order, which expired on November 30. It was mentioned that a feeling existed in some quarters that the Order—which only applied to employees of 16 years and over—should be extended to include within its scope children of 14 years, so that spinners may expedite pressing work.

Mr. Clough said that a good many manufacturers felt that no children under 16 should be allowed to work overtime. (Hear, hear.) Personally he would oppose the proposal.

clothing and equipment of the vast numbers of soldiers that it has been necessary to mobilise so suddenly owing to this country being involved in a gigantic war.

Technically speaking, there was, of course, nothing to prevent adult males from working overtime, since the Factory Acts deal only with the hours that may be worked by women and young persons, but the strength of the cotton trade unions has always made it possible for the adult males to take for themselves what the law has given to women and children. Some controversy has arisen on this point out of the attitude taken up by the Operative Spinners' Amalgamation. Up to the present this association has consistently declined to allow any of its members to work overtime, and contended sufficient spindles were available to do all the Government work that was required. In the spinning this has been proved to be correct, and the issue is now narrowed down to the question of doubling or twining. A number of firms are desirous of working overtime in the making of coarse two-fold yarns for Government requirements. The operative twiners, who are members of the Amalgamation, state that there are employers who have spindles standing idle either whole or part time that might be put on the work. On the other hand, it is contended by those responsible for the placing of the orders that their attempts to find additional spindles to undertake the work have been fruitless. We have no doubt the operative twiners are quite as patriotic as any other class of textile operative. In fact, the patriotism that declines to work overtime whilst other operatives and other machinery of a similar kind are alike idle is a kind of patriotism that we rather like. Can it be that there are twining employers who are refusing Government orders, and letting their machinery stand idle before they will go to the expense of carrying out slight alterations that may in some cases be necessary? If this is what is standing in the way, it seems as if it ought to be possible to use some pressure in that direction. Overtime working should be the very last resource, even in times like these.

the German Engineers' Association requesting the support of the chamber for their suggested scheme of placing financial supervisors over limited companies a certain percentage of whose capital is held by alien enemies.

Mr. Crabtree asked who were alien enemies. Could he, for instance, deal with a German firm established in Bradford?

December 16th 1916

STRESS OF OVERTIME IN THE MILLS.

DISCUSSION AT DEWSBURY.

At a meeting of the Heavy Woollen District Trades and Labour Council held at Dewsbury last night under the presidency of Mr. F. Oates, a letter was read with respect to the "cursed overtime business" in the textile indutries, but the name of the writer was not disclosed. In the letter it was stated that for the last three months operatives had been working from 5 o'clock in the morning until as late as 10 o'clock at night, and that fathers could only see their bairns on Sundays. Reference was also made to the miserable pale faces of the women workers, and it was alleged that the operatives were like whipped animals, deprived of every spark of life. Manufacturers, the writer contended, were out for big profits at the expense of human life.

A letter was received from the clerk to the Dewsbury Board of Guardians (Mr. C. P. Pickersgill) with reference to a request that the Board should meet a deputation from the Council respecting payment of the standard rate of wages to the labour master. Mr. Pickersgill said the Board had already received a deputation from the Amalgamated Society of Joiners and Carpenters, and that no good could be achieved by further consideration of the subject.

Mr. S. Jacks moved a resolution regretting the action of the Board of Guardians in putting a slight on organised labour, and asking that a deputation should be received. Thanks were also added to Mr. Deasy and Mr. Richardson, members of the Board, for the stand they had made on behalf of trade union principles.

Mr. Percy Ward, who seconded the motion, said the labour master would be in receipt of an additional ten shillings per week if he was paid the standard rate of wages for a joiner.

The resolution was unanimously adopted.

Mr. J. Halstead, a member of the Dewsbury Town Council, moved:—

That this Council regrets the Order issued by the Home Office instructing policemen to supervise the conduct of soldiers' wives, and considers it an insult to the soldiers whose wives are as well conducted and as clean in their habits and manners as any Home Office officials or army officers; and the Council pleads that the Order may be withdrawn at once.

He said there had been a storm of protest throughout the country against an obnoxious and unnecessary order. Even if the supposed evil was rampant no good could be accomplished by police supervision, for evil-living women would dodge the constabulary. A hateful task was being imposed on the police who had sufficient dirty work to perform already. Idle ladies could be better employed than by prying into the affairs of soldiers' wives, many of whom would refuse to accept a few shillings per week rather than be subjected to an inquisition. The speaker concluded by admitting that there was little cause for complaint in Dewsbury.

Mr. J. Richardson (Batley) seconded the resolution.

Mr. Jacks, who supported it, described the Order as detestable, and an insult to womanhood. He remarked that the Order would, he supposed, only apply to the cottage and not to the mansion, and that it was resented by the whole country.

The resolution was unanimously adopted.

Mr. Godfrey Saville (Birstall) proposed that the attention of the Home Office should be drawn to the excessive amount of overtime which was being worked, and that employers should be asked to put more looms on Government work, postponing ordinary trade until the soldiers and sailors had been clad. He stated that workpeople were being broken down in health, and that a tremendous number of accidents were occurring in the mills. It was a scandalous sight that women and children should be turning out of the mills as late as 8 o'clock at night. The earnings of the workers, too, were far from satisfactory, and the attention of the Home Office should be called to the conditions which obtained.

Mr. F. Blackburn seconded the proposition.

Mr. Frank Kirbyson protested against boys and girls from 14 to 16 years of age working all night in the mills. He said that at 7 o'clock in the morning he had seen little girls protecting little boys from the rain with the shelter of their shawls. Many of those young children were hardly strong enough to carry their food cans and bread to the mills, and it was often 8 o'clock or 8.30 before they reached their homes after a night's work.

The resolution was carried, and it was also decided to bring the matter to the notice of the masters' association.

Dec 19th. 1916.

BETHNAL GREEN WAR CONTRACTS.

Action by the Home Office.

The Bethnal Green Borough Council recently drew the attention of the Home Office to the piece rates which were being paid in certain instances to home workers in Bethnal Green for Government work. As a result of a subsequent interview between officials of the Council and the Home Office, a representative of the Home Office undertook to inquire into the cases which at the time had been reported to the Council. The Council have now been given to understand that in some cases direct action will be taken for infringements of the provisions of the Trade Boards Act and that in other cases action is contemplated under the Factory and Workshop Acts and other statutes. The Home Office has since asked for information of other cases which might be discovered; and a further list, dealing exclusively with Government work, has been prepared by the Public Health Department and forwarded to the Home Office.

Manchester Dispatch,
Dec. 21st. 1916.

NEW LEEDS FACTORIES.

Army Contracts Said to Cause Overwork.

So overwhelming and continued is the demand in the West Riding for army clothing that during the week-end was announced the pending opening of two new clothing factories at Leeds, which is now the central clothing depot for England and Scotland, as arranged by the Board of Trade.

Nearly every loom is at work on khaki and blue serge, and in the heavy woollen district workers are appealing to the Home Office, through the Labour Council, for shorter hours. They contend that to work from 5 am. to 10 p.m. is inimical to health.

The new factories are owned by R. B. Brown and Sons, of Leeds and Hebden Bridge (who have large army contracts on hand), and by Lyon Bros., one being in Dewsbury-road, and the other a four-storey building in Templar-street.

The efforts of the Russian Government to place orders for three million yards of army cloths in the Huddersfield district have not succeeded. Whether such large orders could be accepted at Leeds is very doubtful.

There is an agitation to close all mills from Thursday to Monday next.

Textile Mercury,
December 19th. 1916.

Army Contracts: Over-Time, Darning

Last week Government officials representing the Director of Army Clothing Contracts had a conference at Galashiels with a number of local manufacturers, with a view to increasing the output of Army cloths at present on order. One of the subjects of discussion was the effect of over-time as a factor of expedition; and from the evidence it appears that over-time is not so productive as the ordinary hours of labour. There is no extra rate of pay for over-time in the tweed trade; but it stands to reason that two hours extra on a ten-hour day does not increase the production by 20 per cent., and a third hour added falls still farther short in efficiency of its proportionate 10 per cent. The great shortage of trained labour causes severe tests to be put on human endurance. Instances are frequent of millmen and scourers working to 9 p.m. four nights per week, all Friday night, and cleaning flues, etc., on the Saturday afternoons.

Government work unfortunately does not provide uniform work for all the operatives in a mill. It seems a curious anomaly that when every loom is fully engaged the darners are working at a reduced "statement" for less than 15 hours a week. As a result, while women weavers are making 25s. a week, darners' wages run from 3s. to 5s. per week. When it is remembered that a fancy woollen mill employs as many women and girls in the darning flat as there are looms in the mill, the problem of unemployment and badly remunerated work becomes serious. There are over 2,500 burlers, darners, knotters, etc., in the Scotch tweed trade so affected. Very little darning is done on the Army cloths, as the heavy milling covers up most of the defects.

Daily Mail, December 21st. 1916.

BUSY DAYS IN BIRMINGHAM.

EVERYBODY WORKING HARD FOR THE ARMY.

CHEERFUL BUSINESS PROPHECIES.

By F. A. McKENZIE.

BIRMINGHAM.

Birmingham is experiencing a famine—a famine of workers.

Government orders for supplies for the Army and Navy have come in such quantities that it is impossible to keep pace with them. Manufacturers by the hundred have transformed their plant to serve the nation. One famous penmaker has abandoned for the moment the making of steel pens to produce 12,000,000 magazine cartridge clips. Button-makers are hurrying the completion of 72,000,000 brass Army buttons. The brassfounders have turned from the making of ornamental brass for furniture to the production of brass tubes for shrapnel. One leather house is reported to have made a fortune by its great purchase of hides on the day the war broke out, and every leather manufacturer is striving early and late to supply a part of the belts and pouches and straps demanded. Rifles are being made by the half-million; small-arm ammunition in such quantities that figures fail; while bedstead manufacturers are busy on hospital beds for the Army. The tinsmiths are making soldiers' canteens. The aluminium workers are vainly trying to manufacture enough water-bottles. Practically every house outside the jewellery trade is working on Government orders at the highest possible pressure.

BADGES FOR THE NEW ARMY.

The Government recently asked for bids for the production of badges for the new Army. An expert calculated that in order to produce the badges required in the manner stated by the War Office every firm that could touch this class of work would have to devote itself exclusively to it for the next sixteen months.

Some establishments are working three shifts a day seven days a week, their machines never resting from midnight until midnight. Others are content with a twenty-hour day, double shifts. Others, finding it impossible to obtain more labour, start early and finish late.

The real difficulty is labour. "At the outset we lost a number of our best men who joined the Army," said one manufacturer to me. "We filled up their places as well as we could. When every available man was used we called in women and girls. To-day old men and lads are doing able-bodied men's work and receiving the same rates of pay as able-bodied men. Girls and women have taken over what was formerly men's work on a very large scale. We are now beginning to use the one-armed man and the one-eyed man. Labour we must have."

OLD TRADES REVIVING.

Old trades are being revived. Birmingham sword-making, once an important affair, almost disappeared under the stress of cheap German competition. Many of the workers were disbanded, some of them went to the workhouse, some to the grave, and one or two went mad, victims of industrial strain. To-day the employers, with renewed demand, are seeking out the old hands wherever they are to be found and bringing them back again. "In past years," said a large manufacturer and well-known public worker, "I have had to sit on relief committees voting sums to help skilled workers, unable to obtain employment, to go to Canada. To-day, if it were not that it did not seem a fair thing to do, we would advertise in the Canadian papers for our workers to come back to us, and pay them to come back. We need them all."

Wages have gone up, and have gone up much higher than the recognised rates seem to show. The wage of the labourer, for example, has risen from 23s. to 26s. or 27s. a week. The rate of pay for certain classes of fitters was formally raised a few days ago from 38s. to 40s. But the employer who tried to obtain men at 40s. would to-day go away empty-handed. One man gave me his experience. "I engaged a fitter last Saturday at 45s. He was to turn up on Monday. He did not come, but there arrived a note from him saying that he had gone somewhere else where he was offered 47s."

Not only is local employer bidding against employer for skilled men but other towns have come in. Newcastle and Greenock, Wolverhampton and Coventry are all holding out tempting offers to Birmingham mechanics. One need only look down the list of advertisements in the local papers. The offer of a bonus on output is common. Here is a firm of tinsmiths offering £3-£4 a week. A Wolverhampton house offers mechanics 1s. an hour and "quarter time and bonus paid to all first-class skilled workmen; night and day shifts; quarter time extra paid for night work; twelve months' work guaranteed to all good men." Still another house takes a big space to advertise its demand for three hundred men.

HASTE IN THE AIR.

There is haste in the air. "We cannot produce our machines fast enough," said one manufacturer of stamping machinery to me. "Everyone wants presses and everyone wants them at once." "My hair is being turned grey with the rush," said a machinery designer. "The manufacturers almost live on my doorstep worrying me for deliveries. 'You do not understand,' they say, 'the seriousness of our position. We simply *must* have them.' It is no use my telling them that I and every one of my men are working to the last ounce of our strength to supply them." "I've had an order offered to me," said a third manufacturer, "that will pay me to put down £5,000 worth of new machinery. When the order is completed I shall be able to scrap the plant if necessary, which will have been paid for and a 20 per cent. profit earned."

Few cities have felt German competition more keenly than here. Trade after trade, once considered by Birmingham its own, was taken from it. Take, for example, the manufacture of buttons. Forty years ago Birmingham made 80 per cent. of the buttons of the world. Before the war she made not more than 15 per cent., the remainder coming from Germany and Austria. To-day Birmingham sees many industries lost in recent years coming back again. In the immediate future the world must have its buttons from Birmingham, for Germany and Austria will not be able to supply them. If people decide to abandon buttons for hooks and eyes, then they must go for their hooks and eyes to Birmingham also. So soon as there comes a pause from the rush of Government orders Birmingham has a fresh overwhelming trade awaiting it. South America and Australia, the Far East and the Far West are raising a daily louder cry for Birmingham goods. Their Continental stocks are becoming exhausted.

COMMERCIAL OPTIMISM.

I find in all quarters here the greatest optimism about our commercial future. "We are going to have such a time as a manufacturing nation as we never had before." I find equally a realisation of the fact that if we are to capture the trade now waiting for us something must be done promptly to train a fresh generation of skilled workers.

No wonder that there are signs of a new era of factory building setting in. The "B.S.A.," one of the most famous Birmingham houses, is to-day erecting an enormous extension of its premises. Work is maintained on the building day and night, and it is said that the premises will take six months to complete. Many manufacturers are at the present time considering plans for rebuilding.

Then there are fresh fields awaiting conquest. Birmingham, for example, has only nibbled so far at the aluminium trade, and enormous possibilities are presented here.

January 4th. 1915.

TROUBLE IN LEEDS CLOTHING TRADE.

WORKERS DEMAND A FLAT RATE.

NOT A MACHINIST IN THE CITY OUT OF WORK.

It is doubtful if in Leeds a single clothing machinist is out of work. If there is, one may assume it is her own fault, for there is scarcely a firm engaged on Government khaki work that would not "jump at" a few extra hands.

Mr. H. E. Withey, the secretary of the Leeds branch of the Clothing Operatives' Union, confirmed this view when spoken to on the point to-day. "The shortage is a very real one," he said, "and if only the hands were available I would get them anything up to 6d. and 7d. an hour.

"At the same time," he added, "there is great dissatisfaction in the Leeds wholesale clothing trade over these contracts; in fact, I don't think there is a shop in the city from which I have not had complaints. The discontent has reached an acute stage, and to-morrow night we are to hold a meeting to consider what can be done. What we want is a flat rate.

"The employers have got a flat rate as between themselves and the Government, and we command we have just as much right to a flat rate as they have. At present the anomalies are extraordinary. One firm will be paying 4d. an hour, while for exactly the same class of work another not many yards away will be paying 6d. We hope, as a result of to-morrow's meeting, to do something in the direction of bringing all firms into line."

It appears that while there is this big call for machinists there is not much demand for male labour. Khaki requires very little tailoring, nearly all the work being done by machine, consequently male tailors are not likely to be in great demand until the "special" trade is revived. Neither does khaki require much pressing. Hence, male pressers are likewise not in very urgent demand.

Several of the larger firms engaged on khaki, by the way, have found it necessary either to extend their factories or take over new premises. One or two of these new factories are on the verge of completion, and within the next week or two several hundred additional machines will be running on khaki.

Great as is the pressure of Government work in Leeds, however, it is not being felt to quite the same extent as in Sheffield. There every available inch of floor space is occupied by machines on Government work, and at one of the largest firms in the city it has even been found necessary to instal lathes for turning shells in the spacious back yard. No firm with a lathe need be without work, and those with lathes big enough for the purpose can have a gun to turn for the mere asking. Indeed, some of the Sheffield armament firms being unable to turn the guns after forging them, are sending them to distant towns to be turned up. This done the guns are returned to Sheffield for completion.

Although the Leeds boot manufacturers are just as busy on army contracts as the wholesale clothiers, there is not the same shortage of hands in the boot industry. Mr. John Buckle, the secretary of the local branch of the Operatives' Union, said that at first the production of army boots was something of a novelty to many local manufacturers, but they had now got into their stride, and had so organised their production that they could turn out far more boots than at the beginning of the war.

"I do not say," he added, "that we could not find work for a few more men, but at the same time there is no unusual demand for them, as there is for machinists in the clothing trade."

Yorkshire Observer,
January 7th. 1915.

UNREST AMONG LEEDS CLOTHING TRADE OPERATIVES.

A mass meeting of the whole of the clothing operatives in Leeds is to be held arising out of the dissatisfaction among the workers engaged on Government work in the city, with the object of demanding a flat rate based on the total cost of labour in order that all employers shall be obliged to pay wages on the same scale. According to the operatives, wages in Leeds vary in the factories by 40 and 50 per cent., though the employers are working on a flat rate laid down by the War Office.

The Clarion, January 8th. 1915.

PATRIOTISM AND PROFIT.

Fraudulent Contractors and Murdered Soldiers.

By R. B. SUTHERS.

ONE wet day last week I was walking in a quiet lane in the county of Blankshire, when I suddenly came upon what appeared to be the nucleus of a new village which had somehow been blown from its foundations in the backlands of Canada and deposited all of a heap on a muddy slope in England. Most of the buildings were of wood with felt roofs, but a few were of corrugated iron. Smoke was rising from some of the chimneys, but outside there was at first no sign of life. On rounding a corner, however, there came into view half a dozen blue-suited men trundling wheelbarrows through the mud and chaffing about the "light duties," and the mystery was solved. The huts were the homes of a battalion of Kitchener's Army.

When one of the Tommies came within hailing distance I asked him how they liked the huts; and he replied with a cheerful grin, "They're grand." Another said, "Half of us would have been dead if we'd stayed in the tents much longer." The huts, it appeared, had only been in use a couple of days, but there was no doubt that so far the change had been entirely satisfactory.

The next day I met Mr. William Stephen Sanders, chairman of the Contracts Committee of the Workers' National Committee, and what he told me of the huts built for the new army all over the country almost obliterated the cheerful memory of my Tommy's emphatic declaration that they were "grand."

"Our information," Mr. Sanders told me, "is thoroughly reliable. It has been obtained at first hand from men engaged on the jobs, men who are prepared to go into the witness-box and swear to the facts, if necessary. It discloses a state of things which is not only a scandal from the point of view of national expenditure, but a serious danger to the health and efficiency of our soldiers in training."

The number of these camps of hutments is somewhere about twenty, and at each camp there are from 250 to 400 huts, each sheltering 30 men.

Now, we have not been lacking in admiration for the Government's firm and statesmanlike method of dealing with various phases of the present crisis, as in helping the banks and the trading community, and in taking charge of necessary foodstuffs and supplies; but they do not appear to have exercised the same courage and foresight in one or two other important matters—for example, the pensions and pay of the forces, and in this matter of the provision of proper shelters for the troops in training.

The building trade has not an enviable reputation in the piping times of peace, and one cannot expect the leopard to change its spots suddenly, even on the shock of war, especially when it is not in the actual fighting line. Consequently it was the Government's duty to knock these spots off as a preliminary to engaging the members of this noble profession in the construction of shelters for men upon whose efficiency and health the existence of the Empire depends. The Government did not knock off the spots, and Mr. Sanders (with facts) proves that the leopards have been preying for profits with all their well-known fervour and success, at the expense of the health and efficiency of the new Army, and at the expense of you and me and the other taxpayers.

The result of the Government's omission to take complete control of the job and carry it out properly is this: The rank and file have to eat and sleep and rest in buildings which a responsible trade union secretary asserts would not be passed by a health officer as fit for accommodation. The huts are not lined inside and the flooring is laid on the bare joists, no felt being used. There are no partitions of any kind, simply a bare building 60ft. by 20ft., with a stove in the centre. The men sleep 4in. from the floor in little box beds, and when the flooring dries the cold air sweeps through the cracks, as the huts are raised from the ground about 2ft. The sides and ends of the huts are only weather boarded, so that the wind can work through, while the roofs in many cases let in both the sunshine (when there is any) and the rain.

Of course, the huts were required in a hurry, but this is a case in which hurry means haste with confusion. The contracts were given out on the understanding that the construction would be of a durable and workmanlike kind, and the prices have been arranged on this basis and vary between £139 and £150 per hut. But the contractors, the patriotic contractors, knowing the need for speed, appear to have put the huts up so rapidly that they have not had time to construct them durably.

Thus, I was told, instead of mortising and tenoning the rails, struts, and bases, they simply square cut and "tosh" nailed all the framing When, however, it comes to receiving cheques for the work I understand these are made out in full, with no deduction for "tosh" work.

Now the stern, imperturbable, armchair warrior who informs us daily that the war will "do us all good," and who feels very keenly the value of his own sacrifice of a winter on the Riviera—this kind of person is apt to pooh-pooh complaints about such trifles. He says: "What does it matter, after all? They will have worse hardships to undergo when they get into the trenches?" He little dreams that he is using what is essentially a German argument in speaking thus; for this answer is of just the same nature as the German defence of their "frightfulness." They say, "War is hell, therefore why not make it as hellish as possible. You can't have too much of a bad thing."

It ought to be obvious to an Englishman that to sow the seeds of consumption or pleurisy or pneumonia in a fighting man before he faces the enemy is not fighting sense; it isn't German sense, much less humanity. And, moreover, it is not horse sense for us to pay contractors to commit this idiotic act.

One firm of contractors, I was told, rushed up huts at a labour cost of £7 12s. 6d., whereas they should have paid £15 for decent work, and whereas the prices charged for huts range from £139 to £150 the cost of the labour and materials of some of the huts put up has been no more than £76. If it be military strategy to "harden" the new Army by subjecting them to damp and draughts, it is surely not business to pay heavily for things that are as free as air and water.

But the "hardening" argument breaks down when we come to the consideration of huts built for officers. I understand that the huts built for officers are well lined inside, with felt under the flooring and linoleum above it. Instead of felt roofing they have corrugated iron, so that they appear to be protected both from damp and draughts. Now, if the hardening argument is sound for the rank and file, why is it not sound for the officers? The officers will have to undergo just the same hardships in the trenches as the men, and if they have not had the same preparation, will presumably succumb sooner to the rigours of the campaign. Thus the "hardening" argument is proved to be fallacious, and the only alternative is that the affair has been grossly mismanaged.

The Government appear to have followed the bad old plan of allowing agents or contractors to arrange for the building, and they appear to have been too busy or too indifferent to insist on the safeguards against fraud and jerry work which are usually applied more or less successfully.

I was told that many firms of good repute tendered for some of the work, but failed to get any; whilst firms not in this particular business seem to have obtained contracts which they sublet. Sub-letting has been rife to such an extent that it is difficult in some cases to discover who are the original contractors. Why could not the Government publish a list of contractors as they usually do? What is the reason for secrecy at all? Why have not the Fair Wage Clause been carried out? Why have contractors been permitted to pay much below the usual rates for work done, and why have complaints been ignored?

Surely a little plain speaking about these hut builders would have been salutary. Either the compilers of this evidence are vile and traitorous persons or the honourable gentlemen who have built the huts are not honourable gentlemen. If the evidence is accurate—and it has been very carefully sifted by responsible trade unionists—the honourable builders are just as much enemies of their country as the arms companies would be if they supplied rifles with leaden bayonets. To endanger the health and perhaps the lives of the men who are going out to fight to defend your home from the thief and the murderer is dastardly, not to say foolish. How do the honourable builders come to permit themselves to be so *dis*-honourable?

And why can't we know their names *and* their addresses and the amount of their profits? We are supposed to be fighting the war for Honesty and Uprightness! If we are, let us practise these virtues as much as possible. Big battalions are not the only thing necessary in war. A thousand men with tubercles in their lungs, picked up in a jerry-built hut, will be little use against a thousand sound in wind and limb. This war is a war of endurance. It will test honesty in work as it was never tested before. Let us have as much of it as we can. But it is not honest to hide misdeeds of the kind described nor to shield their perpetrators.

One naturally thinks first of the injury caused to the men in training by the provision of these defective supplies, but hardly less important is the injury done to the workers employed by dishonest and sweating contractors. You cannot expect, and you cannot get, good work from ill-paid and half-starved men and women. It is satisfactory to note that we have not heard of any grave scandals with regard to the food supplies to the Army at the front or to the Army in the making, but in connection with other contracts Mr. Sanders informed me that there were many cases of sweating and price-cutting, with the inevitable result that goods of a shoddy and dangerous quality are being produced for the use of the men at the front.

For example, a London firm is paying workers 2s. 6d. per dozen for making shirts, the workers supplying their own cotton and fetching the work.

A prominent firm is paying 3s. 3d. per dozen for shirts, while other firms in the same town are paying 4s. 6d.

A provincial firm is paying outworkers 1d. each for making soldiers' beds. For a long day's work women can earn 1s. In the same town another firm is paying 4½d. per bed, the women finding the cotton at a cost of 1½d. per bed.

A provincial firm making thread for the Government are paying such low piece rates that the worker can earn sometimes only 5½d. per day.

What kind of clothing can be expected for such prices, and what kind of consciences do the people responsible for providing our forces with such rubbish possess? They seem to me to be essentially German consciences. We cannot fight liars with lies, and a shirt that falls to pieces is just as great a lie as the German lies about the fall of Paris.

One of the facts mentioned by Mr. Sanders is a particularly contemptible piece of trickery. It is so ingeniously German. A firm supplying hose by the pound sprinkled the hose with water in order to increase its weight by 25 per cent, and that their crime might not be discovered they packed the goods so that the bottom and top layers were dry articles. If such an incident be proved to the authorities, why should they shield the guilty parties?

It is not creditable to a nation fighting for honest dealing that the workers engaged in such practices should be afraid to complain openly for fear of victimisation. Think of it. "We are fighting to uphold honesty: but if you dare to be honest we shall punish you by starving you." To the Press we say: "If you expose these scandalous criminals we shall ruin you."

Honesty, of course, is a matter of degree. It is an ideal, but it is the honestest people that are going to come out on top. Our Mr. Beswick once committed a profound epigram. He said: "There is not 5 per cent. between the bishop and the burglar." And I think he added that the 5 per cent. was in favour of the burglar. This profound truth applies also to nations. We are fighting to prove our 5 per cent. superiority. It ought to be an easy job, but it would be much more glorious to make it 50 per cent.

Batley News, Jan. 9th. 1915

THE WORST EVIL OF THE WAR

Textile Workers' Report Says it is Women Workers' Overtime.

"Accident List is Terrible."

A Private "as Useful as a Field Marshal or King."

The annual report of the Heavy Woollen District Textile Workers' Union, compiled by Councillor Ben Turner, J.P. (secretary), opens with a reference to the international war, and proceeds:—

During the early part of the year all was peace. Trade was quiet, unemployment was growing keener, but we paid out-of-work pay freely and yet saved money even on the first half of the year.

Over 200 of our district members have joined the forces or were taken over as Territorials, and we have decided to keep them in full benefits, free from contributions whilst they are away.

The country's Ministers must be made to pay the soldiers such wages that their wives and children and other dependents have never less than £1 per week going into the household for the soldiers' sake, and that pensions and disablement allowances shall be on the same broad basis. A private is as dear and as useful to a home as a Field-Marshal or a King.

When war broke out the textile trade was cut off like lightning strokes from the clouds. The dismissals were numerous, and our Union met the position bravely. From August and September, except at three or four places, our unemployment pay has been below normal.

WOMEN AND OVERTIME.

The war has brought evils with it to our homeland, and the worst has been for the women workers having to work overtime and in some places during the night. Had the authorities had some commercial and industrial business men in their service much of this needless, irregular time would have been avoided. The workers will gladly work overtime and all time to clothe their fellow soldier workmen, but they know that with good business arrangements much of it would have been needless.

Raw material is getting a difficulty, and the only way out would be to commandeer it all so that the work could be done in the interest of the people, particularly the soldiers and service men, and not in the interests of money makers.

Fortunes have been made out of the nation's misfortunes, and the old saying has come true again, "Muck goes to t' midden" or "profit goes to where there is plenty."

COMMOTION OVER KHAKI.

The Government even now could do much if it said, until our soldiers are clad, and our common people are clad there shall be no cloths made for the dudes and dandies, and thus the task of providing all needed for the fighting line could be done in a few months' time.

There has been some commotion over the khaki cloths owing to the heavy nature of the same, making it impossible on an ordinary price list to turn out enough to make a wage, and the Union has done good work for weavers in getting increased prices. The overtime rates have also caused much trouble. As it takes more to maintain physical efficiency when working overtime or night time than ordinary, the workers surely need more wage, and they must have the same rights in these emergencies to get extras as the employers in many instances take.

There has been a big demand for milners, and, alas, much danger from eczema has followed owing to the sorts of ingredients used and the hard work of pulling the pieces together in the process.

The signs are for another four months of good trade, and I think it will be for 12 months. When the time comes that our agreement expires, there ought to be an attempt made to so arrange that the missing links of last year's agreement shall be picked up, and all the trade put on a sounder wage basis.

The adult male and female must aim at a much higher wage than is at present paid, and the sliding scale for the younger folk should be so arranged as to make it worth while for folk to have lads and lasses to help in the manufacture of cloths and clothing.

In the finishing trade wages have been for years poor, whilst weavers at most mills are below the living line. Weavers are, like menders, liggers-on, condenser-minders, burlers, knotters, inkers, and winders, etc., too certain of being married, and forget the lesson of trades unionism.

The accident list in textile mills is terrible. Since overtime and night-work it has been worse, and it is proof positive that speed and rush have some effect on the numbers of accidents in mills.

Yorkshire Observer, Jan. 18th. 1915.

Overtime in the Heavy Woollen District.

According to a statement made by Mr. Ben Turner at a meeting of Heavy Woollen District textile workers at Dewsbury on Saturday the Home Office have altered the permits granted to manufacturers of Army materials so as to reduce the overtime hours of women and young children from fourteen hours to a maximum of nine hours per week. For several months the amount of overtime worked has been two and a-half hours on each of the first five nights of each week and an hour and a-half on Saturday afternoons. The new regulations provide for overtime of two hours on four nights or one and a-half hours on five nights and an hour on Saturday. Mr. Turner's announcement is doubly welcome, inasmuch as it indicates that the most urgent of the Government requirements have been met satisfactorily, and that the heavy strain on women and child labour is to be relaxed to an appreciable extent. It ought to be recognised that those women and young people have done splendidly their share of the heavy national task.

OVERTIME IN THE HEAVY WOOLLEN MILLS.

CONDITIONS TO BE REVISED.

There was a large attendance at the annual meeting of the Heavy Woollen District Union of Textile Workers, held in the Exchange Hall, Dewsbury, on Saturday, under the presidency of Mr. Benjamin Turner (Ravensthorpe).

The report of the secretary (Mr. Ben Turner, Mayor of Batley), which has been published already, was adopted. Mr. Benjamin Turner was re-elected president, Mr. J. Chappell (Batley) treasurer, and Messrs. J. J. Greenwood and J. Hudson auditors. Messrs. J. Healey, W. Day, and F. Blackburn, of Dewsbury, and F. Crossley (Ravensthorpe) were elected on the committee.

Mr. Ben Turner (the secretary) raised the question of the wages agreement, which will expire during the coming summer. He said it behoved all workpeople to assist the union to secure new and better terms under which there would be a minimum wage for every person employed in the textile trades. Owing to lack of organisation when the existing agreement was made in 1913 several sections were excluded from its benefit. It was desirable that the forces of the workers should be so strengthened as to bring every department, including the weavers, within the scope of the arrangement, which would have to be entered into this year. He trusted that with every prospect of good trade continuing for another twelve months there would be no difficulty experienced in peacefully arranging a fresh and more comprehensive agreement.

It was unanimously resolved to instruct the officials of the union to give the requisite three months' notice, when the proper time arrived, to terminate the existing agreement and to negotiate for the creation of a new one.

A long discussion ensued with respect to the payment of night workers in the mills.

Mr. Ben Turner advised the members of the union to look well ahead and not attempt to squeeze too much from the employers at the present time. He pointed out that to pursue a moderate policy at this juncture would be a safeguard against any retaliation to which employers might otherwise resort if slack times came. It seemed only right that with such pressure being exerted on the textile industries of the district there should be extra money for night work, and he was glad to know that it was being paid by a considerable number of firms.

Proceeding, the secretary stated that there was to be a meeting of representatives of the union and the Heavy Woollen District Manufacturers' Association in regard to excessive overtime and other matters. An official intimation had just been received that there was to be a revision of the conditions contained in the permits which had been given for the overtime employment of women and young persons. The maximum amount of overtime was to be nine hours per week, divided into two hours per night on each of four days and one hour on Saturday, or one and a-half hour per night for five days and one hour on Saturday, the total under the latter arrangement being eight and a-half hours. Mr. Turner added that even the revised hours were still too long, but it had to be recognised that our soldiers must be clothed by some means. He was very pleased that in the woollen trade they had been able to successfully resist the overtime employment of children under 16 years of age whereas, owing to deficient trade union organisation, at Bradford there were children 14 years old working overtime in the worsted trade.

A discussion on the rise in food prices is reported elsewhere.

658/14 658.

Yorkshire Observer, Jan. 19th. 1915.

LABOUR PROBLEMS IN HEAVY WOOLLEN MILLS.

IMPORTANT CONFERENCE AT DEWSBURY.

A long and important conference took place yesterday evening at the Town Hall, Dewsbury, between representatives of the Heavy Woollen District Manufacturers' Association and the Heavy Woollen District Union of Textile Workers. The employers were represented by Alderman Sir Mark Oldroyd (who presided), Mr. J. E. Walker (Mirfield), Mr. A. Rhodes (Heckmondwike), Mr. W. O. R. Holton (Birstall), Mr. W. France (Dewsbury), Mr. Watson Kaye (Ravensthorpe), Mr. Lee (Earlsheaton), and the secretary (Mr. C. L. W. Nicholson), and the union by Mr. Ben Turner (Mayor of Batley), Mr. A. Gee (Huddersfield), Mr. Benjamin Turner (Ravensthorpe), Mr. A. Wilcock (Dewsbury), and Mr. G. Saville (Birstall).

The first question raised by the union delegates was that of excessive overtime in the mills. It was urged that the long hours worked by numerous operatives had caused an abnormal amount of sickness, this being proved by the increased claims for benefits under the Insurance Act. The delegates therefore asked that the new regulations of the Home Office limiting the overtime of women and young persons to nine hours per week should be applied by the manufacturers to adult males also, and that Saturday afternoon and Sunday midnight to Monday morning labour should be abolished. It was believed, said the spokesmen of the operatives, that additional efficiency of production would result to such an extent as to warrant the change. Another subject discussed was that of wages for night workers, and it was stated that in this connection there had been trouble at several mills in the district.

At the conclusion of the conference Sir Mark Oldroyd intimated on behalf of the employers that the Manufacturers' Association would issue to the members a circular containing recommendations that the two complaints which had been made should be dealt with as far as practicable.

THE PRESSURE OF KHAKI CONTRACTS.

OVERTIME EMPLOYMENT OF YOUNG PERSONS.

Some comment has been occasioned by the fact that young persons under the age of sixteen are working overtime in spinning mills in Bradford in order to enable employers to cope with the pressure of khaki contracts. Mention has already been made in these columns of the resolution on the subject recently passed by the Juvenile Employment Subcommittee of the Education Authority, a body whose function it is through the medium of a large number of visitors to advise children who are leaving school for employment and to keep in touch with them until they are seventeen years of age. In their letter to the Home Office the committee stated that their attention had been drawn to the fact that "many children under seventeen years of age are working from 6 a.m. to 8.30 p.m. in various mills in this city in connection with the manufacture of khaki. The committee are fully aware of the urgent need for the manufacture of khaki, but they view with apprehension the prejudicial effects of these very long hours upon the health of children, and they would warmly welcome any rearrangement that could be made which would obviate the necessity of those under seventeen years of age being engaged beyond the normal factory hours."

A HOME OFFICE EXEMPTION.

It does not appear to be generally realised that under section 150 of the Factory and Workshop Act, 1901, "in case of any public emergency" the Secretary of State may by Order, "to the extent and during the period named by him," exempt from the Act "any factory or workshop belonging to the Crown, or any factory or workshop in respect of work which is being done on behalf of the Crown under a contract specified in the Order."

What has happened is that the Secretary of State, in the present public emergency, under this section of the Act made an Order (which has just been extended for a further period of three months) allowing the working of overtime in the woollen and worsted industries "for work which is being done on behalf of the Crown."

The Order—made after consultation with the representatives of the industries in the chief centres—applies only to factories in which 75 per cent. or more of the output is work on behalf of the Crown—i.e., on behalf of the British and allied forces; and it limits the overtime that may be worked to a total "not exceeding nine hours per week," exclusive of meal hours. Thus employers possessing the certificate of exemption are acting lawfully and within their rights. It is only in spinning, where small deft hands are needed for the processes of doffing and "bobbin-legging," that young persons under the age of 16 are employed. The Order, indeed,

During the early part of the year all was peace. Trade was quiet, unemployment was growing keener, but we paid out-of-work pay freely and yet saved money even on the first half of the year.

Over 200 of our district members have joined the forces or were taken over as Territorials, and we have decided to keep them in full benefits, free from contributions whilst they are away.

The country's Ministers must be made to pay the soldiers such wages that their wives and children and other dependents have never less than £1 per week going into the household for the soldiers' sake, and that pensions and disablement allowances shall be on the same broad basis. A private is as dear and as useful to a home as a Field-Marshal or a King.

When war broke out the textile trade was cut off like lightning strokes from the clouds. The dismissals were numerous, and our Union met the position bravely. From August and September, except at three or four places, our unemployment pay has been below normal.

WOMEN AND OVERTIME.

The war has brought evils with it to our homeland, and the worst has been for the women workers having to work overtime and in some places during the night. Had the authorities had some commercial and industrial business men in their service much of this needless, irregular time would have been avoided. The workers will gladly work overtime and all time to clothe their fellow soldier workmen, but they know that with good business arrangements much of it would have been needless.

Raw material is getting a difficulty, and the only way out would be to commandeer it all so that the work could be done in the interest of the people, particularly the soldiers and service men, and not in the interests of money makers.

Fortunes have been made out of the nation's misfortunes, and the old saying has come true again, "Muck goes to t' midden" or "profit goes to where there is plenty."

COMMOTION OVER KHAKI.

The Government even now could do much if it said, until our soldiers are clad, and our common people are clad there shall be no cloths made for the dudes and dandies, and thus the task of providing all needed for the fighting line could be done in a few months' time.

There has been some commotion over the khaki cloths owing to the heavy nature of the same, making it impossible on an ordinary price list to turn out enough to make a wage, and the Union has done good work for weavers in getting increased prices. The overtime rates have also caused much trouble. As it takes more to maintain physical efficiency when working overtime or night time than ordinary, the workers surely need more wage, and they must have the same rights in these emergencies to get extras as the employers in many instances take.

There has been a big demand for milners, and, alas, much danger from eczema has followed owing to the sorts of ingredients used and the hard work of pulling the pieces together in the process.

The signs are for another four months of good trade, and I think it will be for 12 months. When the time comes that our agreement expires, there ought to be an attempt made to so arrange that the missing links of last year's agreement shall be picked up, and all the trade put on a sounder wage basis.

The adult male and female must aim at a much higher wage than is at present paid, and the sliding scale for the younger folk should be so arranged as to make it worth while for folk to have lads and lasses to help in the manufacture of cloths and clothing.

In the finishing trade wages have been for years poor, whilst weavers at most mills are below the living line. Weavers are, like menders, liggers-on, condenser-minders, burlers, knotters, inkers, and winders, etc., too certain of being married, and forget the lesson of trades unionism.

The accident list in textile mills is terrible. Since overtime and night-work it has been worse, and it is proof positive that speed and rush have some effect on the numbers of accidents in mills.

a-half hours on five nights and an hour on Saturday. Mr. Turner's announcement is doubly welcome, inasmuch as it indicates that the most urgent of the Government requirements have been met satisfactorily, and that the heavy strain on women and child labour is to be relaxed to an appreciable extent. It ought to be recognised that those women and young people have done splendidly their share of the heavy national task.

OVERTIME IN THE HEAVY WOOLLEN MILLS.

CONDITIONS TO BE REVISED.

There was a large attendance at the annual meeting of the Heavy Woollen District Union of Textile Workers, held in the Exchange Hall, Dewsbury, on Saturday, under the presidency of Mr. Benjamin Turner (Ravensthorpe).

The report of the secretary (Mr. Ben Turner, Mayor of Batley), which has been published already, was adopted. Mr. Benjamin Turner was re-elected president, Mr. J. Chappell (Batley) treasurer, and Messrs. J. J. Greenwood and J. Hudson auditors. Messrs. J. Healey, W. Day, and F. Blackburn, of Dewsbury, and F. Crossley (Ravensthorpe) were elected on the committee.

Mr. Ben Turner (the secretary) raised the question of the wages agreement, which will expire during the coming summer. He said it behoved all workpeople to assist the union to secure new and better terms under which there would be a minimum wage for every person employed in the textile trades. Owing to lack of organisation when the existing agreement was made in 1913 several sections were excluded from its benefit. It was desirable that the forces of the workers should be so strengthened as to bring every department, including the weavers, within the scope of the arrangement, which would have to be entered into this year. He trusted that with every prospect of good trade continuing for another twelve months there would be no difficulty experienced in peacefully arranging a fresh and more comprehensive agreement.

It was unanimously resolved to instruct the officials of the union to give the requisite three months' notice, when the proper time arrived, to terminate the existing agreement and to negotiate for the creation of a new one.

A long discussion ensued with respect to the payment of night workers in the mills.

Mr. Ben Turner advised the members of the union to look well ahead and not attempt to squeeze too much from the employers at the present time. He pointed out that to pursue a moderate policy at this juncture would be a safeguard against any retaliation to which employers might otherwise resort if slack times came. It seemed only right that with such pressure being exerted on the textile industries of the district there should be extra money for night work, and he was glad to know that it was being paid by a considerable number of firms.

Proceeding, the secretary stated that there was to be a meeting of representatives of the union and the Heavy Woollen District Manufacturers' Association in regard to excessive overtime and other matters. An official intimation had just been received that there was to be a revision of the conditions contained in the permits which had been given for the overtime employment of women and young persons. The maximum amount of overtime was to be nine hours per week, divided into two hours per night on each of four days and one hour on Saturday, or one and a-half hour per night for five days and one hour on Saturday, the total under the latter arrangement being eight and a-half hours. Mr. Turner added that even the revised hours were still too long, but it had to be recognised that our soldiers must be clothed by some means. He was very pleased that in the woollen trade they had been able to successfully resist the overtime employment of children under 16 years of age whereas, owing to deficient trade union organisation, at Bradford there were children 14 years old working overtime in the worsted trade.

A discussion on the rise in food prices is reported else here.
